The table below presents a sensitivity analysis for each significant actuarial assumption showing how the post-employment benefit obligation would have been affected by changes in the relevant actuarial assumption that were reasonably possible at the balance sheet date. Unforeseen

circumstances may arise, which could result in variations that are outside the range of alternatives deemed reasonably possible. Caution should be used in extrapolating the sensitivities below on the post-employment benefit obligation, as the sensitivities may not be linear.

Sensitivity analysis of significant actuarial assumptions¹

Increase / (decrease) in post-employment benefit obligation USD million	UK plan		US plans	
	31.12.18	31.12.17	31.12.18	31.12.17
Discount rate				
Increase by 50 basis points	(1)	(2)	(2)	(3)
Decrease by 50 basis points	1	2	2	3
Average health care cost trend rate				
Increase by 100 basis points	3	4	1	1
Decrease by 100 basis points	(3)	(3)	0	(1)
Life expectancy				
Increase in longevity by one additional year	2	2	2	4

¹ The sensitivity analyses are based on a change in one assumption while holding all other assumptions constant, so that interdependencies between the assumptions are excluded.

c) Defined contribution plans

UBS sponsors a number of defined contribution plans in locations outside Switzerland. The locations with significant defined contribution plans are the US and the UK. Certain plans allow employees to make contributions and earn matching or other contributions from UBS. Employer contributions to defined

contribution plans are recognized as an expense, which, for the years ended 31 December 2018, 2017 and 2016, amounted to USD 268 million, USD 243 million and USD 238 million, respectively.

Consolidated financial statements
UBS Group AG consolidated financial statements

Note 29 Pension and other post-employment benefit plans (continued)

d) Related-party disclosure

UBS is the principal provider of banking services for the pension fund of UBS in Switzerland. In this capacity, UBS is engaged to execute most of the pension fund's banking activities. These activities can include, but are not limited to, trading, securities lending and borrowing and derivative transactions. The non-Swiss UBS pension funds do not have a similar banking relationship with UBS.

Also, UBS leases certain properties that are owned by the Swiss pension fund. As of 31 December 2018, the minimum commitment toward the Swiss pension fund under the related

leases was approximately USD 17 million (31 December 2017: USD 5 million).

→ Refer to the "Composition and fair value of plan assets" table in Note 29a for more information on fair value of investments in UBS instruments held by the Swiss pension fund

The following amounts have been received or paid by UBS from and to the pension and other post-employment benefit plans located in Switzerland, the UK and the US in respect of these banking activities and arrangements.

Related-party disclosure

USD million	For the year ended		
	31.12.18	31.12.17	31.12.16
Received by UBS			
Fees	35	36	36
Paid by UBS

Note 30 Employee benefits: variable compensation

a) Plans offered

The Group has several share-based and other compensation plans that align the interests of Group Executive Board (GEB) members and other employees with the interests of investors. These compensation plans are also designed to meet regulatory requirements. The most significant compensation plans are described below.

→ Refer to Note 1a item 6 for a description of the accounting policy related to share-based and other deferred compensation plans

Mandatory deferred compensation plans

Equity Ownership Plan (EOP)

The EOP is a mandatory deferred share-based compensation plan for all employees with total annual compensation greater than USD / CHF 300,000.

EOP awards granted to GEB members and certain other employees will only vest if both Group and business division performance conditions are met. For all awards granted for the performance year 2017 (awarded in early 2018) and before, the Group performance condition is based on the average adjusted return on tangible equity (RoTE) excluding deferred tax assets over the performance period. Starting with the EOP awards granted in 2019 for the performance year 2018, the Group performance condition is based on the average reported return on common equity tier 1 capital (RoCET1). Business division performance is measured on the basis of their average adjusted return on attributed equity (RoAE). For Corporate Center employees, it is measured on the basis of the average operating businesses' adjusted RoAE.

Certain awards, such as replacement awards issued outside the normal performance year cycle, may take the form of deferred cash under the EOP plan rules.

Notional shares represent a promise to receive UBS shares at vesting and do not carry voting rights during the vesting period. Notional shares granted prior to February 2014 have no rights to dividends, whereas awards granted since February 2014 carry a dividend equivalent that may be paid in notional shares or cash and that vests on the same terms and conditions as the awards. However, starting with awards granted for the performance year 2017, European Banking Authority guidelines do not permit individuals who are deemed to be Material Risk Takers (MRTs) to receive dividend or interest payments on instruments awarded as deferred

variable remuneration. Where dividend payments are not permitted, the grant price of the EOP award is adjusted for the expected dividend yield over the vesting period to reflect the fair value of the non-dividend-bearing award.

Awards are settled by delivering UBS shares at vesting, except in jurisdictions where this is not permitted for legal or tax reasons. EOP awards generally vest in equal installments after two and three years following grant (for GEB members, generally after three, four and five years). The awards are generally forfeitable upon, among other circumstances, voluntary termination of employment with UBS.

Deferred Contingent Capital Plan (DCCP)

The DCCP is a mandatory deferred compensation plan for all employees with total annual compensation greater than USD / CHF 300,000.

DCCP awards granted up to January 2015 represent a right to receive a cash payment at vesting. For awards granted since February 2015, DCCP takes the form of notional additional tier 1 (AT1) capital instruments, which at the discretion of UBS can be settled in either a cash payment or a perpetual, marketable AT1 capital instrument. DCCP awards vest in full after five years, and up to seven years for UK senior management functions, unless there is a trigger event.

Awards are forfeited if a viability event occurs, that is, if FINMA notifies the firm in writing that the DCCP awards must be written down to prevent an insolvency, bankruptcy or failure of UBS, or if UBS receives a commitment of extraordinary support from the public sector that is necessary to prevent such an event. Additionally, they are written down if the Group's common equity tier 1 capital ratio falls below 10% for GEB members and below 7% for all other employees. As an additional performance condition, GEB members forfeit 20% of their award for each loss-making year during the vesting period.

For awards granted up to January 2015, interest on the awards is paid annually, provided that UBS achieved an adjusted profit before tax in the preceding year. For awards granted since February 2015, interest payments are discretionary. Where interest payments are not permitted, such as for MRTs, the DCCP award reflects the fair value of the granted non-interest-bearing award.

The awards are generally forfeitable upon, among other circumstances, voluntary termination of employment with UBS.

Note 30 Employee benefits: variable compensation (continued)

Asset Management EOP

In order to align deferred compensation of certain Asset Management employees with the performance of the investment funds they manage, awards are granted to such employees in the form of cash-settled notional investment funds. The amount delivered depends on the value of the underlying investment funds at the time of vesting. The awards are generally forfeitable upon, among other circumstances, voluntary termination of employment with UBS.

Financial advisor variable compensation

In line with market practice for US wealth management businesses, the compensation for US financial advisors in Global Wealth Management is comprised of production payout and deferred compensation awards. Production payout is primarily based on compensable revenue and is paid monthly.

Financial advisors may also qualify for deferred compensation awards, which generally vest over a six-year period. The awards are based on strategic performance measures, including production, length of service with the firm and net new business. Production payout rates and deferred compensation awards may be reduced for, among other things, errors, negligence or carelessness, or a failure to comply with the firm's rules, standards, practices and policies or applicable laws and regulations.

Strategic objective awards

Strategic objective awards are deferred compensation awards based on strategic performance measures, including production, length of service with the firm and net new business. These awards are granted in the form of both deferred share-based and deferred cash-based awards, with a vesting period of up to six years.

Through performance year 2016, strategic objective awards were partly granted under the PartnerPlus deferred cash plan. In addition to such granted awards (UBS company contributions), participants were allowed to voluntarily contribute additional amounts otherwise payable as production payout up to a certain percentage, which vested upon contribution. Company contributions and voluntary contributions were credited with interest in accordance with the terms of the plan. Rather than being credited with interest, a participant could elect to have voluntary contributions, along with vested company contributions, credited with notional earnings based on the performance of various mutual funds. Company contributions and interest on both company and voluntary contributions ratably vest in 20% installments six to 10 years following grant date. Company contributions and interest on notional earnings on both company and voluntary contributions are forfeitable under certain circumstances.

GrowthPlus

GrowthPlus is a compensation plan for selected financial advisors whose revenue production and length of service exceed defined thresholds from 2010 through 2017. Awards were granted in 2010, 2011, 2015 and 2018. The awards are cash-based and are distributed over seven years, with the exception of 2018 awards, which are distributed over five years.

Other compensation plans**Equity Plus Plan (Equity Plus)**

Equity Plus is a voluntary share-based compensation plan that provides eligible employees with the opportunity to purchase UBS shares at market value and receive one notional share for every three shares purchased, up to a maximum annual limit. Share purchases may be made annually from the performance award and / or monthly through deductions from salary. If the shares purchased are held until three years from the start of the associated plan year and, in general, if the employee remains employed by UBS, the notional shares vest. For notional shares granted since April 2014, employees are entitled to receive a dividend equivalent, which may be paid in notional shares and / or cash.

Role-based allowances (RBAs)

Certain employees of legal entities regulated in the EU may receive an RBA in addition to their base salary. This allowance reflects the market value of a specific role and is fixed, non-forfeitable compensation. Unlike salary, an RBA is paid only as long as the employee is in such a role. RBAs consist of a cash portion and, where applicable, a blocked UBS share award. Such shares will be unblocked in equal installments after two and three years. The compensation expense is recognized in the year of grant.

Note 30 Employee benefits: variable compensation (continued)**Discontinued deferred compensation plans**

The following plans have been discontinued. Expenses related to these plans were fully recognized in the income statement in periods prior to 2018. Any remaining outstanding options and stock appreciation rights under these awards will expire during 2019.

Senior Executive Equity Ownership Plan (SEEOP)

Up to February 2012, GEB members and selected senior executives received a portion of their mandatory deferral in UBS shares or notional shares, which vested in equal installments over a five-year vesting period and were forfeitable if certain conditions had not been met. The employee's business division or the Group as a whole had to be profitable in the financial year preceding scheduled vesting. Awards granted under SEEOP were settled by delivering UBS shares at vesting. No SEEOP awards have been granted since 2012.

Senior Executive Stock Option Plan (SESOP)

Up to February 2008, GEB members and selected senior executives were granted UBS options with a strike price set at 110% of the market value of a UBS share on the grant date. These awards vested in full following a three-year vesting period and generally expired 10 years from the grant date. No SESOP awards have been granted since 2008.

Long-Term Deferred Retention Senior Incentive Scheme (LTDRSIS)

Awards under the LTDRSIS were granted to employees in Australia up to and including 2014 and represented a profit share amount based on the profitability of the Australian business. Awards vested after three years and included an arrangement that allowed for unpaid installments to be reduced if the business recorded a loss for the calendar year preceding vesting. The awards were generally forfeitable upon voluntary termination of employment with UBS.

Key Employee Stock Appreciation Rights Plan (KESAP) and Key Employee Stock Option Plan (KESOP)

Until 2009, certain key and high-potential employees were granted discretionary share-settled stock appreciation rights (SARs) or options on UBS shares with a strike price not less than the market value of a UBS share on the date of grant. A SAR gives employees the right to receive a number of UBS shares equal to the value of any market price increase of a UBS share between the grant date and the exercise date. One option entitles the holder to acquire one registered UBS share at the option's strike price. SARs and options are settled by delivering UBS shares, except in jurisdictions where this is not permitted for legal reasons. No options or SARs awards have been granted since 2009.

Share delivery obligations

Share delivery obligations related to employee share-based compensation awards were 146 million shares as of 31 December 2018 (31 December 2017: 166 million shares). Share delivery obligations are calculated on the basis of unvested notional share awards, options and stock appreciation rights, taking applicable performance conditions into account.

As of 31 December 2018, UBS held 118 million treasury shares (31 December 2017: 132 million) that were available to satisfy share delivery obligations. Treasury shares held are delivered to employees at exercise or vesting. However, share delivery obligations related to certain options and stock appreciation rights can also be satisfied by shares issued out of conditional capital. As of 31 December 2018, the number of UBS Group AG shares that could have been issued out of conditional capital for this purpose was 125 million (31 December 2017: 128 million).

b) Effect on the income statement

Effect on the income statement for the financial year and future periods

The table below provides information on compensation expenses related to total variable compensation, including financial advisor variable compensation, that were recognized in the financial year ended 31 December 2018, as well as expenses that were deferred

and will be recognized in the income statement for 2019 and later. The majority of expenses deferred to 2019 and later that are related to the performance year 2018 relates to awards granted in March 2019. The total compensation expense for unvested share-based awards granted up to 31 December 2018 will be recognized in future periods over a weighted average period of 2.3 years.

Note 30 Employee benefits: variable compensation (continued)**c) Outstanding share-based compensation awards****Share and performance share awards**

Movements in outstanding share-based awards under the EOP during 2018 and 2017 are provided in the table below.

Movements in outstanding share and performance share awards granted under the EOP

	Number of shares 2018	Weighted average grant date fair value (USD)	Number of shares 2017	Weighted average grant date fair value (USD)
Outstanding, at the beginning of the year	162,835,713	15	165,626,088	16
Shares awarded during the year	58,329,398	17	63,872,651	15
Distributions during the year	(67,696,099)	15	(58,756,089)	16
Forfeited during the year	(6,623,984)	16	(7,906,936)	15
Outstanding, at the end of the year	146,845,027	16	162,835,713	15
<i>of which: shares vested for accounting purposes</i>	<i>66,850,562</i>		<i>74,883,139</i>	

The total carrying amount of the liability related to cash-settled share-based awards as of 31 December 2018 and 31 December 2017 was USD 39 million and USD 56 million, respectively.

Option awards

No option awards have been granted since 2009. The table below provides information on movements in outstanding option awards during 2018 and 2017. As these awards are Swiss franc-denominated, weighted average exercise prices are presented in Swiss francs.

Movements in outstanding option awards

	Number of options 2018	Weighted average exercise price (CHF)	Number of options 2017	Weighted average exercise price (CHF)
Outstanding, at the beginning of the year	32,583,168	25	55,913,291	39
Exercised during the year ¹	(1,813,583)	12	(1,632,319)	12
Forfeited during the year	(19,752)	23	(38,995)	27
Expired unexercised	(24,182,241)	29	(21,658,809)	61
Outstanding, at the end of the year	6,567,592	14	32,583,168	25
Exercisable, at the end of the year	6,567,592	14	32,583,168	25

¹ The weighted average share price upon option exercise was CHF 16.22 in 2018 (2017: CHF 16.73), resulting in an intrinsic value of CHF 7 million of options exercised during 2018 (2017: CHF 8 million).

The table below provides additional information about options outstanding as of 31 December 2018.

Range of exercise prices	Options outstanding			Weighted average remaining contractual term (years)
	Number of options outstanding	Weighted average exercise price (CHF)	Aggregate intrinsic value (CHF million)	
CHF				
10.21–15.00	3,294,894	10.27	6.5	0.2
15.01–25.00	3,272,698	16.95	0.0	0.6
10.21–25.00	6,567,592		6.5	

Note 30 Employee benefits: variable compensation (continued)**SAR awards**

No SAR awards have been granted since 2009. The table below provides information on movements in outstanding SAR awards during 2018 and 2017. As these awards are Swiss franc-denominated, weighted average exercise prices are presented in Swiss francs.

Movements in outstanding SAR awards

	Number of SARs 2018	Weighted average exercise price (CHF)	Number of SARs 2017	Weighted average exercise price (CHF)
Outstanding, at the beginning of the year	8,513,415	12	10,807,315	12
Exercised during the year ¹	(2,490,146)	11	(2,212,700)	11
Forfeited during the year	(11,000)	13	(23,000)	11
Expired unexercised	(46,500)	12	(58,200)	13
Outstanding, at the end of the year	5,965,769	12	8,513,415	12
Exercisable, at the end of the year	5,965,769	12	8,513,415	12

¹ The weighted average share price upon exercise of SARs was CHF 16.15 in 2018 (2017: CHF 16.70), resulting in an intrinsic value of CHF 12 million of SARs exercised during 2018 (2017: CHF 12 million).

The table below provides additional information about SARs outstanding as of 31 December 2018.

Range of exercise prices	SARs outstanding			Weighted average remaining contractual term (years)
	Number of SARs outstanding	Weighted average exercise price (CHF)	Aggregate intrinsic value (CHF million)

d) Valuation**UBS share awards**

UBS measures compensation expense based on the average market price of the UBS share on the grant date as quoted on the SIX Swiss Exchange, taking into consideration post-vesting sale and hedge restrictions, non-vesting conditions and market conditions, where applicable. The fair value of the share awards subject to post-vesting sale and hedge restrictions is discounted on the basis of the duration of the post-vesting restriction and is referenced to the cost of purchasing an at-the-money European put option for the term of the transfer restriction. The weighted average discount for share and performance share awards granted during 2018 was approximately 18.0% (2017: 20.2%) of the market price of the UBS share. The grant date fair value of notional shares without dividend entitlements also includes a deduction for the present value of future expected dividends to be paid between the grant date and distribution.

UBS options and SARs awards

The fair values of options and SARs have been determined using a standard closed-formula option valuation model. The expected term of each instrument is calculated on the basis of historical employee exercise behavior patterns, taking into account the share price, strike price, vesting period and the contractual life of the instrument. The term structure of volatility is derived from the implied volatilities of traded options on UBS shares in combination with the observed long-term historical share price volatility. Expected future dividends are derived from traded UBS options or from the historical dividend pattern.

Note 31 Interests in subsidiaries and other entities

a) Interests in subsidiaries

UBS defines its significant subsidiaries as those entities that, either individually or in aggregate, contribute significantly to the Group's financial position or results of operations, based on a number of criteria, including the subsidiaries' equity and their contribution to the Group's total assets and profit or loss before tax, in accordance with the requirements set by IFRS 12, Swiss regulations and the rules of the US Securities and Exchange Commission (SEC).

Individually significant subsidiaries

The two tables below list the Group's individually significant subsidiaries as of 31 December 2018. Unless otherwise stated, the subsidiaries listed below have share capital consisting solely

of ordinary shares that are held fully by the Group, and the proportion of ownership interest held is equal to the voting rights held by the Group.

The country where the respective registered office is located is also the principal place of business. UBS AG operates through a global network of branches and a significant proportion of its business activity is conducted outside Switzerland in the UK, US, Singapore, Hong Kong and other countries. UBS Europe SE has branches and offices in a number of EU member states, including Germany, Italy, Luxembourg, Spain and Austria. Share capital is provided in the currency of the legally registered office.

Subsidiaries of UBS Group AG as of 31 December 2018

¹ Includes a nominal amount relating to redeemable preference shares.

Consolidated structured entities

UBS consolidates a structured entity (SE) if it has power over the relevant activities of the entity, exposure to variable returns and the ability to use its power to affect its returns. Consolidated SEs include certain investment funds, securitization vehicles and client investment vehicles. UBS has no individually significant subsidiaries that are SEs.

Investment fund SEs are generally consolidated when the Group's aggregate exposure combined with its decision-making rights indicate the ability to use such power in a principal capacity. Typically the Group will have decision-making rights as fund manager, earning a management fee, and will provide seed capital at the inception of the fund or hold a significant percentage of the fund units. Where other investors do not have the substantive ability to remove UBS as decision maker, the Group is deemed to have control and therefore consolidates the fund.

Securitization SEs are generally consolidated when the Group holds a significant percentage of the asset-backed securities issued by the SE and has the power to remove without cause the servicer of the asset portfolio.

Client investment SEs are generally consolidated when the Group has a substantive liquidation right over the SE or a decision right over the assets held by the SE and has exposure to variable returns through derivatives traded with the SE or holding notes issued by the SE.

In 2018 and 2017, the Group did not enter into any contractual obligation that could require the Group to provide financial support to consolidated SEs. In addition, the Group did not provide support, financial or otherwise, to a consolidated SE when the Group was not contractually obligated to do so, nor has the Group an intention to do so in the future. Further, the Group did not provide support, financial or otherwise, to a previously unconsolidated SE that resulted in the Group controlling the SE during the reporting period.

Note 31 Interests in subsidiaries and other entities (continued)**b) Interests in associates and joint ventures**

As of 31 December 2018 and 2017, no associate or joint venture was individually material to the Group. In addition, there were no significant restrictions on the ability of associates or joint ventures to transfer funds to UBS Group AG or its subsidiaries in the form of cash dividends or to repay loans or advances made. There were no quoted market prices for any associates or joint ventures of the Group.

UBS Securities China is no longer recognized as an investment in associate as of 31 December 2018 as this entity was consolidated following an increase in stake from 24.99% to 51% and UBS acquiring control in December 2018.

→ Refer to Note 32 for more information

In November 2018, SIX and Worldline entered into a strategic partnership in the cards business under which SIX transferred its existing cards business to Worldline and received a 27% stake in Worldline. UBS recognized a gain of USD 460 million in the income statement, proportional to UBS's 17.31% equity ownership in SIX.

Investments in associates and joint ventures

<i>USD million</i>	2018	2017

¹ In December 2018, UBS increased its shareholding in UBS Securities China from 24.99% to 51%, acquiring control of the entity in accordance with IFRS 10, Consolidated Financial Statements. Upon acquisition of control, UBS derecognized its former investment in associate. Refer to Note 32 for more information. ² Reflects reclassifications to Properties and other non-current assets held for sale. ³ For 2018, consists of USD 511 million from associates, of which USD 460 million reflected a valuation gain on the equity ownership in SIX related to the sale of SIX Payment Services to Worldline, and USD 18 million from joint ventures. For 2017, consists of USD 61 million from associates and USD 15 million from joint ventures. ⁴ For 2018, the total of USD 1 million is from associates. For 2017, consists of USD 24 million from associates and negative USD 1 million from joint ventures. ⁵ In 2018, UBS AG's equity interest amounts to 17.31%. UBS AG is represented on the Board of Directors.

Consolidated financial statements
UBS Group AG consolidated financial statements

Note 31 Interests in subsidiaries and other entities (continued)

c) Interests in unconsolidated structured entities

During 2018, the Group sponsored the creation of various SEs and interacted with a number of non-sponsored SEs, including securitization vehicles, client vehicles as well as certain investment funds, that UBS did not consolidate as of 31 December 2018 because it did not control these entities.

The table below presents the Group's interests in and maximum exposure to loss from unconsolidated SEs as well as the total assets held by the SEs in which UBS had an interest as of year-end, except for investment funds sponsored by third parties, for which the carrying value of UBS's interest as of year-end has been disclosed.

Interests in unconsolidated structured entities

	31.12.18				
<i>USD million, except where indicated</i>	Securitization vehicles	Client vehicles	Investment funds	Total	Maximum exposure to loss ¹

Total liabilities	21	54	208	283	
Assets held by the unconsolidated structured entities in which UBS had an interest (USD billion)⁹	58⁶	80⁷	422⁸		

¹ For the purpose of this disclosure, maximum exposure to loss amounts do not consider the risk-reducing effects of collateral or other credit enhancements. ² Represents the carrying value of loan commitments. The maximum exposure to loss for these instruments is equal to the notional amount. ³ Upon adoption of IFRS 9 on 1 January 2018, investment fund units that were formerly classified as available for sale under IAS 39 were reclassified to Financial assets at fair value not held for trading. Refer to Note 1c for more information. ⁴ As of 31 December 2018, USD 0.6 billion of the USD 0.8 billion (31 December 2017: USD 0.7 billion of the USD 0.8 billion) was held in Corporate Center – Non-core and Legacy Portfolio. ⁵ Comprised of credit default swap liabilities and other swap liabilities. The maximum exposure to loss for credit default swap liabilities is equal to the sum of the negative carrying value and the notional amount. For other swap liabilities, no maximum exposure to loss is reported. ⁶ Represents the principal amount outstanding. ⁷ Represents the market value of total assets. ⁸ Represents the net asset value of the investment funds sponsored by UBS and the carrying value of UBS's interests in the investment funds not sponsored by UBS. ⁹ In 2018 UBS has refined the methodology applied to identify significant interests in the scope of disclosure under IFRS 12, Disclosure of Interests in Other Entities. This change has been applied prospectively as the effect on interests disclosed was not material in prior periods. Had this methodology been applied in 2017, the interests in unconsolidated structured entities at 31 December 2017 would have been USD 0.3 million and USD 0.2 million lower for securitization vehicles and client vehicles, respectively. Assets held by the unconsolidated structured entities in which UBS had an interest at 31 December 2017 would have been USD 26 billion lower for securitization vehicles and USD 22 billion lower for client vehicles.

Note 31 Interests in subsidiaries and other entities (continued)

The Group retains or purchases interests in unconsolidated SEs in the form of direct investments, financing, guarantees, letters of credit, derivatives and through management contracts.

The Group's maximum exposure to loss is generally equal to the carrying value of the Group's interest in the SE, with the exception of guarantees, letters of credit and credit derivatives, for which the contract's notional amount, adjusted for losses already incurred, represents the maximum loss that the Group is exposed to. In addition, the current fair value of derivative swap instruments with a positive replacement value only, such as total return swaps, is presented as the maximum exposure to loss. Risk exposure for these swap instruments could change over time with market movements.

The maximum exposure to loss disclosed in the table on the previous page does not reflect the Group's risk management activities, including effects from financial instruments that may be used to economically hedge the risks inherent in the unconsolidated SE or the risk-reducing effects of collateral or other credit enhancements.

In 2018 and 2017, the Group did not provide support, financial or otherwise, to an unconsolidated SE when not contractually obligated to do so, nor has the Group an intention to do so in the future.

In 2018 and 2017, income and expenses from interests in unconsolidated SEs primarily resulted from mark-to-market movements recognized in other net income from fair value changes on financial instruments, which have generally been hedged with other financial instruments, as well as fee and commission income received from UBS-sponsored funds.

Interests in securitization vehicles

As of 31 December 2018 and 31 December 2017, the Group held interests, both retained and acquired, in various securitization vehicles, a majority of which are held within Corporate Center – Non-core and Legacy Portfolio. The Investment Bank also retained interests in securitization vehicles related to financing, underwriting, secondary market and derivative trading activities. In some cases the Group may be required to absorb losses from an unconsolidated SE before other parties because the Group's interest is subordinated to others in the ownership structure.

An overview of the Group's interests in unconsolidated securitization vehicles and the relative ranking and external credit rating of those interests is presented in the table on the following pages. The numbers outlined in this table may differ

from the securitization positions presented in the 31 December 2018 Pillar 3 report under "Pillar 3 disclosures" at www.ubs.com/investors, for the following reasons: (i) exclusion from the table on the following pages of synthetic securitizations transacted with entities that are not SEs and transactions in which the Group did not have an interest because it did not absorb any risk, (ii) a different measurement basis in certain cases (e.g., IFRS carrying value within the table above compared with net exposure amount at default for Pillar 3 disclosures) and (iii) different classification of vehicles viewed as sponsored by the Group versus sponsored by third parties.

- Refer to Note 1a item 1 for more information on the Group's accounting policies regarding consolidation and sponsorship of securitization vehicles and other structured entities
- Refer to the 31 December 2018 Pillar 3 report under "Pillar 3 disclosures" at www.ubs.com/investors for more information

Interests in client vehicles

As of 31 December 2018 and 31 December 2017, the Group retained interests in client vehicles sponsored by UBS and third parties that relate to financing and derivative activities, and to hedge structured product offerings. Included within these investments are securities guaranteed by US government agencies.

Interests in investment funds

The Group holds interests in a number of investment funds, primarily resulting from seed investments or in order to hedge structured product offerings. In addition to the interests disclosed in the table on the previous page, the Group manages the assets of various pooled investment funds and receives fees that are based, in whole or part, on the net asset value of the fund and / or the performance of the fund. The specific fee structure is determined on the basis of various market factors and considers the nature of the fund and the jurisdiction of incorporation, as well as fee schedules negotiated with clients. These fee contracts represent an interest in the fund as they align the Group's exposure with investors, providing a variable return that is based on the performance of the entity. Depending on the structure of the fund, these fees may be collected directly from the fund assets and / or from the investors. Any amounts due are collected on a regular basis and are generally backed by the assets of the fund. The Group did not have any material exposure to loss from these interests as of 31 December 2018 or as of 31 December 2017.

¹ This table excludes receivables and derivative transactions with securitization vehicles. ² Includes credit card, auto and student loan structures. ³ Includes collateralized debt obligations. ⁴ In 2018 UBS has refined the methodology applied to identify significant interests in the scope of disclosure under IFRS 12, Disclosure of Interests in Other Entities. This change has been applied prospectively as the effect on interests disclosed was not material in prior periods. Had this methodology been applied in 2017, the interests in unconsolidated securitization vehicles at 31 December 2017 would have been USD 0.3 million lower and the assets held by these unconsolidated securitization vehicles would have been USD 26 billion lower.

Note 31 Interests in subsidiaries and other entities (continued)**Sponsored unconsolidated structured entities in which UBS did not have an interest**

For several sponsored SEs, no interest was held by the Group at year-end. However, during the respective reporting period the Group transferred assets, provided services and held instruments that did not qualify as an interest in these sponsored SEs, and accordingly earned income or incurred expenses from these entities. The table below presents the income earned and expenses incurred directly from these entities during the year as well as corresponding asset information. The table does not include income earned and expenses incurred from risk management activities, including income and expenses from financial instruments used to economically hedge instruments transacted with the unconsolidated SEs.

The majority of the fee income arose from investment funds that are sponsored and administrated by the Group, but managed by third parties. As the Group does not provide any active management services, UBS was not exposed to risk from the performance of these entities and was therefore deemed not to have an interest in them. In certain structures, the fees receivable may be collected directly from the investors and have therefore not been included in the table below.

The Group also recorded other net income from fair value changes on financial instruments from mark-to-market movements arising primarily from derivatives, such as interest rate and currency swaps as well as credit derivatives, through which the Group purchases protection, and financial liabilities designated at fair value, which do not qualify as interests because the Group does not absorb variability from the performance of the entity. Total income reported does not reflect economic hedges or other mitigating effects from the Group's risk management activities.

During 2018, UBS and third parties transferred assets of USD 1 billion and USD 1 billion, respectively, into sponsored securitization vehicles created in the year (2017: USD 2 billion and USD 8 billion, respectively). UBS and third parties also transferred assets of USD 2 billion and USD 0 billion, respectively, into sponsored client vehicles created in the year (2017: USD 3 billion and USD 1 billion, respectively). For sponsored investment funds, transfers arose during the period as investors invested and redeemed positions, thereby changing the overall size of the funds, which, when combined with market movements, resulted in a total closing net asset value of USD 18 billion (31 December 2017: USD 15 billion).

Sponsored unconsolidated structured entities in which UBS did not have an interest at year-end¹

	As of or for the year ended			
	31.12.18			
	Securitization vehicles	Client vehicles	Investment funds	Total
<i>USD million, except where indicated</i>				
Net interest income	0	(6)	1	(5)

Asset information (USD billion)	10²	4³	15⁴	

¹ For the year ended 31 December 2018, no profit attributable to non-controlling interests was excluded from the table (31 December 2017: USD 73 million). ² Represents the amount of assets transferred to the respective securitization vehicles. ³ Represents the amount of assets transferred to the respective client vehicles. Information in the comparative period has been restated. Asset information as of 31 December 2017 has decreased by USD 3 billion as a result. ⁴ Represents the total net asset value of the respective investment funds.

Note 32 Changes in organization and acquisitions and disposals of subsidiaries and businesses

Changes in Group structure and organization

UBS Business Solutions AG

In 2015, UBS Business Solutions AG was established as a direct subsidiary of UBS Group AG to act as the Group service company and UBS transferred the ownership of the majority of its existing service subsidiaries outside the US to UBS Business Solutions AG. In 2017, shared services functions in Switzerland and the UK were transferred from UBS AG to UBS Business Solutions AG. In 2017, UBS also completed the transfer of the shared services employees in the US to its US service company, UBS Business Solutions US LLC, a wholly owned subsidiary of UBS Americas Holding LLC.

UBS Group Funding (Switzerland) AG

UBS established UBS Group Funding (Switzerland) AG in 2016 as a wholly owned direct subsidiary of UBS Group AG, to issue loss-absorbing additional tier 1 (AT1) capital instruments and total loss-absorbing capacity (TLAC)-eligible senior unsecured debt, which are guaranteed by UBS Group AG. In 2017, UBS transferred the then outstanding TLAC-eligible senior unsecured debt to UBS Group Funding (Switzerland) AG as the issuer. In May 2018, UBS substituted UBS Group AG where it was the issuer of outstanding AT1 capital instruments with UBS Group Funding (Switzerland) AG. Following the substitution, the relevant AT1 capital instruments are guaranteed by UBS Group AG, and investors' seniority of claim against UBS Group AG remains unchanged.

UBS Europe SE

In 2016, UBS merged its Wealth Management subsidiaries in Italy, Luxembourg (including its branches in Austria, Denmark and Sweden), the Netherlands and Spain into UBS Deutschland AG, which was renamed to UBS Europe SE, in order to establish UBS's new European legal entity, which is headquartered in Frankfurt, Germany.

The previously announced combined UK business transfer and cross-border merger of UBS Limited into UBS Europe SE took place on 1 March 2019.

Transfer of assets and liabilities from UBS Limited to UBS AG, London Branch

In the fourth quarter of 2018, clients and other counterparties of UBS Limited who can be serviced by UBS AG, London Branch were generally migrated to UBS AG, London Branch. Transactions affecting the businesses that were transferred which occurred on or after the transfer date were recorded in UBS AG, London Branch.

UBS Asset Management AG

In 2016, UBS transferred the majority of the operating subsidiaries of Asset Management to UBS Asset Management AG.

Increase of stake in and consolidation of UBS Securities China

In December 2018, UBS increased its shareholding in UBS Securities China from 24.99% to 51%, acquiring control of the entity in accordance with IFRS 10, *Consolidated Financial Statements*. Upon acquisition of control, UBS remeasured its former 24.99% holding at fair value, resulting in a pre-tax loss of USD 270 million, recognized in *Other income*. In addition, a net foreign currency translation gain of USD 46 million was recognized upon derecognition of the former investment in associate, also in *Other income*.

The cost of acquisition of the additional 26.01% stake was USD 125 million. Upon consolidation, UBS recognized USD 102 million of goodwill and USD 278 million of other net assets. In addition, a non-controlling interest of USD 136 million has been recognized.

Acquisitions

In October 2018, UBS acquired certain assets and liabilities from Nordea's Luxembourg-based private banking business for a consideration of approximately EUR 120 million. As a result of the transaction, UBS recognized a total of EUR 1.1 billion of loans (mortgages, Lombard loans, overdrafts), EUR 1.3 billion of cash and EUR 2.4 billion of deposits, as well as approximately EUR 75 million of intangible assets and approximately EUR 50 million of goodwill, recognized in Global Wealth Management. In addition, UBS reported an increase of approximately EUR 9.5 billion in client assets, of which approximately EUR 6.1 billion count as invested assets.

Sales and disposals of subsidiaries and businesses

In 2018, 2017 and 2016, no significant subsidiaries were removed from the scope of consolidation as a result of sales or disposals.

In the third quarter of 2018, UBS completed the sale of Widder Hotel, resulting in a pre-tax gain on sale of subsidiaries and businesses of USD 25 million and a pre-tax gain on sale of real estate of USD 31 million.

In 2017, UBS completed the sale of Asset Management's fund administration servicing units in Luxembourg and Switzerland to Northern Trust, resulting in a pre-tax gain on sale of USD 153 million. Also in 2017, UBS completed the sale of a life insurance subsidiary within Global Wealth Management. A loss on sale of USD 24 million was recognized in 2016 relating to this transaction.

Note 33 Operating leases and finance leases

Information on lease contracts classified as operating leases where UBS is the lessee is provided in Note 33a and information on finance leases where UBS acts as a lessor is provided in Note 33b.

a) Operating lease commitments

As of 31 December 2018, UBS was obligated under a number of non-cancelable operating leases for premises and equipment used primarily for banking purposes. The significant premises leases usually include renewal options and escalation clauses in line with general office rental market conditions, as well as rent adjustments based on price indices. However, the lease

agreements do not contain contingent rent payment clauses and purchase options, nor do they impose any restrictions on UBS's ability to pay dividends, engage in debt financing transactions or enter into further lease agreements.

→ Refer to Note 1d for more information on the expected effects of adoption of IFRS 16, *Leases*, effective 1 January 2019

<i>USD million</i>	31.12.18

Sublease rental income	52	68	79
Net operating lease expense recognized in the income statement	714	671	678

b) Finance lease receivables

UBS leases a variety of assets to third parties under finance leases, such as commercial vehicles, production lines, medical equipment, construction equipment and aircraft. At the end of the respective lease term, assets may be sold to third parties or further leased. Lessees may participate in any sales proceeds achieved. Lease expenses cover the cost of the assets less their residual value as well as financing costs.

As of 31 December 2018, unguaranteed residual values of USD 156 million had been accrued, and the ECL stage 3 allowance for uncollectible minimum lease payments receivable amounted to USD 7 million. No contingent rents were received in 2018. Amounts in the table below are disclosed on a gross basis. The finance lease receivable in Note 17a of USD 1,091 million is presented net of expected credit loss allowances.

Note 35 Related parties

UBS defines related parties as associates (entities that are significantly influenced by UBS), joint ventures (entities in which UBS shares control with another party), post-employment benefit plans for UBS employees, key management personnel, close family members of key management personnel and entities

that are, directly or indirectly, controlled or jointly controlled by key management personnel or their close family members. Key management personnel is defined as members of the Board of Directors (BoD) and Group Executive Board (GEB).

a) Remuneration of key management personnel

The Chairman of the BoD has a specific management employment contract and receives pension benefits upon retirement. Total remuneration of the Chairman of the Board of Directors and all GEB members is included in the table below.

Remuneration of key management personnel

<i>USD million, except where indicated</i>	31.12.18	31.12.17	31.12.16
Base salaries and other cash payments ¹	27	25	25

Equity-based compensation ³	40	40	42
Total	109	106	105
Total (CHF million)⁴	107	106	104

¹ Includes role-based allowances in line with market practice in response to regulatory requirements. ² The cash portion may also include blocked shares in line with regulatory requirements. ³ Expenses for shares granted are calculated at grant date of the respective award and allocated over the vesting period of generally 5 years. Refer to Note 30 for more information. In 2018, 2017 and 2016, equity-based compensation was entirely comprised of EOP awards. ⁴ Swiss franc amounts disclosed represent the respective US dollar amounts translated at the applicable performance award currency exchange rates (2018: CHF / USD 0.98; 2017: CHF / USD 1.00; 2016: CHF / USD 0.99).

The independent members of the BoD do not have employment or service contracts with UBS, and thus are not entitled to benefits upon termination of their service on the BoD. Payments to these individuals for their services as external board members

amounted to USD 7.6 million (CHF 7.4 million) in 2018, USD 7.1 million (CHF 7.1 million) in 2017 and USD 7.2 million (CHF 7.2 million) in 2016.

b) Equity holdings of key management personnel

Equity holdings of key management personnel

	31.12.18	31.12.17
Number of stock options from equity participation plans held by non-independent members of the BoD and the GEB members ¹	0	398,867
Number of shares held by members of the BoD, GEB and parties closely linked to them ²	5,954,967	3,709,539

¹ Refer to Note 30 for more information. ² Excludes shares granted under variable compensation plans with forfeiture provisions.

Of the share totals above, 95,597 shares were held by close family members of key management personnel on 31 December 2018 and 31 December 2017. No shares were held by entities that are directly or indirectly controlled or jointly controlled by key management personnel or their close family members on

31 December 2018 and 31 December 2017. Refer to Note 30 for more information. As of 31 December 2018, no member of the BoD or GEB was the beneficial owner of more than 1% of UBS Group AG's shares.

Note 35 Related parties (continued)**c) Loans, advances and mortgages to key management personnel**

The non-independent members of the BoD and GEB members are granted loans, fixed advances and mortgages in the ordinary course of business on substantially the same terms and conditions that are available to other employees, including interest rates and collateral, and neither involve more than the normal risk of collectibility nor contain any other unfavorable

features for the firm. Independent BoD members are granted loans and mortgages in the ordinary course of business at general market conditions.

Movements in the loan, advances and mortgage balances are as follows.

Loans, advances and mortgages to key management personnel¹

<i>USD million, except where indicated</i>	2018	2017

Balance at the end of the year (CHF million)^{2,3}	34	41

¹ All loans are secured loans. ² Excludes unused uncommitted credit facilities for one GEB member of USD 3,000,000 (CHF 2,949,690) as of 31 December 2018 and for two GEB members and one BoD member of USD 5,330,670 (CHF 5,196,294) as of 31 December 2017. ³ Swiss franc amounts disclosed represent the respective US dollar amounts translated at the relevant year-end closing exchange rate.

d) Other related-party transactions with entities controlled by key management personnel

In 2018 and 2017, UBS did not enter into transactions with entities that are directly or indirectly controlled or jointly controlled by UBS's key management personnel or their close family members and as of 31 December 2018, 31 December 2017 and 31 December 2016, there were no outstanding balances related to such transactions. Furthermore, in 2018 and

2017, entities controlled by key management personnel did not sell any goods or provide any services to UBS, and therefore did not receive any fees from UBS. UBS also did not provide services to such entities in 2018 and 2017, and therefore also received no fees.

Note 36 Invested assets and net new money**Invested assets**

Invested assets include all client assets managed by or deposited with UBS for investment purposes. Invested assets include managed fund assets, managed institutional assets, discretionary and advisory wealth management portfolios, fiduciary deposits, time deposits, savings accounts and wealth management securities or brokerage accounts. All assets held for purely transactional purposes and custody-only assets, including corporate client assets held for cash management and transactional purposes, are excluded from invested assets as the Group only administers the assets and does not offer advice on how the assets should be invested. Also excluded are non-bankable assets (e.g., art collections) and deposits from third-party banks for funding or trading purposes.

Discretionary assets are defined as client assets that UBS decides how to invest. Other invested assets are those where the client ultimately decides how the assets are invested. When a single product is created in one business division and sold in another, it is counted in both the business division that manages the investment and the one that distributes it. This results in double counting within UBS total invested assets, as both business divisions are independently providing a service to their respective clients, and both add value and generate revenue.

Net new money

Net new money in a reporting period is the amount of invested assets that are entrusted to UBS by new and existing clients, less those withdrawn by existing clients and clients who terminated their relationship with UBS.

Net new money is calculated using the direct method, under which inflows and outflows to / from invested assets are determined at the client level based on transactions. Interest and dividend income from invested assets are not counted as net new money inflows. Market and currency movements as well as fees, commissions and interest on loans charged are excluded from net new money, as are the effects resulting from any acquisition or divestment of a UBS subsidiary or business. Reclassifications between invested assets and custody-only assets as a result of a change in the service level delivered are generally treated as net new money flows; however, where such change in service level directly results from a new externally imposed regulation, the one-time net effect of the implementation is reported as an asset reclassification without net new money impact.

The Investment Bank does not track invested assets and net new money. However, when a client is transferred from the Investment Bank to another business division, this produces net new money even though client assets were already with UBS. There were no such transfers between the Investment Bank and other business divisions in 2018 and 2017.

Invested assets and net new money

	As of or for the year ended

Note 37 Currency translation rates

The following table shows the rates of the main currencies used to translate the financial information of UBS's operations with a functional currency other than the US dollar into US dollars.

	Closing exchange rate		Average rate ¹		
	As of		For the year ended		
	31.12.18	31.12.17	31.12.18	31.12.17	31.12.16
1 CHF	1.02	1.03	1.02	1.02	1.01
1 EUR	1.15	1.20	1.18	1.14	1.10
1 GBP	1.28	1.35	1.33	1.30	1.34
100 JPY	0.91	0.89	0.91	0.89	0.92

¹ Monthly income statement items of operations with a functional currency other than the US dollar are translated with month-end rates into US dollars. Disclosed average rates for a year represent an average of 12 month-end rates, weighted according to the income and expense volumes of all operations of the Group with the same functional currency for each month. Weighted average rates for individual business divisions may deviate from the weighted average rates for the Group.

Note 38 Events after the reporting period

Events subsequent to the publication of the unaudited fourth quarter 2018 report

The 2018 results and the balance sheet as of 31 December 2018 differ from those presented in the unaudited fourth quarter 2018 report published on 22 January 2019 as a result of events adjusted for after the balance sheet date. Provisions for litigation, regulatory and similar matters increased, which reduced 2018 operating profit before tax and 2018 net profit attributable to shareholders each by USD 382 million. As a result, basic earnings per share decreased by USD 0.10 and diluted earnings per share decreased by USD 0.09.

→ Refer to Note 21 for more information on provisions for litigation, regulatory and similar matters

Note 39 Main differences between IFRS and Swiss GAAP

The consolidated financial statements of UBS Group AG are prepared in accordance with International Financial Reporting Standards (IFRS). The Swiss Financial Market Supervisory Authority (FINMA) requires financial groups that present their financial statements under IFRS to provide a narrative explanation of the main differences between IFRS and Swiss GAAP (FINMA Circular 2015 / 1 and the Banking Ordinance). Included in this Note are the significant differences in the recognition and measurement between IFRS and the provisions of the Banking Ordinance and the guidelines of FINMA governing true and fair view financial statement reporting pursuant to article 25 through article 42 of the Banking Ordinance.

1. Consolidation

Under IFRS, all entities that are controlled by the holding entity are consolidated.

Under Swiss GAAP, controlled entities that are deemed immaterial to the Group or that are held temporarily only are exempt from consolidation, but instead are recorded as participations accounted for under the equity method of accounting or as financial investments measured at the lower of cost or market value.

2. Classification and measurement of financial assets

Under IFRS, financial assets are classified as measured at amortized cost, fair value through other comprehensive income (FVOCI) or fair value through profit or loss (FVTPL). Whereas all equity instruments are accounted for at FVTPL by UBS, the classification and measurement of debt instruments depends on the nature of the business model within which the asset is held and the characteristics of the contractual cash flows of the asset.

Under Swiss GAAP, debt instruments are generally measured at amortized cost. The classification and measurement of financial assets in the form of securities depend on the nature of the asset: debt instruments that are not held to maturity (available for sale), as well as equity instruments with no permanent holding intent, are classified as *Financial investments* and measured at the lower of (amortized) cost or market value. Market value adjustments up to the original cost amount and realized gains or losses upon disposal of the investment are recorded in the income statement as *Other income from ordinary activities*. Equity instruments with a permanent holding intent are classified as participations in *Non-consolidated investments in subsidiaries and other participations* and measured at cost less impairment.

Impairment losses are recorded in the income statement as *Impairment of investments in non-consolidated subsidiaries and other participations*. Reversals of impairments up to the original cost amount as well as realized gains or losses upon disposal of the investment are recorded as *Extraordinary income / Extraordinary expenses* in the income statement.

Note 39 Main differences between IFRS and Swiss GAAP (continued)**3. Fair value option applied to financial liabilities**

Under IFRS, UBS applies the fair value option to certain financial liabilities not held for trading. Instruments for which the fair value option is applied are accounted for at FVTPL. The amount of change in the fair value that is attributable to changes in UBS's own credit is presented in *Other comprehensive income* directly within *Retained earnings*. The fair value option is applied primarily to issued structured debt instruments; certain non-structured debt instruments; certain payables under repurchase agreements and cash collateral on securities lending agreements; amounts due under unit-linked investment contracts; brokerage payables; and certain loan commitments.

Under Swiss GAAP, the fair value option can only be applied to structured debt instruments that consist of a debt host contract and one or more embedded derivatives that do not relate to own equity. Furthermore, unrealized changes in fair value attributable to changes in UBS's own credit are not recognized, whereas realized own credit is recognized in *Net trading income*.

4. Allowances and provisions for credit losses

Under IFRS, allowances and provisions for credit losses are estimated based on an expected credit loss model. Expected credit losses (ECL) are recognized for financial assets measured at amortized cost, financial assets measured at FVOCI, fee and lease receivables, financial guarantees, loan commitments and certain other credit facilities. Maximum 12-month ECL are recognized from initial recognition of instruments in stage 1. Lifetime ECL are recognized for instruments in stage 2 if a significant increase in credit risk is detected subsequent to the instrument's initial recognition. Lifetime ECL are also recognized for credit-impaired financial instruments, referred to as instruments in stage 3. Determination of whether an instrument is credit impaired is based on the occurrence of one or more loss events.

Under Swiss GAAP, a claim is impaired and an allowance or provision for credit losses is recognized when objective evidence demonstrates that a loss event has occurred after the initial recognition and that the loss event has an effect on future cash flows that can be reliably estimated (incurred loss approach). UBS considers a claim to be impaired if it will be unable to

collect all amounts due on it based on the original contractual terms as a result of credit deterioration of the issuer or counterparty. Impairment under the incurred loss approach is in line with ECL for credit-impaired claims in stage 3 under IFRS. A claim can be a loan or receivable or other debt instrument held to maturity carried at amortized cost, a debt instrument available for sale carried at the lower of amortized cost or market value, or a commitment, such as a letter of credit, a guarantee or a similar instrument.

An allowance for credit losses is reported as a decrease in the carrying value of a financial asset. For an off-balance sheet item, such as a commitment, a provision for credit loss is reported in *Provisions*. Changes to allowances and provisions for credit losses are recognized in *Credit loss (expense) / recovery*.

5. Hedge accounting

Under IFRS, when cash flow hedge accounting is applied, the fair value gain or loss on the effective portion of the derivative designated as a cash flow hedge is recognized in equity. When fair value hedge accounting is applied, the fair value gains or losses of the derivative and the hedged item are recognized in the income statement.

Under Swiss GAAP, the effective portion of the fair value change of the derivative instrument designated as a cash flow or as fair value hedge is deferred on the balance sheet as *Other assets* or *Other liabilities*. The carrying value of the hedged item designated in fair value hedges is not adjusted for fair value changes attributable to the hedged risk.

6. Goodwill and intangible assets

Under IFRS, goodwill acquired in a business combination is not amortized but tested annually for impairment. Intangible assets with an indefinite useful life are also not amortized but tested annually for impairment.

Under Swiss GAAP, goodwill and intangible assets with indefinite useful lives are amortized over a period not exceeding five years, unless a longer useful life, which may not exceed 10 years, can be justified. In addition, these assets are tested annually for impairment.

Note 39 Main differences between IFRS and Swiss GAAP (continued)**7. Pension and other post-employment benefit plans**

Swiss GAAP permits the use of IFRS or Swiss accounting standards for pension and other post-employment benefit plans, with the election made on a plan-by-plan basis.

UBS has elected to apply IFRS (IAS 19) for the non-Swiss defined benefit plans in UBS AG standalone financial statements and Swiss GAAP (FER 16) for the Swiss pension plan in the UBS AG and the UBS Switzerland AG standalone financial statements. The requirements of Swiss GAAP are better aligned with the specific nature of Swiss pension plans, which are hybrid in that they combine elements of defined contribution and defined benefit plans, but are treated as defined benefit plans under IFRS. Key differences between Swiss GAAP and IFRS include the treatment of dynamic elements, such as future salary increases and future interest credits on retirement savings, which are not considered under the static method used in accordance with Swiss GAAP. Also, the discount rate used to determine the defined benefit obligation in accordance with IFRS is based on the yield of high-quality corporate bonds of the market in the respective pension plan country. The discount rate used in accordance with Swiss GAAP (i.e., the technical interest rate) is determined by the Pension Foundation Board based on the expected returns of the Board's investment strategy.

For defined benefit plans, IFRS requires the full defined benefit obligation net of the plan assets to be recorded on the balance sheet, with changes resulting from remeasurements recognized directly in equity. However, for non-Swiss defined benefit plans for which IFRS accounting is elected, changes due to remeasurements are recognized in the income statement of UBS AG standalone under Swiss GAAP.

Swiss GAAP requires that employer contributions to the pension fund are recognized as personnel expenses in the income statement. Further, Swiss GAAP requires an assessment as to whether, based on the financial statements of the pension fund prepared in accordance with Swiss accounting standards (FER 26), an economic benefit to, or obligation of, the employer arises from the pension fund which is recognized in the balance sheet when conditions are met. Conditions for recording a pension asset or liability would be met if, for example, an employer contribution reserve is available or the employer is required to contribute to the reduction of a pension deficit (on an FER 26 basis).

8. Netting of replacement values

Under IFRS, replacement values and related cash collateral are reported on a gross basis unless the restrictive IFRS netting requirements are met: i) existence of master netting agreements and related collateral arrangements that are unconditional and legally enforceable, both in the normal course of business and in the event of default, bankruptcy or insolvency of UBS and its counterparties; and ii) UBS's intention to either settle on a net basis or to realize the asset and settle the liability simultaneously.

Under Swiss GAAP, replacement values and related cash collateral are generally reported on a net basis, provided the master netting and the related collateral agreements are legally enforceable in the event of default, bankruptcy or insolvency of UBS's counterparties.

9. Negative interest

Under IFRS, negative interest income arising on a financial asset does not meet the definition of interest income and, therefore, negative interest on financial assets and negative interest on financial liabilities are presented within interest expense and interest income, respectively.

Under Swiss GAAP, negative interest on financial assets is presented within interest income and negative interest on financial liabilities is presented within interest expense.

10. Extraordinary income and expense

Certain non-recurring and non-operating income and expense items, such as realized gains or losses from the disposal of participations, fixed and intangible assets, as well as reversals of impairments of participations and fixed assets, are classified as extraordinary items under Swiss GAAP. This distinction is not available under IFRS. ▲

UBS AG consolidated financial information

This section contains a comparison of selected financial and capital information between UBS Group AG consolidated and UBS AG consolidated. Information for UBS AG consolidated does not differ materially from UBS Group AG on a consolidated basis.

Comparison UBS Group AG consolidated versus UBS AG consolidated

The accounting policies applied under International Financial Reporting Standards (IFRS) to both UBS Group AG and UBS AG consolidated financial statements are identical. However, there are certain scope and presentation differences as noted below:

- Assets, liabilities, operating income, operating expenses and operating profit before tax relating to UBS Group AG and its directly held subsidiaries, including UBS Business Solutions AG, are reflected in the consolidated financial statements of UBS Group AG but not of UBS AG. UBS AG's assets, liabilities, operating income and operating expenses related to transactions with UBS Group AG and its directly held subsidiaries, including UBS Business Solutions AG and other shared services subsidiaries, are not subject to elimination in the UBS AG consolidated financial statements, but are eliminated in the UBS Group AG consolidated financial statements. UBS Business Solutions AG and other shared services subsidiaries of UBS Group AG charge other legal entities within the UBS AG consolidation scope for services provided, including a markup on costs incurred.
- UBS Group AG consolidated equity was USD 0.7 billion higher compared to the equity of UBS AG consolidated as of 31 December 2018, mainly driven by higher dividends paid by UBS AG to UBS Group AG compared with the dividend distributions of UBS Group AG, as well as higher retained earnings in the UBS Group AG consolidated financial statements, largely related to the aforementioned markup charged by shared services subsidiaries of UBS Group AG to other legal entities in the UBS AG scope of consolidation. UBS Group AG is also the grantor of the majority of the compensation plans of the Group and recognizes share premium for equity-settled awards granted, largely offset by the treasury shares held to hedge the related share delivery obligation and those acquired as part of our share repurchase program. These effects were partly offset by additional share premium recognized at the UBS AG consolidated level related to the establishment of UBS Group AG and UBS Business Solutions AG, a wholly owned subsidiary of UBS Group AG.
- Going concern capital of UBS AG consolidated was USD 3.9 billion lower than going concern capital of UBS Group AG consolidated as of 31 December 2018, reflecting lower additional tier 1 (AT1) capital of USD 4.4 billion partly offset by higher common equity tier 1 (CET1) capital of USD 0.5 billion.
- CET1 capital of UBS AG consolidated was USD 0.5 billion higher than that of UBS Group AG consolidated as of 31 December 2018. The main drivers are differences in equity, in deductions for compensation-related regulatory capital components and in dividend accruals.
- Going concern loss-absorbing AT1 capital of UBS AG consolidated was USD 4.4 billion lower than that of UBS Group AG consolidated as of 31 December 2018, reflecting Deferred Contingent Capital Plan awards and AT1 capital notes. These AT1 capital notes were issued by UBS Group Funding (Switzerland) AG, a direct subsidiary of UBS Group AG, after the implementation of the new Swiss SRB framework, and only qualify as gone concern loss-absorbing capacity at the UBS AG consolidated level.

Management's report on internal control over financial reporting

Management's responsibility for internal control over financial reporting

The Board of Directors and management of UBS AG are responsible for establishing and maintaining adequate internal control over financial reporting. UBS AG's internal control over financial reporting is designed to provide reasonable assurance regarding the preparation and fair presentation of published financial statements in accordance with IFRS as issued by the IASB.

UBS AG's internal control over financial reporting includes those policies and procedures that:

- pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect transactions and dispositions of assets;
- provide reasonable assurance that transactions are recorded as necessary to permit preparation and fair presentation of financial statements, and that receipts and expenditures of the company are being made only in accordance with authorizations of UBS AG management; and
- provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Management's assessment of internal control over financial reporting as of 31 December 2018

UBS AG management has assessed the effectiveness of UBS AG's internal control over financial reporting as of 31 December 2018 based on the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) in Internal Control – Integrated Framework (2013 Framework). Based on this assessment, management believes that, as of 31 December 2018, UBS AG's internal control over financial reporting was effective.

The effectiveness of UBS AG's internal control over financial reporting as of 31 December 2018 has been audited by Ernst & Young Ltd, UBS AG's independent registered public accounting firm, as stated in their report appearing on page 513, which expresses an unqualified opinion on the effectiveness of UBS AG's internal control over financial reporting as of 31 December 2018.

Report of Independent Registered Public Accounting Firm

To the Shareholders and the Board of Directors of UBS AG

Opinion on Internal Control over Financial Reporting

We have audited UBS AG and subsidiaries' internal control over financial reporting as of 31 December 2018, based on criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (2013 Framework) (the COSO criteria). In our opinion, UBS AG and subsidiaries maintained, in all material respects, effective internal control over financial reporting as of 31 December 2018, based on the COSO criteria.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) ("PCAOB"), the consolidated balance sheets of UBS AG and subsidiaries as of 31 December 2018, 31 December 2017 and 1 January 2017, the related consolidated income statements, statements of comprehensive income, changes in equity and cash flows for each of the three years in the period ended 31 December 2018, and the related notes and our report dated 14 March 2019 expresses an unqualified opinion thereon.

Basis for Opinion

UBS AG's management is responsible for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying Management's Report on Internal Control Over Financial Reporting. Our responsibility is to express an opinion on UBS AG's internal control over financial reporting based on our audit. We are a public accounting firm registered with the PCAOB and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audit in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects.

Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

Definition and Limitations of Internal Control Over Financial Reporting

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Report of Independent Registered Public Accounting Firm

To the Shareholders and the Board of Directors of UBS AG

Opinion on the Financial Statements

We have audited the accompanying consolidated balance sheets of UBS AG and subsidiaries (“the Company”) as of 31 December 2018, 31 December 2017 and 1 January 2017, the related consolidated income statements, statements of comprehensive income, changes in equity and cash flows, for each of the three years in the period ended 31 December 2018, and the related notes (collectively referred to as the “financial statements”). In our opinion, the financial statements present fairly, in all material respects, the consolidated financial position of UBS AG and subsidiaries as of 31 December 2018, 31 December 2017 and 1 January 2017, and the consolidated results of their operations and their cash flows for each of the three years in the period ended 31 December 2018, in conformity with International Financial Reporting Standards, as issued by the International Accounting Standards Board.

Adoption of IFRS 9 *Financial Instruments*

As discussed in Note 1 to the consolidated financial statements, the Company changed its method of accounting for the classification, measurement and impairment of financial instruments in 2018 due to the adoption of IFRS 9 *Financial Instruments*.

Changes to functional and presentation currencies

As discussed in Note 1 to the consolidated financial statements, the functional currencies of UBS AG's Head office in Switzerland changed from Swiss francs to U.S. dollars and UBS AG's London Branch changed from British pounds to U.S. dollars in compliance with the requirements of IAS 21 *The Effects of Changes in Foreign Exchange Rates*. The Company elected to change the presentation currency of UBS AG's consolidated financial statements from Swiss francs to U.S. dollars to align with these functional currency changes.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) (“PCAOB”), UBS AG and subsidiaries' internal control over financial reporting as of 31 December 2018, based on criteria established in Internal Control-Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (2013 framework), and our report dated 14 March 2019, expressed an unqualified opinion thereon.

Basis for Opinion

These financial statements are the responsibility of the Company's Board of Directors. Our responsibility is to express an opinion on the Company's financial statements based on our audits. We are a public accounting firm registered with the PCAOB and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements. We believe that our audits provide a reasonable basis for our opinion.

To the General Meeting of
UBS AG, Zurich and Basel

Basel, 14 March 2019

Statutory auditor's report on the audit of the consolidated financial statements

Opinion

We have audited the consolidated financial statements of UBS AG and its subsidiaries (the Group), which comprise the consolidated balance sheets as of 31 December 2018, 31 December 2017 and 1 January 2017, and the consolidated income statements, statements of comprehensive income, changes in equity and cash flows for each of the three years in the period ended 31 December 2018, and notes to the consolidated financial statements, including a summary of significant accounting policies in note 1.

In our opinion, the accompanying consolidated financial statements give a true and fair view of the consolidated financial position of the Group as at 31 December 2018, 31 December 2017 and 1 January 2017 and the consolidated results of its operations and its cash flows for each of the three years in the period ended 31 December 2018 in accordance with International Financial Reporting Standards (IFRS) and comply with Swiss law.

Basis for opinion

We conducted our audit in accordance with Swiss law, International Standards on Auditing (ISAs) and Swiss Auditing Standards. Our responsibilities under those provisions and standards are further described in the Auditor's responsibilities for the audit of the consolidated financial statements section of our report.

We are independent of the Group in accordance with the provisions of Swiss law and the requirements of the Swiss audit profession, as well as the International Ethics Standards Board for Accountants' *Code of Ethics for Professional Accountants* ("IESBA Code"), and we have fulfilled our other ethical responsibilities in accordance with these requirements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Key audit matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the consolidated financial statements of the current period. These matters were addressed in the context of our audit of the consolidated financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters. For each matter below, our description of how our audit addressed the matter is provided in that context.

We have fulfilled the responsibilities described in the Auditor's responsibilities for the audit of the consolidated financial statements section of our report, including in relation to these matters. Accordingly, our audit included the performance of procedures designed to respond to our assessment of the risks of material misstatement of the consolidated financial statements. The results of our audit procedures, including the procedures performed to address the matters below, provide the basis for our audit opinion on the accompanying consolidated financial statements.

Deferred tax asset valuation

Area of focus We identified the valuation of the deferred tax assets (“DTAs”) in the Americas as a key audit matter. We focused on this area because there is significant judgment exercised when determining the valuation of DTAs given the significant amount of tax net operating loss carryforwards (net operating losses or “NOLs”) the Group has available and the changing facts and circumstances that has lead the Group to execute selected tax planning strategies and revise its approach to valuing the DTA. DTAs can be recognized to the extent it is probable they will be utilized to offset taxable profits within the loss carryforward period or be used against deductible temporary differences. The estimate of future taxable profits is based on the legal entity strategic plans and is sensitive to the assumptions made in estimating future taxable income.

See note 8 to the financial statements.

Our audit response We obtained an understanding of the revised DTA valuation approach and executed tax planning strategies. We evaluated the design and tested the operational effectiveness of the Group’s key controls over accounting for the revised DTA valuation approach, the assumptions used in developing the legal entity strategic plans and estimating future taxable income, and tax planning strategies. We assessed the impact that the revised DTA valuation approach and tax planning strategies had on deferred taxes and the Group’s disclosures in note 8.

We assessed the completeness and accuracy of the data used for the estimations of future taxable income. This included auditing computations of the models applied to the recognition process for DTAs and testing the control framework around the models.

We involved EY specialists to assess the key economic assumptions embedded in the legal entity strategic plans. We compared key inputs used to forecast future taxable income to externally available data, historical data and performance and assessed the sensitivity of the outcomes to reasonably possible changes in assumptions.

We also assessed whether the Group’s disclosure regarding the application of judgment in estimating recognized and unrecognized DTAs appropriately reflects the Group’s deferred tax position (within note 8).

Legal provision & contingencies

Area of focus We focused on this area because the Group operates in a legal and regulatory environment that is exposed to significant litigation and similar risks arising from disputes and regulatory proceedings. Such matters are subject to many uncertainties and the outcome may be difficult to predict. These uncertainties inherently affect the amount and timing of potential outflows with respect to the provisions which have been established and other contingent liabilities. Overall, the legal provision represents the Group’s best estimate for existing legal matters that have a probable and estimable impact on the Group’s financial position.

See note 21 to the financial statements.

Our audit response We obtained an understanding, evaluated the design and tested the operational effectiveness of the Group's key controls over the legal provision and contingencies process.

We assessed the methodologies on which the provision amounts are based, recalculated the provisions, and tested the completeness and accuracy of the underlying information. We read the legal analyses supporting the judgmental aspects impacted by legal interpretations. We obtained correspondence directly from external legal counsel to assess the information provided by the Group and followed up directly with external counsel as deemed necessary.

We also assessed the Group's provisions and contingent liabilities disclosure (within note 21).

IT Controls relevant to financial reporting

Area of focus We focused on this area because the Group is highly dependent on its IT systems for business processes and financial reporting. The Group continues to invest in its IT systems to meet client needs and business requirements including the effectiveness of its logical access and change management IT controls.

The Group also implemented a new consolidation system in 2018. IT implementations are complex by nature and impose risks related to the migration of data and the design and operating effectiveness of key controls that could have a significant impact on the financial statements.

Our audit response In assessing the reliability of electronic data processing, we included specialized IT auditors as part of our audit team. Our audit procedures focused on the IT infrastructure and applications relevant to financial reporting including evaluation of the design and testing of the operating effectiveness of key IT logical access, change management and IT automated controls.

Our audit procedures related to logical access included testing of user access management, privileged user access, periodic access right recertifications and user authentication controls. Our audit procedures related to change management included testing of management's program change test approach, approval of change requests as well as segregation of duties.

Our audit procedures also included testing the completeness and accuracy of the new consolidation system conversion, including those related to data migration. We also evaluated the design and tested the operating effectiveness of the system conversion as well as key IT General Controls and IT automated controls of the newly implemented system. We also tested the completeness and accuracy of post conversion system generated reports.

Valuation of complex or illiquid financial assets and liabilities at fair value held for trading, derivative financial instruments, financial assets and liabilities at fair value not held for trading, and debt issued at fair value

Area of focus We focused on this area because of the complexity and judgments and assumptions over the fair valuation of financial assets and liabilities with significant unobservable inputs.

We focused on market developments in fair value methodologies and specifically on the Group's higher estimation uncertainty ("HEU") products, Credit Valuation Adjustment ("CVA") / and Funding Valuation Adjustment ("FVA").

See note 24 to the financial statements.

Our audit response We obtained an understanding, evaluated the design and tested the operating effectiveness of the key controls over the financial instrument valuation processes, including controls over market data inputs into valuation models, model governance, and valuation adjustments.

We tested a sample of the valuation models and the inputs used in those models, using a variety of techniques, including comparing inputs to available market data.

We selected a sample of positions and independently calculated estimated values and compared the values to the Group's recorded values.

In addition, we evaluated the methodology and inputs used by the Group in determining funding and credit fair value adjustments on uncollateralized derivatives and fair value option liabilities.

We also assessed the Group's disclosure (within note 24).

IFRS 9 *Financial Instruments* – Transition to IFRS 9

Area of focus We focused on IFRS 9 *Financial Instruments*, which replaced IAS 39 *Financial Instruments: Recognition and Measurement* as the new standard represents a fundamental change of how financial instruments are classified, measured and assessed for impairment. Specifically, the classification of financial instruments as at amortized cost is now contingent on passing a business model assessment and a solely payment of principal and interest test. Further, financial instruments at amortized cost, debt instruments at fair value through other comprehensive income and loan commitments are subject to a new impairment model whereby credit loss allowances are recognized on an expected credit loss (ECL) basis. The new accounting policies and the transition impacts are discussed within note 1(a)(3)(b), note 1(a)(3)(g), note 1(a)(3)(n), note 1(a)(3)(o) and note 1(c) of the financial statements.

We focused on the IFRS 9 transition adjustment at 1 January 2018, including classification and measurement changes and the recognition of expected credit losses (ECL).

We also focused on the allowance for ECL. Specifically, management's choice of, and the probability weightings assigned to, the forward-looking economic scenarios used in measuring ECL. Auditing management's choice of, and the probability weightings assigned to, the forward-looking economic scenarios is complex due to the inherent uncertainty of future events and their relevance for the exposures of the bank.

Further, we focused on the allowance for ECL due to the complexity of statistical credit risk models used in the estimate. This included probability of default models due to their influence on both staging (determination whether a 12 month or a lifetime ECL needs to be estimated) as well as overall ECL (probability of default is a factor in the ECL calculation formula).

We also focused on the high complexity and high degree of judgment in the measurement of individual ECL credit allowances for defaulted exposures ("Stage 3"). This was complex due to the high degree of management judgements involved in the loss given default assumptions, which are based on assessments of the expected future cash flows, either from the debtor's continuing operations or from the liquidation of collaterals.

See notes 10 and 23 to the financial statements.

Our audit response

Regarding the transition to IFRS 9, we have assessed:

- the reasonableness of key accounting policy decisions including the judgements and elections made by management;
- the classification decisions made including the business model assessments and the solely payments of principal and interest tests; and
- the disclosures made in response to the transitional requirements in the context of IFRS 9.

For these elements, we have obtained an understanding, evaluated the design and tested the operating effectiveness of key controls related to the transition impact adjustments. We have evaluated whether financial instruments classified as amortized cost or fair value through other comprehensive income passed the business model assessment and the solely payment of principal and interest test.

We obtained an understanding, evaluated the design and tested the operating effectiveness of key controls over all aspects of the ECL estimate, including management's choice of, and the probability weightings assigned to, the forward-looking economic scenarios used in measuring ECL. We evaluated Management's governance controls for periodic review of the scenarios and probabilities. We evaluated the methodologies underlying the development of the scenarios and the probability weightings assigned to them. We verified that the base case scenario used was consistent with the base case used in other areas of the Group, such as goodwill impairment tests and the valuation of deferred tax assets. We engaged macroeconomic specialists to assist in the evaluation of economic scenarios from a variety of external sources, as well as internally developed forecasts. This included assessing the key macroeconomic variables forecasted, such as GDP, unemployment, interest rates and house price indexes. We performed an overall analytical assessment of the ECL provision levels to determine if they were reasonable considering the Group's portfolio, risk profile, credit risk management and the macroeconomic environment.

Regarding the statistical credit risk models used in the ECL estimate, we have obtained an understanding, evaluated the design and tested the operating effectiveness of key controls over the bank's process to design, build, test, validate, and approve the models. Our control testing included controls over the completeness and accuracy of input data for these models, the proper implementation of the model's calculation logic in the bank's IT landscape and the transfer of the output data into the overall ECL calculation. To assist in these audit procedures, we engaged model specialists to evaluate whether the models were fit for purpose and did not contain any undue bias. We also tested the model calibrations and outcomes.

For the measurement of individual ECL credit allowances for defaulted exposures ("Stage 3"), we have obtained an understanding, evaluated the design and tested the operating effectiveness of key controls over the bank's work out process which includes the assessments made by management regarding the future cash flows from the debtor's continuing operations and/or the liquidation of collaterals. We tested collateral or exit values, cash flow assumptions and exit strategies and re-performed the discounted cash flow calculations.

We also assessed the Group's disclosure (within note 1(a)(3)(b), note 1(a)(3)(g) note 1(c), note 10 and note 23).

Changes to functional and presentation currencies

Area of focus We focused on this area because the cumulative changes to the legal structure, business activities and change to the structural currency management strategy of UBS AG's Head Office in Switzerland resulted in a change in functional currency from Swiss francs to US dollars as of 1 October 2018. A similar change to the legal structure, business activities and change to the structural currency management strategy of UBS AG's London Branch resulted in a change in functional currency from British pounds to US dollars as of 1 October 2018. In line with these changes, the presentation currency of UBS AG changed from Swiss francs to US dollars, with prior periods restated.

We focused on the functional currency change because of the judgement involved in the determination of a change in functional currency in accordance with International Accounting Standard 21, *The Effects of Changes in Foreign Exchange Rates*.

We focused on the presentation currency change as the accounting for the retrospective application of the change in presentation currency is complex. The complexity is due to the number of entities within the Group that have a functional currency that differs from the presentation currency of UBS AG, the magnitude of changes to equity components, including other comprehensive income, treasury shares, share capital, share premium, and retained earnings, and the operational complexity involved in calculating the impact of the change of presentation currency.

See note 1(a)(13) and note 1(b)(1) to the financial statements.

Our audit response

We obtained an understanding, evaluated the design and tested the operating effectiveness of the Group's key controls over Management's completeness assessment of the entities impacted by the cumulative changes in the Group's legal structure, business activities and change to the Group's structural currency management strategy. We assessed the completeness and accuracy of the data used in the functional currency assessment. We evaluated Management's analysis of the currency composition of total operating income and total operating expenses of the impacted entities in accordance with International Accounting Standard 21, *The Effects of Changes in Foreign Exchange Rates*. We evaluated the design and tested the operating effectiveness of the Group's key controls over the implementation of the change in functional currency of impacted entities to US dollars.

We obtained an understanding, evaluated the design and tested the operating effectiveness of the Group's key controls over the retrospective application of the change in presentation currency of UBS AG. We performed procedures to evaluate the impact of the application of the change, we recalculated the impact of historical foreign exchange transactions of non-US dollar functional currency entities and evaluated the presentation of equity components under the presentation currency USD, including other comprehensive income, treasury shares, share capital, share premium and retained earnings. We assessed the completeness and accuracy of the data used in the calculation for retrospective presentation in US dollars.

We have also assessed the Group's disclosure regarding the changes to functional and presentation currencies (see note 1(a)(13) and note 1(b)(1)).

Subsequent Event – French cross-border wealth management business

Area of focus As the Group noted in note 21 to the financial statements, on 20 February 2019, the 32nd Chamber of the First Instance Court in France (the "Court") found UBS AG guilty of illicit solicitation for 2004-2011 and aggravated laundering of the proceeds of tax fraud for 2004-2012, and assessed a penalty of EUR 3.7 billion. In addition, the Court found UBS (France) SA ("UBS France") guilty of aiding and abetting illicit solicitation for 2004-2009 and for aiding and abetting the laundering of the proceeds of tax fraud for 2004-2008 and assessed a penalty of EUR 15 million. The Court also awarded civil damages of EUR 800 million jointly for UBS AG, UBS France and three individuals. UBS AG, UBS France and the three individuals are appealing the decision.

We focused on this area because of the complexity and judgements over the accounting for this litigation contingency. This litigation contingency is subject to many uncertainties and the ultimate outcome is difficult to predict. These uncertainties inherently affect the amount and timing of any potential outflow with respect to the ultimate resolution of this matter.

Our audit response

We obtained an understanding, evaluated the design and tested the operational effectiveness of the Group's key controls over this litigation contingency.

We assessed the methodology on which the provision was based, recalculated the provision and tested the completeness and accuracy of the underlying information. We read the legal analyses supporting the judgmental aspects impacted by legal interpretations and obtained correspondence directly from external legal counsel to assess the information provided by the Group and followed up directly with external counsel as deemed necessary. We involved EY specialists to assist in the understanding of the judgement and the evaluation of the responses from external counsel.

We also assessed the Group's disclosure for this litigation contingency in note 21.

Other information included in the annual report

The Board of Directors is responsible for the other information in the annual report. The other information comprises all information included in the annual report, but does not include the consolidated financial statements, the unconsolidated financial statements of UBS AG, the compensation report (pages 282, 287-288, and 301), disclosures denoted with an audited "signpost", and our auditor's report thereon.

Our opinions on the consolidated financial statements, the standalone financial statements of UBS AG and the compensation report do not cover the other information in the annual report and we do not express any form of assurance conclusion thereon other than the disclosures denoted with an audited "signpost".

In connection with our audit of the consolidated financial statements, our responsibility is to read the other information in the annual report and, in doing so, consider whether the other information is materially inconsistent with the consolidated financial statements or our knowledge obtained in the audit or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

Responsibilities of the Board of Directors for the consolidated financial statements

The Board of Directors is responsible for the preparation of the consolidated financial statements that give a true and fair view in accordance with IFRS and the provisions of Swiss law, and for such internal control as the Board of Directors determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, the Board of Directors is responsible for assessing the Group's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board of Directors either intends to liquidate the Group or to cease operations, or has no realistic alternative but to do so.

Auditor's responsibilities for the audit of the consolidated financial statements

Our objectives are to obtain reasonable assurance about whether the consolidated financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with Swiss law, ISAs, and Swiss Auditing Standards and will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated financial statements.

A further description of our responsibilities for the audit of the consolidated financial statements is located at the website of EXPERTsuisse: <http://www.expertsuisse.ch/en/audit-report-for-public-companies>. This description forms part of our auditor's report.

Report on other legal and regulatory requirements

In accordance with article 728a paragraph 1 item 3 CO and the Swiss Auditing Standard 890, we confirm that an internal control system exists, which has been designed for the preparation of consolidated financial statements in accordance with the instructions of the Board of Directors.

We recommend that the consolidated financial statements submitted to you be approved.

Accounting policies applicable prior to 1 January 2018

The accounting policies described in Note 1a have been applied consistently in all years presented unless otherwise stated in Note 1b. In addition, effective from 1 January 2018, the Group applies IFRS 9, *Financial Instruments*, which substantially changes the accounting for financial assets, and IFRS 15, *Revenue from Contracts with Customers*, which affects UBS AG's revenue recognition, measurement and presentation.

Within Note 1a, policies for prior periods that differ from those applied to the financial year ended 31 December 2018 are identified with a **Comparative policy** signpost. A triangle symbol – ▲ – indicates the end of these comparative policy sections.

Note 1 Summary of significant accounting policies (continued)**a) Significant accounting policies**

This Note describes the significant accounting policies applied in the preparation of the consolidated financial statements (the "Financial Statements") of UBS AG and its subsidiaries ("UBS"). On 14 March 2019, the Financial Statements were authorized for issue by the Board of Directors.

Basis of accounting

The Financial Statements have been prepared in accordance with International Financial Reporting Standards (IFRS), as issued by the International Accounting Standards Board (IASB), and are presented in US dollars (USD), which is also the functional currency of UBS AG's Head Office, UBS AG's London Branch and UBS AG's US-based operations.

Disclosures provided in the "Risk, treasury and capital management" section of this report that are marked as audited form an integral part of the Financial Statements. These disclosures relate to requirements under IFRS 7, *Financial Instruments: Disclosures*, and IAS 1, *Presentation of Financial Statements*, and are not repeated in this section.

The accounting policies described in this Note have been applied consistently in all years presented unless otherwise stated in Note 1b. In addition, effective from 1 January 2018, UBS AG applies IFRS 9, *Financial Instruments*, which substantially changes the accounting for financial assets, and IFRS 15, *Revenue from Contracts with Customers*, which affects the Group's revenue recognition, measurement and presentation. Within this note, policies for prior periods that differ from those applied to the financial year ended 31 December 2018 are identified as "Comparative policy."

Critical accounting estimates and judgments

Preparation of these Financial Statements under IFRS requires management to apply judgment and make estimates and assumptions that affect reported amounts of assets, liabilities, income and expenses and disclosure of contingent assets and liabilities, and may involve significant uncertainty at the time they are made. Such estimates and assumptions are based on the best available information. UBS AG regularly reassesses the estimates and assumptions, which encompass historical experience, expectations of the future and other pertinent factors, to determine their continuing relevance based on current conditions, updating them as necessary. Changes in those estimates and assumptions may have a significant effect on the Financial Statements. Further, actual results may differ significantly from UBS AG's estimates, which could result in significant losses to UBS AG, beyond what was anticipated or provided for.

The following areas contain estimation uncertainty or require critical judgment and have a significant effect on the amounts recognized in the Financial Statements:

- fair value of financial instruments (refer to item 3f in this Note and to Note 24)
- allowances and provisions for expected credit losses (refer to item 3g in this Note and to Note 23)
- assessment of the business model and certain contractual features when classifying financial instruments (refer to item 3b in this Note)
- pension and other post-employment benefit plans (refer to item 7 in this Note and to Note 29)
- income taxes (refer to item 8 in this Note and to Note 8)
- goodwill (refer to item 11 in this Note and to Note 16)
- provisions and contingent liabilities (refer to item 12 in this Note and to Note 21)
- consolidation of structured entities (refer to item 1 in this Note and to Note 31)
- determination of the functional currency and assessing the earliest date from which it is practical to perform a restatement following a change in presentational currency (refer to item 13 in this Note and to Note 1b)

1) Consolidation**a. Consolidation principles**

The Financial Statements comprise the financial statements of UBS AG and its subsidiaries, presented as a single economic entity, whereby intercompany transactions and balances have been eliminated. UBS AG consolidates all entities that it controls, including controlled structured entities (SEs), which is the case when it has (i) power over the relevant activities of the entity; (ii) exposure to an entity's variable returns; and (iii) the ability to use its power to affect its own returns.

Where an entity is governed by voting rights, control is generally indicated by a direct shareholding of more than one-half of the voting rights.

Note 1 Summary of significant accounting policies (continued)

In other cases, the assessment of control is more complex and requires greater use of judgment. Where UBS AG has an interest in an entity that exposes it to variability, UBS AG considers whether it has power over the relevant activities of the entity that allows it to affect the variability of its returns. Consideration is given to all facts and circumstances to determine whether UBS AG has power over another entity; that is, the current ability to direct the relevant activities of an entity when decisions about those activities need to be made. Factors such as the purpose and design of the entity, rights held through contractual arrangements (such as call rights, put rights or liquidation rights) as well as potential decision-making rights are all considered in this assessment. Where UBS AG has power over the relevant activities, a further assessment is made to determine whether, through that power, it has the ability to affect its own returns by assessing whether power is held in a principal or agent capacity. Consideration is given to: (i) the scope of decision-making authority; (ii) rights held by other parties, including removal or other participating rights; and (iii) exposure to variability, including remuneration, relative to total variability of the entity as well as whether that exposure is different from that of other investors. If, after review of these factors, UBS AG concludes that it can exercise its power to affect its own returns, the entity is consolidated.

Subsidiaries, including SEs, are consolidated from the date when control is obtained and are deconsolidated from the date when control ceases. Control, or the lack thereof, is reassessed if facts and circumstances indicate that there is a change to one or more of the elements required to establish that control is present.

→ Refer to Note 31 for more information

b. Structured entities

UBS AG sponsors the formation of SEs and interacts with non-sponsored SEs for a variety of reasons, including allowing clients to obtain or be exposed to particular risk profiles, to provide funding or to sell or purchase credit risk. An SE is an entity that has been designed so that voting or similar rights are not the dominant factor in deciding who controls the entity. Such entities generally have a narrow and well-defined objective and include those historically referred to as special-purpose entities, as well as some investment funds. UBS AG assesses whether an entity is an SE by considering the nature of the activities of the entity as well as the substance of voting or similar rights afforded to other parties, including investors and independent boards or directors. UBS AG considers rights such as the ability to liquidate the entity or remove the decision maker to be similar to voting rights when the holder has the substantive ability to exercise such rights without cause. In the absence of such rights or in cases where the existence of such rights cannot be fully established, the entity is considered to be an SE.

The classes of SEs with which UBS AG is involved include:

- *Securitization structured entities* are established to issue securities to investors that are backed by assets held by the SE and whereby (i) significant credit risk associated with the securitized exposures has been transferred to third parties and (ii) there is more than one risk position or tranche issued by the securitization vehicle in line with the Basel III securitization definition. All securitization entities are classified as SEs.
- *Client investment structured entities* are established predominantly for clients to invest in specific assets or risk exposures through purchasing notes issued by the SE, predominantly on a fixed-term basis. The SE may source assets via a transfer from UBS AG or through an external market transaction. In some cases, UBS AG may enter into derivatives with the SE to either align the cash flows of the entity with the investor's intended investment objective or to introduce other desired risk exposures. In certain cases, UBS AG may have interests in a third-party-sponsored SE to hedge specific risks or participate in asset-backed financing.
- *Investment fund structured entities* have a collective investment objective, are managed by an investment manager and are either passively managed, so that any decision making does not have a substantive effect on variability, or are actively managed, and investors or their governing bodies do not have substantive voting or similar rights. UBS AG creates and sponsors a large number of funds in which it may have an interest through the receipt of variable management fees and / or a direct investment. In addition, UBS AG has interests in a number of funds created and sponsored by third parties, including exchange-traded funds and hedge funds, to hedge issued structured products.

When UBS AG does not consolidate an SE, but has an interest in an SE or has sponsored an SE, disclosures are provided on the nature of these interests and sponsorship activities.

Critical accounting estimates and judgments

Each individual entity is assessed for consolidation in line with the aforementioned consolidation principles. The assessment of control can be complex and requires the use of significant judgment. As the nature and extent of UBS AG's involvement are unique to each entity, there is no uniform consolidation outcome by entity. Certain entities within a class may be consolidated while others may not. When carrying out the consolidation assessment, judgment is exercised considering all the relevant facts and circumstances, including the nature and activities of the investee, as well as the substance of voting and similar rights.

→ Refer to Note 31 for more information

Note 1 Summary of significant accounting policies (continued)**2) Segment reporting**

Prior to the first quarter 2018, UBS AG's businesses were organized globally into five business divisions: Wealth Management, Wealth Management Americas, Personal & Corporate Banking, Asset Management and the Investment Bank, all of which were supported by Corporate Center. The five business divisions qualified as reportable segments for the purpose of segment reporting and, together with Corporate Center, reflected the management structure of UBS. AG Corporate Center – Non-core and Legacy Portfolio was managed and reported as a separate reportable unit within Corporate Center. Financial information about the five business divisions and Corporate Center (with its units: Services, Group Asset and Liability Management (Group ALM), Non-core and Legacy Portfolio) was presented separately in internal reporting to management.

Effective from the first quarter of 2018, UBS AG combined its Wealth Management and Wealth Management Americas business divisions into a single Global Wealth Management business division. Global Wealth Management is managed on an integrated basis, with a single set of performance targets and an integrated operating plan and management structure. Consistent with this, the operating results of Global Wealth Management are presented and assessed on an integrated basis in internal management reports. Consequently, from 2018, Global Wealth Management qualifies as an operating and reportable segment for the purposes of segment reporting and is presented in these Financial Statements alongside Personal & Corporate Banking, Asset Management, the Investment Bank and Corporate Center (with its units Services, Group ALM and Non-core and Legacy Portfolio). Following the change in the composition of UBS AG's operating segments and corresponding reportable segments, previously reported segment information has been restated. This change has no material effect on the former segments, including recognized goodwill.

→ Refer to item 11 in this Note and Note 16 for more information

UBS AG's internal accounting policies, which include management accounting policies and service level agreements, determine the revenues and expenses directly attributable to each reportable segment. Transactions between the reportable segments are carried out at internally agreed rates and are reflected in the operating results of the reportable segments. Revenue-sharing agreements are used to allocate external client revenues to reportable segments where several reportable segments are involved in the value creation chain. Commissions are credited to the reportable segments based on the corresponding client relationship. Total intersegment revenues for UBS AG are immaterial, as the majority of the revenues are

allocated across the segments by means of revenue-sharing agreements. Interest income earned from managing UBS AG's consolidated equity is allocated to the reportable segments based on average attributed equity and currency composition. Assets and liabilities of the reportable segments are funded through and invested with Corporate Center – Group ALM, and the net interest margin is reflected in the results of each reportable segment.

Segment assets are based on a third-party view and do not include intercompany balances. This view is in line with internal reporting to management. Certain assets managed centrally by Corporate Center – Services and Corporate Center – Group ALM may be allocated to other segments on a basis different to that on which the corresponding costs or revenues are allocated. For example, certain assets that are reported in Corporate Center – Services or Corporate Center – Group ALM may be retained on the balance sheet of these components of Corporate Center, notwithstanding that the costs or revenues associated with these assets may be entirely or partly allocated to the operating segments. Similarly, certain assets are reported in the business divisions, whereas the corresponding costs or revenues are entirely or partly allocated to Corporate Center – Services and Corporate Center – Group ALM.

Non-current assets disclosed for segment reporting purposes represent assets that are expected to be recovered more than 12 months after the reporting date, excluding financial instruments, deferred tax assets and post-employment benefits.

→ Refer to Notes 1b and 2 for more information

3) Financial instruments**a. Recognition**

UBS AG recognizes financial instruments when it becomes a party to the contractual provisions of the instrument. UBS AG applies settlement date accounting to all regular way purchases and sales of financial instruments.

In transactions in which UBS AG acts as a transferee, to the extent that the transfer of a financial asset does not qualify for derecognition by the transferor, UBS AG does not recognize the transferred instrument as its asset.

UBS AG also acts in a fiduciary capacity, which results in the holding or placing of assets on behalf of individuals, trusts, retirement benefit plans and other institutions. Unless the recognition criteria are satisfied, these assets are not recognized on UBS AG's balance sheet. Consequently, the related income is excluded from these Financial Statements.

Client cash balances associated with derivatives clearing and execution services are not recognized on the balance sheet if, through contractual agreement, regulation or practice, UBS AG neither obtains benefits from nor controls the client cash balances.

Note 1 Summary of significant accounting policies (continued)

b. Classification, measurement and presentation

All financial instruments are initially measured at fair value. In the case of financial instruments subsequently measured at amortized cost or fair value through other comprehensive income (FVOCI), the initial fair value is adjusted for directly attributable transaction costs.

Policy applicable from 1 January 2018¹

On initial recognition, financial assets are classified as measured at amortized cost, FVOCI, or fair value through profit or loss (FVTPL).

A debt instrument is measured at amortized cost if it meets the following conditions:

- it is held within a business model that has an objective to hold financial assets to collect contractual cash flows; and
- the contractual terms of the financial asset result in cash flows that are solely payments of principal and interest (SPPI) on the principal amount outstanding.

A debt instrument is measured at FVOCI if it meets both of the following conditions:

- it is held within a business model whose objective is achieved by both collecting contractual cash flows and selling financial assets; and
- the contractual terms of the financial asset result in cash flows that are SPPI on the principal amount outstanding.

All other financial assets are measured at FVTPL and consist of held for trading assets, assets mandatorily measured on a fair value basis and derivatives, except to the extent that they are designated in a hedging relationship, in which case the IAS 39 hedge accounting requirements continue to apply.

Business model assessment

UBS AG determines the nature of the business model, for example if the objective is to hold the financial asset and collect the contractual cash flows, by considering the way in which the financial assets are managed to achieve a particular business objective as determined by management.

Financial assets that are held for trading or managed on a fair value basis are measured at FVTPL insofar as the associated business model is neither to hold the financial assets to collect contractual cash flows nor to hold to collect contractual cash flows and sell.

UBS AG originates loans to hold to maturity and to sell or sub-participate to other parties, resulting in a transfer of substantially all the risks and rewards, and derecognition of the loan or portions of it. UBS AG considers the activities of lending to hold and lending to sell or sub-participate as two separate business models, with financial assets within the former considered to be within a business model that has an objective to hold the assets to collect contractual cash flows, and those

within the latter included in a trading portfolio. In certain cases, it may not be possible on origination to identify whether loans or portions of loans will be sold or sub-participated and certain loans may be managed on a fair value basis through, for instance, using credit derivatives. These financial assets are mandatorily measured at FVTPL.

Critical accounting estimates and judgments

UBS AG exercises judgment in determining the appropriate level at which to assess its business models. In general, the assessment is performed at the product level, e.g., retail and commercial mortgages. In other cases, the assessment is carried out at a more granular level, e.g., loan portfolios by region, and, if required, further disaggregation is performed by business strategy. A detailed assessment is carried out considering how the financial assets are evaluated and reported to UBS AG's key management, the risks that affect the performance of the business and the way that management is compensated. In addition, UBS AG exercises judgment in determining the effect of sales of financial instruments on the business model assessment. In particular, an assessment is made on whether and the extent to which sales are consistent with the objective of the business model.

Contractual cash flow characteristics

In assessing whether the contractual cash flows are SPPI, UBS AG considers whether the contractual terms of the financial asset contain a term that could change the timing or amount of contractual cash flows arising over the life of the instrument, which could affect whether the instrument is considered to meet the SPPI criterion.

For example, UBS AG holds portfolios of private mortgage contracts and corporate loans in Personal & Corporate Banking that commonly contain clauses that provide for two-way compensation if prepayment occurs. The amount of compensation paid by or to UBS AG reflects the effect of changes in market interest rates. UBS AG has determined that the inclusion of the change in market interest rates in the compensation amount is reasonable for the early termination of the contract, and therefore results in contractual cash flows that are SPPI.

Critical accounting estimates and judgments

UBS AG applies judgment when considering whether certain contractual features, such as interest rate reset frequency or non-recourse features, significantly affect future cash flows and whether compensation paid or received on early termination of lending arrangements results in cash flows that are not SPPI. A thorough analysis of all relevant facts and circumstances is assessed before concluding whether contractual cash flows of the financial instrument are consistent with payments representing principal and interest.

After initial recognition, UBS AG classifies, measures and presents its financial assets and liabilities in accordance with IFRS 9, as described in the table on the following pages.

¹ The accounting policy in this section applies from 1 January 2018, the effective date of IFRS 9. For the details of transition effects refer to Note 1c.

Note 1 Summary of significant accounting policies (continued)

Classification, measurement and presentation of financial instruments from 1 January 2018

Financial assets classification		Significant items included	Measurement and presentation
Measured at amortized cost		<p>A debt financial asset is measured at amortized cost if:</p> <ul style="list-style-type: none"> – it is held in a business model that has an objective to hold assets to collect contractual cash flows; and – the contractual terms give rise to cash flows that are SPPI. <p>This classification includes:</p> <ul style="list-style-type: none"> – cash and balances at central banks – loans and advances to banks – cash collateral receivables on securities borrowed – receivables on reverse repurchase agreements – cash collateral receivables on derivative instruments – residential and commercial mortgages – corporate loans – secured loans, including Lombard loans, and unsecured loans – loans to financial advisors – debt securities held as high-quality liquid assets (HQLA) – fee and lease receivables. 	<p>Measured at amortized cost using the effective interest rate (EIR) method less allowances for expected credit losses (ECL) (refer to items 3c and 3g in this Note for more information).</p> <p>The following items are recognized in the income statement:</p> <ul style="list-style-type: none"> – interest income, which is accounted for in accordance with item 3c in this Note – ECL and reversals – foreign exchange translation gains and losses. <p>Upfront fees and direct costs relating to loan origination, refinancing or restructuring as well as to loan commitments – when it is probable that UBS AG will enter into a specific lending relationship – are deferred and amortized over the life of the loan using the EIR method.</p> <p>When the financial asset at amortized cost is derecognized, the gain or loss is recognized in the income statement.</p> <p>Amounts arising from exchange-traded derivatives (ETD) and certain over-the-counter (OTC) derivatives cleared through central clearing counterparties that are either considered to be daily settled or in substance net settled on a daily basis (refer to items 3d and 3i in this Note) are presented within <i>Cash collateral receivables on derivative instruments</i>.</p>
Measured at FVOCI	Debt instruments measured at FVOCI	<p>A debt financial asset is measured at FVOCI if:</p> <ul style="list-style-type: none"> – it is held in a business model whose objective is achieved by both holding assets to collect contractual cash flows and selling the assets; and – the contractual terms give rise to cash flows that are SPPI. <p>This classification primarily includes debt securities and certain asset-backed securities held as HQLA for which the contractual cash flows meet the SPPI criterion.</p>	<p>Measured at fair value with unrealized gains and losses reported in <i>Other comprehensive income</i>, net of applicable income taxes, until such investments are derecognized (when sold, collected or otherwise disposed). Upon derecognition, any accumulated balances in <i>Other comprehensive income</i> are reclassified to the income statement and reported within <i>Other income</i>.</p> <p>The following items are recognized in the income statement:</p> <ul style="list-style-type: none"> – interest income, which is accounted for in accordance with item 3c in this Note – ECL and reversals – foreign exchange translation gains and losses. <p>The amounts recognized in the income statement are determined on the same basis as for financial assets measured at amortized cost.</p>

Note 1 Summary of significant accounting policies (continued)**Classification, measurement and presentation of financial instruments from 1 January 2018 (continued)**

Financial assets classification		Significant items included	Measurement and presentation
Measured at FVTPL	Held for trading	<p>Financial assets held for trading include:</p> <ul style="list-style-type: none"> – all derivatives with a positive replacement value, except those that are designated and effective hedging instruments; and – other financial assets acquired principally for the purpose of selling or repurchasing in the near term, or that are part of a portfolio of identified financial instruments that are managed together and for which there is evidence of a recent actual pattern of short-term profit taking. Included in this category are debt instruments (including those in the form of securities, money market paper and traded corporate and bank loans) and equity instruments. 	<p>Measured at fair value with changes recognized in profit or loss.</p> <p>Changes in fair value, initial transaction costs and gains and losses realized on disposal or redemption are recognized in <i>Other net income from fair value changes on financial instruments</i>, except interest and dividend income on instruments other than derivatives (refer to item 3c in this Note for more information), interest on derivatives designated as hedging instruments in certain types of hedge accounting relationships and forward points on certain short- and long-duration foreign exchange contracts, which are reported in <i>Net interest income</i>.</p>
	Mandatorily measured at FVTPL – Other	<p>A financial asset is mandatorily measured at FVTPL if:</p> <ul style="list-style-type: none"> – it is not held in a business model whose objective is to hold assets to collect contractual cash flows or to hold them to collect contractual cash flows and sell; and / or – the contractual terms give rise to cash flows that are not SPPI; and / or – it is not held for trading. <p>The following financial assets are mandatorily measured at FVTPL:</p> <ul style="list-style-type: none"> – certain structured loans, certain commercial loans, receivables under reverse repurchase and cash collateral on securities borrowing agreements that are managed on a fair value basis; – loans managed on a fair value basis and hedged with credit derivatives; – certain debt securities held as HQLA and managed on a fair value basis; – certain investment fund holdings and assets held to hedge delivery obligations related to cash-settled employee compensation plans. These assets represent holdings in investment funds, whereby the contractual cash flows do not meet the SPPI criterion because the entry and exit price is based on the fair value of the fund's assets; – brokerage receivables, for which contractual cash flows do not meet the SPPI criterion because the aggregate balance is accounted for as a single unit of account, with interest being calculated on the individual components; – auction rate securities, for which contractual cash flows do not meet the SPPI criterion because interest may be reset at rates that contain leverage; – equity instruments; and – assets held under unit-linked investment contracts. 	<p>Derivative assets (including derivatives that are designated and effective hedging instruments) are generally presented as <i>Derivative financial instruments</i>, except those exchange-traded and OTC-cleared derivatives that are considered to be settled on a daily basis or in substance net settled on a daily basis, which are presented within <i>Cash collateral receivables on derivative instruments</i>.</p> <p>The presentation of fair value changes on derivatives that are designated and effective as hedging instruments depends on the type of hedge relationship (refer to item 3j in this Note for more information).</p> <p>Financial assets held for trading (other than derivatives) are presented as <i>Financial assets at fair value held for trading</i>.</p> <p>Other financial assets mandatorily measured at fair value through profit or loss are presented as <i>Financial assets at fair value not held for trading</i>, except for brokerage receivables, which are presented as a separate line item on UBS AG's balance sheet.</p>

Note 1 Summary of significant accounting policies (continued)

Classification, measurement and presentation of financial instruments from 1 January 2018 (continued)

Financial liabilities classification		Significant items included	Measurement and presentation
Measured at amortized cost		<p>This classification includes:</p> <ul style="list-style-type: none"> – demand and time deposits; – retail savings / deposits; – amounts payable under repurchase agreements; – cash collateral on securities lent; – non-structured fixed-rate bonds; – subordinated debt; – certificates of deposit and covered bonds; – obligations against funding from UBS Group AG and its subsidiaries ; and – cash collateral payables on derivative instruments. 	<p>Measured at amortized cost using the EIR method.</p> <p>Upfront fees and direct costs relating to the issuance or origination of the liability are deferred and amortized over the life of the liability using the EIR method.</p> <p>When the financial liability at amortized cost is derecognized, the gain or loss is recognized in the income statement.</p> <p>Amortized cost liabilities are presented on the balance sheet primarily as <i>Amounts due to banks, Customer deposits, Payables from securities financing transactions, Debt issued measured at amortized cost</i> and <i>Funding from UBS Group AG and its subsidiaries</i>.</p> <p>Amounts arising from ETD and certain OTC derivatives cleared through central clearing counterparties that are either considered to be daily settled or in substance net settled on a daily basis (refer to items 3d and 3i in this Note for more information) are presented within <i>Cash collateral payables on derivative instruments</i>.</p>
Measured at fair value through profit or loss	Held for trading	<p>Financial liabilities held for trading include:</p> <ul style="list-style-type: none"> – all derivatives with a negative replacement value (including certain loan commitments), except those that are designated and effective hedging instruments; and – obligations to deliver financial instruments, such as debt and equity instruments, that UBS AG has sold to third parties, but does not own (short positions). 	<p>Measurement of financial liabilities classified at FVTPL follows the same principles as for financial assets classified at FVTPL, except that the amount of change in the fair value of the financial liability that is attributable to changes in UBS AG's own credit risk is presented in OCI.</p> <p>Financial liabilities measured at FVTPL are presented as <i>Financial liabilities at fair value held for trading</i> and <i>Other financial liabilities designated at fair value</i>, respectively, except for brokerage payables and debt issued, which are presented separately on UBS AG's balance sheet.</p>
	Designated at FVTPL	<p>UBS AG designates at FVTPL the following financial liabilities:</p> <ul style="list-style-type: none"> – issued hybrid debt instruments that primarily include equity-linked, credit-linked and rates-linked bonds or notes – issued debt instruments managed on a fair value basis – certain payables under repurchase agreements and cash collateral on securities lending agreements that are managed in conjunction with associated reverse repurchase agreements and cash collateral on securities borrowed (from 1 January 2018) – amounts due under unit-linked investment contracts whose cash flows are linked to financial assets measured at FVTPL and eliminate an accounting mismatch (from 1 January 2018) – brokerage payables, which arise in conjunction with brokerage receivables and are measured at FVTPL to achieve measurement consistency (from 1 January 2018). 	<p>Derivative liabilities (including derivatives that are designated and effective hedging instruments) are generally presented as <i>Derivative financial instruments</i>, except those exchange-traded and OTC-cleared derivatives that are considered to be settled on a daily basis or in substance net settled on a daily basis, which are presented within <i>Cash collateral payables on derivative instruments</i>.</p> <p>Bifurcated embedded derivatives are measured at fair value, but are presented on the same balance sheet line as the host contract measured at amortized cost.</p> <p>Derivatives that are designated and effective as hedging instruments are also measured at fair value. The presentation of fair value changes differs depending on the type of hedge relationship (refer to item 3j in this Note for more information).</p>

Note 1 Summary of significant accounting policies (continued)**Comparative policy | Policy applicable prior to 1 January 2018**

Prior to 1 January 2018, on initial recognition, UBS AG classified, measured and presented its financial assets and liabilities in accordance with IAS 39, *Financial Instruments: Recognition and Measurement*. Classification, measurement and presentation requirements in respect of financial liabilities have been

substantially retained by IFRS 9 and are detailed in the table "Classification, measurement and presentation of financial instruments from 1 January 2018." The following table sets out details of classification, measurement and presentation of financial assets prior to 1 January 2018.

Classification, measurement and presentation of financial assets prior to 1 January 2018

Financial assets classification	Significant items included	Measurement and presentation ¹
Held for trading	<p>Financial assets held for trading include:</p> <ul style="list-style-type: none"> – all derivatives with a positive replacement value, except those that are designated and effective hedging instruments; and – any other financial asset acquired principally for the purpose of selling or repurchasing in the near term, or part of a portfolio of identified financial instruments that are managed together and for which there is evidence of a recent actual pattern of short-term profit taking. Included in this category are debt instruments (including those in the form of securities, money market paper and traded corporate and bank loans), equity instruments, and assets held under unit-linked investment contracts. 	<p>Measured at fair value with changes recognized in profit or loss.</p> <p>Changes in fair value, initial transaction costs and gains and losses realized on disposal or redemption are recognized in <i>Other net income from fair value changes on financial instruments</i>, except interest and dividend income on instruments other than derivatives (refer to item 3c in this Note), interest on derivatives designated as hedging instruments in certain types of hedge accounting relationships and forward points on certain short duration foreign exchange contracts, which are reported in <i>Net interest income</i>.</p> <p>Derivative assets are generally presented as <i>Derivative financial instruments</i>.</p>
Designated at fair value through profit or loss	<p>A financial asset may be designated at fair value through profit or loss only upon initial recognition and this designation is irrevocable.</p> <p>The fair value option can be applied only if one of the following criteria is met:</p> <ul style="list-style-type: none"> – the financial instrument is a hybrid instrument that includes a substantive embedded derivative; – the financial instrument is part of a portfolio that is risk managed on a fair value basis and reported to senior management on that basis; or – the application of the fair value option eliminates or significantly reduces an accounting mismatch that would otherwise arise. <p>UBS AG designated at fair value through profit or loss the following financial assets:</p> <ul style="list-style-type: none"> – certain structured loans, reverse repurchase and securities borrowing agreements that are managed on a fair value basis; – loans that are hedged predominantly with credit derivatives. These instruments are designated at fair value to eliminate an accounting mismatch; – certain debt securities held as high-quality liquid assets (HQLA) and managed by Corporate Center – Group ALM on a fair value basis; and – assets held to hedge delivery obligations related to cash-settled employee compensation plans. These assets are designated at fair value in order to eliminate an accounting mismatch that would otherwise arise as a result of the liability being measured on a fair value basis. 	<p>Bifurcated embedded derivatives are measured at fair value, but presented on the same balance sheet line as the host contract measured at amortized cost.</p> <p>The presentation of fair value changes on derivatives that are designated and effective hedging instruments differs depending on the type of hedge relationship (refer to item 3j in this Note for more information).</p> <p>Financial assets held for trading (other than derivatives) are presented as <i>Financial assets at fair value held for trading</i>.</p> <p>Financial assets designated at fair value through profit or loss are presented as <i>Financial assets at fair value not held for trading</i>.</p>

¹ Presentation categories in this table reflect retrospective amendments to UBS AG's balance sheet presentation carried out upon transition to IFRS 9 to facilitate comparability. For a detailed description of line items presented in UBS AG's financial statements on or before the year ended 31 December 2017, refer to item 4 within Note 1c.

Note 1 Summary of significant accounting policies (continued)**Classification, measurement and presentation of financial assets prior to 1 January 2018 (continued)**

Financial assets classification	Significant items included	Measurement and presentation
Loans and receivables (amortized cost)	<p>Non-derivative financial assets with fixed or determinable payments that are not quoted in an active market and are not assets for which UBS AG may not recover substantially all of its initial net investment for reasons other than credit deterioration. This classification includes:</p> <ul style="list-style-type: none"> – cash and balances with central banks – cash collateral receivables on derivative instruments – residential and commercial mortgages – secured loans, including reverse repurchase agreements, receivables under stock borrowing and Lombard loans, and unsecured loans – certain securities held within Corporate Center – Non-core and Legacy Portfolio – trade and lease receivables. 	<p>Measured at amortized cost using the effective interest rate method less allowances for credit losses (refer to items 3c and 3g in this Note).</p> <p>Upfront fees and direct costs relating to loan origination, refinancing or restructuring as well as to loan commitments are deferred and amortized over the life of the loan using the effective interest rate method.</p> <p>Loans and receivables are presented on the balance sheet primarily as <i>Cash and balances with central banks, Loans and advances to banks, Loans and advances to customers, Receivables from securities financing transactions and Cash collateral receivables on derivative instruments</i>.</p> <p>Amounts arising from exchange-traded derivatives (ETD) and certain over-the-counter (OTC) derivatives cleared through central clearing counterparties that are either considered to be daily settled or qualify for netting (refer to items 3d and 3i in this Note) are presented within <i>Cash collateral receivables on derivative instruments</i>.</p>
Available for sale	<p>Financial assets classified as available for sale are non-derivative financial assets that are not classified as held for trading, designated at fair value through profit or loss, or loans and receivables. This classification mainly includes debt securities held as HQLA and managed by Corporate Center – Group ALM, certain asset-backed securities managed by Corporate Center – Group ALM, investment fund holdings and strategic and commercial equity investments.</p>	<p>Measured at fair value with unrealized gains and losses reported in <i>Other comprehensive income</i>, net of applicable income taxes, until such investments are sold, collected or otherwise disposed of, or until any such investment is determined to be impaired (refer to item 3g in this Note). Upon disposal, any accumulated balances in <i>Other comprehensive income</i> are reclassified to the income statement and reported within <i>Other income</i>.</p> <p>Interest and dividend income are recognized in the income statement in accordance with item 3c in this Note. Refer to item 13 in this Note for information on the treatment of foreign exchange translation gains and losses.</p>
Held to maturity	<p>Non-derivative financial assets with fixed or determinable payments and fixed maturities for which UBS AG has the positive intention and ability to hold to maturity.</p> <p>This classification mainly includes debt securities held as HQLA and managed by Corporate Center – Group ALM.</p>	<p>Measured at amortized cost using the effective interest rate method less allowances for credit losses (refer to items 3c and 3g in this Note).</p>

Note 1 Summary of significant accounting policies (continued)**c. Interest income and expense**

Interest income and expense are recognized in the income statement applying the effective interest rate (EIR) method. When calculating the EIR for financial instruments (other than credit-impaired financial instruments), UBS AG estimates future cash flows considering all contractual terms of the instrument, but not expected credit losses.

In determining interest income and expense, the EIR is applied to the gross carrying amount of the financial asset (unless the asset is credit-impaired) or the amortized cost of a financial liability (prior to 1 January 2018: amortized cost of a financial asset or financial liability). However, when a financial asset becomes credit-impaired after initial recognition, interest income is determined by applying the EIR to the amortized cost of the instrument, which represents the gross carrying amount adjusted for any credit loss allowance. Furthermore, for financial assets that were credit-impaired on initial recognition, interest is determined by applying a credit-adjusted EIR to the amortized cost of the instrument.

Upfront fees, including loan commitment fees where a loan is expected to be issued, and direct costs are included within the initial measurement of a financial instrument measured at amortized cost or FVOCI (prior to 1 January 2018: financial asset classified as available for sale). Such fees and costs are therefore recognized over the expected life of the instrument as part of its EIR.

Fees related to loan commitments where no loan is expected to be issued, as well as loan syndication fees where UBS AG does not retain a portion of the syndicated loan or where UBS AG does retain a portion of the syndicated loan at the same effective yield for comparable risk as other participants, are included in *Net fee and commission income*.

→ Please refer to item 4 in this Note for more information

Presentation of interest in the income statement

Effective from 1 January 2018, interest income or expense on financial instruments measured at amortized cost and financial assets measured at FVOCI (prior to 1 January 2018: financial assets classified as available for sale) are presented separately within *Interest income from financial instruments measured at amortized cost and fair value through other comprehensive income* and *Interest expense from financial instruments measured at amortized cost*.

UBS AG also presents interest income and expense on financial instruments (excluding derivatives) measured at FVTPL including forward points on certain short- and long-duration foreign exchange contracts and dividends separately in *Interest income (or expense) from financial instruments measured at fair value through profit or loss*. Furthermore, interest income and expense on derivatives designated as hedging instruments in effective hedge relationships are presented consistently with the interest income and expense of the respective hedged item.

Interest income on financial assets, excluding derivatives, is included in *Interest income* when positive and in *Interest expense* when negative, because negative interest income arising on a financial asset does not meet the definition of revenue. Similarly, interest expense on financial liabilities, excluding derivatives, is included in *Interest expense*, except when interest rates are negative, in which case it is included in *Interest income*.

→ Refer to item 3j in this Note and Note 3 for more information

d. Derecognition**Financial assets**

UBS AG derecognizes a financial asset, or a portion of a financial asset, from its balance sheet where the contractual rights to cash flows from the asset have expired, or have been transferred, usually by sale, thus exposing the purchaser to either substantially all the risks and rewards of the asset or a significant part of the risks and rewards combined with a practical ability to sell or pledge the asset.

A financial asset is considered to have been transferred when UBS AG (i) transfers the contractual rights to receive the cash flows of the financial asset or (ii) retains the contractual rights to receive the cash flows of that asset, but assumes a contractual obligation to pay the cash flows to one or more entities.

Where financial assets have been pledged as collateral or in similar arrangements, they are considered to have been transferred if the counterparty has received the contractual right to the cash flows of the pledged assets, as may be evidenced, for example, by the counterparty's right to sell or repledge the assets. Where the counterparty to the pledged financial assets has not received the contractual right to the cash flows, UBS AG does not consider this to be a transfer for the purposes of derecognition.

Note 1 Summary of significant accounting policies (continued)

In transactions where substantially all of the risks and rewards of ownership of a financial asset are neither retained nor transferred, UBS AG derecognizes the financial asset if control over the asset is surrendered, and the rights and obligations retained following the transfer are recognized separately as assets and liabilities, respectively. In transfers where control over the financial asset is retained, UBS AG continues to recognize the asset to the extent of its continuing involvement, determined by the extent to which it is exposed to changes in the value of the transferred asset following the transfer.

Certain over-the-counter (OTC) derivative contracts and most exchange-traded futures and options contracts cleared through central clearing counterparties are considered to be settled on a daily basis through the daily margining process, as the payment or receipt of the variation margin represents legal or economic settlement of a derivative contract, which results in derecognition of the associated positive and negative replacement values.

→ Refer to Note 25 for more information

Financial liabilities

UBS AG derecognizes a financial liability from its balance sheet when it is extinguished; i.e., when the obligation specified in the contract is discharged, canceled or expires. When an existing financial liability is exchanged for a new one from the same lender on substantially different terms, or the terms of an existing liability are substantially modified, such an exchange or modification results in derecognition of the original liability and the recognition of a new liability with any difference in the respective carrying amounts being recognized in the income statement.

e. Securities borrowing / lending and repurchase / reverse repurchase transactions

Securities borrowing / lending and repurchase / reverse repurchase transactions are generally entered into on a collateralized basis. In such transactions, UBS AG typically borrows or lends equity and debt securities in exchange for securities or cash collateral.

These transactions are treated as collateralized financing transactions where the securities transferred / received are not derecognized or recognized on the balance sheet. Securities transferred / received with the right to resell or repledge are disclosed separately.

In reverse repurchase and securities borrowing agreements, the cash delivered is derecognized and a corresponding receivable, including accrued interest, is recorded in the balance sheet line *Receivables from securities financing transactions* (prior to 1 January 2018: *Reverse repurchase agreements* and *Cash collateral on securities borrowed*), representing UBS AG's right to receive the cash. Similarly, in repurchase and securities lending agreements, the cash received is recognized and a corresponding obligation, including accrued interest, is recorded in *Payables from securities financing transactions* (prior to 1 January 2018: *Repurchase agreements* and *Cash collateral on securities lent*). Additionally, the sale of securities that is settled by delivering securities received in reverse repurchase or securities borrowing transactions triggers the recognition of a trading liability.

Repurchase and reverse repurchase transactions with the same counterparty, maturity, currency and central securities depository are generally presented net, subject to meeting the netting requirements described in item 3i of this Note.

→ Refer to Notes 26 and 25 for more information

f. Fair value of financial instruments

UBS AG accounts for a significant portion of its assets and liabilities at fair value. Fair value is the price on the measurement date that would be received for the sale of an asset or paid to transfer a liability in an orderly transaction between market participants in the principal market, or in the most advantageous market in the absence of a principal market.

All financial instruments measured at fair value are categorized into one of three fair value hierarchy levels. Level 1 financial instruments are those for which fair values can be derived from quoted prices in active markets. Level 2 financial instruments are those for which fair values must be derived using valuation techniques for which all significant inputs are, or are based on, observable market data. Level 3 financial instruments are those for which fair values can only be derived on the basis of valuation techniques for which significant inputs are not based on observable market data.

Note 1 Summary of significant accounting policies (continued)**Critical accounting estimates and judgments**

The use of valuation techniques, modeling assumptions and estimates of unobservable market inputs require significant judgment and could affect the amount of gain or loss recorded for a particular position. Valuation techniques that rely more heavily on unobservable inputs require a higher level of judgment to calculate a fair value than those entirely based on observable inputs.

Valuation techniques, including models, that are used to determine fair values are periodically reviewed and validated by qualified personnel, independent of those who created them. Models are calibrated to ensure that outputs reflect observable market data, to the extent possible. Also, UBS AG prioritizes the use of observable inputs, when available, over unobservable inputs. Judgment is required in selecting appropriate models as well as inputs for which observable data is less readily or not available.

UBS AG's governance framework over fair value measurement is described in Note 24b.

The level of subjectivity and the degree of management judgment involved in the development of estimates and the selection of assumptions are more significant for instruments valued using specialized and sophisticated models and where some or all of the parameter inputs are less observable (Level 3 instruments) and may require adjustment to reflect factors that market participants would consider in estimating fair value, such as close-out costs, credit exposure, model-driven valuation uncertainty, funding costs and benefits, trading restrictions and other factors, which are presented in Note 24d. UBS AG provides a sensitivity analysis of the estimated effects arising from changing significant unobservable inputs in Level 3 financial instruments to reasonably possible alternative assumptions within Note 24g.

→ Refer to Note 24 for more information

g. Allowances and provisions for expected credit losses*Policy applicable from 1 January 2018¹*

Expected credit losses (ECL) are recognized for financial assets measured at amortized cost, financial assets measured at FVOCI, fee and lease receivables, financial guarantees and loan commitments. ECL are also recognized on the undrawn portion of revolving revocable credit lines, which include UBS AG's credit card limits and master credit facilities, which are customary in the Swiss market for corporate and commercial clients. UBS AG refers to both as "other credit lines," with clients allowed to draw down on-demand balances (with the Swiss master credit facilities also allowing for term products) and which can be terminated by UBS AG at any time. Though these other credit lines are revocable, UBS AG is exposed to credit risk because the client has the ability to draw down funds before UBS AG can take credit risk mitigation actions.

Recognition of expected credit losses

ECL represent the difference between contractual cash flows and those UBS AG expects to receive, discounted at the EIR. For loan commitments and other credit facilities in scope of ECL, expected cash shortfalls are determined by considering expected future drawdowns.

ECL are recognized on the following basis:

- Maximum 12-month ECL are recognized from initial recognition, reflecting the portion of lifetime cash shortfalls that would result if a default occurs in the 12 months after the reporting date, weighted by the risk of a default occurring. Instruments in this category are referred to as instruments in stage 1. For instruments with a remaining maturity of less than 12 months, ECL are determined for this shorter period.
- Lifetime ECL are recognized if a significant increase in credit risk (SICR) is detected subsequent to the instrument's initial recognition, reflecting lifetime cash shortfalls that would result from all possible default events over the expected life of a financial instrument, weighted by the risk of a default occurring. Instruments in this category are referred to as instruments in stage 2. Where an SICR is no longer observed, the instrument will move back to stage 1.
- Lifetime ECL are always recognized for credit-impaired financial instruments, referred to as instruments in stage 3. The IFRS 9 determination of whether an instrument is credit-impaired is based on the occurrence of one or more loss events, with lifetime ECL generally derived by estimating expected cash flows based on a chosen recovery strategy. Credit-impaired exposures may include positions for which no loss has occurred or no allowance has been recognized, for example, because they are expected to be fully recoverable through the collateral held.
- Changes in lifetime ECL since initial recognition are also recognized for assets that are purchased or originated credit-impaired (POCI). POCI financial assets are initially recognized at fair value, with interest income subsequently being recognized based on a credit-adjusted EIR. POCI financial instruments include those that are newly recognized following a substantial restructuring and remain a separate category until derecognition.

UBS AG does not apply the low-credit-risk practical expedient that allows a lifetime ECL for lease or fee receivables to be recognized irrespective of whether a significant increase in credit risk has occurred. Instead, UBS AG has incorporated lease and fee receivables into the standard ECL calculation.

¹ The accounting policy in this section applies from 1 January 2018, the effective date of IFRS 9. For the details of transition effects refer to Note 1c.

Note 1 Summary of significant accounting policies (continued)

A write-off is made when all or part of a financial asset is deemed uncollectible or forgiven. Write-offs reduce the principal amount of a claim and are charged against previously established allowances for credit losses. Recoveries, in part or in full, of amounts previously written off are generally credited to *Credit loss (expense) / recovery*. Write-offs and partial write-offs represent derecognition / partial derecognition events.

ECL are recognized in profit or loss with a corresponding ECL allowance reported as a decrease in the carrying value of financial assets measured at amortized cost on the balance sheet. For financial assets measured at fair value through OCI, the carrying value is not reduced, but an accumulated amount is recognized in OCI. For off-balance sheet financial instruments and other credit lines, provisions for ECL are reported in *Provisions*. ECL are recognized within the income statement in *Credit loss (expense) / recovery*.

Default and credit impairment

UBS AG applies a single definition of default for classifying assets and determining the probability of default of its obligors for risk modeling purposes. The definition of default is based on quantitative and qualitative criteria. A counterparty is classified as defaulted at the latest when material payments of interest, principal or fees are overdue for more than 90 days, or more than 180 days for certain exposures in relation to loans to private and commercial clients in Personal & Corporate Banking, and to private clients of Global Wealth Management Region Switzerland. UBS AG does not consider the general 90-day presumption for default recognition appropriate for these latter portfolios based on an analysis of the cure rates, which demonstrated that strict application of the 90-day criterion would not accurately reflect the inherent credit risk. Counterparties are also classified as defaulted when bankruptcy, insolvency proceedings or enforced liquidation have commenced; obligations have been restructured on preferential terms (forbearance); or there is other evidence that payment obligations will not be fully met without recourse to collateral. The latter may be the case even if, to date, all contractual payments have been made when due. If a counterparty is defaulted, generally all claims against the counterparty are treated as defaulted.

An instrument is classified as credit-impaired if the counterparty is defaulted, and / or the instrument is identified as POCI. An instrument is POCI if it has been purchased with a material discount to its carrying amount following a risk event of the issuer or originated with a defaulted counterparty. Once a financial asset is classified as defaulted / credit-impaired (except when it is POCI), it is reported as a stage 3 instrument and remains as such unless all past due amounts have been rectified, additional payments have been made on time, the position is not classified as credit-restructured, and there is general evidence of credit recovery. A three-month probation period is applied before a transfer back to stages 1 or 2 can be triggered.

However, most instruments remain in stage 3 for a longer period.

Measurement of expected credit losses

IFRS 9 ECL reflect an unbiased, probability-weighted estimate based on either loss expectations resulting from default events over a maximum 12-month period from the reporting date or over the remaining life of a financial instrument. The method used to calculate individual probability-weighted unbiased ECL is based on a combination of the following principal factors: probability of default (PD), loss given default (LGD) and exposure at default (EAD). Parameters are generally determined on an individual financial asset level. Based on the materiality of the portfolio, for credit card exposures and personal account overdrafts in Switzerland, and certain loans to financial advisors of Global Wealth Management Region Americas, a portfolio approach is applied that derives an average PD and LGD for the entire portfolio. PDs and LGDs used in the ECL calculation are point in time (PIT)-based for key portfolios and consider both current conditions and expected cyclical changes. For each instrument or group of instruments, parameter time series are generated consisting of the instruments' PD, LGD and EAD profiles considering the respective period of exposure to credit risk. For material portfolios, PD and LGD are determined for four different scenarios, whereas EAD projections are treated as scenario independent.

For the purpose of determining the ECL-relevant parameters, UBS AG leverages its Pillar 1 internal ratings-based (IRB) models that are also used in determining expected loss (EL) and risk-weighted assets under the Basel III framework and Pillar 2 stress loss models. Adjustments have been made to these models and new IFRS 9-related models have been developed that consider the complexity, structure and risk profile of relevant portfolios and take account of the fact that PDs and LGDs used in the ECL calculation are PIT-based, as opposed to the corresponding Basel III through-the-cycle (TTC) parameters. All models that are relevant for measuring expected credit losses have been subject to the existing model validation and oversight processes with the Group Model Governance Board as the highest approval authority. The assignment of internal counterparty rating grades and the determination of default probabilities for the purposes of Basel III are not affected by the IFRS 9 ECL calculation.

Probability of default (PD): The PD represents the likelihood of a default over a specified time period. A 12-month PD represents the likelihood of default determined for the next 12 months and a lifetime PD represents the probability of default over the remaining lifetime of the instrument. The lifetime PD calculation is based on a series of 12-month PIT PDs that are derived from TTC PDs and scenario forecasts. This modeling is region-, industry- and client segment-specific and considers both scenario-systematic and client-idiosyncratic information. To derive the cumulative lifetime PD per scenario, the series of 12-month PIT PDs are transformed into marginal PIT PDs, taking any assumed default events from previous periods into account.

Note 1 Summary of significant accounting policies (continued)

Loss given default (LGD): The LGD represents an estimate of the loss at the time of a potential default occurring during the life of a financial instrument. The determination of the LGD takes into account expected future cash flows from collateral and other credit enhancements, or expected payouts from bankruptcy proceedings for unsecured claims and, where applicable, time to realization of collateral and the seniority of claims. The LGD is commonly expressed as a percentage of the EAD.

Exposure at default (EAD): The EAD represents an estimate of the exposure to credit risk at the time of a potential default occurring during the life of a financial instrument. It represents the cash flows outstanding at the time of default, considering expected repayments, interest payments and accruals, discounted at the EIR. Future drawdowns on facilities are considered through a credit conversion factor (CCF) that is reflective of historical drawdown and default patterns and the characteristics of the respective portfolios. IFRS 9-specific CCFs have been modeled to capture client segment- and product-specific patterns after removing Basel III standard-specific elements, i.e., conservatism and focus on a 12-month period prior to default.

Estimation of expected credit losses

Number of scenarios and estimation of scenario weights

The determination of the probability-weighted ECL requires evaluating a range of diverse and relevant future economic conditions, especially with a view to modeling the non-linear effect of assumptions about macroeconomic factors on the estimate.

To accommodate this requirement, UBS AG uses four different economic scenarios in the ECL calculation: an upside, a baseline, a mild downside and a severe downside scenario. Each scenario is represented by a specific scenario narrative, which is relevant considering the exposure of key portfolios to economic risks, and for which a set of consistent macroeconomic variables is determined. Those variables range from above-trend economic growth to severe recession. The baseline scenario is aligned to the economic and market assumptions used for UBS AG business planning purposes. An econometric model is used to provide an input into the scenario weight assessment process giving a first indication of the probability that the GDP forecast used for each scenario would materialize, if historically observed deviations of GDP growth from trend growth were representative. As such historical analyses of GDP development do not include an assessment of the underlying economic or political causes, management positions the model output into the context of current conditions and future expectations and applies material judgment in determining the final scenario weights. The determined weights constitute the probabilities that the respective set of macroeconomic conditions will occur and not that the chosen particular narratives with the related macroeconomic variables will materialize.

Macroeconomic and other factors

The range of macroeconomic, market and other factors that is modeled as part of the scenario determination is wide, and historical information is used to support the identification of the key factors. As the forecast horizon increases, the availability of information decreases and judgment increases. For cycle-sensitive PD and LGD determination purposes, UBS AG projects the relevant economic factors for a period of three years before reverting, over a specified period, to a cycle-neutral PD and LGD for longer-term projections.

Factors relevant for the ECL calculation vary by type of exposure and are determined during the credit cycle index model development process in close alignment with expert judgment. Certain variables may only be relevant for specific types of exposures, such as house price indices for mortgage loans, while other variables have key relevance in the ECL calculation for all exposures. Regional and client segment characteristics are generally taken into account, with specific focus on Switzerland and the US considering UBS AG's key ECL-relevant portfolios.

For UBS AG, the following forward-looking macroeconomic variables represent the most relevant factors in the ECL calculation:

- GDP growth rates, given their significant effect on borrowers' performance;
- house price indices, given their significant effect on mortgage collateral valuations;
- unemployment rates, given their significant effect on private clients' ability to meet contractual obligations;
- interest rates, given their significant effect on the counterparties' abilities to service their debt;
- consumer price indices, given their overall relevance for companies' performance, private clients' purchasing power and economic stability; and
- equity indices, given that they are an important factor in our corporate rating tools.

The forward-looking macroeconomic assumptions used in the ECL calculation are developed by UBS AG's economists, risk methodology personnel and credit risk officers. Assumptions and scenarios are validated and approved through a Scenario Committee and an Operating Committee, which also aim to ensure a consistent use of forward-looking information throughout UBS AG, including in the business planning process. ECL inputs are tested and reassessed for appropriateness at least each quarter and appropriate adjustments are made when needed.

Scenario generation, review process and governance

All aspects of the scenario selection, including the specific narratives, their weight for the ECL estimation, and the key macroeconomic and other factors, are subject to a formal governance and approval process.

Note 1 Summary of significant accounting policies (continued)

A team of economists, who are part of Group Risk Control, provide the basic analysis taking into account information obtained through established risk identification and assessment processes, which involve a broad range of experts, in particular, risk specialists and other in-house economists. Material risks with a high likelihood of materializing are then factored into the scenario selection process. Once narratives have been developed, key macroeconomic factors that are consistent with the severity of the case and interdependencies are determined.

The scenarios, their weight and the key macroeconomic and other factors are subject to a critical assessment by members of the Scenario Committee, where senior credit officers from the divisions and representatives from Group Risk Control are represented. Important aspects for the review are the extent to which the selected scenarios reflect the vulnerabilities of the relevant portfolios; whether their transformation into PIT PD and LGD values is in line with credit risk officers' expectations; and whether there may be pockets of exposures, where particular credit risk concerns may not be capable of being addressed systematically and require an expert-based overlay for stage allocation and ECL allowance. This also ensures a consistent use of forward-looking information throughout UBS AG and an alignment with the business planning process.

The Operating Committee is jointly chaired by the Group Controller and Chief Accounting Officer, and the Risk Chief Operating Officer and Group Chief Risk Model Officer, and is comprised of the divisional Chief Risk Officers and divisional Chief Financial Officers as well as senior Corporate Center Risk and Finance representatives. They review the proposals submitted by the Scenario Committee and approve the final selection of scenarios and factors and any expert-based overlays as they may be required to cover temporary issues, either related to specific risk elements in a portfolio, or due to identified technical deficiencies pending remediation (model updates, data quality, etc.).

The Group Model Governance Board as the highest authority under UBS's model governance framework ratifies the decisions by the Operating Committee.

ECL measurement period

The period for which lifetime ECL are determined is based on the maximum contractual period that UBS AG is exposed to credit risk, taking into account contractual extension, termination and prepayment options. For irrevocable loan commitments and financial guarantee contracts, the measurement period represents the maximum contractual period for which UBS AG has an obligation to extend credit.

Additionally, some financial instruments include both an on-demand loan and a revocable undrawn commitment, where the contractual cancellation right does not limit UBS AG's exposure to credit risk to the contractual notice period as the client has the ability to draw down funds before UBS AG can take risk-mitigating actions. In such cases, UBS AG is required to estimate

the period over which it is exposed to credit risk. This applies to UBS AG's credit card limits, which do not have a defined contractual maturity date, are callable on demand and where the drawn and undrawn components are managed as one unit. The exposure arising from UBS AG's credit card limits is not significant and is managed at a portfolio level, with credit actions triggered when balances are past due. An ECL measurement period of seven years is applied for credit card limits, capped at 12 months for stage 1 balances, as a proxy for the period that UBS AG is exposed to credit risk.

Customary master credit agreements in the Swiss corporate market also include on-demand loans and revocable undrawn commitments. For smaller commercial facilities, a risk-based monitoring (RbM) approach is in place that highlights negative trends as risk events, at an individual facility level, based on a combination of continuously updated risk indicators. The risk events trigger additional credit reviews by a risk officer, allowing for informed credit decisions to be taken. Larger corporate facilities are not subject to RbM, but are reviewed at least annually through a formal credit review. UBS AG has assessed these credit risk management practices and considers both the RbM approach and formal credit review as substantive credit reviews resulting in a re-origination of the facility. Following this, a 12-month measurement period from the reporting date is used for both types of facilities as an appropriate proxy of the period over which UBS AG is exposed to credit risk, with 12 months also used as a look-back period for assessing SICR, always from the respective reporting date.

Significant increase in credit risk

Financial instruments subject to ECL are monitored on an ongoing basis. To determine whether the recognition of a maximum 12-month ECL continues to be appropriate, it is assessed whether an SICR has occurred since initial recognition of the financial instrument. The assessment criteria include both quantitative and qualitative factors. UBS AG does not make use of the expedient that no particular SICR test is required for instruments that have low credit risk at reporting date.

Primarily, UBS AG assesses changes in an instrument's risk of default on a quantitative basis by comparing the annualized forward-looking and scenario-weighted lifetime PD of an instrument determined at two different dates:

- at the reporting date; and
- at inception of the instrument.

In both cases, the respective PDs are determined for the residual lifetime of the instrument, i.e., the period between the reporting date and maturity. If, based on UBS AG's quantitative modeling, an increase exceeds a set threshold, an SICR is deemed to have occurred and the instrument is transferred to stage 2 with lifetime ECL being recognized.

Note 1 Summary of significant accounting policies (continued)

The threshold applied varies depending on the original credit quality of the borrower. For instruments with lower default probabilities at inception due to good credit quality of the counterparty, the SICR threshold is set at a higher level than for instruments with higher default probabilities at inception. This implies that for instruments with initially lower default probabilities, a relatively higher deterioration in credit quality is needed to trigger an SICR than for those instruments with originally higher PDs. The SICR assessment based on PD changes is made at an individual financial asset level. A high-level overview of the SICR trigger, which is a multiple of the annualized remaining lifetime PIT PD expressed in rating downgrades that entail the same multiple of PD values, together with the corresponding ratings at origination of an instrument, is provided in the "SICR thresholds" table below. This simplified view is aligned to internal ratings as disclosed in "Internal UBS AG rating scale and mapping of external ratings" presented in "Credit risk" in the "Risk management and control" section of this report. The actual SICR thresholds applied are defined on a more granular level interpolating between the values shown in the table below.

SICR thresholds

Internal rating at origination of the instrument	Rating downgrades / SICR trigger
0-3	3
4-8	2
9-13	1

→ Refer to the "Risk management and control" section of this report for more details on the bank's internal grading system

Irrespective of the SICR assessment based on default probabilities, credit risk is generally deemed to have significantly increased for an instrument if the contractual payments are more than 30 days past due. For certain less material portfolios, specifically the Swiss credit card portfolio and the recruitment and retention loans to financial advisors of Global Wealth Management Region Americas, the 30-day past due criterion is used as the primary indicator of an SICR. Where instruments are transferred to stage 2 due to the 30-day past due criterion, a minimum period of six months is applied before a transfer back to stage 1 can be triggered. For instruments in Personal & Corporate Banking that are between 90 and 180 days past due but have not been reclassified to stage 3, a one-year period is applied before a transfer back to stage 1 can be triggered.

Additionally, based on individual counterparty-specific indicators, external market indicators of credit risk or general economic conditions, counterparties may be moved to a watch list, which is used as a secondary qualitative indicator for an SICR and hence for a transfer to stage 2. Exception management is further applied, allowing for individual and collective adjustments on exposures sharing the same credit risk characteristics to take account of specific situations that are not otherwise fully reflected. Instruments for which an SICR since initial recognition is determined based on criteria other than changed default probabilities or watch list items remain in stage 2 for at least six months post resolution of the stage 2 trigger event.

The overall SICR determination process does not apply to Lombard loans, securities financing transactions and certain other asset-based lending transactions, because of the risk management practices adopted, including daily monitoring processes with strict remargining requirements. If margin calls are not satisfied, a position is closed out and classified as a stage 3 position.

Credit risk officers are responsible for ensuring that the stage allocation of instruments is in line with the requirements of the standard. Identification of an SICR for accounting purposes is in some aspects different from internal credit risk management processes for loans with increased credit risk, mainly because ECL accounting requirements are instrument-specific, such that a borrower can have multiple exposures allocated to different stages, and that maturing loans in stage 2 will migrate to stage 1 upon renewal irrespective of the actual credit risk at that time. Under a risk-based approach, a holistic counterparty credit assessment and the absolute level of risk at any given date will determine what risk mitigating actions may be warranted.

→ Refer to the "Risk management and control" section of this report for more information

Note 1 Summary of significant accounting policies (continued)**Critical accounting estimates and judgments**

The calculation of ECL requires management to apply significant judgment and make estimates and assumptions that involve significant uncertainty at the time they are made. Changes to these estimates and assumptions can result in significant changes to the timing and amount of ECL to be recognized.

Determination of a significant increase in credit risk

IFRS 9 does not include a definition of what constitutes an SICR. UBS AG's assessment of whether an SICR has occurred since initial recognition is based on reasonable and supportable forward-looking information, both qualitative and quantitative, and includes significant management judgment. More stringent criteria could significantly increase the number of instruments migrating to stage 2. An IFRS 9 Operating Committee has been established to review and challenge the SICR approach and any potential changes and determinations made in the quarter.

Scenarios, scenario weights and macroeconomic factors

ECL reflect an unbiased and probability-weighted amount, which UBS AG determines by evaluating a range of possible outcomes. Management selects forward-looking scenarios and judges the suitability of respective weights to be applied. Each of the scenarios is based on management's assumptions around future economic conditions in the form of macroeconomic, market and other factors. Changes in the scenarios and weights, the corresponding set of macroeconomic variables and the assumptions made around those variables for the forecast horizon would have a significant effect on the ECL. An IFRS 9 Scenario Committee, in addition to the Operating Committee, has been established to derive, review and challenge the selection and weights.

ECL measurement period

Lifetime ECL are generally determined based upon the contractual maturity of the transaction, which significantly affects ECL. The ECL calculation is therefore sensitive to any extension of contractual maturities triggered by business decisions, consumer behaviors and an increased number of stage 2 positions. In addition, for credit card limits and Swiss callable master credit facilities, judgment is required as UBS AG must determine the period over which it is exposed to credit risk. A seven-year period has been applied for credit card limits, capped at 12 months for stage 1 positions, and a 12-month period has been applied for master credit facilities.

Modeling and management adjustments

A number of complex models have been developed or modified to calculate ECL, with additional management adjustments required. Internal counterparty rating changes, new or revised models and changes to data may significantly affect ECL. The models are governed by UBS AG's model validation controls, which aim to ensure independent verification, and are approved by the Group Model Governance Board (GMGB). The management adjustments are approved by the IFRS 9 Operating Committee and endorsed by the GMGB.

UBS provides a sensitivity analysis of the effect of scenario selection, scenario weights and SICR trigger points on ECL measurement within Note 23g.

Comparative policy | Policy applicable prior to 1 January 2018

A claim is impaired and an allowance or provision for credit losses is recognized when objective evidence demonstrates that a loss event has occurred after the initial recognition and that the loss event has an effect on the future cash flows that can be reliably estimated (incurred loss approach). UBS AG considers a claim to be impaired if it will be unable to collect all amounts due on it based on the original contractual terms as a result of credit deterioration of the issuer or counterparty. A claim can be a loan or receivable carried at amortized cost, or a commitment, such as a letter of credit, a guarantee or a similar instrument.

An allowance for credit losses is reported as a decrease in the carrying value of a financial asset. For an off-balance sheet item, such as a commitment, a provision for credit loss is reported in *Provisions*. Changes to allowances and provisions for credit losses are recognized in *Credit loss (expense) / recovery*.

Critical accounting estimates and judgments

Allowances and provisions for credit losses are evaluated at both a counterparty-specific level and collectively. Judgment is used in making assumptions about the timing and amount of impairment losses.

Counterparty-specific allowances and provisions

Loans are evaluated individually for impairment if objective evidence indicates that a loan may be impaired. Individual credit exposures are evaluated on the basis of the borrower's overall financial condition, resources and payment record, the prospects of support from contractual guarantors and, where applicable, the realizable value of any collateral. The impairment loss for a loan is the excess of the carrying value of the financial asset over the estimated recoverable amount. The estimated recoverable amount is the present value, calculated using the loan's original effective interest rate, of expected future cash flows, including amounts that may result from restructuring or the liquidation of collateral. If a loan has a variable interest rate, the discount rate for calculating the recoverable amount is the current effective interest rate. Upon impairment, interest income is accrued by applying the original effective interest rate to the impaired carrying value of the loan.

Note 1 Summary of significant accounting policies (continued)

All impaired loans are reviewed and analyzed at least annually. Any subsequent changes to the amounts and timing of the expected future cash flows compared with prior estimates result in a change in the allowance for credit losses and are charged or credited to *Credit loss (expense) / recovery*. An allowance for impairment is reversed only when the credit quality has improved to such an extent that there is reasonable assurance of timely collection of principal and interest in accordance with the original contractual terms of the instrument, or the equivalent value thereof. A write-off is made when all or part of a financial asset is deemed uncollectible or forgiven. Write-offs reduce the principal amount of a claim and are charged against previously established allowances for credit losses. Recoveries, in part or in full, of amounts previously written off are credited to *Credit loss (expense) / recovery*.

Collective allowances and provisions

Collective allowances and provisions are calculated for portfolios with similar credit risk characteristics, taking into account historical loss experience and current conditions. The methodology and assumptions used are reviewed regularly to reduce any differences between estimated and actual loss experience. For all of its portfolios, UBS AG also assesses whether there have been any unforeseen developments that might result in impairments that are not immediately observable at a counterparty level. To determine whether an event-driven collective allowance for credit losses is required, UBS AG considers global economic drivers to assess the most vulnerable countries and industries. As the allowance cannot be allocated to individual loans, the loans are not considered to be impaired and interest is accrued on each loan according to its contractual terms. If objective evidence becomes available that indicates that an individual financial asset is impaired, it is removed from the group of financial assets assessed for impairment on a collective basis and is assessed separately as counterparty-specific.

Impairment of financial assets classified as available for sale

At each balance sheet date, UBS AG assesses whether indicators of impairment are present. Available-for-sale debt instruments are impaired when there is objective evidence, using the same criteria described on the previous page, that, as a result of one or more events that occurred after the initial recognition of the asset, the estimated future cash flows have decreased.

Objective evidence that there has been an impairment of an available-for-sale equity instrument is a significant or prolonged decline in the fair value of the asset. UBS AG uses a rebuttable presumption that such instruments are impaired where there has been a decline in fair value of more than 20% below its original cost or fair value has been below original cost for more than six months.

To the extent a financial asset classified as available for sale is determined to be impaired, the related cumulative net

unrealized loss previously recognized in *Other comprehensive income* is reclassified to the income statement within *Other income*. For equity instruments, any further loss is recognized directly in the income statement, whereas for debt instruments, any further loss is recognized in the income statement only if there is additional objective evidence of impairment. After the recognition of an impairment on a financial asset classified as available for sale, increases in the fair value of equity instruments are reported in *Other comprehensive income*. For debt instruments, such increases in the fair value, up to amortized cost in the transaction currency, are recognized in *Other income*, provided that the fair value increase is related to an event occurring after the impairment loss was recorded. Increases in excess of that amount are reported in *Other comprehensive income*. ▲

h. Restructured and modified financial assets

When payment default is expected or where default has already occurred, UBS AG may grant concessions to borrowers in financial difficulties that it would otherwise not consider in the normal course of its business, such as preferential interest rates, extension of maturity, modifying the schedule of repayments, debt / equity swap, subordination, etc. When a concession or forbearance measure is granted, each case is considered individually and the exposure is generally classified as being in default. Forbearance classification will remain until the loan is collected or written off, non-preferential conditions are granted that supersede the preferential conditions or until the counterparty has recovered and the preferential conditions no longer exceed our risk appetite.

Contractual adjustments when there is no evidence of imminent payment default, or where changes to terms and conditions are within UBS AG's usual risk appetite, are not considered to be in forbearance. Modifications represent contractual amendments that result in an alteration of future contractual cash flows and that can occur within UBS AG's normal risk appetite or as part of a credit restructuring where a counterparty is in financial difficulties.

A restructuring or modification of a financial asset could lead to a substantial change in the terms and conditions, resulting in the original financial asset being derecognized and a new financial asset being recognized. Where the modification does not result in a derecognition, any difference between the modified contractual cash flows discounted at the original EIR and the existing gross carrying value of a financial asset is recognized in profit or loss as a modification gain or loss. Further, the subsequent SICR assessment is made by comparing the risk of default at the reporting date based on the modified contractual terms of the financial asset with the risk of default at initial recognition based on the original, unmodified contractual terms of the financial asset.

Note 1 Summary of significant accounting policies (continued)**i. Netting**

UBS AG nets financial assets and liabilities on its balance sheet if (i) it has the unconditional and legally enforceable right to set off the recognized amounts, both in the normal course of business and in the event of default, bankruptcy or insolvency of UBS AG and all of the counterparties, and (ii) intends either to settle on a net basis or to realize the asset and settle the liability simultaneously. Netted positions include, for example, certain derivatives and repurchase and reverse repurchase transactions with various counterparties, exchanges and clearing houses.

In assessing whether UBS AG intends to either settle on a net basis, or to realize the asset and settle the liability simultaneously, emphasis is placed on the effectiveness of operational settlement mechanics in eliminating substantially all credit and liquidity exposure between the counterparties. This condition precludes offsetting on the balance sheet for substantial amounts of UBS AG's financial assets and liabilities, even though they may be subject to enforceable netting arrangements. For OTC derivative contracts, balance sheet offsetting is generally only permitted in circumstances in which a market settlement mechanism exists via an exchange or central clearing counterparty that effectively accomplishes net settlement through a daily exchange of collateral via a cash margining process. For repurchase arrangements and securities financing transactions, balance sheet offsetting may be permitted only to the extent that the settlement mechanism eliminates, or results in insignificant, credit and liquidity risk, and processes the receivables and payables in a single settlement process or cycle.

→ Refer to Note 25 for more information

j. Hedge accounting

UBS AG uses derivative and non-derivative instruments to manage exposures to interest rate and foreign currency risks, including exposures arising from forecast transactions. UBS AG continues to apply hedge accounting requirements as set out in IAS 39. Qualifying instruments may be designated as hedging instruments in (i) hedges of the change in fair value of recognized assets or liabilities (fair value hedges); (ii) hedges of the variability in future cash flows attributable to a recognized asset or liability or highly probable forecast transactions (cash flow hedges); or (iii) hedges of a net investment in a foreign operation (net investment hedges).

At the time a financial instrument is designated in a hedge relationship, UBS AG formally documents the relationship between the hedging instrument(s) and hedged item(s), including the risk management objectives and strategy in undertaking the hedge transaction and the methods that will be used to assess the effectiveness of the hedging relationship. Accordingly, UBS AG assesses, both at the inception of the hedge and on an ongoing basis, whether the hedging instruments, primarily derivatives, have been "highly effective" in offsetting changes in the fair value or cash flows associated with the designated risk of the hedged items.

A hedge is considered highly effective if the following criteria are met: (i) at inception of the hedge and throughout its life, the hedge is expected to be highly effective in achieving offsetting changes in fair value or cash flows attributable to the hedged risk; and (ii) actual results of the hedge are within a range of 80–125%. In the case of hedging forecast transactions, the transaction must have a high probability of occurring and must present an exposure to variations in cash flows that could ultimately affect the reported net profit or loss. UBS AG discontinues hedge accounting when (i) it determines that a hedging instrument is not, or has ceased to be, highly effective as a hedge; (ii) the derivative expires or is sold, terminated or exercised; (iii) the hedged item matures, is sold or repaid; or (iv) forecast transactions are no longer deemed highly probable. UBS AG may also discontinue hedge accounting voluntarily.

Hedge ineffectiveness represents the amount by which the changes in the fair value of the hedging instrument differ from changes in the fair value of the hedged item attributable to the hedged risk, or the amount by which changes in the present value of future cash flows of the hedging instrument exceed changes in the present value of expected cash flows of the hedged item. Such ineffectiveness is recorded in current-period earnings in *Other net income from fair value changes on financial instruments* (prior to 1 January 2018: *Net trading income*).

Interest from derivatives designated as hedging instruments in effective fair value hedge relationships is presented within *Interest income from loans and deposits* and *Interest expense on debt issued*, within *Net interest income*. Interest from derivatives designated as hedging instruments in effective cash flow hedge relationships that is reclassified from other comprehensive income when the hedged transaction affects profit or loss is presented within *Interest income from derivative instruments designated as cash flow hedges*.

→ Refer to Note 3 for more information

Note 1 Summary of significant accounting policies (continued)

Fair value hedges

For qualifying fair value hedges, the change in the fair value of the hedging instrument is recognized in the income statement along with the change in the fair value of the hedged item that is attributable to the hedged risk. In fair value hedges of interest rate risk, the fair value change of the hedged item attributable to the hedged risk is reflected as an adjustment to the carrying value of the hedged item. If the hedge accounting relationship is terminated for reasons other than the derecognition of the hedged item, the adjustment to the carrying value is amortized to the income statement over the remaining term to maturity of the hedged item using the effective interest rate method. For a portfolio hedge of interest rate risk, the equivalent change in fair value is reflected within *Other financial assets measured at amortized cost* or *Other financial liabilities measured at amortized cost*. If the portfolio hedge relationship is terminated for reasons other than the derecognition of the hedged item, the amount included in *Other financial assets measured at amortized cost* or *Other financial liabilities measured at amortized cost* is amortized to the income statement over the remaining term to maturity of the hedged items using the straight-line method.

Cash flow hedges

Fair value gains or losses associated with the effective portion of derivatives designated as cash flow hedges for cash flow repricing risk are recognized initially in *Other comprehensive income* within *Equity*. When the hedged forecast cash flows affect profit or loss, the associated gains or losses on the hedging derivatives are reclassified from *Equity* to the income statement.

If a cash flow hedge of forecast transactions is no longer considered effective, or if the hedge relationship is terminated, the cumulative gains or losses on the hedging derivatives previously reported in *Equity* remain there until the committed or forecast transactions occur and affect profit or loss. If the forecast transactions are no longer expected to occur, the deferred gains or losses are reclassified immediately to the income statement.

Hedges of net investments in foreign operations

Hedges of net investments in foreign operations are accounted for similarly to cash flow hedges. Gains or losses on the hedging instrument relating to the effective portion of the hedge are recognized directly in *Equity* (and presented in the statement of

changes in equity and statement of comprehensive income under *Foreign currency translation*), while any gains or losses relating to the ineffective and / or undesignated portion (for example, the interest element of a forward contract) are recognized in the income statement. Upon disposal or partial disposal of the foreign operation, the cumulative value of any such gains or losses recognized in *Equity* associated with the entity is reclassified to *Other income*.

Economic hedges that do not qualify for hedge accounting

Derivative instruments that are transacted as economic hedges, but do not qualify for hedge accounting, are treated in the same way as derivative instruments used for trading purposes; i.e., realized and unrealized gains and losses are recognized in *Other net income from fair value changes on financial instruments* (prior to 1 January 2018: *Net trading income*), except for the forward points on certain short- and long-duration foreign exchange contracts, which are reported in *Net interest income*.

→ Refer to Note 11 for more information

k. Embedded derivatives

Derivatives may be embedded in other financial instruments (host contracts). For example, they could be represented by the conversion feature embedded in a convertible bond. Such hybrid instruments arise predominantly from the issuance of certain structured debt instruments. An embedded derivative is generally required to be separated from the host contract (from 1 January 2018: unless the host contract is a financial asset in scope of IFRS 9) and accounted for as a standalone derivative instrument at fair value through profit or loss if (i) the host contract is not carried at fair value with changes in fair value reported in the income statement; (ii) the economic characteristics and risks of the embedded derivative are not closely related to the economic characteristics and risks of the host contract; and (iii) the terms of the embedded derivative would meet the definition of a standalone derivative, were they contained in a separate contract.

Typically, UBS AG applies the fair value option to hybrid instruments (refer to item 3b in this Note for more information), in which case bifurcation of an embedded derivative component is not required.

Note 1 Summary of significant accounting policies (continued)**l. Financial liabilities**

Financial liabilities measured at amortized cost include *Debt issued measured at amortized cost* and *Funding from UBS Group AG and its subsidiaries*. The latter includes contingent capital instruments that contain contractual provisions under which the principal amounts would be written down upon either a specified CET1 ratio breach or a determination by FINMA that a viability event has occurred. Such contractual provisions are not derivatives as the underlying is deemed to be a non-financial variable specific to a party to the contract. Where there is a legal bail-in mechanism for write-down or conversion into equity (as is the case, for instance, with senior unsecured debt issued by UBS AG that is subject to write-down or conversion under resolution authority granted to FINMA under Swiss law), such mechanism does not form part of the contractual terms and, therefore, does not affect the amortized cost accounting treatment applied to these instruments. If the debt were to be written down or converted into equity in a future period, this would result in the full or partial derecognition of the financial liabilities, with the difference between the carrying value of the debt written down or converted into equity and the fair value of any equity shares issued recognized in the income statement.

In cases where, as part of UBS AG's risk management activity, fair value hedge accounting is applied to fixed-rate debt instruments carried at amortized cost, their carrying amount is adjusted for changes in fair value related to the hedged exposure. Refer to item 3j for more information on hedge accounting.

Obligations of UBS AG arising from funding it has received from UBS Group AG or its subsidiaries, which are not within the UBS AG scope of consolidation, are presented as *Funding from UBS Group AG and its subsidiaries*.

Debt issued and subsequently repurchased in relation to market-making or other activities is treated as redeemed. A gain or loss on redemption (depending on whether the repurchase price of the bond is lower or higher than its carrying value) is recorded in *Other income*. A subsequent sale of own bonds in the market is treated as a reissuance of debt.

UBS AG uses the fair value option to designate certain issued debt instruments as financial liabilities designated at fair value through profit or loss, on the basis that such financial instruments include embedded derivatives and / or are managed on a fair value basis (refer to item 3b in this Note for more information).

m. Own credit

Changes in the fair value of financial liabilities designated at fair value through profit or loss related to own credit are recognized in *Other comprehensive income* directly within *Retained earnings* and will not be reclassified to the income statement in future periods.

n. Loan commitments**Policy applicable from 1 January 2018¹**

Loan commitments are arrangements under which clients can borrow stipulated amounts under defined terms and conditions.

Loan commitments that can be canceled at any time by UBS AG at its discretion are neither recognized on the balance sheet nor included in off-balance sheet disclosures.

Loan commitments that cannot be canceled by UBS AG once the commitments are communicated to the beneficiary or that are revocable only because of automatic cancellation upon deterioration in a borrower's creditworthiness are considered irrevocable and are classified as (i) derivative loan commitments measured at fair value through profit or loss; (ii) loan commitments designated at fair value through profit or loss; or (iii) other loan commitments.

UBS AG recognizes ECL on non-cancelable other loan commitments. In addition, UBS AG also recognizes ECL on loan commitments that can be canceled at any time if UBS AG is exposed to credit risk (refer to item g in this Note). Corresponding ECL are presented within *Provisions* on the UBS AG's balance sheet. ECL relating to these other loan commitments are recorded in the income statement in *Credit loss (expense) / recovery*.

When a client draws on a commitment, the resulting loan is presented within *Financial assets at fair value held for trading*, or within *Financial assets at fair value not held for trading* when the associated loan commitments are measured at fair value through profit or loss, and within *Loans and advances to customers* when the associated loan commitment is not measured at fair value through profit or loss.

Comparative policy | Policy applicable prior to 1 January 2018

When a client draws on a commitment, the resulting loan is classified as a (i) trading asset, consistent with the associated derivative loan commitment; (ii) financial asset designated at fair value through profit or loss, consistent with the loan commitment designated at fair value through profit or loss; or as a (iii) loan when the associated loan commitment is accounted for as other loan commitment. ▲

o. Financial guarantee contracts**Policy applicable from 1 January 2018¹**

Financial guarantee contracts are contracts that require the issuer to make specified payments to reimburse the holder for an incurred loss because a specified debtor fails to make payments when due in accordance with the terms of a specified debt instrument. UBS AG issues such financial guarantees to banks, financial institutions and other parties on behalf of clients to secure loans, overdrafts and other banking facilities.

¹ The accounting policy in this section applies from 1 January 2018, the effective date of IFRS 9. For the details of transition effects refer to Note 1c.

Note 1 Summary of significant accounting policies (continued)

Certain issued financial guarantees that are managed on a fair value basis are designated at fair value through profit or loss. Financial guarantees that are not managed on a fair value basis are initially recognized in the financial statements at fair value and are subsequently measured at the higher of:

- the amount of ECL (refer to item g in this Note); and
- the amount initially recognized less the cumulative amount of income recognized as of the reporting date.

ECL resulting from guarantees is recorded in the income statement in *Credit loss (expense) / recovery*.

Comparative policy | Policy applicable prior to 1 January 2018

Financial guarantees that are not managed on a fair value basis are initially recognized in the financial statements at fair value and are subsequently measured at the higher of the amount initially recognized less cumulative amortization and, to the extent a payment under the guarantee has become probable, the present value of the expected payment. Any change in the liability relating to probable expected payments resulting from guarantees is recorded in the income statement in *Credit loss (expense) / recovery*. ▲

p. Other net income from fair value changes on financial instruments

The line item *Other net income from fair value changes on financial instruments* includes fair value gains and losses on financial instruments at fair value through profit or loss but excluding interest income and expense on non-derivatives (refer to item 3c in this Note), as well as the effects at derecognition, trading gains and losses and intermediation income arising from certain client-driven Global Wealth Management and Personal & Corporate Banking financial transactions. In addition, foreign currency translation effects and income and expenses from precious metals are presented within this income statement line item.

4) Fee and commission income and expenses

Policy applicable from 1 January 2018¹

UBS AG earns fee income from a diverse range of services it provides to its clients. Fee income can be divided into two broad categories: fees earned from services that are provided over a certain period of time, such as asset or portfolio management, custody services and certain advisory services; and fees earned

from point-in-time services such as underwriting fees and brokerage fees (e.g., securities and derivative execution and clearing).

→ Refer to Note 4 for more information, including the disaggregation of revenues

Performance obligations satisfied over time

Fees earned from services that are provided over a certain period of time are recognized on a pro rata basis over the service period, provided the fees are not contingent on successfully meeting specified performance criteria that are beyond the control of UBS AG (see measurement below).

Costs to fulfill services over time are recorded in the income statement immediately, because such services are considered to be a series of services that are substantially the same from day to day and have the same pattern of transfer. The costs to fulfill neither generate nor enhance the resources of UBS AG that will be used to satisfy future performance obligations and cannot be distinguished between those that relate to satisfied and unsatisfied performance obligations. Therefore, these costs do not qualify to be recognized as an asset. Where costs incurred relate to contracts that include variable consideration that is constrained by factors beyond UBS AG's control (e.g., successful mergers and acquisitions (M&A) activity) or where UBS AG has a history of not recovering such costs on similar transactions, such costs are expensed immediately as incurred.

Performance obligations satisfied at a point in time

Fees earned from providing transaction-type services are recognized when the service has been completed, provided such fees are not subject to refund or another contingency beyond the control of UBS AG.

Incremental costs to fulfill services provided at a point in time are typically incurred and recorded at the same time as the performance obligation is satisfied and revenue is earned, and are therefore not recognized as an asset, e.g., brokerage. Where recovery of costs to fulfill relates to an uncompleted point-in-time service for which the satisfaction of the performance obligation in the contract is dependent upon factors beyond the control of UBS AG, such as underwriting a successful securities issuance, or where UBS AG has a history of not recovering such costs through reimbursement on similar transactions, such costs are expensed immediately as incurred.

¹ The accounting policy in this section applies from 1 January 2018, the effective date of IFRS 15. For the details of transition effects refer to Note 1b.

Note 1 Summary of significant accounting policies (continued)**Measurement**

Fee and commission income is measured based on consideration specified in a legally enforceable contract with a customer, excluding amounts such as taxes collected on behalf of third parties. Consideration can include both fixed and variable amounts. Variable consideration includes refunds, discounts, performance bonuses and other amounts that are contingent on the occurrence or non-occurrence of a future event. Variable consideration that is contingent on an uncertain event can only be recognized to the extent that it is highly probable that a significant reversal in the amount of cumulative revenue for a contract will not occur. This is referred to as the variable consideration constraint. UBS AG does not consider the highly probable criterion to be met where the contingency on which income is dependent is beyond the control of UBS AG. In such circumstances, UBS AG only recognizes revenue when the contingency has been resolved or an uncertain event has occurred. Examples include asset management performance-linked fees, which are only payable if the returns of a fund exceed a benchmark and are only recognized after the performance period has elapsed. Similarly, M&A advisory fees that are dependent on a successful client transaction are not recognized until the transaction on which the fees are dependent has been executed. Asset management fees (excluding performance-based fees) received on a periodic basis, typically quarterly, that are determined based on a fixed percentage of net asset value that has not been established at the reporting date, are estimated and accrued ratably over the period to the next invoice date, except during periods in which market volatility indicates there is a risk of significant reversal. Research revenues earned by the Investment Bank under commission-sharing or research payment account agreements are not recognized until the client has provided a definitive allocation of amounts between research providers, as prior to this UBS AG generally does not have an enforceable right to a specified amount of consideration.

Consideration received is allocated to the separately identifiable performance obligations in a contract. Owing to the nature of UBS's business, contracts that include multiple performance obligations are typically those that are considered to include a series of similar performance obligations fulfilled over time with the same pattern of transfer to the client, e.g., asset management. As a consequence, UBS AG is not required to apply significant judgment in allocating the consideration received across the various performance obligations. UBS AG has taken the practical expedient to not disclose information on the allocation of the transaction price to remaining performance obligations in contracts. This is because contracts are typically less than one year in duration. Where contracts have a longer duration, they are either subject to the variable consideration constraint, with fees calculated on future net asset value, which cannot be included within the transaction price for the contract, or result in revenue being recognized ratably using the output method corresponding directly to the value of the services

completed to date and to which UBS would be entitled to invoice upon termination of the contract, e.g., loan commitments.

Presentation of fee and commission income and expense

Fee and commission income and expense are presented gross on the face of the income statement when UBS AG is considered to be principal in the contractual relationship with its customer and any suppliers used to fulfill such contracts. This occurs where UBS AG has control over such services and its relationship with suppliers prior to provision of the service to the client. UBS AG only considers itself to be an agent in relation to services provided by third parties, e.g., third-party execution costs for exchange-traded derivatives and fees payable to third-party research providers, where the client controls both the choice of supplier and the scope of the services to be provided. Furthermore, in order to be considered an agent UBS AG must not take responsibility for the quality of the service, transform or integrate the services into a UBS AG product. In such circumstances UBS AG is essentially acting as a payment agent for its client. When UBS AG is acting as an agent, any costs incurred are directly offset against the associated income.

Presentation of expenses in the income statement

UBS AG presents expenses primarily in line with their nature in the income statement, differentiating between expenses that are incremental and incidental to revenues, which are presented within *Total operating income*, and those that are related to personnel, general and administrative expenses, which are presented within *Total operating expenses*.

Contract assets, contract liabilities and capitalized expenses

UBS AG has applied the practical expedient of allowing for costs incurred to obtain a contract to be expensed as incurred where the amortization period for any asset recognized would be less than 12 months.

Where UBS AG provides services to clients, consideration is due immediately upon satisfaction of a point-in-time service or at the end of a prespecified period for a service performed over time; e.g., certain asset management fees are collected monthly or quarterly, through deduction from a client account, deduction from fund assets or through separate invoicing. Where receivables are recorded, they are presented within *Other financial assets measured at amortized cost*.

Contract liabilities relate to prepayments received from customers where UBS AG is yet to satisfy its performance obligation.

Contract assets are recorded when an entity's right to consideration in exchange for services transferred is conditional on something other than the passage of time, e.g., the entity's future performance.

UBS AG has not recognized any material contract assets, contract liabilities or capitalized expenses during the period and has therefore not provided a contract balances reconciliation.

Note 1 Summary of significant accounting policies (continued)

Comparative policy | Policy applicable prior to 1 January 2018

Fees earned from services that are provided over a certain period of time are recognized ratably over the service period, with the exception of performance-linked fees or fee components with specific performance criteria. Such fees are recognized when, as of the reporting date, the performance benchmark has been met and when collectibility is reasonably assured.

Fees earned from providing transaction-type services are recognized when the service has been completed and the fee is fixed or determinable, i.e., not subject to refund or adjustment.

Fee income generated from providing a service that does not result in the recognition of a financial instrument is presented within *Net fee and commission income*. Fees generated from the acquisition, issue or disposal of a financial instrument are presented in the income statement in line with the balance sheet classification of that financial instrument. ▲

→ Refer to Note 4 for more information

5) Cash and cash equivalents

For the purpose of the statement of cash flows, cash and cash equivalents comprise balances with an original maturity of three months or less, including cash, money market paper and balances at central and other banks.

6) Share-based and other deferred compensation plans

Share-based compensation plans

UBS Group AG is the grantor of and maintains the obligation to settle share-based compensation plans that are awarded to employees of UBS AG. UBS AG recognizes the fair value of awards granted to its employees. These awards are generally subject to conditions that require employees to complete a specified period of service and, for performance shares, to satisfy specified performance conditions. Compensation expense is recognized, on a per-tranche basis, over the service period based on an estimate of the number of instruments expected to vest and is adjusted to reflect actual outcomes. Where the service period is shortened, for example in the case of employees affected by restructuring programs or mutually agreed termination provisions, recognition of expense is accelerated to the termination date.

Where no future service is required, such as for employees who are eligible for retirement or who have met certain age and length-of-service criteria, the services are presumed to have been received and compensation expense is recognized immediately

on, or prior to, the date of grant. Such awards may remain forfeitable until the legal vesting date if certain non-vesting conditions are not met. For equity-settled awards, forfeiture events resulting from breach of a non-vesting condition do not result in an adjustment to expense.

UBS AG has no obligation to settle the awards and therefore awards of UBS Group AG shares are classified as equity-settled share-based payment transactions. Compensation expense is measured by reference to the fair value of UBS Group AG equity instruments on the date of grant adjusted, when relevant, to take into account the terms and conditions inherent in the award, including dividend rights, transfer restrictions in effect beyond the vesting date, and non-vesting conditions. Fair value is determined at the date of grant and is not remeasured unless their terms are modified such that the fair value immediately after modification exceeds the fair value immediately prior to modification. Any increase in fair value resulting from a modification is recognized as compensation expense, either over the remaining service period or, for vested awards, immediately.

→ Refer to Note 30 for more information

Other compensation plans

The employees of UBS AG are granted deferred compensation plans that are settled in cash or financial instruments other than UBS AG equity, the amount of which may be fixed or may vary based on the achievement of specified performance conditions or the value of specified underlying assets. Compensation expense is recognized over the period that the employee provides services to become entitled to the award. Where the service period is shortened, for example in the case of employees affected by restructuring programs or mutually agreed termination provisions, recognition of expense is accelerated to the termination date. Where no future service is required, such as for employees who are eligible for retirement or who have met certain age and length-of-service criteria, the services are presumed to have been received and compensation expense is recognized immediately on, or prior to, the date of grant. The amount recognized is based on the present value of the amount expected to be paid under the plan and is remeasured at each reporting date, so that the cumulative expense recognized equals the cash or the fair value of respective financial instruments distributed.

→ Refer to Note 30 for more information

Note 1 Summary of significant accounting policies (continued)**7) Pension and other post-employment benefit plans**

UBS AG sponsors various post-employment benefit plans for its employees worldwide, which include defined benefit and defined contribution pension plans, and other post-employment benefits such as medical and life insurance benefits that are payable after the completion of employment.

→ Refer to Note 29 for more information

Defined benefit plans

UBS AG offers defined benefit pension and medical insurance benefits. Defined benefit plans specify an amount of benefit that an employee will receive, which usually depends on one or more factors, such as age, years of service and compensation. The defined benefit liability recognized on the balance sheet is the present value of the defined benefit obligation less the fair value of the plan assets at the balance sheet date, with changes resulting from remeasurements recorded immediately in *Other comprehensive income*. If the fair value of the plan assets is higher than the present value of the defined benefit obligation, the recognition of the resulting net defined benefit asset is limited to the present value of economic benefits available in the form of refunds from the plan or reductions in future contributions to the plan. UBS AG applies the projected unit credit method to determine the present value of its defined benefit obligations, the related current service cost and, where applicable, past service cost. The projected unit credit method sees each period of service as giving rise to an additional unit of benefit entitlement and measures each unit separately to build up the final obligation. These amounts, which take into account the specific features of each plan, including risk sharing between employee and employer, are calculated periodically by independent qualified actuaries.

Critical accounting estimates and judgments

The net defined benefit liability or asset at the balance sheet date and the related personnel expense depend on the expected future benefits to be provided, determined using a number of economic and demographic assumptions. A range of assumptions could be applied, and different assumptions could significantly alter the defined benefit liability or asset and pension expense recognized. The most significant assumptions include life expectancy, the discount rate, expected salary increases, pension increases and, in addition for the Swiss plan and one of the US defined benefit pension plans, interest credits on retirement savings account balances. Life expectancy is determined by reference to published mortality tables. The discount rate is determined by reference to the rates of return on high-quality fixed-income investments of appropriate currency and term at the measurement date. The assumption for salary increases reflects the long-term expectations for salary growth and takes into account historical salary development by age groups, expected inflation and expected supply and demand in the labor market. A sensitivity analysis for reasonable possible movements in each significant assumption for UBS AG's post-employment obligations is provided within Note 29.

Defined contribution plans

A defined contribution plan is a pension plan under which UBS AG pays fixed contributions into a separate entity from which post-employment and other benefits are paid. UBS AG has no legal or constructive obligation to pay further contributions if the plan does not hold sufficient assets to pay employees the benefits relating to employee service in the current and prior periods. UBS AG's contributions are expensed when the employees have rendered services in exchange for such contributions. This is generally in the year of contribution. Prepaid contributions are recognized as an asset to the extent that a cash refund or a reduction in future payments is available.

8) Income taxes

UBS AG is subject to the income tax laws of Switzerland and those of the non-Swiss jurisdictions in which UBS AG has business operations.

UBS AG's provision for income taxes is composed of current and deferred taxes. Current income taxes represent taxes to be paid or refunded for the current period or previous periods.

Deferred taxes are recognized for temporary differences between the carrying amounts and tax bases of assets and liabilities that will result in taxable or deductible amounts in future periods and are measured using the applicable tax rates and laws that have been enacted or substantively enacted by the end of the reporting period and which will be in effect when such differences are expected to reverse.

Deferred tax assets arise from a variety of sources, the most significant being: (i) tax losses that can be carried forward to be used against profits in future years; and (ii) temporary differences that will result in deductions against profits in future years. Deferred tax assets are recognized only to the extent that it is probable that sufficient taxable profits will be available against which these differences can be used. When an entity or tax group has a history of recent losses, deferred tax assets are only recognized to the extent there are sufficient taxable temporary differences or there is convincing other evidence that sufficient taxable profit will be available against which the unused tax losses can be utilized.

Note 1 Summary of significant accounting policies (continued)

Deferred tax liabilities are recognized for temporary differences between the carrying amounts of assets and liabilities in the balance sheet that reflect the expectation that certain items will give rise to taxable income in future periods.

Deferred and current tax assets and liabilities are offset when (i) they arise in the same tax reporting group; (ii) they relate to the same tax authority; (iii) the legal right to offset exists; and (iv) they are intended to be settled net or realized simultaneously.

Current and deferred taxes are recognized as income tax benefit or expense in the income statement except for current and deferred taxes recognized (i) upon the acquisition of a subsidiary (for which such amounts would affect the amount of goodwill arising from the acquisition); (ii) for gains and losses on the sale of treasury shares (for which the tax effects are recognized directly in *Equity*); (iii) for unrealized gains or losses on financial instruments that are classified as FVOCI (prior to 1 January 2018: financial assets classified as available for sale); (iv) for changes in fair value of derivative instruments designated as cash flow hedges; (v) for remeasurements of defined benefit plans; or (vi) for certain foreign currency translations of foreign operations. Amounts relating to points (iii) through (vi) are recognized in *Other comprehensive income* within *Equity*.

UBS AG reflects the potential effect of uncertain tax positions using expected value (i.e., a probability-weighted approach), except where the likelihood of loss is remote (less than 5%).

Critical accounting estimates and judgments

Tax laws are complex, and judgment and interpretations about the application of such laws are required when accounting for income taxes. UBS AG considers the performance of its businesses and the accuracy of historical forecasts and other factors in evaluating the recoverability of its deferred tax assets, including the remaining tax loss carry-forward period, and its assessment of expected future taxable profits in the forecast period used for recognizing deferred tax assets. Estimating future profitability is inherently subjective and is particularly sensitive to future economic, market and other conditions, which are difficult to predict.

The level of deferred tax asset recognition is influenced by management's assessment of UBS AG's future profitability based on relevant business plan forecasts. Existing assessments are reviewed and, if necessary, revised to reflect changed circumstances. This review is conducted annually, in the fourth quarter of each year, but adjustments may be made at other times, if required. In a situation where recent losses have been incurred, convincing other evidence that there will be sufficient future profitability is required.

If profit forecast assumptions in future periods deviate from the current outlook, the value of UBS AG's deferred tax assets may be affected. Any increase or decrease in the carrying amount of deferred tax assets would primarily be recognized through the income statement but would not affect cash flows.

In addition, judgment is required to assess the expected value of uncertain tax positions that are incorporated into the estimate of income and deferred tax and the assessment of the related probabilities, including in relation to the interpretation of tax laws, the resolution of any income tax-related appeals or litigation and the assessment of the related probabilities.

→ **Refer to Note 8 for more information**

9) Investments in associates

Interests in entities where UBS AG has significant influence over the financial and operating policies of the entity, but does not have control, are classified as investments in associates and accounted for under the equity method of accounting. Typically, UBS AG has significant influence when it holds or has the ability to hold between 20% and 50% of a company's voting rights. Investments in associates are initially recognized at cost, and the carrying amount is increased or decreased after the date of acquisition to recognize the UBS AG's share of the investee's comprehensive income and any impairment losses.

The net investment in an associate is impaired if there is objective evidence of a loss event and the carrying value of the investment in the associate exceeds its recoverable amount.

→ **Refer to Note 31 for more information**

Note 1 Summary of significant accounting policies (continued)**10) Property, equipment and software**

Property, equipment and software includes own-used properties, leasehold improvements, information technology hardware, externally purchased and internally generated software, as well as communication and other similar equipment. Property, equipment and software is carried at cost less accumulated depreciation and impairment losses and is reviewed at each reporting date for indication for impairment. Software development costs are capitalized only when the costs can be measured reliably and it is probable that future economic benefits will arise. Depreciation of property, equipment and software begins when they are available for use (i.e., when they are in the location and condition necessary for them to be capable of operating in the manner intended by management). Depreciation is calculated on a straight-line basis over an asset's estimated useful life. The estimated useful economic lives of UBS AG's property, equipment and software are:

- properties, excluding land: ≤ 67 years
- IT hardware and communication equipment: ≤ 7 years
- other machines and equipment: ≤ 10 years
- software: ≤ 10 years
- leasehold improvements: shorter of the lease term or the economic life of asset (typically ≤ 20 years)

→ Refer to Note 15 for more information

11) Goodwill and intangible assets

Goodwill represents the excess of the cost of an acquisition over the fair value of UBS AG's share of net identifiable assets of the acquired entity at the date of the acquisition. Goodwill is not amortized, but at the end of each reporting period or when indicators of impairment exist, UBS AG assesses whether there is any indication that goodwill is impaired. If such indicators exist, UBS AG is required to test the goodwill for impairment. Irrespective of whether there is any indication of impairment, UBS AG tests goodwill for impairment annually.

For the 2017 annual test, UBS AG considered the segments, as they are reported in Note 2a, as separate cash-generating units, since that was the level at which the performance of investments (and the related goodwill) was reviewed and assessed by management.

Following the integration in 2018 of the Wealth Management and Wealth Management Americas business divisions into the single reportable segment Global Wealth Management, UBS AG continued to separately monitor the goodwill previously allocated to the two former business divisions. As a consequence, for the purpose of goodwill impairment testing, the former Wealth Management and Wealth Management Americas business divisions are considered to be two separate cash-generating units referred to in Note 16 as Global Wealth Management Americas¹ and Global Wealth Management ex Americas. The remaining

goodwill balances continued to be tested at the level of Asset Management and the Investment Bank, respectively, consistent with the 2017 annual test.

The impairment test is performed for each cash-generating unit to which goodwill is allocated by comparing the recoverable amount, based on its value-in-use, to the carrying amount of the respective cash-generating unit. An impairment charge is recognized in the income statement if the carrying amount exceeds the recoverable amount.

If the estimated earnings and other assumptions in future periods deviate from the current outlook, the value of UBS AG's goodwill may become impaired in the future, giving rise to losses in the income statement. Recognition of any impairment of goodwill would reduce net profit and equity, but would not affect cash flows.

Intangible assets are comprised of separately identifiable intangible items arising from business combinations and certain purchased trademarks and similar items. Intangible assets are recognized at cost. The cost of an intangible asset acquired in a business combination is its fair value at the date of acquisition. Intangible assets with a finite useful life are amortized using the straight-line method over their estimated useful life, generally not exceeding 20 years. In rare cases, intangible assets can have an indefinite useful life, in which case they are not amortized. At each reporting date, intangible assets are reviewed for indications of impairment. If such indications exist, the intangible assets are analyzed to assess whether their carrying amount is fully recoverable. An impairment loss is recognized if the carrying amount exceeds the recoverable amount.

Critical accounting estimates and judgments

UBS AG's methodology for goodwill impairment testing is based on a model that is most sensitive to the following key assumptions: (i) forecasts of earnings available to shareholders in years one to three; (ii) changes in the discount rates; and (iii) changes in the long-term growth rate.

The key assumptions are linked to external market information, where applicable. Earnings available to shareholders are estimated on the basis of forecast results, which are part of the business plan approved by the BoD. The discount rates are determined by applying a capital asset pricing model-based approach, as well as considering quantitative and qualitative inputs from both internal and external analysts, the view of management and regional differences in risk-free rates, at the level of individual cash-generating units. Long-term growth rates are determined in a consistent manner based on nominal or real GDP growth rate forecasts, considering different regions worldwide as incorporated in the business plan approved by the BoD.

The key assumptions used to determine the recoverable amounts of each cash-generating unit are tested for sensitivity by applying reasonably possible changes to those assumptions. Refer to Note 16 for details on how the reasonably possible changes may affect the results of UBS AG's model for goodwill impairment testing.

→ Refer to Notes 2 and 16 for more information

¹ Now including the Global Wealth Management business in Latin America, previously part of the Wealth Management business division.

Note 1 Summary of significant accounting policies (continued)**12) Provisions and contingent liabilities**

Provisions are liabilities of uncertain timing or amount, and are recognized when: (i) UBS AG has a present obligation as a result of a past event; (ii) it is probable that an outflow of resources will be required to settle the obligation; and (iii) a reliable estimate of the amount of the obligation can be made.

The majority of UBS AG's provisions relate to litigation, regulatory and similar matters, restructuring, employee benefits, real estate and loan commitments and guarantees.

UBS AG recognizes provisions for litigation, regulatory and similar matters when, in the opinion of management after seeking legal advice, the requirements for recognition have been met. Where these factors are otherwise satisfied, a provision may be established for claims that have not yet been asserted against UBS AG, but are nevertheless expected to be, based on UBS AG's experience with similar asserted claims.

Management may undertake restructuring activities, i.e., a planned and controlled program that materially changes either the scope of the business or the manner in which it is conducted. Restructuring provisions are recognized when a detailed and formal restructuring plan has been approved and a valid expectation has been raised that the restructuring will be carried out, either through commencement of the plan or announcements to affected employees.

Provisions are recognized for lease contracts if the unavoidable costs of a contract exceed the benefits expected to be received under it (onerous lease contracts). For example, this may occur when a significant portion of a leased property is expected to be vacant for an extended period.

Provisions for employee benefits are recognized mainly in respect of service anniversaries and sabbatical leave.

Provisions are recognized at the measurement point that represents our best estimate of the consideration required to settle the present obligation at the balance sheet date. Such estimates are based on all available information and are revised over time as more information becomes available. If the effect of the time value of money is material, provisions are discounted and measured at the present value of the expenditure expected to settle or discharge the obligation, using a rate that reflects the current market assessments of the time value of money and the risks specific to the obligation.

Provisions that are similar in nature are aggregated to form a class, while the remaining provisions, including those of less significant amounts, are disclosed under *Other provisions*. Provisions are presented separately on the balance sheet and, when they are no longer considered uncertain in timing or amount, are reclassified to other liabilities.

When all conditions required to recognize a provision are not met, a contingent liability is disclosed, unless the likelihood of an outflow of resources is remote. Contingent liabilities are also disclosed for possible obligations that arise from past events whose existence will be confirmed only by uncertain future events not wholly within the control of UBS AG. Such disclosures are not made if it is not practicable to do so.

Critical accounting estimates and judgments

Recognition of provisions often involves significant judgment in assessing the existence of an obligation that results from past events and in estimating the probability, timing and amount of any outflows of resources. This is particularly the case for litigation, regulatory and similar matters, which, due to their nature, are subject to many uncertainties making their outcome difficult to predict. Such matters may involve unique fact patterns or novel legal theories, proceedings that have not yet been initiated or are at early stages of adjudication, or as to which alleged damages have not been quantified by the claimants. Determining whether an obligation exists as a result of a past event and estimating the probability, timing and amount of any potential outflows is based on a variety of assumptions, variables, and known and unknown uncertainties.

The amount of any provision recognized is sensitive to the assumptions used and there could be a wide range of possible outcomes for any particular matter.

Statistical or other quantitative analytical tools are of limited use in determining whether to establish or determine the amount of provisions in the case of litigation, regulatory or similar matters. Furthermore, information currently available to management may be incomplete or inaccurate, increasing the risk of erroneous assumptions with regard to the future development of such matters. Management regularly reviews all the available information regarding such matters, including legal advice, which is a significant consideration, to assess whether the recognition criteria for provisions have been satisfied and to determine the timing and amount of any potential outflows.

→ **Refer to Note 21 for more information**

Note 1 Summary of significant accounting policies (continued)**13) Foreign currency translation**

Transactions denominated in a foreign currency are translated into the functional currency of the reporting entity at the spot exchange rate on the date of the transaction. At the balance sheet date, all monetary assets including those at FVOCI (prior to 1 January 2018: monetary financial assets classified as available for sale) and monetary liabilities denominated in foreign currency are translated into the functional currency using the closing exchange rate. Translation differences (which for monetary financial assets at FVOCI are determined as if they were financial assets measured at amortized cost) are reported in *Other net income from fair value changes on financial instruments* (prior to 1 January 2018: *Net trading income*).

Non-monetary items measured at historical cost are translated at the exchange rate on the date of the transaction. Prior to 1 January 2018, foreign currency translation differences on non-monetary financial assets classified as available for sale were recorded directly in *Equity* until the asset was derecognized.

Upon consolidation, assets and liabilities of foreign operations (which from 1 October 2018 also include UBS AG's Swiss-based operations with Swiss franc functional currency) are translated into US dollars, UBS AG's presentation currency, at the closing exchange rate on the balance sheet date, and income and expense items and other comprehensive income are translated at the average rate for the period. The resulting foreign currency translation differences attributable to shareholders are recognized in *Foreign currency translation* within *Equity*, which forms part of *Total equity attributable to shareholders*, whereas the foreign currency translation differences attributable to non-controlling interests are included within *Equity attributable to non-controlling interests*. Share capital issued, share premium and treasury shares held are translated at the historic average rate, whereby the difference between the historic average rate and the spot rate realized upon repayment of share capital or disposal of treasury shares is reported as *Share premium*. Cumulative amounts recognized in OCI in respect of cash flow hedges and financial assets measured at FVOCI (prior to 1 January 2018: financial assets classified as available for sale) are translated at the closing exchange rate as of balance sheet dates, with any translation effects adjusted through *Retained earnings*.

When a foreign operation is disposed or partially disposed of and UBS AG no longer controls the foreign operation, the cumulative amount of foreign currency translation differences within *Total equity attributable to shareholders* and *Equity attributable to non-controlling interests* related to that foreign operation is reclassified to the income statement as part of the gain or loss on disposal. Similarly, if an investment in an associate becomes an investment in a subsidiary, the cumulative amount of foreign currency translation differences is reclassified to profit or loss. When UBS AG disposes of a portion of its interest in a subsidiary that includes a foreign operation but retains control, the related portion of the cumulative currency translation balance is reclassified to *Equity attributable to non-controlling interests*.

→ Refer to Note 37 for more information

Critical accounting estimates and judgments

The determination of an entity's functional currency and the trigger for a change requires management to apply significant judgment and assumptions. IAS 21, *The Effects of Changes in Foreign Exchange Rates*, requires management to consider the underlying transactions, events and conditions that are relevant to the entity when determining the appropriate functional currency and any changes. UBS AG's conclusion, in the fourth quarter of 2018, that the functional currency of UBS AG, UBS AG's Head Office in Switzerland and UBS AG's London Branch has changed was based on a detailed assessment of the primary currencies affecting and influencing the economics of each entity, considering revenue generating income streams, expenses, funding and risk management activities.

In addition, determining the earliest date from which it is practicable to perform a restatement following a voluntary change in presentational currency also requires management to apply significant judgment and make estimates and assumptions. UBS AG's decision in 2018 to change the presentation currency of its consolidated financial statements from Swiss francs to US dollars was made in line with IAS 8, *Accounting Policies, Changes in Accounting Estimates and Errors*, by assessing the earliest date from which it was practicable to perform a restatement, taking into consideration whether sufficiently reliable data was available for earlier periods and whether any assumptions on management intent or significant estimates of amounts were required. UBS AG carried out a detailed and extensive data analysis before concluding that 1 January 2004 represented the earliest date available, with the consequence that foreign currency translation gains and losses prior to 2004 have been disregarded and foreign currency translation effects first calculated from 1 January 2004 onward.

→ Refer to Note 1b for more information

Note 1 Summary of significant accounting policies (continued)**14) Non-controlling interests and preferred noteholders**

Net profit is split into *Net profit attributable to shareholders*, *Net profit attributable to non-controlling interest* and *Net profit attributable to preferred noteholders*. Similarly, *Equity* is split into *Equity attributable to shareholders*, *Equity attributable to non-controlling interests* and *Equity attributable to preferred noteholders*.

Non-controlling interests subject to option arrangements, e.g., written puts, are generally deemed to be acquired by UBS AG. As a result, the amounts allocated to non-controlling interests are reduced accordingly and a liability for the options' exercise price is recognized, with any difference between these two amounts recorded in *Share premium*.

15) Leasing

UBS AG enters into lease contracts, or contracts that include lease components, predominantly of premises and equipment, and primarily as lessee. Leases that transfer substantially all the risks and rewards, but not necessarily legal title in the underlying assets, are classified as finance leases. All other leases are classified as operating leases. UBS AG is not a lessee in any material finance leases.

Lease contracts classified as operating leases where UBS AG is the lessee include non-cancelable long-term leases of office buildings in most UBS AG locations. Operating lease rentals payable are recognized as an expense on a straight-line basis over the lease term, which commences with control of the physical use of the property. Lease incentives are treated as a reduction of rental expense and are recognized on a consistent basis over the lease term.

Where UBS AG acts as lessor under a finance lease, a receivable is recognized in *Other financial assets measured at amortized cost* at an amount equal to the present value of the aggregate of the minimum lease payments plus any unguaranteed residual value that UBS AG expects to recover at the end of the lease term. Initial direct costs are also included in the initial measurement of the lease receivable. Lease payments received during the lease term are allocated to repayment of the outstanding receivable and interest income to reflect a constant periodic rate of return on UBS AG's net investment using the interest rate implicit in the lease. UBS AG reviews the estimated unguaranteed residual value annually, and if the estimated residual value to be realized is less than the amount assumed at lease inception, a loss is recognized for the expected shortfall.

Certain arrangements do not take the legal form of a lease but convey a right to use an asset in return for a payment or series of payments. For such arrangements, UBS AG determines at the inception of the arrangement whether the fulfillment of the arrangement is dependent on the use of a specific asset or assets, and if so, the arrangement is accounted for as a lease.

Note 1 Summary of significant accounting policies (continued)**b) Changes in accounting policies, comparability and other adjustments, excluding the effects of adoption of IFRS 9, Financial Instruments****1) Changes in functional and presentation currency****Change in functional currencies**

As a consequence of legal entity structural changes over recent years – notably the transfer of the Personal & Corporate Banking and Global Wealth Management businesses booked in Switzerland from UBS AG to UBS Switzerland AG, and the creation of UBS Business Solutions AG, which houses a significant portion of the employees and associated costs that were previously held in UBS AG's Head Office in Switzerland and UBS AG's London Branch – a concentration of US dollar-influenced and -managed business activities now exist in UBS AG's Head Office in Switzerland and UBS AG's London Branch. In addition, from the fourth quarter of 2018, for risk management purposes UBS AG adopted the US dollar as the risk-neutral currency and has adjusted its structural risk positions accordingly. As a result of these changes, effective from 1 October 2018, the functional currency of UBS AG's Head Office in Switzerland changed prospectively from Swiss francs to US dollars and that of UBS AG's London Branch changed from British pounds to US dollars, in compliance with the requirements of IAS 21, *The Effects of Changes in Foreign Exchange Rates*.

Change in presentation currency

In 2018, the presentation currency of UBS AG's consolidated financial statements has changed from Swiss francs to US dollars to align with the functional currency changes of significant Group entities. UBS AG has restated prior periods for this voluntary presentational change in line with IAS 8, *Accounting Policies, Changes in Accounting Estimates and Errors*, from 1 January 2004. This point in time represented the earliest date from which it was practicable to perform a restatement, given the lack of sufficiently reliable data for earlier periods. As a consequence, foreign currency translation (FCT) gains or losses prior to 2004 have been disregarded, with FCT effects first calculated from 1 January 2004 onward. In addition, UBS AG has included a second comparative balance sheet as of 1 January 2017 in line with IAS 1, *Presentation of Financial Statements*.

Income and expenses as well as *Other comprehensive income* (OCI) were translated to US dollars at the respective average exchange rates prevailing for the relevant periods. Additionally, *Other income* was restated to reflect releases of FCT gains or losses from OCI to the income statement when calculated under the new US dollar presentation currency. The effect of such restatements for 2018, 2017 and 2016 was not material to the income statements of these periods.

Assets, liabilities and total equity were translated at closing exchange rates prevailing on the respective balance sheet dates, after reflection of deferred tax effects relating to the restatement. Share capital issued, share premium and treasury shares held were translated at historic average rates, whereby differences between historic average rate and closing exchange rate realized upon repayment of share capital or disposal of treasury shares were reported as *Share premium*. Cumulative amounts recognized in OCI in respect of cash flow hedges and financial assets measured at FVOCI (prior to 1 January 2018: financial assets classified as available for sale) were translated at closing exchange rate as of respective balance sheet dates, with any translation effects adjusted through *Retained earnings*.

The restated FCT balance as of 1 October 2018 included a cumulative gain of USD 767 million related to previously applied net investment hedges entered into by UBS AG's Head Office to hedge investments in foreign operations against their former Swiss franc functional currency.

Assets, liabilities and equity were translated to US dollars at closing exchange rates prevailing on the respective balance sheet dates, and income and expenses were translated at the respective average rates prevailing for the relevant periods.

Note 1 Summary of significant accounting policies (continued)**2) IFRS 15, Revenue from Contracts with Customers**

Effective from 1 January 2018, UBS AG adopted IFRS 15, *Revenue from Contracts with Customers*, which replaced IAS 18, *Revenue*, and establishes principles for revenue recognition that apply to all contracts with customers except those relating to financial instruments, leases and insurance contracts. The standard requires an entity to recognize revenue as performance obligations are satisfied.

IFRS 15 specifies that variable consideration is only recognized when the related performance obligation has been satisfied and to the extent that it is highly probable that a significant reversal will not occur when the uncertainty associated with the variable consideration is subsequently resolved.

IFRS 15 also provides guidance on when revenues and expenses should be presented on a gross or net basis and establishes a cohesive set of disclosure requirements for information on the nature, amount, timing and uncertainty of revenue and cash flows from contracts with customers.

As permitted by the transitional provisions of IFRS 15, UBS AG elected not to restate comparative figures. Instead, the cumulative effect of initially applying the standard was recognized as an adjustment to the opening balance of retained earnings. A transition adjustment of USD 28 million on a pre-tax basis and USD 25 million net of tax was posted to retained earnings to reverse income recognized prior to 1 January 2018 under IAS 18 that must be deferred under IFRS 15, either owing to the variable consideration constraint (asset management performance fees of USD 16 million) or because UBS AG does not have an enforceable right to a specified amount of consideration (commission-sharing agreements for research services of USD 11 million).

The adoption of IFRS 15 resulted in changes to UBS AG's accounting policies applicable from 1 January 2018 as set out in Note 1a.

Following the adoption of IFRS 15, fee and commission income is presented in the income statement separately from fee and commission expense.

Where UBS AG is acting as principal as defined by IFRS 15, costs of fulfilling contracts are required by IFRS 15 to be presented separately in the income statement within *Fee and commission expense*. Where UBS AG is acting as agent as defined by IFRS 15, costs of fulfilling contracts are required to be presented as a reduction in *Fee and commission income*. This resulted in a reclassification of certain brokerage fees paid in an agency capacity from *Fee and commission expense* to *Fee and commission income* from 1 January 2018, primarily relating to third-party execution costs for exchange-traded derivative transactions and fees payable to third-party research providers on behalf of clients.

Other presentation changes

In addition to the IFRS 15 changes, certain revenues presented within *Fee and commission income*, primarily distribution fees and fund management fees, have been reclassified between reporting lines in Note 4 to better reflect the nature of the revenues, with comparative-period information restated accordingly. Also, certain expenses that are incremental and incidental to revenues have been reclassified prospectively from *General and administrative expenses* to *Fee and commission expense* to improve the alignment of transaction-based costs with the associated revenue stream, primarily affecting clearing costs, client loyalty costs, and fund and custody expenses. As the effect of this reclassification was not material, prior-period information was not restated.

→ **Refer to Note 4 for more information on the nature, amount, timing and uncertainty of revenues and cash flows from contracts with customers**

3) Changes in segment reporting

Effective from the first quarter of 2018, UBS AG combined its Wealth Management and Wealth Management Americas business divisions into a single Global Wealth Management business division. Global Wealth Management is managed on an integrated basis, with a single set of performance targets and a unified operating plan and management structure. Consistent with this, the operating results of Global Wealth Management are presented and assessed on an integrated basis in internal management reports. Consequently, beginning from 2018, Global Wealth Management qualifies as an operating and reportable segment for the purposes of segment reporting and is presented alongside Personal & Corporate Banking, Asset Management, the Investment Bank, and Corporate Center (with its units Services, Group Asset and Liability Management and Non-core and Legacy Portfolio).

Note 1 Summary of significant accounting policies (continued)**4) IFRS 7, Financial Instruments: Disclosures**

IFRS 7, *Financial Instruments: Disclosures*, was updated in line with IFRS 9, *Financial Instruments*. UBS AG adopted the revised requirements on 1 January 2018, which is the date of initial application of IFRS 9. IFRS 9 transition disclosures as set out by IFRS 7 are presented in Note 1c.

In line with amendments to IFRS 7, from 1 January 2018, UBS AG separately presents hedging gains and losses recognized during the period in the statement of comprehensive income and the amounts reclassified to the income statement. More specifically, the effective portion of changes in fair value of hedging instruments designated as net investment hedges (before tax) recognized in other comprehensive income and the amounts reclassified to the income statement, previously included within *Foreign currency translation movements, before tax* and *Foreign exchange amounts reclassified to the income statement from equity*, are now presented in *Effective portion of changes in fair value of hedging instruments designated as net investment hedges, before tax* and *Effective portion of changes in fair value of hedging instruments designated as net investment hedges reclassified to the income statement*, respectively.

Furthermore, the line *Foreign exchange amounts reclassified to the income statement from equity* was renamed to *Foreign currency translation differences on foreign operations reclassified to income statement*, and the line *Income tax relating to foreign currency translation movements* was renamed to *Income tax relating to foreign currency translations, including the effect of net investment hedges*.

In addition, while retaining hedge accounting under IAS 39, from 2018 UBS AG presents new disclosures to reflect the effects of hedge accounting on its financial statements as required by consequential amendments of IFRS 7. The enhanced disclosures are included in the "Derivatives transacted for hedging purposes" section of Note 28. Specifically, hedging disclosures now include a more extensive description of UBS AG's hedging strategies as risk management tools, and effects of hedge accounting on financial position and performance are structured in tabular format. These additional disclosures are presented prospectively from 1 January 2018.

5) Amendments to IAS 1, Presentation of Financial Statements

In line with amendments to IAS 1, *Presentation of Financial Statements*, from 1 January 2018, in the income statement, UBS presents interest income and interest expense, calculated using the effective interest rate method, on financial instruments measured at amortized cost and financial assets measured at fair value through other comprehensive income separately from interest income and expense on financial instruments measured at fair value through profit or loss.

→ Refer to Note 3 for more information

6) Change in presentation of forward points on certain long-duration foreign exchange contracts transacted as economic hedges

Effective from 1 January 2018, UBS AG refined the presentation of forward points on certain long-duration foreign exchange contracts transacted as economic hedges, transferring the forward points from *Other net income from fair value changes on financial instruments* (prior to 1 January 2018: *Net trading income*) to *Interest income from financial instruments measured at fair value through profit or loss* to align with the presentation of forward points on certain short-duration foreign exchange contracts. The amount of forward points on certain long-duration foreign exchange contracts recognized in *Interest income from financial instruments measured at fair value through profit or loss* did not have a material effect on UBS AG's financial statements and prior periods have not been restated.

7) IFRS Interpretations Committee, Payments relating to taxes other than income tax

During the second quarter of 2018, UBS AG refined its treatment of prepayments or overpayments in relation to uncertain tax positions outside of the scope of IAS 12, *Income Taxes*, following the IFRS Interpretation Committee's discussion on *Payments relating to taxes other than income tax*. More specifically, prepayments for uncertain tax positions that have not yet given rise to a liability are recognized as assets because UBS AG will either receive a cash rebate or a benefit through the extinguishment of a future liability. Adoption of the change did not have a material effect on UBS AG's financial statements.

Note 1 Summary of significant accounting policies (continued)

c) Changes in accounting policies and comparability and transition effects from the adoption of IFRS 9 *Financial Instruments*

1) Introduction

Effective 1 January 2018, UBS AG adopted IFRS 9, *Financial Instruments*, which replaced IAS 39, *Financial Instruments: Recognition and Measurement*, and substantially changed accounting and financial reporting in three key areas: classification and measurement of financial assets, impairment and hedge accounting. In addition, UBS AG early adopted the Amendment to IFRS 9, *Prepayment Features with Negative Compensation*, issued in October 2017, which allows UBS AG to continue to apply amortized cost accounting to Swiss private mortgages and corporate loans that provide for two-way compensation if a prepayment occurs. UBS AG has retained hedge accounting under IAS 39 as permitted and early adopted the own credit requirements of IFRS 9 during the first quarter of 2016.

As permitted by the transitional provisions of IFRS 9, UBS AG elected not to restate comparative figures. Any effect on the carrying amounts of financial assets and liabilities at the date of transition to IFRS 9 was recognized as an adjustment to opening retained earnings. The detailed effects of the adoption of IFRS 9 on 1 January 2018 are presented in this Note and the updated accounting policies for classification and measurement of financial instruments and impairment of financial assets as applied from 1 January 2018 are presented in Note 1a.

2) Transition effect

The adoption of IFRS 9 effective 1 January 2018 has resulted in a reduction to IFRS consolidated equity as of 1 January 2018 of USD 591 million. This effect is comprised of classification and measurement changes of USD 360 million on a pre-tax basis and USD 300 million net of tax, as well as effects from the implementation of impairment requirements based on an expected credit loss (ECL) methodology of USD 357 million on a pre-tax basis and USD 291 million net of tax.

→ Refer to the 31 December 2018 Pillar 3 report under "Pillar 3 disclosures" at www.ubs.com/investors for more information on the effect of the IFRS 9 transition on UBS's capital adequacy

3) Governance

The implementation of IFRS 9 has been a key strategic initiative for UBS AG implemented under the joint sponsorship of the Group Chief Financial Officer and the Group Chief Risk Officer. The incorporation of forward-looking information into the ECL calculation and the definition and assessment of what constitutes a significant increase in credit risk (SICR) are inherently subjective and involve the use of significant expert judgment. Therefore, UBS AG has developed a front-to-back governance framework over the ECL calculation process jointly owned by the Group Chief

Financial Officer and the Group Chief Risk Officer and has designed controls to meet the requirements of the Sarbanes-Oxley Act. UBS AG has efficient credit risk management processes in place that continue to be applicable and aim to ensure that the effects of economic developments are appropriately considered, mitigation actions are taken where required and risk appetite is reassessed and adjusted as needed.

→ Refer to the "Risk management and control" section of this report for more information

4) Retrospective amendments to UBS AG's balance sheet presentation

Although the effect of IFRS 9 classification and measurement changes has been applied prospectively, UBS AG has made a series of changes to the presentation of its balance sheet to facilitate comparability, with information for periods ending before 1 January 2018 being presented in this revised structure. The primary changes include:

- IAS 39-specific asset categories, such as *Financial assets held to maturity* and *Financial assets available for sale*, have been superseded by the new categories *Financial assets measured at amortized cost* and *Financial assets measured at fair value through other comprehensive income*.
- A new line, *Financial assets at fair value not held for trading*, has been created to accommodate in particular financial assets previously designated at fair value, all of which are mandatorily classified at fair value through profit or loss under IFRS 9.
- *Other assets* and *Other liabilities* have been split into those measured at amortized cost, measured at fair value through profit or loss and other non-financial assets and liabilities.
- *Cash collateral on securities borrowed* and *Reverse repurchase agreements* have been combined into a single line, *Receivables from securities financing transactions*. Similarly, *Cash collateral on securities lent* and *Repurchase agreements* have been combined into a single line, *Payables from securities financing transactions*.
- Finance lease receivables, previously presented within *Loans*, are now presented within *Other financial assets measured at amortized cost*.
- Precious metal positions previously presented in *Trading portfolio assets* are now presented within the new line *Other non-financial assets*.
- *Financial liabilities designated at fair value* have been split into two lines: *Debt issued designated at fair value* and *Other financial liabilities designated at fair value*.
- Obligations of UBS AG from funding received from UBS Group AG or its subsidiaries, previously included within *Due to customers*, are now presented separately within *Funding from UBS Group AG and its subsidiaries*.

Note 1 Summary of significant accounting policies (continued)

The table below illustrates the revised balance sheet presentation of assets and liabilities as of 31 December 2017 in comparison with the presentation in the Annual Report 2017. The presentation of the components of equity has not changed, and therefore, for illustration purposes, total liabilities and equity

are presented in a single line in the table. The table does not reflect any of the effects of adopting the classification and measurement requirements of IFRS 9, which are presented in the "Reclassification and remeasurement of carrying amounts and recognition of ECL upon adoption of IFRS 9" table in this Note.

Note 1 Summary of significant accounting policies (continued)**Explanatory footnotes to the table "Retrospective amendments to UBS AG's balance sheet presentation"**

Table ref.	Description of presentation changes applied retrospectively to the balance sheet as of 31 December 2017
Balance sheet assets	
1	Cash collateral on securities borrowed of USD 12,714 million and reverse repurchase agreements of USD 79,238 million as of 31 December 2017 are now presented as a total of USD 91,951 million within a single line, <i>Receivables from securities financing transactions</i> .
2	Finance lease receivables of USD 1,086 million as of 31 December 2017, previously presented within <i>Loans</i> , are now presented within <i>Other financial assets measured at amortized cost</i> .
3	<i>Financial assets held to maturity</i> measured at amortized cost of USD 9,403 million as of 31 December 2017 are now presented within <i>Other financial assets measured at amortized cost</i> .
4	Precious metal positions of USD 4,681 million as of 31 December 2017, previously presented in <i>Trading portfolio assets</i> , are now presented within <i>Other non-financial assets</i> .
5	Financial assets designated at fair value through profit or loss of USD 60,070 million as of 31 December 2017, previously presented in a separate line, are now presented within <i>Financial assets at fair value not held for trading</i> .
6	Debt and equity instruments of USD 8,889 million as of 31 December 2017, previously presented in <i>Financial assets available for sale</i> , are now presented within <i>Financial assets measured at fair value through other comprehensive income</i> .
7	The reporting line <i>Other assets</i> has been split into two new reporting lines, <i>Other financial assets measured at amortized cost</i> and <i>Other non-financial assets</i> . <ul style="list-style-type: none"> – Assets of USD 30,268 million as of 31 December 2017, previously presented within <i>Other assets</i>, are now presented within <i>Other financial assets measured at amortized cost</i> (USD 27,401 million) and <i>Other non-financial assets</i> (USD 2,867 million). – Financial assets now presented within <i>Other financial assets measured at amortized cost</i> include brokerage receivables of USD 19,573 million, debt securities of USD 9,403 million, loans to financial advisors of USD 3,199 million and other assets amounting to USD 5,715 million. Refer to Note 17a for more information. – Refer to Note 17b for more information on assets now presented within <i>Other non-financial assets</i>.
Balance sheet liabilities	
8	Cash collateral on securities lent of USD 1,835 million and repurchase agreements of USD 15,650 million as of 31 December 2017 are now presented within a single line, <i>Payables from securities financing transactions</i> .
9	Obligations of UBS AG from funding received from UBS Group AG or its subsidiaries of USD 35,648 million as of 31 December 2017, which are not within the UBS AG scope of consolidation and were previously included within <i>Due to customers</i> , are now presented separately within <i>Funding from UBS Group AG and its subsidiaries</i> .
10	Financial liabilities designated at fair value through profit or loss of USD 55,604 million as of 31 December 2017 are now presented within <i>Debt issued designated at fair value</i> (USD 50,782 million) and <i>Other financial liabilities designated at fair value</i> (USD 4,822 million).
11	The reporting line <i>Other liabilities</i> has been split into three new reporting lines, <i>Other financial liabilities measured at amortized cost</i> , <i>Other financial liabilities designated at fair value</i> and <i>Other non-financial liabilities</i> . <ul style="list-style-type: none"> – Liabilities amounting to USD 56,412 million as of 31 December 2017, previously presented within <i>Other liabilities</i>, are now presented within <i>Other financial liabilities measured at amortized cost</i> (USD 38,093 million, thereof USD 30,413 million brokerage payables), within <i>Other financial liabilities designated at fair value</i> (amounts due under unit-linked investment contracts of USD 11,821 million) and within <i>Other non-financial liabilities</i> (USD 6,499 million). – Refer to Note 22a for more information on financial liabilities now presented within <i>Other financial liabilities measured at amortized cost</i>. – Refer to Note 22b for more information on financial liabilities now presented within <i>Other financial liabilities designated at fair value</i>. – Refer to Note 22c for more information on liabilities now presented within <i>Other non-financial liabilities</i>.

Note 1 Summary of significant accounting policies (continued)**5) Transition to IFRS 9 as of 1 January 2018****Transition to classification and measurement requirements**

As set out in the amended accounting policies in Note 1a, IFRS 9 requires all financial assets, except equity instruments and derivatives, to be classified at amortized cost, at fair value through other comprehensive income or at fair value through profit or loss (FVTPL), based on the business model for managing the respective assets and their contractual cash flow characteristics.

Changes resulting from the application of IFRS 9 classification and measurement requirements as of 1 January 2018 have been applied as follows:

- Determination of the business model was made based on facts and circumstances as of the 1 January 2018 transition date.
- De-designations and new designations of financial instruments at FVTPL, pursuant to transition requirements of IFRS 9, have been carried out as of 1 January 2018. These reassessments resulted in:
 - i. the de-designation of certain financial assets designated at FVTPL, as they are managed on a fair value basis, and therefore mandatorily measured at fair value, or are no longer managed on a fair value basis but held to collect the contractual cash flows and therefore measured at amortized cost; and
 - ii. the new designation of financial liabilities at FVTPL (e.g., brokerage payables) in order to achieve measurement consistency with associated financial assets that are mandatorily measured at FVTPL (e.g., brokerage receivables).

For UBS AG, the most significant IFRS 9 classification and measurement changes on transition to IFRS 9 were as follows:

- financial assets that no longer qualify for amortized cost accounting under IFRS 9 have been classified at FVTPL because their cash flow characteristics do not satisfy the sole payments of principal and interest criterion (e.g., auction rate securities and certain brokerage receivables);
- lending arrangements that no longer qualify for amortized cost accounting under IFRS 9 are classified at FVTPL because the business model within which they are managed does not have an objective to hold financial assets in order to collect

- the contractual cash flows or to collect contractual cash flows and sell (e.g., certain Investment Bank lending arrangements);
- equity instruments classified as available for sale under IAS 39 are classified at FVTPL under IFRS 9; and
- financial liabilities are newly designated under IFRS 9 at FVTPL, from amortized cost accounting, to align with conclusions reached for associated financial assets that will be measured at FVTPL (e.g., brokerage payables).

Effect on UBS AG income statement presentation

Upon adoption of IFRS 9, the reclassification of auction rate securities, certain loans in the Investment Bank, certain repurchase agreements and brokerage balances from amortized cost to FVTPL has resulted in the interest income from these instruments moving from *Interest income (expense) from financial instruments measured at amortized cost* to *Interest income (expense) from financial instruments measured at fair value through profit or loss*. These changes have been applied prospectively from 1 January 2018.

Effect on UBS AG's statement of cash flows

Following the adoption of IFRS 9, changes have been made to the statement of cash flows to reflect the changes arising from financial instruments that have been reclassified on the balance sheet. In particular, cash flows from certain financial assets previously measured as available-for-sale assets at fair value through other comprehensive income have been reclassified from investing activities to operating activities as the assets are measured at fair value through profit or loss effective 1 January 2018.

Transition to expected credit loss requirements

As set out in UBS AG's amended accounting policies in Note 1a, IFRS 9 introduced a forward-looking ECL approach, which is intended to result in an earlier recognition of credit losses compared with the incurred-loss impairment approach for financial instruments under IAS 39 and the loss-provisioning approach for financial guarantees and loan commitments under IAS 37, *Provisions, Contingent Liabilities and Contingent Assets*.

The majority of ECL calculated as of the transition date relate to the private and commercial mortgage portfolio and corporate lending in Switzerland within Personal & Corporate Banking.

Note 1 Summary of significant accounting policies (continued)**Models at transition**

For the purpose of implementing ECL under IFRS 9, UBS AG has leveraged existing Pillar 1 internal ratings-based (IRB) models that are also used in determining expected loss and risk-weighted assets under the Basel III framework and Pillar 2 stress loss models.

Existing models have been adapted and 29 new models have been developed for the ECL calculation that consider the complexity, structure and risk profile of relevant portfolios and take account of the fact that the probabilities of default (PD) and the loss given default (LGD) used in the ECL calculation are point-in-time-based as opposed to the corresponding Basel III through-the-cycle (TTC) parameters. Management adjustments have also been made. UBS AG has leveraged its existing model risk framework, including the key model validation control executed by Model Risk Management & Control. New and revised models have been approved by UBS's Group Model Governance Board.

The assignment of internal counterparty rating grades and the determination of default probabilities for the purposes of Basel III remain unchanged.

→ Refer to "Credit risk models" in the "Risk management and control" section of this report for more information

Scenarios and scenario weights at transition

As outlined in Note 1a, UBS AG uses four different economic scenarios in the ECL calculation: an upside, a baseline, a mild downside and a severe downside scenario. ECL calculated on transition have been determined for each of the scenarios and subsequently weighted based on the probabilities in the table "Economic scenarios and weights applied."

Economic scenarios and weights applied

ECL scenario	Assigned weights in % (1.1.18)
Upside	20.0
Baseline	42.5
Mild downside	30.0
Severe downside	7.5

→ Refer to Note 23b for information on weights applied to economic scenarios as at 31 December 2018

UBS AG has established IFRS 9 ECL Scenario and Operating Committees to propose and approve the selection of the scenarios and weights to be applied and to monitor whether appropriate governance exists.

Macroeconomic and other factors at transition

Assumptions around the most important forward-looking economic factors for Switzerland, the US and other regions as applied in each of the economic scenarios to determine ECL at the date of transition can be summarized as follows.

For the baseline scenario, which is modeled along our business plan assumptions of a continuation of overall important global growth, Swiss GDP growth remains between 1% and 2% annually over the three years of the scenario. Moderate growth results in a very mild increase of unemployment, which stabilizes at around 3.5%. Asset price growth is also moderate, with the Swiss equity price index rising approximately 8% annually, while house prices grow by less than 1% annually. Policy rates, short-term interest rates and government bond yields increase very gradually over the three years of the scenario by approximately 50 basis points. GDP growth in the US remains relatively stable, and faster than in Switzerland. Monetary policy tightens at a similar pace to Switzerland and, combined with a modest decline in the unemployment rate, helps to keep inflation in check. US equity prices slightly underperform their Swiss counterparts, while house prices outperform relatively stagnant Swiss house price growth. In the rest of the world, growth remains buoyant, with moderating growth in both Europe and China contrasting with accelerating growth in other emerging markets.

In the upside scenario, which assumes GDP growth rising above trend in most countries with only a moderate rise in inflation and ongoing accommodative monetary policies, GDP growth in Switzerland peaks at around 5% annually. Strong growth leads to a decline in unemployment to very low levels (below 1%) by 2020. Asset prices grow at a robust pace, with equity prices increasing approximately 10% annually and house prices (single-family homes) rising approximately 4% annually. Policy and short-term interest rates remain low over the entire scenario, while government bond yields experience a sustained increase. In the US and the rest of the world, the scenario shows broadly similar features, with growth accelerating in Year 1 before steadily returning toward trend by Year 3. Specifically in the US, GDP growth accelerates at a slightly faster pace than in Switzerland, although the US experiences a slightly less substantial improvement in the unemployment rate by Year 3. The degree of policy tightening is marginally greater over the scenario horizon and, as in Switzerland, long-term government bond yields rise more significantly than short-term rates, and to a greater degree.

Note 1 Summary of significant accounting policies (continued)

The mild downside scenario is based on a monetary policy tightening assumption, implemented to deflate a potential asset price bubble, causing Swiss GDP to decline by almost 1% in the first year of the scenario. The unemployment rate rises to roughly 5%. Equity prices fall by more than 20% over three years, while house prices decline by 15% over the same period. The fall of the nominal asking rent index, which is cushioned by higher interest rates, is more moderate than the decline in house prices. Short-term interest rates rise significantly as a result of monetary tightening, as well as government bond yields. In this scenario, inflation in the US accelerates rapidly, leading to a sharp rise in short-term interest rates, with a similar development in Switzerland. GDP growth and house prices decline at a similar rate in the US and Switzerland. In the rest of the world, growth is also weighed down, particularly in more vulnerable emerging markets such as Russia, Turkey and Brazil, as interest rates and credit spreads rise sharply.

The severe downside scenario is modeled to mimic a severe recession caused by an event affecting Switzerland's competitiveness in key export markets, with Swiss GDP shrinking almost 7% in the first year of the scenario. The severe recession results in a substantial increase in unemployment, which peaks at around 9%. Asset prices plummet, with the Swiss equity index falling more than 55% over three years, and house prices declining 27% over the same period. Policy and short-term interest rates remain low over the entire scenario horizon. US GDP and unemployment deteriorate by a lesser degree than in Switzerland, and while house and equity prices decline sharply, the effects are also less severe than in Switzerland. With more scope to cut rates than the Swiss National Bank, short-term rates fall in the US. In the rest of the world, growth also slows sharply, particularly in the eurozone and neighboring emerging markets, such as Turkey and Russia.

→ Refer to Note 23 for more information

ECL measurement period at transition

As set out in Note 1a, for the majority of ECL-relevant instruments, the contractual maturity is used to calculate the measurement period, with this capped at 12 months when stage 1 ECL are required. In addition, for credit card limits and Swiss callable master credit facilities, judgment is required as UBS AG must determine the period over which it is exposed to credit risk. A seven-year period has been applied for credit cards and 12 months for master credit facilities. UBS AG's ECL-relevant financial instruments have relatively short average maturities, which significantly contribute to the level of ECL on transition.

SICR determination at transition

The identification of instruments for which a significant increase in credit risk (SICR) has been determined since initial recognition,

and the corresponding allocation to stage 2 at transition, generally follow the principles described in the relevant accounting policy provided in Note 1a. Furthermore, the following principles have been applied.

General: In estimating the retrospective lifetime PDs, the economic conditions over the relevant prior periods and the general significant uncertainty inherent in such approximation have been considered to determine the allocation of instruments to stage 2 at transition.

Real estate financing: The Basel III rating methodology applied to the majority of income-producing real estate financings within Personal & Corporate Banking, which is leveraged for IFRS 9 ECL calculations, was significantly changed in 2017. As a consequence, there is no comparable rating on origination to determine whether an SICR has arisen over time. As permitted by the IFRS 9 transition requirements, a lifetime ECL allowance has therefore been recognized for certain real estate financing positions and will continue to be recognized until the positions are derecognized.

Other portfolios, including private mortgages and commercial SME clients: The Basel III rating models for other key portfolios in Personal & Corporate Banking, in particular for private client mortgages and commercial clients in the small and medium-sized enterprise segment, have recently been subject to a major redesign. While the methodology remained essentially the same and the calibration to the portfolios' average TTC PD value unchanged, the effect on the stage allocation is significant. This is due to the fact that the introduction of new models has led to a broader and different distribution of borrowers across the rating spectrum; while there was no material effect on those counterparties with an uplift in their rating, some of those that had a downward shift in their rating triggered the SICR threshold and a reclassification into stage 2 at transition.

Overview of transition effects

The table on the following pages provides a detailed overview of the IFRS 9 transition effects as of 1 January 2018. This includes:

- reclassification of IAS 39 carrying amounts to the new categories applicable under IFRS 9;
- remeasurement of carrying amounts due to reclassification (any remeasurement to fair value and / or reversal of IAS 39 allowances or IAS 37 provisions for assets moving from amortized cost to fair value); and
- recognition of IFRS 9 ECL for in-scope assets, off-balance sheet positions and other credit lines.

The following table also includes the effects recognized for deferred tax assets and therefore the total effect provided in *Retained earnings* in the table is net of tax effects. Explanatory footnotes set out after the table provide additional details on these changes.

Note 1 Summary of significant accounting policies (continued)**Explanatory footnotes to the table "Reclassification and remeasurement of carrying amounts and recognition of ECL upon adoption of IFRS 9"**

Table ref.	Description of classification or remeasurement changes on adoption of IFRS 9 as of 1 January 2018
1	Certain customer and prime brokerage receivable balances, in the Investment Bank and Global Wealth Management, fail the solely payments of principal and interest (SPPI) criterion for measurement at amortized cost. These include USD 4,812 million previously included within <i>Loans and advances to customers</i> , USD 17 million from <i>Loans and advances to banks</i> and USD 19,573 million previously included within <i>Other financial assets measured at amortized cost</i> . The receivables are managed under a business model whose objective is to hold the assets to collect contractual cash flows. However, the reported receivables represent an aggregation of cash receivable and payable balances that form a single unit of account at the client level and generate a return that does not constitute consideration for the time value of money, credit risk and other basic lending risks. The SPPI criterion is therefore not met and under IFRS 9 the receivables are mandatorily measured at fair value through profit or loss (FVTPL) and separately presented as <i>Brokerage receivables</i> . There was no difference between the amortized cost carrying amount and the fair value as of 1 January 2018 and therefore no remeasurement gain or loss has been recognized.
2	Based on the business model assessment under IFRS 9, certain reverse repurchase agreements with a carrying amount of USD 5,085 million as of 31 December 2017 were determined to be managed on a fair value basis and were therefore reclassified from amortized cost to FVTPL measurement under IFRS 9. The carrying value has been reclassified from <i>Receivables from securities financing transactions</i> to <i>Financial assets at fair value not held for trading</i> as of 1 January 2018. A remeasurement loss of USD 1 million has been recorded in <i>Retained earnings</i> . USD 11,787 million of forward starting reverse repurchase agreements are newly accounted for as derivatives, prior to settlement, from 1 January 2018 as they are managed on a fair value basis. The fair value of the derivatives as of 1 January 2018 was immaterial.
3	Certain positions previously included within <i>Loans and advances to customers</i> with a carrying amount of USD 2,747 million as of 31 December 2017 were reclassified to <i>Financial assets at fair value not held for trading</i> upon adoption of IFRS 9. This includes: <ul style="list-style-type: none"> – auction rate securities (USD 2,169 million) that are held in Corporate Center and contain an embedded leverage feature triggering the failure of the SPPI criterion; and – certain loans in the Investment Bank (USD 566 million) and in Corporate Center (USD 12 million) that either fail the SPPI criterion or are held within a business model with an intent to sell or substantially hedge the primary risks. These assets are mandatorily measured at FVTPL under IFRS 9. A corresponding net remeasurement loss of USD 293 million was recognized in <i>Retained earnings</i> related to these reclassifications. This remeasurement loss also included reversal of specific credit loss allowances (USD 11 million).
4	Due to a change in the underlying business model, loans and advances to customers with a carrying amount of USD 480 million as of 31 December 2017 have been reclassified to <i>Financial assets at fair value held for trading</i> as of 1 January 2018. A corresponding net remeasurement loss of USD 16 million, which includes the reversal of specific IAS 39 credit loss allowances, was recognized in <i>Retained earnings</i> related to this reclassification. Irrevocable loan commitments that are contractually linked with these financial assets are now recognized as <i>Derivative financial instruments</i> (derivative liabilities) and are measured at FVTPL as of 1 January 2018. This reclassification resulted in a USD 61 million loss with a corresponding entry to <i>Retained earnings</i> . Liabilities arising from deferred fees of USD 4 million related to these loan commitments recorded as <i>Other financial liabilities measured at amortized cost</i> at 31 December 2017 were derecognized with a corresponding entry to <i>Retained earnings</i> .
5	Financial assets with a carrying amount of USD 15 million as of 31 December 2017 were reclassified to <i>Loans and advances to customers</i> from <i>Financial assets at fair value not held for trading</i> (USD 9 million) and from <i>Financial assets at fair value held for trading</i> (USD 6 million) given management's intent to hold these financial assets to collect contractual cash flows. Loan commitments related to these financial assets, which were recognized as derivative liabilities with a carrying value of USD 2 million as of 31 December 2017, were accordingly derecognized on 1 January 2018 with a corresponding entry to <i>Retained earnings</i> .
6	Certain debt instruments with a carrying amount of USD 569 million as of 31 December 2017 were formerly classified as available for sale and measured at fair value through other comprehensive income (FVOCI) under IAS 39 but are measured at amortized cost under IFRS 9. Those positions, which are held to collect cash flows solely representing payment of principal and interest, are presented within <i>Other financial assets measured at amortized cost</i> as of 1 January 2018. The fair value of these assets was consistent with the amortized cost value as of 1 January 2018 and no remeasurement gain or loss has been recognized.
7	Upon adopting IFRS 9, UBS AG has elected to refine the assets classified within <i>Financial assets at fair value held for trading</i> to carve out those that are segregated from UBS AG's trading activities, where UBS AG's role is primarily to manage the assets on a fair value basis on behalf of others. Instead, such assets will be presented alongside others managed on a fair value basis within <i>Financial assets at fair value not held for trading</i> . As a consequence of this refinement, UBS AG has reclassified assets held to hedge unit-linked investment contracts of USD 11,609 million from <i>Financial assets at fair value held for trading</i> to <i>Financial assets at fair value not held for trading</i> as of 1 January 2018. No remeasurement gain or loss has been recognized.

Note 1 Summary of significant accounting policies (continued)**Explanatory footnotes to the table "Reclassification and remeasurement of carrying amounts and recognition of ECL upon adoption of IFRS 9" (continued)**

Table ref.	Description of classification or remeasurement changes on adoption of IFRS 9 as of 1 January 2018 (continued)
8	<p>UBS AG holds certain global and local liquidity buffers that were determined to be managed on a fair value basis as management utilizes fair value information for reporting and decision-making purposes. Therefore, assets previously classified as available for sale under IAS 39 with a carrying amount of USD 636 million as of 31 December 2017 were reclassified to <i>Financial assets at fair value not held for trading</i>. An unrealized gain of USD 5 million related to these positions was reclassified from <i>Other comprehensive income</i> to <i>Retained earnings</i>.</p> <p>Additionally, equity instruments and investment fund units previously classified as available for sale under IAS 39 with a carrying amount of USD 755 million as of 31 December 2017 were reclassified to <i>Financial assets at fair value not held for trading</i> under the revised IFRS 9 measurement rules. A related unrealized gain in OCI of USD 204 million has been reclassified to <i>Retained earnings</i>.</p> <p>Additionally, a net tax expense of USD 134 million was transferred from OCI to <i>Retained earnings</i> related to the positions above that were reclassified out of the IAS 39 available-for-sale category.</p>
9	<p>Assets previously designated at FVTPL with a carrying amount of USD 60,070 million as of 31 December 2017 are no longer designated as such under IFRS 9, as it was determined that these assets were either held in a business model that is managed on a fair value basis, did not meet the SPPI criterion, or did meet the SPPI criterion and are held in a hold-to-collect business model.</p> <p>Of the total, assets with a carrying amount of USD 60,062 million are now mandatorily measured at FVTPL and included within <i>Financial assets at fair value not held for trading</i>. The remaining assets with a carrying amount of USD 9 million have been de-designated and were reclassified to <i>Loans and advances to customers</i>, given a change in business model to hold-to-collect (refer to footnote 5).</p>
10	<p>Certain debt instruments with a carrying amount of USD 6,930 million as of 31 December 2017 were formerly classified as available for sale under IAS 39 and are measured at FVOCI under IFRS 9. These instruments include US government bonds, US government-sponsored mortgage-backed securities, and other forms of debt that are held in a business model whose objective is achieved by both collecting contractual cash flows and selling and that meet the SPPI criterion. These positions are now presented within <i>Financial assets measured at fair value through other comprehensive income</i>.</p>
11	<p>Deferred tax assets of USD 126 million have been recognized in connection with the adoption of IFRS 9. Of the total effect, USD 66 million relates to the recognition of ECL and USD 59 million relates to classification and measurement changes upon adoption of IFRS 9.</p>
12	<p>Upon adoption of the ECL requirements of IFRS 9, a transition effect of USD 357 million was recognized, consisting of USD 148 million of stage 1 allowances, USD 193 million of stage 2 allowances and an incremental increase in stage 3 allowances of USD 16 million. The effect was mainly recognized within <i>Loans and advances to customers</i> (USD 241 million), with effects also recognized in <i>Other financial assets measured at amortized cost</i> (USD 36 million), <i>Loans and advances to banks</i> (USD 3 million), <i>Receivables from securities financing transactions</i> (USD 2 million) and <i>Provisions</i> (USD 76 million).</p>
13	<p>Certain repurchase agreements with a carrying amount of USD 5,212 million as of 31 December 2017 have been designated at FVTPL as they are managed in conjunction with reverse repurchase agreements that are mandatorily measured at FVTPL under IFRS 9. These amounts are included within <i>Other financial liabilities designated at fair value</i> as of 1 January 2018. A remeasurement gain of USD 5 million has been recognized in <i>Retained earnings</i> as of 1 January 2018 related to this reclassification.</p> <p>USD 7,930 million of forward starting repurchase agreements are newly accounted for as derivatives, prior to settlement, from 1 January 2018 as they are managed on a fair value basis. The fair value of the derivatives as of 1 January 2018 was immaterial.</p>
14	<p>To achieve measurement consistency with reclassified customer and prime brokerage receivables that are measured at FVTPL following adoption of IFRS 9, certain customer deposits with a carrying amount of USD 5,404 million and prime brokerage payables with a carrying amount of USD 30,413 million as of 31 December 2017 have been designated at FVTPL and are presented within <i>Brokerage payables designated at fair value</i> as of 1 January 2018. There was no difference between the amortized cost carrying amount and the fair value as of 1 January 2018 and therefore no remeasurement gain or loss has been recognized.</p>
15	<p>The adoption of IFRS 9 has resulted in a reduction to IFRS consolidated equity as of 1 January 2018 of USD 591 million.</p> <p>This effect is comprised of classification and measurement changes of USD 360 million on a pre-tax basis and USD 300 million net of tax, as well as effects from the implementation of ECL methodology of USD 357 million on a pre-tax basis and USD 291 million net of tax. In addition, USD 74 million has been reclassified from <i>Other comprehensive income</i> recognized directly in equity, net of tax, to <i>Retained earnings</i> (refer to footnote 8 above), with no overall effect on equity attributable to shareholders.</p>

Note 1 Summary of significant accounting policies (continued)**Reconciliation of allowances and provisions on adoption of IFRS 9 as of 1 January 2018**

The table below provides a reconciliation from the IAS 39 allowances / IAS 37 provisions to the IFRS 9 ECL allowances / provisions recognized as of 1 January 2018 upon adoption of IFRS 9.

Reconciliation of allowances and provisions on adoption of IFRS 9

	31.12.17	1.1.18		
<i>USD million</i>	Loss allowances and provisions (IAS 39 / IAS 37)	Reversal of allowances (IAS 39)	Recognition of ECL (IFRS 9) ¹	Allowances and provisions for ECL (IFRS 9)
On-balance sheet				
Cash and balances at central banks			0	0
Loans and advances to banks	(3)		(3)	(5)
Receivables from securities financing transactions			(2)	(2)
Cash collateral receivables on derivative instruments			0	0
Loans and advances to customers	(675)	27 ²	(241) ³	(890)
Other financial assets measured at amortized cost	(104) ⁴		(36)	(139)
Total on-balance sheet	(781)	27	(282)	(1,037)
Off-balance sheet financial instruments and other credit lines				
Guarantees	(30)		(8)	(38)
Loan commitments	(4)		(33)	(37)
Other credit lines			(35)	(35)
Total off-balance sheet financial instruments and other credit lines	(34)		(76)	(110)
Total	(815)	27	(357)	(1,146)
<i>of which: stage 1</i>			<i>(148)</i>	<i>(148)</i>
<i>of which: stage 2</i>			<i>(193)</i>	<i>(193)</i>
<i>of which: stage 3</i>			<i>(16)⁵</i>	<i>(806)</i>

¹ Includes stage 1 and stage 2 expected credit losses and additional stage 3 expected credit losses. ² The reversal of USD 27 million of IAS 39 loss allowances relates to instruments reclassified from amortized cost to fair value through profit or loss on transition to IFRS 9. Refer also to footnotes 3 and 4 to the table "Reclassification and remeasurement of carrying amounts and recognition of ECL upon adoption of IFRS 9." ³ Includes the reversal of collective allowances of USD 13 million. ⁴ Includes USD 84 million related to loans to financial advisors for which an allowance was reported as a direct reduction of the carrying amount as of 31 December 2017. ⁵ The incremental increase in stage 3 allowances of USD 16 million arises from additional consideration of forward looking scenarios under IFRS 9.

Note 1 Summary of significant accounting policies (continued)

IFRS 9 transition effect on other comprehensive income and retained earnings as of 1 January 2018

The table below presents the transition effects recognized in OCI and retained earnings upon adoption of IFRS 9.

IFRS 9 impact on other comprehensive income and retained earnings

USD million

Other comprehensive income recognized directly in equity, net of tax

Reclassification of financial assets (available for sale to fair value through profit or loss) – equity instruments	(204)
Reclassification of financial assets (available for sale to fair value through profit or loss) – debt instruments	(5)
Tax (expense) / benefit	134
Total change in other comprehensive income	(74)

Retained earnings

Remeasurement of financial assets (reclassified from amortized cost to fair value through profit or loss)	(310)
Reclassification of financial assets (reclassified from available for sale to fair value through profit or loss)	209
Recognition of ECL for on-balance sheet financial assets	(282)
Remeasurement of financial liabilities (reclassified from amortized cost to designated at fair value through profit or loss)	5
Recognition of derivative loan commitments measured at fair value through profit or loss	(61)
Derecognition of liabilities for deferred fees on other loan commitments	4
Derecognition of derivative loan commitments measured at fair value through profit or loss	2
Recognition of ECL for off-balance sheet positions	(76)
Tax (expense) / benefit	(9)
Total change in retained earnings	(518)
Total change in equity due to the adoption of IFRS 9	(591)

Note 1 Summary of significant accounting policies (continued)**d) International Financial Reporting Standards and Interpretations to be adopted in 2019 and later and other changes****IFRS 16, Leases**

UBS AG will adopt IFRS 16, *Leases*, on 1 January 2019. This will fundamentally change how UBS AG accounts for operating leases when acting as a lessee, with a requirement to record a lease obligation and a right-of-use asset on the balance sheet. Upon adoption of IFRS 16, assets and liabilities are expected to increase by approximately USD 3.5 billion with no material effect to the UBS AG's equity.

Changes in Corporate Center cost allocations and equity attribution to business divisions as of the first quarter of 2019

In order to further align Group and divisional performance, UBS AG will adjust the methodology for the allocation of Corporate Center – Services funding costs and expenses to the business divisions. At the same time, UBS AG is updating its funds transfer pricing framework to better reflect the sources and usage of funding. All of these changes are effective as of 1 January 2019 and prior-period segment information will be restated.

Together, these changes will decrease the business divisions' operating results and thereby increase their adjusted cost / income ratios by approximately 1-2 percentage points, with an offsetting effect of approximately USD 0.7 billion in Corporate Center's operating profit / (loss) before tax.

Corporate Center will retain funding costs for deferred tax assets, costs relating to UBS AG's legal entity transformation program and other costs not attributable to or representative of the performance of the business divisions.

Alongside the update to allocations and UBS AG's funds transfer pricing framework, UBS AG is increasing the allocation of balance sheet resources from Corporate Center to the business divisions, resulting in approximately USD 220 billion of assets allocated from Corporate Center to the business divisions in restated 2018 numbers, predominantly from high-quality liquid assets and certain other assets centrally managed on behalf of the business divisions.

Upon adoption of IFRS 16, *Leases*, as of 1 January 2019, UBS AG intends to additionally allocate approximately USD 3.5 billion of newly recognized right of use assets to the business divisions.

Changes to Corporate Center segment reporting effective first quarter 2019

As announced in the third quarter 2018 report, UBS AG will no longer separately assess the performance of Non-core and Legacy Portfolio, given its substantially reduced size and resource consumption. In addition, following the aforementioned changes to UBS's methodology for allocating funding costs and expenses from Corporate Center – Services and Corporate Center – Group Asset and Liability Management (Group ALM) to the business divisions, the operating loss retained in Corporate Center – Services and Corporate Center – Group ALM will be significantly reduced. As a consequence and in compliance with IFRS 8, *Operating Segments*, beginning with the first quarter 2019 report, UBS AG will provide results for total Corporate Center only and will not separately report Corporate Center – Services, Group ALM and Non-core and Legacy Portfolio. Furthermore, UBS AG will operationally combine Group Treasury with Group ALM and call this combined unit Group Treasury. Commentary on performance of this function will be included in the Corporate Center management discussion and analysis in UBS's quarterly and annual reporting. Former Group ALM total risk management net income after allocations will continue to be disclosed separately. Prior-period information will be restated.

IFRIC 23, Uncertainty over Income Tax Treatments

In June 2017, the IASB issued IFRIC Interpretation 23, *Uncertainty over Income Tax Treatments* (IFRIC 23), which addresses how uncertain tax positions should be accounted for under IFRS. IFRIC 23 requires that, where acceptance of the tax treatment by the relevant tax authority is considered probable, it should be assumed as an accounting recognition matter that treatment of the item will ultimately be accepted. Therefore, no tax provision would be required in such cases. However, if acceptance of the tax treatment is not considered probable, the entity is required to reflect that uncertainty using an expected value (i.e., a probability-weighted approach) or the single most likely amount.

IFRIC 23 is mandatorily effective for accounting periods beginning on or after 1 January 2019 and any resulting change to the tax provisions should be recognized in retained earnings.

UBS AG expects to recognize a net tax expense of USD 11 million in retained earnings on 1 January 2019 in respect of the adoption of IFRIC 23, which will be reflected in UBS AG's first quarter 2019 report.

Note 1 Summary of significant accounting policies (continued)

Amendments to IAS 19, *Employee Benefits*

In February 2018, the IASB issued amendments to IAS 19, *Employee Benefits*, which address the accounting when a plan amendment, curtailment or settlement occurs during the reporting period. The amendments require entities to use the updated actuarial assumption to determine current service cost and net interest for the remainder of the annual reporting period after such an event. The amendments also clarify how the requirements for accounting for a plan amendment, curtailment or settlement affect the asset ceiling requirements. The amendments are effective prospectively for plan amendments, curtailments or settlements that occur on or after 1 January 2019. The adoption will have no effect on UBS AG's financial statements on transition at 1 January 2019.

Annual Improvements to IFRS Standards 2015–2017 Cycle

In December 2017, the IASB issued *Annual Improvements to IFRS Standards 2015–2017 Cycle*, which resulted in amendments to IFRS 3, *Business Combinations*, IFRS 11, *Joint Arrangements*, IAS 12, *Income Taxes*, and IAS 23, *Borrowing Costs*. The amendments are mandatorily effective as of 1 January 2019. The adoption of these amendments will have no material effect on the UBS AG's financial statements on the transition date.

Conceptual Framework

In March 2018, the IASB issued a revised version of its Conceptual Framework for Financial Reporting (the Framework). The Framework sets out the fundamental concepts of financial reporting that guide the IASB in developing IFRS standards. The amended Framework seeks to improve the concepts for reporting assets, liabilities, income and expenses, explains how to decide when assets and liabilities should be measured using historical cost and when they should be measured at current value, and provides up-to-date tools that will help the IASB in setting IFRS standards. It underpins existing IFRS standards but does not override them. Preparers use the Framework as a point of reference to develop accounting policies in rare instances where a particular business transaction is not covered by existing IFRS standards.

The IASB and the IFRS Interpretations Committee will begin to use the new Framework immediately in developing new, or amending existing, financial reporting standards and interpretations. For UBS AG, the Framework becomes effective in annual periods beginning on 1 January 2020. UBS AG is currently assessing the effect of the amended Framework on its financial accounting policies.

Amendments to IFRS 3, *Business Combinations*

In October 2018, the IASB issued *Definition of a Business (Amendments to IFRS 3)*. The amendments clarify the definition of a business, with the objective of assisting in the determination of whether a transaction should be accounted for as a business combination or an asset acquisition. The amendments apply to transactions for which the acquisition date is on or after 1 January 2020, with early application permitted. Adoption of these amendments is not expected to have a material effect on the financial statements.

Note 2a Segment reporting

The operational structure of UBS AG as of 31 December 2018 was comprised of Corporate Center and four business divisions: Global Wealth Management, Personal & Corporate Banking, Asset Management and the Investment Bank.

→ Refer to “Segment reporting” in Note 1a for more information

Global Wealth Management

In the first quarter of 2018, Wealth Management and Wealth Management Americas were combined into a single unit. Global Wealth Management provides investment advice and solutions to private clients, in particular in the ultra high net worth and high net worth segments. Clients benefit from Global Wealth Management’s comprehensive set of capabilities, including wealth planning, investing, lending, asset protection, philanthropy, corporate and banking services as well as family office services in collaboration with the Investment Bank and Asset Management. Global Wealth Management has a global footprint, with the US representing its largest market. Clients are served through local offices and dedicated advisors. The ultra high net worth business is managed globally across the regions.

Personal & Corporate Banking

Personal & Corporate Banking provides comprehensive financial products and services to private, corporate and institutional clients and operates in Switzerland in the private and corporate loan market. Personal & Corporate Banking is central to UBS AG’s universal bank model in Switzerland and it works with the wealth management, investment bank and asset management businesses to help clients receive the best products and solutions for their specific financial needs. While Personal & Corporate Banking operates primarily in its home market of Switzerland, it also provides capabilities to support the growth of the international business activities of UBS AG’s corporate and institutional clients through local hubs in Frankfurt, New York, Hong Kong and Singapore. The business is divided into Personal Banking and Corporate & Institutional Clients (CIC).

Asset Management

Asset Management is a large-scale and diversified global asset manager. It offers investment capabilities and styles across all major traditional and alternative asset classes, as well as platform solutions and advisory support to institutions, wholesale intermediaries and Global Wealth Management clients around the world. Asset Management offers clients a wide range of investment products and services in different asset classes in the form of segregated, pooled or advisory mandates

as well as registered investment funds in various jurisdictions. It covers the main asset management markets globally, with a presence in 23 countries grouped in four regions: the Americas; Europe, Middle East and Africa; Switzerland; and Asia Pacific.

Investment Bank

The Investment Bank provides a range of services to institutional, corporate and wealth management clients to help them raise capital, grow their businesses, invest and manage risks. It is focused on its traditional strengths in advisory, capital markets, equities and foreign exchange, complemented by a targeted rates and credit platform. The Investment Bank uses its research and technology capabilities to support its clients as they adapt to the evolving market structures and changes in the regulatory, technological, economic and competitive landscape. The Investment Bank delivers solutions to corporate, institutional and wealth management clients, using its intellectual capital and electronic platforms. It also provides services to Global Wealth Management, Personal & Corporate Banking and Asset Management. It has a global reach, with a presence in 33 countries and principal offices in all major financial hubs.

Corporate Center

Corporate Center provides services to the Group through the Corporate Center – Services and Group Asset and Liability Management (Group ALM) units. Corporate Center also includes the Non-Core and Legacy Portfolio unit.

Corporate Center – Services consists of the Group Chief Operating Officer area (Group Technology, Group Corporate Services, Group Human Resources, Group Operations and Group Sourcing), Group Finance (excluding Group ALM), Group Legal, Group Risk Control, Communications & Branding, Group Compliance, Regulatory & Governance, and UBS in society.

Group ALM manages the structural risk of UBS AG’s balance sheet, including interest rate risk, structural foreign exchange risk and collateral risk, as well as the risks associated with UBS AG’s liquidity and funding portfolios. Group ALM also seeks to optimize financial performance by matching assets and liabilities. Group ALM serves all business divisions and the other Corporate Center units through three main risk management areas, and its risk management is fully integrated into UBS AG’s risk governance framework.

Non-core and Legacy Portfolio manages legacy positions from businesses exited by the Investment Bank. It is overseen by a committee chaired by the Group Chief Risk Officer.

Note 2b Segment reporting by geographic location

The operating regions shown in the table below correspond to the regional management structure of UBS AG. The allocation of operating income to these regions reflects, and is consistent with, the basis on which the business is managed and its performance is evaluated. These allocations involve assumptions and judgments that management considers to be reasonable, and may be refined to reflect changes in estimates or management structure. The main principles of the allocation methodology are that client revenues are attributed to the

domicile of the client and trading and portfolio management revenues are attributed to the country where the risk is managed. This revenue attribution is consistent with the mandate of the regional Presidents. Certain revenues, such as those related to Corporate Center – Non-core and Legacy Portfolio, are managed at a global level. These revenues are included in the *Global* line.

The geographic analysis of non-current assets is based on the location of the entity in which the assets are recorded.

For the year ended 31 December 2018

¹ 2017 and 2016 figures have been restated for the change of the presentation currency from Swiss francs to US dollars. Refer to Note 1b item 1 for more information. In addition, 2017 and 2016 figures have been restated to reflect the regional representation of Global Wealth Management after combining Wealth Management and Wealth Management Americas in 2018. Refer to Note 1b item 3 for more information.

Income statement notes

Note 3 Net interest income and other net income from fair value changes on financial instruments

Change in presentation of net interest income and other net income from fair value changes on financial instruments

The table on the following pages reflects certain presentation changes made to reflect the effects from the adoption of new standards and interpretations in 2018. These changes are summarized as follows:

- In line with amendments to IAS 1, *Presentation of Financial Statements*, from 1 January 2018, UBS presents interest income and interest expense calculated, using the effective interest rate method, on financial instruments measured at amortized cost and financial assets measured at fair value through other comprehensive income separately from interest income and expense on financial instruments measured at fair value through profit or loss (FVTPL) in the income statement. Comparative information has been adjusted accordingly. As a result of this change, forward points on certain short-duration foreign exchange contracts are now presented within *Interest income from financial instruments at fair value held for trading* that were previously presented within *Interest income from loans and deposits*. Comparative information was restated accordingly.
- Upon adoption of IFRS 9, certain assets and liabilities were reclassified from amortized cost to fair value through profit or loss (auction rate securities, certain loans in the Investment Bank, certain repurchase agreements and brokerage balances). This has resulted in the interest income from these instruments moving from *Interest income (expense) from financial instruments measured at amortized cost* to *Interest income (expense) from financial instruments measured at fair value through profit or loss*. These changes have been applied prospectively from 1 January 2018 with certain prior-period information being adjusted for comparability. Comparative information for brokerage balances now separately presents the related interest income and expense, which was formerly included within *Interest income (expense) from loans and deposits*.
- A new line, *Interest income from financial instruments at fair value not held for trading*, has been included to accommodate in particular interest income from financial assets previously designated at fair value under IAS 39, which are now mandatorily classified at fair value through profit or loss under IFRS 9. Comparative information has been adjusted accordingly.
- Net gains / losses from financial assets previously designated at fair value under IAS 39 (2017: net gains of USD 2,567 million; 2016: net losses of USD 171 million) are no longer separately disclosed in the table on the following pages as assets are now mandatorily classified at fair value through profit or loss under IFRS 9.

¹ Net interest income and other net income from fair value changes on financial instruments presented for business divisions and Corporate Center units includes allocations from Corporate Center – Group ALM.

² Mainly includes spread-related income in connection with client-driven transactions, foreign currency translation effects and income and expenses from precious metals, which are included in the income statement line Other net income from fair value changes on financial instruments. ³ Prior-period information may not be comparable as a result of the adoption of IFRS 9, effective 1 January 2018. Refer to Note 1c for more information on these changes. Negative interest income and negative interest expense are each individually approximately 9% of net interest income (2017: approximately 8% of net interest income; 2016: approximately 5% of net interest income). ⁴ As a consequence of amendments to IAS 1, Presentation of Financial Statements, effective 1 January 2018, forward points on certain short-duration foreign exchange contracts previously presented within Interest income from loans and deposits are now presented within Interest income from financial instruments at fair value held for trading. Comparative information was restated accordingly. ⁵ Consists of interest income from cash and balances at central banks, loans and advances to banks, and negative interest on amounts due to banks and customer deposits. ⁶ Includes interest income on receivables from securities financing transactions and negative interest, including fees, on payables from securities financing transactions. ⁷ Consists of interest expense on amounts due to banks and customer deposits, and negative interest on cash and balances at central banks, loans and advances to banks. ⁸ Includes interest expense on payables from securities financing transactions and negative interest, including fees, on receivables from securities financing transactions. ⁹ Includes dividend income. ¹⁰ Includes interest income on certain reverse repurchase agreements that are measured at fair value through profit or loss since 1 January 2018 and negative interest, including fees, on the corresponding repurchase agreements. ¹¹ Includes expense related to dividend payment obligations on financial instruments held for trading. ¹² Includes interest expense on certain repurchase agreements that are measured at fair value through profit or loss since 1 January 2018 and negative interest, including fees, on the corresponding reverse repurchase agreements. ¹³ Excludes fair value changes of hedges related to financial liabilities designated at fair value and foreign currency translation effects arising from translating foreign currency transactions into the respective functional currency, both of which are reported within Other net income from fair value changes on financial instruments. 2018 includes a net gain of USD 2,152 million related to amounts due under unit-linked investment contracts, which are designated at fair value under IFRS 9. Refer to Note 1c for more information.

Note 4 Net fee and commission income¹

Total fee and commission income²	19,632	19,390	18,425
<i>of which: recurring</i>	12,911		
<i>of which: transaction-based</i>	6,629		
<i>of which: performance-based</i>	93		
Brokerage fees paid	316	673	769
Other	1,387	1,167	1,013
Total fee and commission expense	1,703	1,840	1,781
Net fee and commission income	17,930	17,550	16,644
<i>of which: net brokerage fees</i>	3,205	3,148	3,035

¹ Upon adoption of IFRS 15, certain brokerage fees paid in an agency capacity have been reclassified from Fee and commission expense to Fee and commission income on a prospective basis from 1 January 2018, primarily relating to third-party execution costs for exchange-traded derivative transactions and fees payable to third-party research providers on behalf of clients. In addition to the IFRS 15 changes, certain revenues, primarily distribution fees and fund management fees, have been reclassified between reporting lines to better reflect the nature of the revenues, with prior-period information restated accordingly. This resulted in the following effects: For the year ended 31 December 2017, USD 316 million was reclassified from Underwriting fees to Brokerage fees and USD 1,040 million was reclassified from Portfolio management and related services to Investment fund fees. For the year ended 31 December 2016, USD 220 million was reclassified from Underwriting fees to Brokerage fees and USD 1,061 million was reclassified from Portfolio management and related services to Investment fund fees. Also, certain expenses that are incremental and incidental to revenues have been reclassified prospectively from General and administrative expenses to Fee and commission expense to improve the alignment of transaction-based costs with the associated revenue stream, primarily affecting clearing costs, client loyalty costs, fund and custody expenses. As the effect of this reclassification was not material, prior-period information was not restated. ² Reflects third-party fee and commission income of USD 12,059 million for Global Wealth Management, USD 3,557 million for the Investment Bank, USD 2,579 million for Asset Management, USD 1,338 million for Personal & Corporate Banking and USD 100 million for Corporate Center.

Deferred	(1,952)	3,308	(658)
Total income tax expense / (benefit) recognized in the income statement	1,345	4,242	753

Income tax recognized in the income statement

An income tax expense of USD 1,345 million was recognized for UBS AG in 2018, which included a net Swiss tax expense of USD 2,760 million and a net non-Swiss tax benefit of USD 1,415 million.

The Swiss tax expense included a deferred tax expense of USD 2,326 million, which reflected a net decrease in deferred tax assets (DTA) previously recognized in relation to tax losses carried forward and deductible temporary differences of USD 709 million following their offset against profits for the year and the write-off of a Swiss temporary difference DTA of USD 1,617 million relating to UBS AG's investment in our US intermediate holding company (US IHC), UBS Americas Holding LLC. The write-off occurred because the deductible temporary difference between the tax and accounting values in respect of UBS AG's investment in the US IHC is no longer expected to reverse in the foreseeable future, reflecting the expected repatriation of a significant portion of future US earnings. In

addition, it included a current tax expense of USD 434 million related to taxable profits earned by Swiss subsidiaries against which no losses were available to offset.

The non-Swiss tax expense included a deferred tax benefit of USD 1,952 million. This primarily reflected a net increase in US DTAs of USD 2,052 million following the review of the approach to the remeasurement of those DTAs. It also included other net deferred tax expenses of USD 100 million and a current tax expense of USD 537 million related to taxable profits earned by non-Swiss subsidiaries and branches against which no losses were available to offset.

UBS AG considers the performance of its businesses and the accuracy of historical forecasts and other factors in evaluating the recoverability of its DTAs, including the length of time remaining until expiration for tax loss carry-forwards and its assessment of expected future taxable profits. Estimating future profitability is inherently subjective and is particularly sensitive to future economic, market and other conditions, which are difficult to predict.

Other items	130	135	16
Income tax expense / (benefit)	1,345	4,242	753

Note 8 Income taxes (continued)

The tax expense of USD 1,345 million for 2018 was lower than the tax expense of USD 4,242 million in 2017. This was mainly because 2017 included a large net deferred tax expense of USD 3,399 million, which was primarily the result of a net write-down of DTAs related to the US federal corporate tax rate reduction included in the Tax Cuts and Jobs Act enacted in the fourth quarter of 2017.

The components of operating profit before tax, and the differences between income tax expense reflected in the financial statements and the amounts calculated at the Swiss tax rate, are provided in the table on the previous page and explained below.

Non-Swiss tax rates differing from Swiss tax rate

To the extent that UBS AG profits or losses arise outside Switzerland, the applicable local tax rate may differ from the Swiss tax rate. This item reflects, for such profits or losses, an adjustment from the tax expense / benefit that would arise at the Swiss tax rate and the tax expense / benefit that would arise at the applicable local tax rate. If an entity generates a profit, a tax expense arises where the local tax rate is in excess of the Swiss tax rate and a tax benefit arises where the local tax rate is below the Swiss tax rate. Conversely, if an entity incurs a loss, a tax benefit arises where the local tax rate is in excess of the Swiss tax rate and a tax expense arises where the local tax rate is less than the Swiss tax rate.

Tax effects of losses not recognized

This item relates to tax losses of entities arising in the year that are not recognized as DTAs. Consequently, no tax benefit arises in relation to those losses. Therefore, the tax benefit calculated by applying the local tax rate to those losses as described above is reversed.

Previously unrecognized tax losses now utilized

This item relates to taxable profits of the year that are offset by tax losses of previous years for which no DTAs were previously recorded. Consequently, no current tax or deferred tax expense arises in relation to those taxable profits. Therefore, the tax expense calculated by applying the local rate on those profits is reversed.

Non-taxable and lower taxed income

This item relates to tax deductions for the year in respect of permanent differences. These include deductions in respect of profits that are either not taxable or are taxable at a lower rate of tax than the local tax rate. They also include deductions made for tax purposes, which are not reflected in the accounts.

Non-deductible expenses and additional taxable income

This item relates to additional taxable income for the year in respect of permanent differences. These include income that is recognized for tax purposes by an entity, but is not included in its profit that is reported in the financial statements. In addition, they include expenses for the year that are non-deductible. For example, the costs of entertaining clients are not deductible in certain locations.

Adjustments related to prior years – current tax

This item relates to adjustments to current tax expense for prior years, e.g. if the tax payable for a year is agreed with the tax authorities in an amount that differs from the amount previously reflected in the financial statements.

Adjustments related to prior years – deferred tax

This item relates to adjustments to deferred tax positions recognized in prior years, e.g., if a tax loss for a year is fully recognized and the amount of the tax loss agreed with the tax authorities is expected to differ from the amount previously recognized as DTAs in the accounts.

Change in deferred tax recognition

This item relates to changes in DTAs, including those previously recognized resulting from reassessments of expected future taxable profits. It also includes changes in temporary differences in the year, for which deferred tax is not recognized. The net benefit in the year mainly relates to the upward revaluation of US DTAs, partly offset by the write-off of the Swiss temporary difference DTA relating to UBS AG's investment in the US intermediate holding company.

Adjustments to deferred tax balances arising from changes in tax rates

This item relates to remeasurements of DTAs and liabilities recognized due to changes in tax rates. These have the effect of changing the future tax saving that is expected from tax losses or deductible tax differences and therefore the amount of DTAs recognized or, alternatively, changing the tax cost of additional taxable income from taxable temporary differences and therefore the deferred tax liability.

Other items

Other items include other differences between profits or losses at the local tax rate and the actual local tax expense or benefit, including increases in provisions for uncertain positions in relation to the current year and other items.

Note 8 Income taxes (continued)**Income tax recognized directly in equity**

Certain tax expenses and benefits were recognized directly in equity during the year. These included the following items:

- a net tax benefit of USD 314 million recognized in other comprehensive income (OCI) (2017: net benefit of USD 159 million), which included a tax benefit of USD 67 million related to cash flow hedges (2017: benefit of USD 163 million), a tax benefit of USD 12 million related to financial assets recognized at fair value through OCI (2017: expense of USD 6 million), a tax expense of USD 2 million related to foreign currency translation gains and losses (2017: expense of USD 2 million), a tax benefit of USD 245 million related to defined benefit pension plans (2017: benefit of USD 6 million) and a tax expense of USD 8 million related to own credit (2017: expense of USD 2 million);
- a tax expense of USD 5 million recognized in share premium (2017: benefit of USD 16 million).

Deferred tax assets and liabilities

UBS AG has gross DTAs, valuation allowances and recognized DTAs related to tax loss carry-forwards and deductible temporary differences and also deferred tax liabilities in respect of taxable temporary differences as shown in the table below. The valuation allowances reflect DTAs that were not recognized because it was not considered probable that future taxable profits will be available to utilize the related tax loss carry-forwards and deductible temporary differences.

Of the recognized DTAs as of 31 December 2018, USD 9.5 billion related to the US, USD 0.3 billion related to Switzerland and USD 0.3 billion related to other locations (as of 31 December 2017, USD 7.2 billion related to the US, USD 2.5 billion related to Switzerland and USD 0.3 billion related to other locations).

As of 31 December 2018, UBS AG has recognized DTAs of USD 53 million (31 December 2017: USD 1,216 million) in respect of entities that incurred losses in either the current or preceding year. The recognition of these DTAs is supported by projections of future taxable profits for these entities.

<i>USD million</i>	31.12.18			31.12.17

Deferred tax liabilities						
Goodwill and intangible assets			26			19
Other			62			32
Total deferred tax liabilities			88			51

¹ Less deferred tax liabilities as applicable.

Note 8 Income taxes (continued)

As of 31 December 2018, tax loss carry-forwards totaling USD 38,428 million (31 December 2017: USD 47,427 million) that are not recognized as DTAs were available to be offset against future taxable profits. These tax losses expire as outlined in the table below.

Unrecognized tax loss carry-forwards

<i>USD million</i>	31.12.18	31.12.17
Within 1 year	0	171
From 2 to 5 years	464	106
From 6 to 10 years	16,297	3,267
From 11 to 20 years	4,457	26,688
No expiry	17,210	17,195
Total	38,428	47,427

As of 31 December 2018, USD 20.0 billion of the unrecognized tax losses carried forward related to the US, USD 14.2 billion related to the UK and USD 4.2 billion related to other locations (at 31 December 2017, USD 28.6 billion related to the US, USD 14.3 billion related to the UK and USD 4.5 billion related to other locations).

In general, Swiss tax losses can be carried forward for seven years, US federal tax losses incurred before 31 December 2017 for 20 years and US federal tax losses incurred after 31 December 2017 and also UK tax losses for an unlimited period. The amounts of US tax loss carry-forwards that are included in the above table are based on their amount for federal tax purposes rather than for state and local tax purposes.

Deferred tax liabilities are recognized in respect of investments in subsidiaries, branches and associates and interests in joint arrangements, except to the extent that UBS AG can control the timing of the reversal of the associated taxable temporary difference and it is probable that it will not reverse in the foreseeable future. However, as of 31 December 2018, this exception was not considered to apply to any taxable temporary differences.

Note 9 Earnings per share (EPS) and shares outstanding

In 2015, UBS AG shares were delisted from the SIX Swiss Exchange and the New York Stock Exchange. As of 31 December 2018, 100% of UBS AG's issued shares were held by UBS Group AG and therefore were not publicly traded. Accordingly, earnings per share information is not provided for UBS AG.

Balance sheet notes

Note 10 Financial assets at amortized cost and other positions in scope of expected credit loss measurement

The tables on the following pages provide information on financial instruments and certain non-financial instruments (e.g., committed unconditionally revocable credit lines) that are subject to ECL. UBS AG has established ECL disclosure segments or "ECL segments" to disaggregate portfolios based on shared risk characteristics and on the same or similar rating methods applied. The key segments are presented in the table below.

Tables provided for 31 December 2018 include additional detail on certain segments that have not been provided for balances as of 1 January 2018.

→ Refer to Note 1c for the comparative information as of 31 December 2017 under IAS 39

→ Refer to Note 23 for more information on expected credit loss measurement

Segment	Segment description	Description of credit risk sensitivity	Business division / Corporate Center
Private clients with mortgages	Lending to private clients secured by owner-occupied real estate and personal account overdrafts of those clients	Sensitive to the interest rate environment, employment status and influence from regional effects (e.g., property values)	– Personal & Corporate Banking – Global Wealth Management
Real estate financing	Rental or income-producing real estate financing to private and corporate clients secured by real estate	Sensitive to GDP development, the interest rate environment and regional effects (e.g., property values)	– Personal & Corporate Banking – Global Wealth Management
Large corporate clients	Lending to large corporate and multinational clients	Sensitive to GDP development, seasonality and business cycles and collateral values (diverse collateral including real estate and other collateral types)	– Personal & Corporate Banking – Investment Bank
SME clients	Lending to small and medium-sized corporate clients	Sensitive to GDP development, the interest rate environment and, to some extent, seasonality and business cycles and collateral values (diverse collateral including real estate and other collateral types)	– Personal & Corporate Banking
Lombard	Loans secured by pledges of marketable securities, guarantees and other forms of collateral	Sensitive to the market (e.g., changes in collateral as well as in invested assets)	– Personal & Corporate Banking – Global Wealth Management
Credit cards	Credit card solutions in Switzerland and the US	Sensitive to the interest rate environment and employment status	– Personal & Corporate Banking – Global Wealth Management
Commodity trade finance	Working capital financing of commodity traders, generally extended on a self-liquidating transactional basis	Sensitive primarily to the strength of individual transaction structures and collateral values (price volatility of commodities) as the primary source for debt service is directly linked to the shipments financed	– Personal & Corporate Banking

→ Refer to Note 23g for more details on sensitivity

Consolidated financial statements
UBS AG consolidated financial statements

Note 10 Financial assets at amortized cost and other positions in scope of expected credit loss measurement (continued)

For amortized cost instruments, the net carrying value represents the maximum exposure to credit risk, taking into account the allowance for credit losses. Financial assets measured at fair value through other comprehensive income (FVOCI) are also subject to ECL; however, unlike for amortized cost instruments, the allowance does not reduce the carrying value of these financial assets. The carrying value of financial assets measured at FVOCI represents the maximum exposure to credit risk.

No purchased credit-impaired financial assets are recognized

in the period. Originated credit-impaired financial assets were not material and are not presented in the table below and on the following page.

In addition to on-balance sheet financial assets, certain off-balance sheet financial instruments and other credit lines are also subject to ECL. The maximum exposure to credit risk for off-balance sheet financial instruments is calculated based on notional amounts.

¹ The carrying value of financial assets measured at amortized cost represents the total gross exposure net of the respective ECL allowances. ² Upon adoption of IFRS 9 as of 1 January 2018, an instrument is classified as credit-impaired if the counterparty is defaulted, and / or the instrument is purchased or originated credit-impaired and includes credit-impaired exposures for which no loss has occurred or no allowance has been recognized (e.g., because they are expected to be fully recoverable through the collateral held). Refer to Note 1c for more information on the adoption of IFRS 9.

Note 11 Derivative instruments**Derivatives: overview**

A derivative is a financial instrument for which the value is derived from one or more variables (underlyings). Underlyings may be indices, foreign currency exchange or interest rates, or the value of shares, commodities, bonds or other financial instruments. A derivative commonly requires little or no initial net investment by either counterparty to the trade.

The majority of derivative contracts are negotiated with respect to notional amounts, tenor, price and settlement mechanisms, as is customary with other financial instruments.

Over-the-counter (OTC) derivative contracts are usually traded under a standardized International Swaps and Derivatives Association (ISDA) master agreement between UBS AG and its counterparties. Terms are negotiated directly with counterparties and the contracts have industry standard settlement mechanisms prescribed by ISDA. Beginning in 2016, regulators in various jurisdictions began a phased introduction of rules requiring the payment and collection of initial and variation margin on certain OTC derivative contracts, which may have a bearing on their price and other relevant terms.

The industry continues to promote the use of central counterparties (CCPs) to clear OTC trades. The trend toward CCP clearing and settlement will generally facilitate the reduction of systemic credit exposures.

Other derivative contracts are standardized in terms of their amounts and settlement dates, and are bought and sold on regulated exchanges. These are commonly referred to as exchange-traded derivatives (ETD) contracts. Exchanges offer the benefits of pricing transparency, standardized daily settlement of changes in value and consequently reduced credit risk.

For presentation purposes, UBS AG's derivative contracts are subject to IFRS netting provisions. Derivative instruments are measured at fair value and generally classified on the balance sheet as *Derivative financial instruments* within *Assets* when having positive replacement values and *Derivative financial instruments* within *Liabilities* when having negative replacement values. However, ETD that are economically settled on a daily basis and OTC derivatives that are either legally settled or in substance net settled on a daily basis are classified as *Cash collateral receivables on derivative instruments* or *Cash collateral payables on derivative instruments*. Changes in the replacement values of derivatives are recorded in *Other net income from fair value changes on financial instruments*, except for interest on derivatives designated as hedging instruments in effective hedge accounting relationships and forward points on certain short- and long-duration foreign exchange contracts, which are recorded in *Net interest income*.

→ Refer to Note 1a items 3j and 3k for more information

→ Refer to Note 25 for more information on derivative financial assets and liabilities after consideration of netting potential allowed under enforceable netting arrangements

UBS AG uses various derivative instruments for both trading and hedging purposes. Derivative product types as well as valuation principles and techniques applied by UBS AG are described in Note 24. Positive replacement values represent the estimated amount UBS AG would receive if the derivative contract were sold on the balance sheet date. Negative replacement values indicate the estimated amount UBS AG would pay to transfer its obligations in respect of the underlying contract were it required or entitled to do so on the balance sheet date.

Derivatives embedded in other financial instruments are not included in the "Derivative instruments" table within this Note. Bifurcated embedded derivatives are presented on the same balance sheet line as the host contract. In cases where UBS AG applies the fair value option to hybrid instruments, bifurcation of an embedded derivative component is not required and as such this component is also not included in the "Derivative instruments" table.

→ Refer to Notes 19 and 24 for more information

Risks of derivative instruments

Derivative instruments are transacted in many trading portfolios, which generally include several types of instruments, not just derivatives. The market risk of derivatives is predominantly managed and controlled as an integral part of the market risk of these portfolios. UBS AG's approach to market risk is described in the audited portions of "Market risk" in the "Risk management and control" section of this report.

Derivative instruments are also transacted with many different counterparties, most of whom are also counterparties for other types of business. The credit risk of derivatives is managed and controlled in the context of UBS AG's overall credit exposure to its counterparties. UBS AG's approach to credit risk is described in the audited portions of "Credit risk" in the "Risk management and control" section of this report. It should be noted that, although the derivative financial assets shown on the balance sheet can be an important component of UBS AG's credit exposure, the positive replacement values related to a respective counterparty are rarely an adequate reflection of UBS AG's credit exposure in its derivatives business with that counterparty. This is generally the case because, on the one hand, replacement values can increase over time (potential future exposure), while on the other hand, exposure may be mitigated by entering into master netting agreements and bilateral collateral arrangements. Both the exposure measures used internally by UBS AG to control credit risk and the capital requirements imposed by regulators reflect these additional factors.

→ Refer to Note 25 for more information on derivative financial assets and liabilities after consideration of netting potential allowed under enforceable netting arrangements

¹ Derivative financial liabilities as of 31 December 2018 include USD 0.0 billion related to derivative loan commitments (31 December 2017: USD 0.0 billion). No notional amounts related to these commitments are included in this table, but they are disclosed within Note 34 under Loan commitments. ² Upon adoption of IFRS 9 on 1 January 2018, certain forward starting repurchase and reverse repurchase agreements have been classified as measured at fair value through profit or loss and are recognized within derivative instruments. The fair value of these derivative instruments was not material as of 31 December 2018. No notional amounts related to these instruments are included in this table, but they are disclosed within Note 34 under Forward starting transactions. ³ PRV: positive replacement value. ⁴ In cases where replacement values are presented on a net basis on the balance sheet, the respective notional values of the netted replacement values are still presented on a gross basis. ⁵ NRV: negative replacement value. ⁶ Other notional values relate to derivatives that are cleared through either a central counterparty or an exchange. The fair value of these derivatives is presented on the balance sheet net of the corresponding cash margin under Cash collateral receivables on derivative instruments and Cash collateral payables on derivative instruments and was not material for all periods presented. ⁷ Notional values of exchange-traded agency transactions and OTC-cleared transactions entered into on behalf of clients are not disclosed as they have a significantly different risk profile. ⁸ Changes in the fair value of purchased and sold non-derivative financial instruments between trade date and settlement date are recognized as replacement values. ⁹ Financial assets and liabilities are presented net on the balance sheet if UBS has the unconditional and legally enforceable right to offset the recognized amounts, both in the normal course of business and in the event of default, bankruptcy or insolvency of the entity and all of the counterparties, and intends either to settle on a net basis or to realize the asset and settle the liability simultaneously. Refer to Note 25 for more information on netting arrangements.

The notional amount of a derivative is generally the quantity of the underlying instrument on which the derivative contract is based and is the reference against which changes in the value of the derivative are measured. Notional values in themselves are generally not a direct indication of the values that are exchanged between parties, and are therefore not a direct measure of risk or financial exposure but are viewed as an indication of the scale of the different types of derivatives entered into by UBS AG.

On a notional value basis, approximately 56% of OTC interest rate contracts held as of 31 December 2018 (31 December 2017: 54%) mature within one year, 28% (31 December 2017: 28%) within one to five years and 16% (31 December 2017: 18%) after five years. Notional values of interest rate contracts cleared with a clearing house that qualify for IFRS balance sheet netting or are legally settled on a daily basis are presented under *Other notional values* and are categorized into maturity buckets on the basis of contractual maturities of the cleared underlying derivative contracts.

Derivatives transacted for sales and trading purposes

Most of UBS AG's derivative transactions relate to sales and trading activities. Sales activities include the structuring and marketing of derivative products to customers to enable them to take, transfer, modify or reduce current or expected risks. Trading activities include market-making to directly support the facilitation and execution of client activity. Market-making involves quoting bid and offer prices to other market participants with the intention of generating revenues based on spread and volume.

Credit derivatives

UBS AG is an active dealer in the fixed income market, including credit default swaps (CDS) and related products, with respect to a large number of issuers' securities. The primary objectives of these activities are ongoing hedging of trading book exposures and market making, primarily on behalf of clients.

Note 11 Derivative instruments (continued)

Market-making activity, which is undertaken within the Investment Bank, consists of buying and selling single-name CDS, index CDS, loan CDS and related referenced cash instruments to facilitate client trading activity. UBS AG also actively utilizes CDS to economically hedge specific counterparty credit risks in its accrual and traded loan portfolios (including off-balance sheet loan commitments) with the aim of reducing concentrations in individual names, sectors or specific portfolios.

In addition, UBS AG actively utilizes CDS to economically hedge specific counterparty credit risks in its OTC derivative portfolios, including financial instruments that are designated at fair value through profit or loss.

The tables below provide more information on credit protection bought and sold, including replacement and notional value information by instrument type and counterparty type. The value of protection bought and sold is not, in isolation, a measure of UBS AG's credit risk. Counterparty relationships are viewed in terms of the total outstanding credit risk, which relates to other instruments in addition to CDS, and in connection with collateral arrangements in place. On a notional value basis, approximately 14% of credit protection bought and sold as of 31 December 2018 matures within one year (31 December 2017: 23%), approximately 74% within one to five years (31 December 2017: 65%) and approximately 12% after five years (31 December 2017: 12%).

UBS AG's CDS trades are documented using industry standard forms of documentation or equivalent terms documented in a bespoke agreement. The agreements that govern CDS generally do not contain recourse provisions that would enable UBS AG to recover from third parties any amounts paid out by UBS AG.

The types of credit events that would require UBS AG to perform under a CDS contract are subject to agreement between the parties at the time of the transaction. However, nearly all transactions are traded with reference to credit events that are applicable under certain market conventions based on the type of reference entity to which the transaction relates. Applicable credit events according to market conventions include bankruptcy, failure to pay, restructuring, obligation acceleration and repudiation / moratorium.

Contingent collateral features of derivative liabilities

Certain derivative instruments contain contingent collateral or termination features triggered upon a downgrade of the published credit ratings of UBS AG in the normal course of business. Based on UBS AG's credit ratings as of 31 December 2018, USD 0.0 billion, USD 0.3 billion and USD 1.0 billion would have been required for contractual obligations related to OTC derivatives in the event of a one-notch, two-notch and three-notch reduction in long-term credit ratings, respectively. In evaluating UBS AG's liquidity requirements, UBS AG considers additional collateral or termination payments that would be required in the event of a reduction in UBS AG's long-term credit ratings, and a corresponding reduction in UBS AG's short-term ratings.

¹ Includes USD 7 million additional assets related to acquisition of businesses in 2018. ² Includes write-offs of fully depreciated assets. ³ Impairment charges recorded in 2018 relate to assets for which the recoverable amount was determined based on value-in-use. Recoverable amounts for these impaired assets were not material as of 31 December 2018. ⁴ As of 31 December 2018, contractual commitments to purchase property in the future amounted to approximately USD 0.3 billion (31 December 2017: approximately USD 0.3 billion). ⁵ Includes USD 22 million related to leased assets, mainly Own-used properties. ⁶ Consists of USD 739 million related to Internally generated software, USD 279 million related to Own-used properties and USD 58 million related to Leasehold improvements. ⁷ Reflects reclassifications to Properties held for sale (USD 70 million on a net basis) of properties sold in 2018.

Note 16 Goodwill and intangible assets

Introduction

UBS AG performs an impairment test on its goodwill assets on an annual basis or when indicators of impairment exist.

For annual tests prior to 2018, UBS AG considered the segments, as they were reported in Note 2a, as separate cash-generating units, as that was the level at which the performance of investments (and the related goodwill) was reviewed and assessed by management. Following the integration in 2018 of the Wealth Management and Wealth Management Americas business divisions into the single reportable segment Global Wealth Management, UBS AG continued to separately monitor the goodwill previously allocated to the two former business divisions. As a consequence, for the purposes of goodwill impairment testing, the former Wealth Management and Wealth Management Americas business divisions are considered to be two separate cash-generating units, referred to in this Note as Global Wealth Management Americas¹ and Global Wealth Management ex Americas. The remaining goodwill balances continued to be tested at the level of Asset Management and the Investment Bank, respectively, consistent with the 2017 annual test.

The impairment test is performed for each cash-generating unit to which goodwill is allocated by comparing the recoverable amount, based on its value-in-use, with the carrying amount of the respective cash-generating unit. An impairment charge is recognized if the carrying amount exceeds the recoverable amount. As of 31 December 2018, total goodwill recognized on the balance sheet was USD 6.4 billion, of which USD 3.7 billion was carried by the Global Wealth Management Americas cash-generating unit, USD 1.2 billion was carried by the Global Wealth Management ex Americas cash-generating unit, USD 1.4 billion was carried by Asset Management and USD 0.1 billion was carried by the Investment Bank. Based on the impairment testing methodology described below, UBS AG concluded that the goodwill balances as of 31 December 2018 allocated to these cash-generating units are not impaired.

Methodology for goodwill impairment testing

The recoverable amounts are determined using a discounted cash flow model, which has been adapted to use inputs that consider features of the banking business and its regulatory environment. The recoverable amount of a cash-generating unit is the sum of the discounted earnings attributable to

shareholders from the first three forecast years and the terminal value, adjusted for the effect of the capital assumed to be needed over the next three years and to support growth beyond this period. The terminal value, which covers all periods beyond the third year, is calculated on the basis of the forecast of third-year profit, the discount rate and the long-term growth rate, as well as the implied perpetual capital growth.

The carrying amount for each cash-generating unit is determined by reference to the Group's equity attribution framework. Within this framework, which is described in the "Capital management" section of this report, we attribute equity to the businesses on the basis of their risk-weighted assets and leverage ratio denominator, their goodwill and intangible assets as well as equity directly associated with activity that Corporate Center – Group Asset and Liability Management manages centrally on behalf of the business divisions. The framework is primarily used for purposes of measuring the performance of the businesses and includes certain management assumptions. Attributed equity equals the capital that a cash-generating unit requires to conduct its business and is currently considered a reasonable approximation of the carrying value of the cash-generating units. The attributed equity methodology is aligned with the business planning process, the inputs from which are used in calculating the recoverable amounts of the respective cash-generating unit.

→ Refer to the "Capital management" section of this report for more information on the equity attribution framework

Assumptions

Valuation parameters used within UBS AG's impairment test model are linked to external market information, where applicable. The model used to determine the recoverable amount is most sensitive to changes in the forecast earnings available to shareholders in years one to three, to changes in the discount rates and to changes in the long-term growth rate. The applied long-term growth rate is based on long-term economic growth rates for different regions worldwide. Earnings available to shareholders are estimated on the basis of forecast results, which are part of the business plan approved by the Board of Directors.

The discount rates are determined by applying a capital asset pricing model-based approach, as well as considering quantitative and qualitative inputs from both internal and external analysts and the view of management.

¹ Now including the Global Wealth Management business in Latin America, previously part of the Wealth Management business division.

Note 16 Goodwill and intangible assets (continued)

Following the change of UBS AG's presentation currency to US dollars, UBS AG has refined its assumptions on long-term growth rates and discount rates. The discount rates now take into account regional differences in risk free rates, at the level of individual cash-generating units. Consistently, long-term growth rates are determined based on nominal or real GDP growth rate forecasts, depending on region. The change to nominal GDP forecasts for some regions results in higher long-term growth rates and thus higher recoverable amounts for all cash-generating units. The change did not affect the outcome of the impairment test.

Key assumptions used to determine the recoverable amounts of each cash-generating unit are tested for sensitivity by applying a reasonably possible change to those assumptions. Forecast earnings available to shareholders were changed by 20%, the discount rates were changed by 1.5 percentage points and the long-term growth rates were changed by 0.75 percentage points. Under all scenarios, reasonably possible changes in key assumptions did not result in an impairment of goodwill or intangible assets that would be material to the

consolidated financial statements or to the reported financial performance of any of the business divisions. As of 31 December 2018, the Investment Bank's recoverable amount exceeded its carrying amount by USD 2.5 billion. A reasonably possible change in the forecast earnings or the discount rate used in the calculation of the Investment Bank's recoverable amount would cause its carrying amount to exceed the recoverable amount. More specifically, if forecast earnings used in the calculation of the Investment Bank's recoverable amount were reduced by approximately 12% or the discount rate increased by 1.4 percentage points, then the Investment Bank's recoverable amount would be equal to its carrying amount.

If the estimated earnings and other assumptions in future periods deviate from the current outlook, the value of goodwill may become impaired in the future, giving rise to losses in the income statement. Recognition of any impairment of goodwill would reduce IFRS equity and net profit. It would not affect cash flows and, as goodwill is required to be deducted from capital under the Basel III capital framework, no effect would be expected on UBS AG's capital ratios.

a) Other financial assets measured at amortized cost

<i>USD million</i>	31.12.18	31.12.17
Prime brokerage receivables ¹		19,573
Debt securities	13,562	9,403
<i>of which: government bills / bonds</i>	8,778	6,632
Loans to financial advisors ²	3,291	3,199
Fee- and commission-related receivables	1,644	1,794
Finance lease receivables	1,091	1,086
Settlement and clearing accounts	1,039	734
Accrued interest income	700	593
Other	1,310	1,508
Total other financial assets measured at amortized cost	22,637	37,890

¹ Upon adoption of IFRS 9 on 1 January 2018, prime brokerage receivables and payables were reclassified from amortized cost to fair value through profit or loss. Brokerage receivables and payables are now presented separately on the balance sheet. Refer to Note 1c for more information. ² Related to financial advisors in the US and Canada.

b) Other non-financial assets

<i>USD million</i>	31.12.18	31.12.17
Precious metals and other physical commodities	4,298	4,681
Bail deposit ¹	1,312	1,371
Prepaid expenses	731	840
VAT and other tax receivables	282	299
Properties and other non-current assets held for sale	82	98
Other	358	258
Total other non-financial assets	7,062	7,548

¹ Refer to item 1 in Note 21b for more information.

Note 18 Amounts due to banks, customer deposits, and funding from UBS Group AG and its subsidiaries**a) Amounts due to banks and customer deposits**

<i>USD million</i>	31.12.18	31.12.17
Amounts due to banks	10,962	7,728
Customer deposits	421,986	423,058
<i>of which: demand deposits</i>	182,642	195,264
<i>of which: retail savings / deposits</i>	165,790	166,013
<i>of which: time deposits</i>	54,998	50,291
<i>of which: fiduciary deposits</i>	18,556	11,490
Total amounts due to banks and customer deposits	432,948	430,786

b) Funding from UBS Group AG and its subsidiaries

<i>USD million</i>	31.12.18	31.12.17
Senior unsecured debt that contributes to total loss-absorbing capacity (TLAC)	29,988	27,937
Senior unsecured debt other than TLAC	1,031	2,736
High-trigger loss-absorbing additional tier 1 capital instruments	7,805	3,761
Low-trigger loss-absorbing additional tier 1 capital instruments	2,378	1,213
Total¹	41,202	35,648

¹ All balances in 2018 are against UBS Group Funding (Switzerland) AG as counterparty. Prior year balances were against both UBS Group AG and UBS Group Funding (Switzerland) AG as counterparties. In May 2018, UBS substituted UBS Group AG where it was the issuer of outstanding AT1 capital instruments with UBS Group Funding (Switzerland) AG.

Note 19 Debt issued designated at fair value

<i>USD million</i>	31.12.18	31.12.17
Issued debt instruments		
Equity-linked ¹	34,392	35,046
Rates-linked	12,073	5,961
Credit-linked	3,282	3,013
Fixed-rate	5,099	4,022
Other	2,185	2,740
Total debt issued designated at fair value	57,031	50,782
<i>of which: issued by UBS AG with original maturity greater than one year²</i>	40,289	38,230
<i>of which: life-to-date own credit (gain) / loss</i>	(270)	163

¹ Includes investment fund unit-linked instruments issued. ² Issued by the legal entity UBS AG. Based on original contractual maturity without considering any early redemption features. More than 99% of the balance as of 31 December 2018 was unsecured (31 December 2017: more than 99% of the balance was unsecured).

As of 31 December 2018 and 31 December 2017, the contractual redemption amount at maturity of debt issued designated at fair value through profit or loss was not materially different from the carrying value.

The table below shows the residual contractual maturity of the carrying value of debt issued designated at fair value, split between fixed-rate and floating-rate instruments based on the contractual terms, and does not consider any early redemption features. Interest rate ranges for future interest payments related

to debt issued designated at fair value have not been included in the table below as a majority of the debt instruments issued are structured products, and therefore the future interest payments are highly dependent upon the embedded derivative and prevailing market conditions at the point in time that each interest payment is made.

→ **Refer to Note 27 for maturity information on an undiscounted cash flow basis**

Contractual maturity of carrying value

<i>USD million</i>	2019	2020	2021	2022	2023	2024–2028	Thereafter	Total 31.12.18	Total 31.12.17

¹ Comprises instruments issued by the legal entity UBS AG. ² Comprises instruments issued by subsidiaries of UBS AG.

Note 20 Debt issued measured at amortized cost

<i>USD million</i>	31.12.18	31.12.17
Certificates of deposit	7,980	24,447
Commercial paper	27,514	24,140
Other short-term debt	3,531	3,683
Short-term debt¹	39,025	52,270
Senior unsecured debt	32,135	33,102
<i>of which: issued by UBS AG with original maturity greater than one year²</i>	32,133	33,090
Covered bonds	3,947	4,218
Subordinated debt	7,511	9,217
<i>of which: low-trigger loss-absorbing tier 2 capital instruments</i>	6,808	8,500
<i>of which: non-Basel III-compliant tier 2 capital instruments</i>	703	718
Debt issued through the Swiss central mortgage institutions	8,569	8,561
Other long-term debt	58	89
<i>of which: issued by UBS AG with original maturity greater than one year²</i>	52	68
Long-term debt³	52,220	55,187
Total debt issued measured at amortized cost⁴	91,245	107,458

¹ Debt with an original maturity of less than one year. ² Issued by the legal entity UBS AG. Based on original contractual maturity without considering any early redemption features. As of 31 December 2018, 100% of the balance was unsecured (31 December 2017: 100% of the balance was unsecured). ³ Debt with an original maturity greater than or equal to one year. The classification of debt issued into short-term and long-term does not consider any early redemption features. ⁴ Net of bifurcated embedded derivatives, the fair value of which was not material for the periods presented.

UBS AG uses interest rate and foreign exchange derivatives to manage the risks inherent in certain debt instruments held at amortized cost. In certain cases, UBS AG applies hedge accounting for interest rate risk as discussed in Note 1a item 3j and Note 28. As a result of applying hedge accounting, the life-

to-date adjustment to the carrying value of debt issued was an increase of USD 282 million as of 31 December 2018 and an increase of USD 493 million as of 31 December 2017, reflecting changes in fair value due to interest rate movements.

Note 20 Debt issued measured at amortized cost (continued)

Subordinated debt consists of unsecured debt obligations that are contractually subordinated in right of payment to all other present and future non-subordinated obligations of the respective issuing entity. All of the subordinated debt instruments outstanding as of 31 December 2018 pay a fixed rate of interest.

The table below shows the residual contractual maturity of the carrying value of debt issued, split between fixed-rate and floating-rate based on the contractual terms, and does not consider any early redemption features. The effects from interest rate swaps, which are used to hedge various fixed-rate debt issuances by changing the repricing characteristics into those similar to floating-rate debt, are also not considered in the table below.

→ Refer to Note 27 for maturity information on an undiscounted cash flow basis

Note 21 Provisions and contingent liabilities

a) Provisions

The table below presents an overview of total provisions recognized under both IAS 37 and IFRS 9.

<i>USD million</i>	31.12.18	31.12.17
Provisions recognized under IAS 37	3,341	3,130
Provisions for off-balance sheet financial instruments ¹	79	34
Provisions for other credit lines ¹	37	0
Total provisions	3,457	3,164

¹ Provisions recognized in 2018 relate to exposures in the scope of the expected credit loss requirements of IFRS 9. Refer to Notes 1c, 10 and 23 for more information. 2017 provisions for off-balance sheet financial instruments relate to loss provisions recognized under IAS 37.

The following table presents additional information for provisions recognized under IAS 37.

<i>USD million</i>	Operational risks ¹	Litigation, regulatory and similar matters ²	Restructuring	Real estate	Employee benefits ⁵	Other	Total 2018	Total 2017
Balance at the beginning of the year	44	2,508	302	128	57	91	3,130	4,043
Additions from acquired companies	0	0	0	2	0	0	2	7
Increase in provisions recognized in the income statement	25	905	142	4	8	34	1,117	956
Release of provisions recognized in the income statement	(5)	(220)	(54)	(1)	(7)	(14)	(301)	(338)
Provisions used in conformity with designated purpose	(20)	(350)	(173)	(11)	0	(33)	(587)	(1,598)
Capitalized reinstatement costs	0	0	0	0	0	0	0	4
Reclassifications	0	0	0	0	0	0	0	(35)
Foreign currency translation / unwind of discount	0	(16)	(1)	0	(2)	(1)	(20)	91
Balance at the end of the year	45	2,827	215³	122⁴	55	77	3,341	3,130

¹ Comprises provisions for losses resulting from security risks and transaction processing risks. ² Comprises provisions for losses resulting from legal, liability and compliance risks. ³ Primarily consists of personnel-related restructuring provisions of USD 40 million as of 31 December 2018 (31 December 2017: USD 56 million) and provisions for onerous lease contracts of USD 170 million as of 31 December 2018 (31 December 2017: USD 241 million). ⁴ Consists of reinstatement costs for leasehold improvements of USD 83 million as of 31 December 2018 (31 December 2017: USD 89 million) and provisions for onerous lease contracts of USD 40 million as of 31 December 2018 (31 December 2017: USD 40 million). ⁵ Includes provisions for sabbatical and anniversary awards.

Restructuring provisions primarily relate to onerous lease contracts and severance payments. The use of onerous lease provisions is driven by the maturities of the underlying lease contracts. Severance-related provisions are used within a short time period, usually within six months, but potential changes in amount may be triggered when natural staff attrition reduces

the number of people affected by a restructuring and therefore the estimated costs.

Information on provisions and contingent liabilities in respect of litigation, regulatory and similar matters, as a class, is included in Note 21b. There are no material contingent liabilities associated with the other classes of provisions.

b) Litigation, regulatory and similar matters

UBS operates in a legal and regulatory environment that exposes it to significant litigation and similar risks arising from disputes and regulatory proceedings. As a result, UBS (which for purposes of this Note may refer to UBS AG and / or one or more of its subsidiaries, as applicable) is involved in various disputes and legal proceedings, including litigation, arbitration, and regulatory and criminal investigations.

Such matters are subject to many uncertainties, and the outcome and the timing of resolution are often difficult to predict, particularly in the earlier stages of a case. There are also situations where UBS may enter into a settlement agreement. This may occur in order to avoid the expense, management distraction or reputational implications of continuing to contest liability, even for those matters for which UBS believes it should be exonerated. The uncertainties inherent in all such matters affect the amount and timing of any potential outflows for both matters with respect to which provisions have been established and other contingent liabilities. UBS makes provisions for such matters brought against it when, in the opinion of management after seeking legal advice, it is more likely than not that UBS has

a present legal or constructive obligation as a result of past events, it is probable that an outflow of resources will be required, and the amount can be reliably estimated. Where these factors are otherwise satisfied, a provision may be established for claims that have not yet been asserted against UBS, but are nevertheless expected to be, based on UBS's experience with similar asserted claims. If any of those conditions is not met, such matters result in contingent liabilities. If the amount of an obligation cannot be reliably estimated, a liability exists that is not recognized even if an outflow of resources is probable. Accordingly, no provision is established even if the potential outflow of resources with respect to such matters could be significant. Developments relating to a matter that occur after the relevant reporting period, but prior to the issuance of financial statements, which affect management's assessment of the provision for such matter (because, for example, the developments provide evidence of conditions that existed at the end of the reporting period), are adjusting events after the reporting period under IAS 10 and must be recognized in the financial statements for the reporting period.

Note 21 Provisions and contingent liabilities (continued)

Specific litigation, regulatory and other matters are described below, including all such matters that management considers to be material and others that management believes to be of significance due to potential financial, reputational and other effects. The amount of damages claimed, the size of a transaction or other information is provided where available and appropriate in order to assist users in considering the magnitude of potential exposures.

In the case of certain matters below, we state that we have established a provision, and for the other matters, we make no such statement. When we make this statement and we expect disclosure of the amount of a provision to prejudice seriously our position with other parties in the matter because it would reveal what UBS believes to be the probable and reliably estimable outflow, we do not disclose that amount. In some cases we are subject to confidentiality obligations that preclude such disclosure. With respect to the matters for which we do not state whether we have established a provision, either (a) we have not established a provision, in which case the matter is treated as a contingent liability under the applicable accounting standard; or (b) we have established a provision but expect disclosure of that fact to prejudice seriously our position with other parties in the matter because it would reveal the fact that UBS believes an outflow of resources to be probable and reliably estimable.

With respect to certain litigation, regulatory and similar matters for which we have established provisions, we are able to estimate the expected timing of outflows. However, the aggregate amount of the expected outflows for those matters for which we are able to estimate expected timing is immaterial relative to our current and expected levels of liquidity over the relevant time periods.

The aggregate amount provisioned for litigation, regulatory and similar matters as a class is disclosed in the "Provisions" table in Note 21a above. It is not practicable to provide an aggregate estimate of liability for our litigation, regulatory and similar matters as a class of contingent liabilities. Doing so would require us to provide speculative legal assessments as to claims

and proceedings that involve unique fact patterns or novel legal theories, that have not yet been initiated or are at early stages of adjudication, or as to which alleged damages have not been quantified by the claimants. Although we therefore cannot provide a numerical estimate of the future losses that could arise from litigation, regulatory and similar matters, we believe that the aggregate amount of possible future losses from this class that are more than remote substantially exceeds the level of current provisions.

Litigation, regulatory and similar matters may also result in non-monetary penalties and consequences. For example, the non-prosecution agreement described in item 5 of this Note, which we entered into with the US Department of Justice (DOJ), Criminal Division, Fraud Section in connection with our submissions of benchmark interest rates, including, among others, the British Bankers' Association London Interbank Offered Rate (LIBOR), was terminated by the DOJ based on its determination that we had committed a US crime in relation to foreign exchange matters. As a consequence, UBS AG pleaded guilty to one count of wire fraud for conduct in the LIBOR matter, paid a fine and is subject to probation through January 2020.

A guilty plea to, or conviction of, a crime could have material consequences for UBS. Resolution of regulatory proceedings may require us to obtain waivers of regulatory disqualifications to maintain certain operations, may entitle regulatory authorities to limit, suspend or terminate licenses and regulatory authorizations, and may permit financial market utilities to limit, suspend or terminate our participation in such utilities. Failure to obtain such waivers, or any limitation, suspension or termination of licenses, authorizations or participations, could have material consequences for UBS.

The risk of loss associated with litigation, regulatory and similar matters is a component of operational risk for purposes of determining our capital requirements. Information concerning our capital requirements and the calculation of operational risk for this purpose is included in the "Capital management" section of this report.

Provisions for litigation, regulatory and similar matters by business division and Corporate Center unit¹

<i>USD million</i>	Global Wealth Manage- ment	Personal & Corporate Banking	Asset Manage- ment	Investment Bank	CC – Services	CC – Group ALM	CC – Non-core and Legacy Portfolio	Total 2018	Total 2017

¹ Provisions, if any, for the matters described in this Note are recorded in Global Wealth Management (items 3 and 4), the Investment Bank (item 7) and Corporate Center – Non-core and Legacy Portfolio (item 2). Provisions, if any, for the matters described in items 1 and 6 of this Note are allocated between Global Wealth Management and Personal & Corporate Banking, and provisions, if any, for the matters described in this Note in item 5 are allocated between the Investment Bank, Corporate Center – Services and Corporate Center – Non-core and Legacy Portfolio.

Note 21 Provisions and contingent liabilities (continued)

1. Inquiries regarding cross-border wealth management businesses

Tax and regulatory authorities in a number of countries have made inquiries, served requests for information or examined employees located in their respective jurisdictions relating to the cross-border wealth management services provided by UBS and other financial institutions. It is possible that the implementation of automatic tax information exchange and other measures relating to cross-border provision of financial services could give rise to further inquiries in the future. UBS has received disclosure orders from the Swiss Federal Tax Administration (FTA) to transfer information based on requests for international administrative assistance in tax matters. The requests concern a number of UBS account numbers pertaining to current and former clients and are based on data from 2006 and 2008. UBS has taken steps to inform affected clients about the administrative assistance proceedings and their procedural rights, including the right to appeal. The requests are based on data received from the German authorities, who seized certain data related to UBS clients booked in Switzerland during their investigations and have apparently shared this data with other European countries. UBS expects additional countries to file similar requests.

The Swiss Federal Administrative Court ruled in 2016 that, in the administrative assistance proceedings related to a French bulk request, UBS has the right to appeal all final FTA client data disclosure orders. On 30 July 2018, the Swiss Federal Administrative Court granted UBS's appeal by holding the French administrative assistance request inadmissible. The FTA filed a final appeal with the Swiss Federal Supreme Court.

Since 2013, UBS (France) S.A., UBS AG and certain former employees have been under investigation in France for alleged complicity in having illicitly solicited clients on French territory, regarding the laundering of proceeds of tax fraud, and of banking and financial solicitation by unauthorized persons. In connection with this investigation, the investigating judges ordered UBS AG to provide bail ("caution") of EUR 1.1 billion and UBS (France) S.A. to post bail of EUR 40 million, which was reduced on appeal to EUR 10 million.

In March 2017, the investigating judges issued a trial order ("ordonnance de renvoi") that charges UBS AG and UBS (France) S.A., as well as various former employees, with illicit solicitation of clients on French territory and with participation in the laundering of the proceeds of tax fraud. The trial on these charges in the court of first instance took place from 8 October 2018 until 15 November 2018. During the trial, the prosecutors and the French State requested penalties and civil monetary damages in connection with the money laundering charges aggregating EUR 5.3 billion. On 20 February 2019, the court announced a verdict finding UBS AG guilty of illicitly soliciting clients on French territory and laundering the proceeds of tax fraud, and UBS France S.A. guilty of aiding and abetting unlawful solicitation and laundering the proceeds of tax fraud.

The court imposed fines aggregating EUR 3.7 billion on UBS AG and UBS France S.A. and awarded EUR 800 million of civil damages to the French state. UBS has appealed the decision. Under French law, the judgment is suspended while the appeal is pending. The Court of Appeal will retry the case de novo as to both the law and the facts and the fines and penalties can be greater than or less than those imposed by the court of first instance. A subsequent appeal to the Cour de Cassation, France's highest court, is possible with respect to questions of law.

UBS believes that based on both the law and the facts the judgment of the court of first instance should be reversed. UBS believes it followed its obligations under Swiss and French law as well as the European Savings Tax Directive. Even assuming liability, which it contests, UBS believes the penalties and damage amounts awarded greatly exceeded the amounts that could be supported by the law and the facts. In particular, UBS believes the court incorrectly based the penalty on the total regularized assets rather than on any unpaid taxes on those assets for which a fraud has been characterized, and further incorrectly awarded damages based on costs that were not proven by the civil party. Notwithstanding that UBS believes it should be acquitted, our balance sheet at 31 December 2018 reflected provisions with respect to this matter in an amount of USD 516 million. The wide range of possible outcomes in this case contributes to a high degree of estimation uncertainty. The provision reflected on our balance sheet at 31 December 2018 reflects our best estimate of possible financial implications, although it is reasonably possible that actual penalties and civil damages could exceed the provision amount.

In 2016, UBS was notified by the Belgian investigating judge that it is under formal investigation ("inculpé") regarding the laundering of proceeds of tax fraud, of banking and financial solicitation by unauthorized persons, and of serious tax fraud. In 2018, tax authorities and a prosecutor's office in Italy asserted that UBS is potentially liable for taxes and penalties as a result of its activities in Italy from 2012 to 2017.

UBS has, and reportedly numerous other financial institutions have, received inquiries from authorities concerning accounts relating to the Fédération Internationale de Football Association (FIFA) and other constituent soccer associations and related persons and entities. UBS is cooperating with authorities in these inquiries.

Our balance sheet at 31 December 2018 reflected provisions with respect to matters described in this item 1 in an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

Note 21 Provisions and contingent liabilities (continued)**2. Claims related to sales of residential mortgage-backed securities and mortgages**

From 2002 through 2007, prior to the crisis in the US residential loan market, UBS was a substantial issuer and underwriter of US residential mortgage-backed securities (RMBS) and was a purchaser and seller of US residential mortgages. A subsidiary of UBS, UBS Real Estate Securities Inc. (UBS RESI), acquired pools of residential mortgage loans from originators and (through an affiliate) deposited them into securitization trusts. In this manner, from 2004 through 2007, UBS RESI sponsored approximately USD 80 billion in RMBS, based on the original principal balances of the securities issued.

UBS RESI also sold pools of loans acquired from originators to third-party purchasers. These whole loan sales during the period 2004 through 2007 totaled approximately USD 19 billion in original principal balance.

UBS was not a significant originator of US residential loans. A branch of UBS originated approximately USD 1.5 billion in US residential mortgage loans during the period in which it was active from 2006 to 2008, and securitized less than half of these loans.

Lawsuits related to contractual representations and warranties concerning mortgages and RMBS: When UBS acted as an RMBS sponsor or mortgage seller, it generally made certain representations relating to the characteristics of the underlying loans. In the event of a material breach of these representations, UBS was in certain circumstances contractually obligated to repurchase the loans to which the representations related or to indemnify certain parties against losses. In 2012, certain RMBS trusts filed an action in the US District Court for the Southern District of New York seeking to enforce UBS RESI's obligation to repurchase loans in the collateral pools for three RMBS securitizations issued and underwritten by UBS with an original principal balance of approximately USD 2 billion. In July 2018, UBS and the trustee entered into an agreement under which UBS will pay USD 850 million to resolve this matter. A significant portion of this amount will be borne by other parties that indemnified UBS. The settlement remains subject to court approval and proceedings to determine how the settlement funds will be distributed to RMBS holders. After giving effect to this settlement, UBS considers claims relating to substantially all loan repurchase demands to be resolved, and believes that new demands to repurchase US residential mortgage loans are time-barred under a decision rendered by the New York Court of Appeals.

Mortgage-related regulatory matters: Since 2014, the US Attorney's Office for the Eastern District of New York has sought information from UBS pursuant to the Financial Institutions Reform, Recovery and Enforcement Act of 1989 (FIRREA), related to UBS's RMBS business from 2005 through 2007. On 8 November 2018, the DOJ filed a civil complaint in the District Court for the Eastern District of New York. The complaint seeks unspecified civil monetary penalties under FIRREA related to

UBS's issuance, underwriting and sale of 40 RMBS transactions in 2006 and 2007. UBS moved to dismiss the civil complaint on 6 February 2019.

Our balance sheet at 31 December 2018 reflected a provision with respect to matters described in this item 2 in an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of this matter cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

3. Madoff

In relation to the Bernard L. Madoff Investment Securities LLC (BMIS) investment fraud, UBS AG, UBS (Luxembourg) S.A. (now UBS Europe SE, Luxembourg branch) and certain other UBS subsidiaries have been subject to inquiries by a number of regulators, including the Swiss Financial Market Supervisory Authority (FINMA) and the Luxembourg Commission de Surveillance du Secteur Financier. Those inquiries concerned two third-party funds established under Luxembourg law, substantially all assets of which were with BMIS, as well as certain funds established in offshore jurisdictions with either direct or indirect exposure to BMIS. These funds faced severe losses, and the Luxembourg funds are in liquidation. The documentation establishing both funds identifies UBS entities in various roles, including custodian, administrator, manager, distributor and promoter, and indicates that UBS employees serve as board members.

In 2009 and 2010, the liquidators of the two Luxembourg funds filed claims against UBS entities, non-UBS entities and certain individuals, including current and former UBS employees, seeking amounts totaling approximately EUR 2.1 billion, which includes amounts that the funds may be held liable to pay the trustee for the liquidation of BMIS (BMIS Trustee).

A large number of alleged beneficiaries have filed claims against UBS entities (and non-UBS entities) for purported losses relating to the Madoff fraud. The majority of these cases have been filed in Luxembourg, where decisions that the claims in eight test cases were inadmissible have been affirmed by the Luxembourg Court of Appeal, and the Luxembourg Supreme Court has dismissed a further appeal in one of the test cases.

In the US, the BMIS Trustee filed claims against UBS entities, among others, in relation to the two Luxembourg funds and one of the offshore funds. The total amount claimed against all defendants in these actions was not less than USD 2 billion. In 2014, the US Supreme Court rejected the BMIS Trustee's motion for leave to appeal decisions dismissing all claims except those for the recovery of fraudulent conveyances and preference payments. In 2016, the bankruptcy court dismissed the remaining claims against the UBS entities. The BMIS Trustee appealed.

Note 21 Provisions and contingent liabilities (continued)**4. Puerto Rico**

Declines since 2013 in the market prices of Puerto Rico municipal bonds and of closed-end funds (funds) that are sole-managed and co-managed by UBS Trust Company of Puerto Rico and distributed by UBS Financial Services Incorporated of Puerto Rico (UBS PR) have led to multiple regulatory inquiries, as well as customer complaints and arbitrations with aggregate claimed damages of USD 2.9 billion, of which claims with aggregate claimed damages of USD 1.9 billion have been resolved through settlements, arbitration or withdrawal of the claim. The claims have been filed by clients in Puerto Rico who own the funds or Puerto Rico municipal bonds and / or who used their UBS account assets as collateral for UBS non-purpose loans; customer complaint and arbitration allegations include fraud, misrepresentation and unsuitability of the funds and of the loans.

A shareholder derivative action was filed in 2014 against various UBS entities and current and certain former directors of the funds, alleging hundreds of millions of US dollars in losses in the funds. In 2015, defendants' motion to dismiss was denied and a request for permission to appeal that ruling was denied by the Puerto Rico Supreme Court. In 2014, a federal class action complaint also was filed against various UBS entities, certain members of UBS PR senior management and the co-manager of certain of the funds, seeking damages for investor losses in the funds during the period from May 2008 through May 2014. Following denial of the plaintiffs' motion for class certification, the case was dismissed in October 2018.

In 2014 and 2015, UBS entered into settlements with the Office of the Commissioner of Financial Institutions for the Commonwealth of Puerto Rico, the US Securities and Exchange Commission (SEC) and the Financial Industry Regulatory Authority in relation to their examinations of UBS's operations. We also understand that the DOJ is conducting a criminal inquiry into the impermissible reinvestment of non-purpose loan proceeds. We are cooperating with the authorities in this inquiry.

In 2011, a purported derivative action was filed on behalf of the Employee Retirement System of the Commonwealth of Puerto Rico (System) against over 40 defendants, including UBS PR, which was named in connection with its underwriting and consulting services. Plaintiffs alleged that defendants violated their purported fiduciary duties and contractual obligations in connection with the issuance and underwriting of USD 3 billion of bonds by the System in 2008 and sought damages of over USD 800 million. In 2016, the court granted the System's request to join the action as a plaintiff, but ordered that plaintiffs must file an amended complaint. In 2017, the court denied defendants' motion to dismiss the amended complaint.

Beginning in 2015, and continuing through 2017, certain agencies and public corporations of the Commonwealth of Puerto Rico (Commonwealth) defaulted on certain interest payments on Puerto Rico bonds. In 2016, US federal legislation created an oversight board with power to oversee Puerto Rico's finances and to restructure its debt. The oversight board has imposed a stay on the exercise of creditors' rights. In 2017, the oversight board placed certain of the bonds into a bankruptcy-like proceeding under the supervision of a Federal District Judge. These events, further defaults, any further legislative action to create a legal means of restructuring Commonwealth obligations or to impose additional oversight on the Commonwealth's finances, or any restructuring of the Commonwealth's obligations, may increase the number of claims against UBS concerning Puerto Rico securities, as well as potential damages sought.

Our balance sheet at 31 December 2018 reflected provisions with respect to matters described in this item 4 in amounts that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provisions that we have recognized.

Note 21 Provisions and contingent liabilities (continued)**5. Foreign exchange, LIBOR and benchmark rates, and other trading practices**

Foreign exchange-related regulatory matters: Beginning in 2013 numerous authorities commenced investigations concerning possible manipulation of foreign exchange markets and precious metals prices. In 2014 and 2015, UBS reached settlements with the UK Financial Conduct Authority (FCA) and the US Commodity Futures Trading Commission (CFTC) in connection with their foreign exchange investigations, FINMA issued an order concluding its formal proceedings relating to UBS's foreign exchange and precious metals businesses, and the Board of Governors of the Federal Reserve System (Federal Reserve Board) and the Connecticut Department of Banking issued a Cease and Desist Order and assessed monetary penalties against UBS AG. In 2015, the DOJ's Criminal Division terminated the 2012 non-prosecution agreement with UBS AG related to UBS's submissions of benchmark interest rates and UBS AG pleaded guilty to one count of wire fraud, paid a fine and is subject to probation through January 2020. UBS has ongoing obligations to cooperate with these authorities and to undertake certain remediation measures. UBS has also been granted conditional immunity by the Antitrust Division of the DOJ and by authorities in other jurisdictions in connection with potential competition law violations relating to foreign exchange and precious metals businesses. Investigations relating to foreign exchange and precious metals matters by certain authorities remain ongoing notwithstanding these resolutions.

Foreign exchange-related civil litigation: Putative class actions have been filed since 2013 in US federal courts and in other jurisdictions against UBS and other banks on behalf of putative classes of persons who engaged in foreign currency transactions with any of the defendant banks. UBS has entered into a settlement agreement that would resolve US federal court class actions relating to foreign currency transactions with the defendant banks and persons who transacted in foreign exchange futures contracts and options on such futures. The settlement agreement, which has been approved by the court, requires, among other things, that UBS pay an aggregate of USD 141 million and provide cooperation to the settlement classes. Certain class members have excluded themselves from that settlement and have filed individual actions in US and English courts against UBS and other banks alleging violations of US and European competition laws and unjust enrichment.

In 2015, a putative class action was filed in federal court against UBS and numerous other banks on behalf of persons and businesses in the US who directly purchased foreign currency from the defendants and alleged co-conspirators for their own end use. In March 2017, the court granted UBS's (and the other banks') motions to dismiss the complaint. The plaintiffs filed an amended complaint in August 2017. In March 2018, the court denied the defendants' motions to dismiss the amended complaint.

In 2016, a putative class action was filed in federal court in New York against UBS and numerous other banks on behalf of persons and entities who had indirectly purchased foreign exchange instruments from a defendant or co-conspirator in the US. The complaint asserts claims under federal and state antitrust laws. In response to defendants' motion to dismiss, plaintiffs agreed to dismiss their complaint.

In 2017, two new putative class actions were filed in federal court in New York against UBS and numerous other banks on behalf of different proposed classes of indirect purchasers of currency, and a consolidated complaint was filed in June 2017. In March 2018, the court dismissed the consolidated complaint. In October 2018, the court granted plaintiffs' motion seeking leave to file an amended complaint.

Putative class actions were also filed against UBS and other banks in federal court in New York and other jurisdictions on behalf of putative classes of persons who had bought or sold physical precious metals and various precious metal products and derivatives. The complaints in these lawsuits asserted claims under the antitrust laws and the Commodity Exchange Act (CEA), and other claims. In July 2018, the court in New York granted UBS's motions to dismiss amended complaints in the putative class actions relating to gold and silver. In 2017, the court granted UBS's motion to dismiss the platinum and palladium action. Plaintiffs in the platinum and palladium action subsequently filed an amended complaint that did not allege claims against UBS.

Note 21 Provisions and contingent liabilities (continued)

LIBOR and other benchmark-related regulatory matters: Numerous government agencies, including the SEC, the CFTC, the DOJ, the FCA, the UK Serious Fraud Office, the Monetary Authority of Singapore, the Hong Kong Monetary Authority, FINMA, various state attorneys general in the US and competition authorities in various jurisdictions, have conducted or are continuing to conduct investigations regarding potential improper attempts by UBS, among others, to manipulate LIBOR and other benchmark rates at certain times. In 2012, UBS reached settlements relating to benchmark interest rates with the UK Financial Services Authority, the CFTC and the Criminal Division of the DOJ, and FINMA issued an order in its proceedings with respect to UBS relating to benchmark interest rates. In addition, UBS entered into settlements with the European Commission and with the Swiss Competition Commission (WEKO) regarding its investigation of bid-ask spreads in connection with Swiss franc interest rate derivatives. UBS has ongoing obligations to cooperate with the authorities with whom we have reached resolutions and to undertake certain remediation measures with respect to benchmark interest rate submissions. In December 2018, UBS entered into a settlement agreement with the New York and other state attorneys general under which it will pay USD 68 million to resolve claims by the attorneys general related to LIBOR. UBS has been granted conditional leniency or conditional immunity from authorities in certain jurisdictions, including the Antitrust Division of the DOJ and WEKO, in connection with potential antitrust or competition law violations related to certain rates. However, UBS has not reached a final settlement with WEKO as the Secretariat of WEKO has asserted that UBS does not qualify for full immunity.

LIBOR and other benchmark-related civil litigation: A number of putative class actions and other actions are pending in the federal courts in New York against UBS and numerous other banks on behalf of parties who transacted in certain interest rate benchmark-based derivatives. Also pending in the US and in other jurisdictions are a number of other actions asserting losses related to various products whose interest rates were linked to LIBOR and other benchmarks, including adjustable rate mortgages, preferred and debt securities, bonds pledged as collateral, loans, depository accounts, investments and other interest-bearing instruments. The complaints allege manipulation, through various means, of certain benchmark interest rates, including USD LIBOR, Euroyen TIBOR, Yen LIBOR, EURIBOR, CHF LIBOR, GBP LIBOR, USD and SGD SIBOR and SOR and Australian BBSW, and seek unspecified compensatory and other damages under varying legal theories.

USD LIBOR class and individual actions in the US: In 2013 and 2015, the district court in the USD LIBOR actions dismissed, in whole or in part, certain plaintiffs' antitrust claims, federal racketeering claims, CEA claims, and state common law claims. Although the Second Circuit vacated the district court's judgment dismissing antitrust claims, the district court again dismissed antitrust claims against UBS in 2016. Certain plaintiffs have appealed that decision to the Second Circuit. Separately, in 2018,

the Second Circuit reversed in part the district court's 2015 decision dismissing certain individual plaintiffs' claims. UBS entered into an agreement in 2016 with representatives of a class of bondholders to settle their USD LIBOR class action. The agreement has received preliminary court approval and remains subject to final approval. In 2018, the district court denied plaintiffs' motions for class certification in the USD class actions for claims pending against UBS, and plaintiffs sought permission to appeal that ruling to the Second Circuit. In July 2018, the Second Circuit denied the petition to appeal of the class of USD lenders and in November 2018 denied the petition of the USD exchange class. In January 2019, a putative class action was filed in the District Court for the Southern District of New York against UBS and numerous other banks on behalf of US residents who, from 1 February 2014 through the present, directly transacted with a defendant bank in USD LIBOR instruments. The complaint asserts antitrust and unjust enrichment claims.

Other benchmark class actions in the US: In 2014, the court in one of the Euroyen TIBOR lawsuits dismissed certain of the plaintiff's claims, including a federal antitrust claim, for lack of standing. In 2015, this court dismissed the plaintiff's federal racketeering claims on the same basis and affirmed its previous dismissal of the plaintiff's antitrust claims against UBS. In 2017, this court also dismissed the other Yen LIBOR / Euroyen TIBOR action in its entirety on standing grounds, as did the court in the CHF LIBOR action. Also in 2017, the courts in the EURIBOR lawsuit dismissed the cases as to UBS and certain other foreign defendants for lack of personal jurisdiction. In October 2018, the court in the SIBOR / SOR action dismissed all but one of plaintiffs' claims against UBS. Plaintiffs in the CHF LIBOR and SIBOR / SOR actions have filed amended complaints following the dismissals, which UBS and other defendants have moved to dismiss. In November 2018, the court in the BBSW lawsuit dismissed the case as to UBS and certain other foreign defendants for lack of personal jurisdiction. Following that dismissal, plaintiffs in the BBSW action moved in January 2019 to file an amended complaint seeking to re-name UBS and certain other banks as defendants. UBS and other defendants also moved to dismiss the GBP LIBOR action in December 2016, but that motion was denied as to UBS in December 2018. UBS moved for reconsideration of that decision in January 2019.

Government bonds: Putative class actions have been filed since 2015 in US federal courts against UBS and other banks on behalf of persons who participated in markets for US Treasury securities since 2007. A consolidated complaint was filed in 2017 in the US District Court for the Southern District of New York alleging that the banks colluded with respect to, and manipulated prices of, US Treasury securities sold at auction and in the secondary market and asserting claims under the antitrust laws and for unjust enrichment. Defendants' motions to dismiss the consolidated complaint are pending.

Note 21 Provisions and contingent liabilities (continued)

UBS and reportedly other banks are responding to investigations and requests for information from various authorities regarding US Treasury securities and other government bond trading practices. As a result of its review to date, UBS has taken appropriate action.

With respect to additional matters and jurisdictions not encompassed by the settlements and orders referred to above, our balance sheet at 31 December 2018 reflected a provision in an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

6. Swiss retrocessions

The Federal Supreme Court of Switzerland ruled in 2012, in a test case against UBS, that distribution fees paid to a firm for distributing third-party and intra-group investment funds and structured products must be disclosed and surrendered to clients who have entered into a discretionary mandate agreement with the firm, absent a valid waiver.

FINMA has issued a supervisory note to all Swiss banks in response to the Supreme Court decision. UBS has met the FINMA requirements and has notified all potentially affected clients.

The Supreme Court decision has resulted, and may continue to result, in a number of client requests for UBS to disclose and potentially surrender retrocessions. Client requests are assessed on a case-by-case basis. Considerations taken into account when assessing these cases include, among other things, the existence of a discretionary mandate and whether or not the client documentation contained a valid waiver with respect to distribution fees.

Our balance sheet at 31 December 2018 reflected a provision with respect to matters described in this item 6 in an amount that UBS believes to be appropriate under the applicable accounting standard. The ultimate exposure will depend on client requests and the resolution thereof, factors that are difficult to predict and assess. Hence, as in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

7. Investigation of UBS's role in initial public offerings in Hong Kong

The Hong Kong Securities and Futures Commission (SFC) has been conducting investigations into UBS's role as a sponsor of certain initial public offerings listed on the Hong Kong Stock Exchange. The SFC has previously indicated that it intended to take enforcement action against UBS and certain employees in relation to certain of these offerings. In March 2018, the SFC issued a decision notice in relation to one of the offerings under investigation. On 13 March 2019, UBS Securities Hong Kong Limited and UBS AG entered into a settlement agreement with the SFC resolving all of the SFC's pending investigations related to sponsorship of initial public offerings (IPOs) by UBS. The agreement provides for a fine of HKD 375 million (USD 48 million) and the suspension of UBS Securities Hong Kong Limited's ability to act as a sponsor for Hong Kong-listed IPOs for one year.

Note 22 Other liabilities**a) Other financial liabilities measured at amortized cost**

<i>USD million</i>	31.12.18	31.12.17
Prime brokerage payables ¹		30,413
Other accrued expenses	1,911	2,160
Accrued interest expenses	1,501	1,572
Settlement and clearing accounts	1,477	1,416
Other	2,688	2,532
Total other financial liabilities measured at amortized cost	7,576	38,092

¹ Upon adoption of IFRS 9 on 1 January 2018, prime brokerage receivables and payables were reclassified from amortized cost to fair value through profit or loss. Brokerage receivables and payables are now presented separately on the balance sheet. Refer to Note 1c for more information.

b) Other financial liabilities designated at fair value

<i>USD million</i>	31.12.18	31.12.17
Amounts due under unit-linked investment contracts	21,679	11,821
Securities financing transactions ¹	9,461	384
Over-the-counter debt instruments	2,450	4,428
<i>of which: life-to-date own credit (gain) / loss</i>	<i>(51)</i>	<i>37</i>
Other	5	9
Total other financial liabilities designated at fair value²	33,594	16,643

¹ Certain repurchase agreements were reclassified from amortized cost to fair value through profit or loss upon adoption of IFRS 9 as of 1 January 2018. Refer to Note 1c for more information. ² As of 31 December 2018 and 31 December 2017, the contractual redemption amount at maturity of other financial liabilities designated at fair value through profit or loss was not materially different from the carrying value.

c) Other non-financial liabilities

<i>USD million</i>	31.12.18	31.12.17
Compensation-related liabilities	4,645	5,036
<i>of which: accrued expenses</i>	<i>2,400</i>	<i>2,433</i>
<i>of which: other deferred compensation plans</i>	<i>1,473</i>	<i>1,655</i>
<i>of which: net defined benefit pension and post-employment liabilities¹</i>	<i>773</i>	<i>948</i>
Current and deferred tax liabilities ²	915	866
VAT and other tax payables	403	388
Deferred income	215	153
Other	98	55
Total other non-financial liabilities	6,275	6,499

¹ Refer to Note 29 for more information. ² Refer to Note 8 for more information.

Additional information

Note 23 Expected credit loss measurement

a) Expected credit losses in the period

Total net credit loss expenses amounted to USD 118 million in 2018, reflecting expected credit losses (ECL) of USD 23 million related to stage 1 and 2 positions and net losses of USD 95 million related to credit-impaired (stage 3) positions.

In the Investment Bank and Global Wealth Management, increased stage 1 and 2 ECL provisions recognized over the year primarily relate to loans and credit facilities originated during 2018 and to a lesser extent to changes in credit quality of existing assets. In Personal & Corporate Banking, ECL remained

unchanged over the year primarily because increased ECL from new transactions and minor changes in applied credit risk models were offset by ECL net recoveries as a lower proportion of transactions was subject to stage 2 classification.

Stage 3 net losses of USD 95 million were recognized across a number of defaulted positions, mainly in Personal & Corporate Banking (USD 56 million) and to a lesser extent in the Investment Bank (USD 29 million).

b) Changes to ECL models, scenarios, scenario weights and key inputs

Refer to Note 1a and 1c for information on ECL models, scenarios, scenario weights and key inputs applied at transition to IFRS 9 as of 1 January 2018. No changes were applied to the determination of a significant increase in credit risk (SICR) and the ECL measurement period during the year 2018. Apart from updating market data, such as house prices, equity indices and foreign exchange rates, and macroeconomic factors, such as gross domestic product (GDP) and unemployment rates, no significant changes were applied to the models used to calculate ECL during the year 2018.

The four scenarios and the related macroeconomic factors were reviewed in light of the economic and political conditions prevailing at year-end 2018. UBS has determined that the fundamental risk assessment made upon transition to IFRS 9 on 1 January 2018 is still appropriate and that potential developments remain suitably covered by the baseline scenario, which is aligned with the business plan, and the three additional scenarios introduced to capture potential non-linearity of credit losses required under IFRS 9. The key parameters (e.g., the real GDP growth, consumer price inflation, unemployment rate) of each scenario have been updated over the course of the year, but remained materially unchanged from what was applied at transition (refer to Note 1c). The key parameters applied as of 31 December 2018 are summarized in the table on the following page.

The determination of the scenario weights is subject to the process and governance outlined in Note 1a Section 3g. An econometric model is used to provide an input into the scenario weight assessment process giving a first indication of the probability that the GDP forecast used for each scenario would materialize, if historically observed deviations of GDP growth from trend growth were representative. As such historical analyses of GDP development do not include an assessment of the underlying economic or political causes, management positions the model output into the context of current conditions and future expectations and applies judgment in

determining the final scenario weights. The reviews during 2018 reflected the increasing probability of a weakening economy in key markets, after a long spell of substantial expansion, and the uncertainties about the influence that several political developments with unforeseeable outcomes may have on future growth. At year-end 2018, management reflected these developments by giving more weight to the mild and severe downside scenarios compared to transition date.

Non-linearity of credit losses in relation to macroeconomic factors is usually most pronounced in portfolios that are most sensitive to interest rates, especially in the areas of mortgage loans to private clients and real estate financing. The mild downside scenario reflects a significant rise of interest rates as a key component and is also particularly relevant for credit risk management purposes.

As noted above, scenario weights are a reflection of risks identified during management's assessment of economic and geopolitical risks and not a specific expectation that a particular narrative with its defined macroeconomic factors (e.g., interest rates) will materialize. Other scenarios for a mild downside with less focus on interest rates would, however, not have been representative of the potential asymmetry of loan losses in a downturn. A more severe recession can be triggered by political factors that cannot be modeled based on observed history; given this consideration, the weight assigned to the severe downside case was based on management's assessment of the geopolitical risks that might affect all of our key markets and portfolios.

ECL scenario	Assigned weights in %	
	2018	2017
	31.12	1.1
Upside	10.0	20.0
Baseline	45.0	42.5
Mild downside	35.0	30.0
Severe downside	10.0	7.5

c) Development of ECL allowances and provisions

The ECL allowances and provisions recognized in the period are impacted by a variety of factors, such as:

- origination of new instruments during the period;
- effect of passage of time as the ECL on an instrument for the remaining lifetime reduces (all other factors remaining the same);
- credit impairment: increased ECL as default is certain and PD increases to 100%;
- discount unwind within ECL as it is measured on a present value basis;
- derecognition of instruments in the period;
- change in individual asset quality of instruments;
- portfolio effect of updating forward-looking scenarios and the respective weights;
- movements from a “maximum 12-month ECL” to the recognition of “lifetime ECL” (and vice versa) following transfers between the stages 1, 2 and 3 (SICR or credit-impairment status);
- changes in credit risk and / or economic forecasting models or updates to model parameters;
- foreign exchange translations for assets denominated in foreign currencies and other movements.

Foreign exchange movements ⁹	8	0	0	8
Other	(6)	2	(1)	(6)
Balance as of 31 December 2018	(1,002)	(162)	(180)	(661)

¹ Represents ECL allowances and provisions prior to ECL remeasurement due to stage transfer. ² Includes ECL movements from new and derecognized transactions, book quality changes, model and methodology changes and foreign exchange rates. ³ Represents the increase and decrease in allowances and provisions resulting from financial instruments (including guarantees and facilities) that were newly originated, purchased or renewed and from the final derecognition of loans or facilities on their maturity date or earlier. ⁴ Represents the remeasurement between 12-month and lifetime ECL due to stage transfers. ⁵ Represents the change in allowances and provisions related to changes in model inputs or assumptions, including changes in forward-looking macroeconomic conditions, changes in the exposure profile, PD and LGD changes, and unwinding of the time value. ⁶ Represents the change in the allowances and provisions related to changes in models and methodologies. ⁷ Represents the decrease in allowances and provisions resulting from write-offs of the ECL allowance against the gross carrying amount when all or part of a financial asset is deemed uncollectible or forgiven. ⁸ Represents reclassifications to Other assets measured at amortized cost. ⁹ Represents the change in allowances and provisions related to movements in foreign exchange rates.

Note 23 Expected credit loss measurement (continued)**d) Maximum exposure to credit risk**

The tables on the following pages provide UBS AG's maximum exposure to credit risk for financial instruments subject to ECL and the respective collateral and other credit enhancements mitigating credit risk for these classes of financial instruments.

The maximum exposure to credit risk includes the carrying amounts of financial instruments recognized on the balance sheet subject to credit risk and the notional amounts for off-balance sheet arrangements. Where information is available, collateral is presented at fair value. For other collateral, such as

real estate, a reasonable alternative value is used. Credit enhancements, such as credit derivative contracts and guarantees, are included at their notional amounts. Both are capped at the maximum exposure to credit risk for which they serve as security. The "Risk management and control" section of this report describes management's view of credit risk and the related exposures, which can differ in certain respects from the requirements of IFRS.

Maximum exposure to credit risk

¹ Includes but is not limited to life insurance contracts, inventory, accounts receivable, mortgage loans, patents and copyrights. ² Loans and advances to banks include amounts held with third-party banks on behalf of clients. The credit risk associated with these balances may be borne by those clients. ³ Included within Cash collateral receivables on derivative instruments are margin balances due from exchanges or clearing houses. Some of these margin balances reflect amounts transferred on behalf of clients who retain the associated credit risk. ⁴ The amount shown in the "Netting" column represents the netting potential not recognized on the balance sheet. Refer to Note 25 for more information. ⁵ Collateral arrangements generally incorporate a range of collateral, including cash, securities, property and other collateral. ⁶ The amount shown in the "Guarantees" column largely relates to sub-participations. Refer to Note 34 for more information.

Prior-period information is presented under IAS 39 requirements.

Note 23 Expected credit loss measurement (continued)**e) Financial assets subject to credit risk by rating category**

The table below shows the credit quality and the maximum exposure to credit risk based on UBS AG's internal credit rating system and year-end stage classification. With the transition to IFRS 9, the credit risk rating reflects UBS AG's assessment of the

probability of default of individual counterparties, prior to substitutions. The amounts presented are gross of impairment allowances.

→ Refer to the "Risk management and control" section of this report for more details on UBS AG's internal grading system

Note 23 Expected credit loss measurement (continued)**f) Credit-impaired financial instruments at amortized cost**

The credit risk in UBS AG's portfolio is actively managed by taking collateral against exposures and by utilizing credit hedging. Collateral held against the credit-impaired loan exposure (stage 3) mainly consisted of real estate and securities. It is UBS AG's policy to dispose of foreclosed real estate as soon as practicable. The carrying amount of foreclosed property recorded in our balance sheet at the end of 2018 and 2017

amounted to USD 60 million and USD 61 million, respectively. The Bank seeks to liquidate collateral held in the form of financial assets expeditiously and at prices considered fair. This may require us to purchase assets for our own account, where permitted by law, pending orderly liquidation. Financial assets that are credit-impaired and related collateral held in order to mitigate potential losses are shown in the table below.

USD million	31.12.18			
	Gross carrying amount	Allowance for expected credit losses	Net carrying amount	Collateral / credit enhancements
Loans and advances to banks	3	(3)	0	0
Loans and advances to customers	2,297	(549)	1,748	1,654
<i>of which: Private clients with mortgages</i>	836	(39)	796	796

Total off-balance sheet financial instruments and other credit lines	383¹	(34)¹		102
	31.12.17			
USD million	Gross carrying amount	Allowance for expected credit losses	Net carrying amount	Collateral / credit enhancements
Loans and advances to customers	1,104	(672)	432	210
Guarantees and loan commitments	204	(34)		5
Total credit-impaired financial assets	1,308²	(706)²	432	215

¹ Upon adoption of IFRS 9 as of 1 January 2018, an instrument is classified as credit-impaired if the counterparty is defaulted, and / or the instrument is purchased or originated credit-impaired and includes credit-impaired exposures for which no loss has occurred or no allowance has been recognized (e.g., because they are expected to be fully recoverable through the collateral held). Refer to Note 1c for more information on the adoption of IFRS 9. ² December 2017 numbers do not include exposure of USD 0.3 billion presented on the balance sheet as other assets.

Note 23 Expected credit loss measurement (continued)**g) Sensitivity analysis**

As outlined in Note 1a, ECL estimates involve significant uncertainties at the time they are made.

ECL model

The models applied to determine point-in-time PD and LGD rely on market and statistical data, which have been found to correlate well with historically observed defaults in sufficiently homogeneous segments. The risk sensitivity of each of our IFRS 9 reporting segments to such factors has been summarized in Note 10.

Emerging new systematic risk factors may not be sufficiently taken into account by existing models and affect their responsiveness to a changing environment. This risk is deemed to be immaterial and monitored through regular model review processes; in particular, it is deemed to be of less importance for the large books of mortgage loans, where risk drivers tend to be stable.

Statistically derived models, which perform well on a reasonably sized and homogeneous portfolio, may show weakness in smaller-sized sub-portfolios, for which other or differently weighted factors may be more relevant criteria. Where risk experts conclude that the output of a general model is not in line with what they would have expected for a specific portfolio segment, and that this would be material for ECL, overlays would be recommended based on management judgment.

ECL estimations for segments where the PD is homogeneous, but the credit exposure is not, may prove to be inaccurate – even though all parameters were accurately predicted – as the actual amount of loss depends on the exposure of the position that defaulted. This observation is less relevant in retail-type portfolios with smaller individual exposures from mortgage loans or financings of SME, but may become important in the large corporate client portfolios in the Investment Bank and Personal & Corporate Banking.

Forward-looking scenarios

Depending on the scenario selection and related macro-economic assumptions for the risk factors, the components of the relevant weighted average ECL change. This is particularly relevant for interest rates, which can take both directions under a given growth assumption (for example, low growth with high interest rates in a stagflation scenario, versus low growth and falling interest rates in a recession). Management will look for scenario narratives that are expected to address the risks of a credit portfolio, while at the same time meeting the requirements of IFRS 9 to avoid bias.

As forecasting models are complex due to the combination of multiple factors, simple what-if analyses by changing individual parameters do not provide reasonable information on the exposure of segments to changes in the macroeconomy. Portfolio-specific analyses based on their key risk factors would also not be additive as potential compensatory effects in other segments would be ignored. Sensitivities at the UBS AG level can only be meaningfully assessed in the context of coherent scenarios with consistently developed macroeconomic factors.

The table below indicates the potential effect of changing economic conditions on ECL for stage 1 and stage 2 positions by disclosing for each scenario (see Note 23b) and material portfolio the corresponding ECL output. The effect of applying scenarios is not linear across the portfolio, with a significant impact observed in the mortgage loan books as the potential effect of rising interest rates manifests itself in the mild downside scenario, with high unemployment rates combined with a marked correction of house prices contributing to high expected losses in the severe downside scenario.

Potential effect of changing economic conditions

	Weighted average		Baseline		Scenarios Upside		Mild downside		Severe downside	
	ECL	in % of baseline	ECL	in % of baseline	ECL	in % of baseline	ECL	in % of baseline	ECL	in % of baseline
<i>USD million, unless otherwise indicated</i>										
Segmentation										
Private clients with mortgages	102	275	37	100	29	78	173	468	365	988
Real estate financing	61	150	41	100	32	79	80	198	119	293
Large corporate clients	47	133	35	100	31	89	46	130	108	308
SME clients	34	118	29	100	28	97	39	135	63	216
Other segments	115	122	95	100	83	88	135	142	171	180
Total	359	152	237	100	204	86	473	200	826	349

Note 23 Expected credit loss measurement (continued)

The forecasting horizon is limited to three years, with a model-based mean reversion of PD and LGD assumed thereafter. Changes to these timelines may have an effect on ECL; depending on the cycle, a longer or shorter forecasting horizon will lead to different annualized lifetime PD and average LGD estimations. This is currently not deemed to be material for UBS AG as a large share of positions, including mortgages in Switzerland, have a maturity that is within the forecasting horizon.

Scenario weights

ECL is sensitive to changing scenario weights, in particular, if narratives and parameters are selected that are not close to the baseline scenario highlighting the non-linearity of credit losses.

As shown in the table on the previous page, the ECL for stage 1 and stage 2 positions would have been USD 237 million instead of USD 359 million if ECL had been determined solely on the baseline scenario. The weighted average ECL amounts therefore to 152% of the baseline value.

Stage allocation and SICR

The determination of what constitutes an SICR is based on

management judgment as explained in Note 1a. Changing the SICR trigger will have a direct effect on ECL as more or fewer positions would be subject to lifetime ECL under any scenario.

Maturity profile

The maturity profile of the assets is an important driver for changes in ECL due to transfers to stage 2. The current maturity profile of most lending books is relatively short; hence a movement to stage 2 may have a limited effect on ECL. A significant portion of our lending to SME is documented under frame credit agreements, which allow for various forms of utilization but are unconditionally cancelable by UBS AG at any time. The relevant maturity for drawings under such agreements with a fixed maturity is the respective term, or maximum 12 months in stage 1. For unused credit lines and all drawings that have no fixed maturity (e.g., current accounts), UBS AG generally applies a 12-month maturity from the reporting date, given the credit review policies, which require either continuous monitoring of key indicators and behavioral patterns for smaller positions or an annual formal review for any other limit. The ECL for these products is sensitive to shortening or extending the maturity assumption.

Note 24 Fair value measurement

This Note provides fair value measurement information for both financial and non-financial instruments and is structured as follows:

- a) Valuation principles
- b) Valuation governance
- c) Fair value hierarchy
- d) Valuation adjustments
- e) Transfers between Level 1 and Level 2

Adoption of IFRS 9

Adoption of IFRS 9 on 1 January 2018 resulted in the reclassification of certain financial assets and liabilities from amortized cost to fair value through profit or loss. This included:

- brokerage receivables and payables held in the Investment Bank and Global Wealth Management;
- auction rate securities held in Corporate Center; and
- certain loans held in the Investment Bank.

Some of those financial assets and liabilities are designated as Level 3 in the fair value hierarchy. Refer to the tables and text within this Note for more information.

An immaterial amount of financial assets were reclassified from *Financial assets at fair value held for trading* and *Financial*

assets at fair value not held for trading to *Loans and advances to customers* upon adoption of IFRS 9. An immaterial amount of associated loan commitments, which were recognized as derivative liabilities as of 31 December 2017, were also derecognized from the balance sheet. No material fair value gains or losses would have been recognized in the income statement in 2018 had these instruments not been reclassified. Similarly, no material fair value gains or losses would have been recognized in *Other comprehensive income* related to debt instruments that were reclassified from *Financial assets available for sale* to *Other financial assets measured at amortized cost* upon adoption of IFRS 9.

→ Refer to Note 1c for more information

a) Valuation principles

Fair value is defined as the price that would be received for the sale of an asset or paid to transfer a liability in an orderly transaction between market participants in the principal market (or most advantageous market, in the absence of a principal market) as of the measurement date. In measuring fair value, the Group uses various valuation approaches and applies a hierarchy for prices and inputs that maximizes the use of observable market data, if available.

All financial and non-financial assets and liabilities measured or disclosed at fair value are categorized into one of three fair value hierarchy levels. In certain cases, the inputs used to measure fair value may fall within different levels of the fair

value hierarchy. For disclosure purposes, the level in the hierarchy within which the instrument is classified in its entirety is based on the lowest level input that is significant to the position's fair value measurement:

- Level 1 – quoted prices (unadjusted) in active markets for identical assets and liabilities;
- Level 2 – valuation techniques for which all significant inputs are, or are based on, observable market data; or
- Level 3 – valuation techniques for which significant inputs are not based on observable market data.

Note 24 Fair value measurement (continued)

If available, fair values are determined using quoted prices in active markets for identical assets or liabilities. An active market is one in which transactions for the asset or liability take place with sufficient frequency and volume to provide pricing data on an ongoing basis. Assets and liabilities that are quoted and traded in an active market are valued at the currently quoted price multiplied by the number of units of the instrument held.

Where the market for a financial instrument or non-financial asset or liability is not active, fair value is established using a valuation technique, including pricing models. Valuation techniques involve the use of estimates, the extent of which depends on the complexity of the instrument and the availability of market-based data. Valuation adjustments may be made to allow for additional factors, including model, liquidity, credit and funding risks, which are not explicitly captured within the valuation technique, but which would nevertheless be considered by market participants when establishing a price. The limitations inherent in a particular valuation technique are considered in the determination of an asset or liability's classification within the fair value hierarchy.

Many cash instruments and over-the-counter (OTC) derivative contracts have bid and offer prices that can be observed in the marketplace. Bid prices reflect the highest price that a party is

willing to pay for an asset. Offer prices represent the lowest price that a party is willing to accept for an asset. In general, long positions are measured at a bid price and short positions at an offer price, reflecting the prices at which the instruments could be transferred under normal market conditions. Offsetting positions in the same financial instrument are marked at the mid-price within the bid-offer spread.

Generally, the unit of account for a financial instrument is the individual instrument, and UBS applies valuation adjustments at an individual instrument level, consistent with that unit of account. However, if certain conditions are met, UBS may estimate the fair value of a portfolio of financial assets and liabilities with substantially similar and offsetting risk exposures on the basis of the net open risks.

For transactions where the valuation technique used to measure fair value requires significant inputs that are not based on observable market data, the financial instrument is initially recognized at the transaction price. This initial recognition amount may differ from the fair value obtained using the valuation technique. Any such difference is deferred and not recognized in the income statement and referred to as deferred day-1 profit or loss.

→ **Refer to Note 24d for more information**

b) Valuation governance

UBS's fair value measurement and model governance framework includes numerous controls and other procedural safeguards that are intended to maximize the quality of fair value measurements reported in the financial statements. New products and valuation techniques must be reviewed and approved by key stakeholders from risk and finance control functions. Responsibility for the ongoing measurement of financial and non-financial instruments at fair value resides with the business divisions. In carrying out their valuation responsibilities, the businesses are required to consider the availability and quality of external market data and to provide justification and rationale for their fair value estimates.

Fair value estimates are validated by risk and finance control functions, which are independent of the business divisions. Independent price verification is performed by Finance through benchmarking the business divisions' fair value estimates with observable market prices and other independent sources. Controls and a governance framework are in place and are intended to ensure the quality of third-party pricing sources where used. For instruments where valuation models are used to determine fair value, independent valuation and model control groups within Finance and Risk Control evaluate UBS's models on a regular basis, including valuation and model input parameters as well as pricing. As a result of the valuation controls employed, valuation adjustments may be made to the business divisions' estimates of fair value to align with independent market data and the relevant accounting standard.

→ **Refer to Note 24d for more information**

Note 24 Fair value measurement (continued)**c) Fair value hierarchy**

The table below provides the fair value hierarchy classification of financial and non-financial assets and liabilities measured at fair value. The narrative that follows describes the different product types, valuation techniques used in measuring their fair value, including significant valuation inputs and assumptions used, and the factors determining their classification within the fair value hierarchy.

¹ Bifurcated embedded derivatives are presented on the same balance sheet lines as their host contracts and are not included in this table. The fair value of these derivatives was not material for the periods presented. ² Financial assets for unit-linked investment contracts were reclassified from Financial assets at fair value held for trading to Financial assets at fair value not held for trading upon adoption of IFRS 9 on 1 January 2018. Refer to Note 1c for more information. ³ Comparative-period information is not disclosed for financial assets and liabilities that were measured at amortized cost prior to the adoption of IFRS 9 on 1 January 2018. Refer to Note 1c for more information. ⁴ As of 31 December 2018, USD 23 billion of Financial assets at fair value not held for trading and USD 6 billion of Financial assets measured at fair value through other comprehensive income are expected to be recovered or settled after 12 months. As of 31 December 2017, USD 24 billion of Financial assets at fair value not held for trading and USD 7 billion of Financial assets measured at fair value through other comprehensive income were expected to be recovered or settled after 12 months. ⁵ The increases in Securities financing transactions primarily relate to the reclassification of certain balances from amortized cost to fair value through profit or loss upon adoption of IFRS 9 on 1 January 2018. Refer to Note 1c for more information. ⁶ Upon adoption of IFRS 9 on 1 January 2018, equity instruments that were formerly classified as available for sale under IAS 39 were reclassified to Financial assets at fair value not held for trading. Refer to Note 1c for more information. ⁷ Other non-financial assets primarily consist of properties and other non-current assets held for sale, which are measured at the lower of their net carrying amount or fair value less costs to sell.

Note 24 Fair value measurement (continued)

Valuation techniques

Valuation techniques are used to value positions for which a market price is not available from market sources. This includes certain less liquid debt and equity instruments, certain exchange-traded derivatives and all derivatives transacted in the OTC market. UBS uses widely recognized valuation techniques for determining the fair value of financial and non-financial instruments that are not actively traded and quoted. The most frequently applied valuation techniques include discounted value of expected cash flows, relative value and option pricing methodologies.

Discounted value of expected cash flows is a valuation technique that measures fair value using estimated expected future cash flows from assets or liabilities and then discounts these cash flows using a discount rate or discount margin that reflects the credit and / or funding spreads required by the market for instruments with similar risk and liquidity profiles to produce a present value. When using such valuation techniques, expected future cash flows are estimated using an observed or implied market price for the future cash flows or by using industry standard cash flow projection models. The discount factors within the calculation are generated using industry standard yield curve modeling techniques and models.

Relative value models measure fair value based on the market prices of equivalent or comparable assets or liabilities, making adjustments for differences between the characteristics of the observed instrument and the instrument being valued.

Option pricing models incorporate assumptions regarding the behavior of future price movements of an underlying referenced asset or assets to generate a probability-weighted future expected payoff for the option. The resulting probability-weighted expected payoff is then discounted using discount factors generated from industry standard yield curve modeling techniques and models. The option pricing model may be implemented using a closed-form analytical formula or other mathematical techniques (e.g., binomial tree or Monte Carlo simulation).

Where available, valuation techniques use market-observable assumptions and inputs. If such data is not available, inputs may be derived by reference to similar assets in active markets, from recent prices for comparable transactions or from other observable market data. In such cases, the inputs selected are based on historical experience and practice for similar or analogous instruments, derivation of input levels based on similar products with observable price levels and knowledge of current market conditions and valuation approaches.

For more complex instruments and instruments not traded in an active market, fair values may be estimated using a combination of observed transaction prices, consensus pricing services and relevant quotes. Consideration is given to the nature of the quotes (e.g., indicative or firm) and the relationship of recently evidenced market activity to the prices provided by consensus pricing services. UBS also uses internally developed

models, which are typically based on valuation methods and techniques recognized as standard within the industry.

Assumptions and inputs used in valuation techniques include benchmark interest rate curves, credit and funding spreads used in estimating discount rates, bond and equity prices, equity index prices, foreign exchange rates, levels of market volatility and correlation. Refer to Note 24f for more information. The discount curves used by the Group incorporate the funding and credit characteristics of the instruments to which they are applied.

Financial instruments excluding derivatives: product description, valuation and classification in the fair value hierarchy

Government bills and bonds

Product description: government bills and bonds include fixed-rate, floating-rate and inflation-linked bills and bonds issued by sovereign governments.

Valuation: these instruments are generally valued using prices obtained directly from the market. Instruments that cannot be priced directly using active-market data are valued using discounted cash flow valuation techniques that incorporate market data for similar government instruments.

Fair value hierarchy: government bills and bonds are generally traded in active markets with prices that can be obtained directly from these markets, resulting in classification as Level 1, while the remaining positions are classified as Level 2.

Corporate and municipal bonds

Product description: corporate bonds include senior, junior and subordinated debt issued by corporate entities. Municipal bonds are issued by state and local governments. While most instruments are standard fixed- or floating-rate securities, some may have more complex coupon or embedded option features.

Valuation: corporate and municipal bonds are generally valued using prices obtained directly from the market for the security, or similar securities, adjusted for seniority, maturity and liquidity. When prices are not available, instruments are valued using discounted cash flow valuation techniques incorporating the credit spread of the issuer or similar issuers. For convertible bonds where no directly comparable price is available, issuances may be priced using a convertible bond model.

Fair value hierarchy: corporate and municipal bonds are generally classified as Level 1 or Level 2 depending on the depth of trading activity behind price sources. Level 3 instruments have no suitable pricing information available and also cannot be referenced to other securities issued by the same issuer. Therefore, such instruments are measured based on price levels for similar issuers adjusted for relative tenor and issuer quality.

Traded loans and loans designated at fair value

Product description: these instruments include fixed-rate loans, corporate loans, recently originated commercial real estate loans and contingent lending transactions.

Note 24 Fair value measurement (continued)

Valuation: loans are valued directly using market prices that reflect recent transactions or quoted dealer prices, where available. Where no market price data is available, loans are valued by relative value benchmarking using pricing derived from debt instruments in comparable entities or different products in the same entity, or by using a credit default swap valuation technique, which requires inputs for credit spreads, credit recovery rates and interest rates. Recently originated commercial real estate loans are measured using a securitization approach based on rating agency guidelines. The valuation of the contingent lending transactions is dependent on actuarial mortality levels and actuarial life insurance policy lapse rates. Mortality and lapse rate assumptions are based on external actuarial estimations for large homogeneous pools, and contingencies are derived from a range relative to the actuarially expected amount.

Fair value hierarchy: instruments with suitably deep and liquid pricing information are classified as Level 2, while any positions requiring the use of valuation techniques, or for which the price sources have insufficient trading depth, are classified as Level 3.

Investment fund units

Product description: investment fund units are pools of assets, generally equity instruments and bonds, broken down to redeemable units.

Valuation: investment fund units are predominantly exchange-traded, with readily available quoted prices in liquid markets. Where market prices are not available, fair value may be measured using net asset values (NAV), taking into account any restrictions imposed upon redemption.

Fair value hierarchy: listed units are classified as Level 1, provided there is sufficient trading activity to justify active-market classification, while other positions are classified as Level 2. Positions for which NAV are not available or that are not redeemable at the measurement date or shortly thereafter are classified as Level 3.

Asset-backed securities

Product description: asset-backed securities (ABS) include residential mortgage-backed securities (RMBS), commercial mortgage-backed securities (CMBS), collateralized debt obligations (CDO) and other ABS and are instruments generally issued through the process of securitization of underlying interest-bearing assets.

Valuation: for liquid securities, the valuation process will use trade and price data, updated for movements in market levels between the time of trading and the time of valuation. Less liquid instruments are measured using discounted expected cash flows incorporating price data for instruments or indices with similar risk profiles. Inputs to discounted expected cash flow techniques include asset prepayment rates, discount margin or discount yields and asset default and recovery rates.

Fair value hierarchy: CDO, RMBS, CMBS and other ABS are generally classified as Level 2. However, if significant inputs are unobservable, or if market or fundamental data is not available, they are classified as Level 3.

Auction rate securities

Product description: there are two types of auction rate securities (ARS): auction preferred securities (APS) and auction rate certificates (ARC). ARC are issued by municipalities and are used by investors as tax-exempt alternatives to money market instruments. Interest rates for these instruments are reset through a periodic Dutch auction. APS are similar to ARC with the primary difference being that they are issued from closed-end funds.

Valuation: ARS are valued using market prices that reflect recent transactions after applying an adjustment for trade size or quoted dealer prices, where available.

Fair value hierarchy: suitably deep and liquid pricing information is generally not available for ARS securities. As a result, these securities are classified as Level 3.

Equity instruments

Product description: equity instruments include stocks and shares, private equity positions and units held in hedge funds.

Valuation: listed equity instruments are generally valued using prices obtained directly from the market. Unlisted equity holdings, including private equity positions, are initially marked at their transaction price and are revalued when reliable evidence of price movement becomes available or when the position is deemed to be impaired. Fair value for units held in hedge funds is measured based on their published NAV, taking into account any restrictions imposed upon redemption.

Fair value hierarchy: the majority of equity securities are actively traded on public stock exchanges where quoted prices are readily and regularly available, resulting in Level 1 classification. Units held in hedge funds are classified as Level 2, except for positions for which published NAV are not available or that are not redeemable at the measurement date or shortly thereafter, in which case such positions are classified as Level 3.

Financial assets for unit-linked investment contracts

Product description: unit-linked investment contracts allow investors to invest in a pool of assets through issued investment units.

Valuation: the majority of assets are listed on exchanges and fair values are determined using quoted prices.

Fair value hierarchy: most assets are classified as Level 1 if actively traded, or Level 2 if trading is not active. However, instruments for which prices are not readily available are classified as Level 3.

Note 24 Fair value measurement (continued)**Securities financing transactions**

Product description: securities financing transactions include (reverse) repurchase agreements (securities purchased under resale agreements and securities sold under repurchase agreements) that are managed on a fair value basis.

Valuation: These instruments are valued using discounted expected cash flow techniques. The discount rate applied is based on funding curves that are relevant to the collateral eligibility terms for the contract in question.

Fair value hierarchy: Collateral funding curves for these instruments are generally observable and, as a result, these positions are classified as Level 2. Where the collateral terms are non-standard the funding curve may be considered unobservable and classified Level 3.

Brokerage receivables and payables

Product description: brokerage receivables and payables include callable, on-demand balances, including long cash credits, short cash debits, margin debit balances and short sale proceeds.

Valuation: fair value is determined based on the value of the underlying balances.

Fair value hierarchy: due to their on-demand nature, these receivables and payables are designated as Level 2.

Financial liabilities designated at fair value

Product description: debt instruments, primarily comprised of equity-, rates- and credit-linked issued notes, which are held at fair value under the fair value option. These instruments are tailored specifically to the holder's risk or investment appetite with structured coupons or payoffs.

Valuation: the risk management and the valuation approaches for these instruments are closely aligned with the equivalent derivatives business and the underlying risk, and the valuation techniques used for this component are the same as the relevant valuation techniques described below. For example, equity-linked notes should be referenced to equity / index contracts and credit-linked notes should be referenced to credit derivative contracts.

Fair value hierarchy: observability is closely aligned with the equivalent derivatives business and the underlying risk.

- **Refer to Notes 19 and 22 for information on debt issued designated at fair value and other financial liabilities designated at fair value**
- **Refer to Note 24d for more information on own credit adjustments related to financial liabilities designated at fair value**

Amounts due under unit-linked investment contracts

Product description: the financial liability represents the amounts due to unit holders.

Valuation: the fair values of investment contract liabilities are determined by reference to the fair value of the corresponding assets.

Fair value hierarchy: the liabilities themselves are not actively traded, but are mainly referenced to instruments that are actively traded and are therefore classified as Level 2.

Derivative instruments: product description, valuation and classification in the fair value hierarchy

The curves used for discounting expected cash flows in the valuation of collateralized derivatives reflect the funding terms associated with the relevant collateral arrangement for the instrument being valued. These collateral arrangements differ across counterparties with respect to the eligible currency and interest terms of the collateral. The majority of collateralized derivatives are measured using a discount curve that is based on funding rates derived from overnight interest in the cheapest eligible currency for the respective counterparty collateral agreement.

Uncollateralized and partially collateralized derivatives are discounted using the LIBOR (or equivalent) curve for the currency of the instrument. As described in Note 24d, the fair value of uncollateralized and partially collateralized derivatives is then adjusted by CVA, DVA and FVA as applicable, to reflect an estimation of the effect of counterparty credit risk, UBS's own credit risk and funding costs and benefits.

Interest rate contracts

Product description: interest rate swap contracts include interest rate swaps, basis swaps, cross-currency swaps, inflation swaps and interest rate forwards, often referred to as forward rate agreements (FRA). Interest rate option contracts include caps and floors, swaptions, swaps with complex payoff profiles and other more complex interest rate options.

Valuation: interest rate swap contracts are valued by estimating future interest cash flows and discounting those cash flows using a rate that reflects the appropriate funding rate for the position being measured. The yield curves used to estimate future index levels and discount rates are generated using market standard yield curve models using interest rates associated with current market activity. The key inputs to the models are interest rate swap rates, FRA rates, short-term interest rate futures prices, basis swap spreads and inflation swap rates. Interest rate option contracts are valued using various market standard option models, using inputs that include interest rate yield curves, inflation curves, volatilities and correlations. The volatility and correlation inputs within the models are implied from market data based on market-observed prices for standard option instruments trading within the market. Option models used to value more exotic products have a number of model parameter inputs that require calibration to enable the exotic model to price standard option instruments to the price levels observed in the market. When the maturity of the interest rate swap or option contract exceeds the term for which standard market quotes are observable for a significant input parameter, the contracts are valued by extrapolation from the last observable point using standard assumptions or by reference to another observable comparable input parameter to represent a suitable proxy for that portion of the term.

Note 24 Fair value measurement (continued)

Fair value hierarchy: the majority of interest rate swaps are classified as Level 2 as the standard market contracts that form the inputs for yield curve models are generally traded in active and observable markets. Options are generally treated as Level 2 as the calibration process enables the model output to be validated to active-market levels. Models calibrated in this way are then used to revalue the portfolio of both standard options and more exotic products. In most cases, there are active and observable markets for the standard market instruments that form the inputs for yield curve models as well as the financial instruments from which volatility and correlation inputs are derived. Exotic options for which appropriate volatility or correlation input levels cannot be implied from observable market data are classified as Level 3. Interest rate swap or option contracts are classified as Level 3 when the term exceeds standard market-observable quotes.

Credit derivative contracts

Product description: a credit derivative is a financial instrument that transfers credit risk related to a single underlying entity, a portfolio of underlying entities or a pool of securitized referenced assets. Credit derivative products include credit default swaps (CDS) on single names, indices and securitized products, plus first to default swaps and certain total return swaps.

Valuation: credit derivative contracts are valued using industry standard models based primarily on market credit spreads, upfront pricing points and implied recovery rates. Where a derivative credit spread is not directly available, it may be derived from the price of the reference cash bond. Asset-backed credit derivatives are valued using a similar valuation technique to the underlying security with an adjustment to reflect the funding differences between cash and synthetic form. Inputs include prepayment rates, default rates, loss severity, discount margin / rate.

Fair value hierarchy classification: single-entity and portfolio credit derivative contracts are classified as Level 2 when credit spreads and recovery rates are determined from actively traded observable market data. Where the underlying reference name(s) are not actively traded and the correlation cannot be directly mapped to actively traded tranche instruments, these contracts are classified as Level 3. Asset-backed credit derivatives follow the characteristics of the underlying security and are therefore distributed across Level 2 and Level 3.

Foreign exchange contracts

Product description: this includes open spot and forward foreign exchange (FX) contracts and OTC FX option contracts. OTC FX option contracts include standard call and put options, options with multiple exercise dates, path-dependent options, options with averaging features, options with discontinuous payoff characteristics, options on a number of underlying FX rates and multi-dimensional FX option contracts, which have a dependency on multiple FX pairs.

Valuation: open spot FX contracts are valued using the FX spot rate observed in the market. Forward FX contracts are valued using the FX spot rate adjusted for forward pricing points observed from standard market-based sources. OTC FX option contracts are valued using market standard option valuation models. The models used for shorter-dated options (i.e., maturities of five years or less) tend to be different than those used for longer-dated options because the models needed for longer-dated OTC FX contracts require additional consideration of interest rate and FX rate interdependency. Inputs to the option valuation models include spot FX rates, FX forward points, FX volatilities, interest rate yield curves, interest rate volatilities and correlations. The inputs for volatility and correlation are implied through the calibration of observed prices for standard option contracts trading within the market. The valuation for multi-dimensional FX options uses a multi-local volatility model, which is calibrated to the observed FX volatilities for all relevant FX pairs.

Fair value hierarchy: the markets for both FX spot and FX forward pricing points are both actively traded and observable and therefore such FX contracts are generally classified as Level 2. A significant proportion of OTC FX option contracts are classified as Level 2 as inputs are derived mostly from standard market contracts traded in active and observable markets. OTC FX option contracts classified as Level 3 include multi-dimensional FX options and long-dated FX exotic option contracts where there is no active market from which to derive volatility or correlation inputs.

Equity / index contracts

Product description: equity / index contracts are equity forward contracts and equity option contracts. Equity option contracts include market standard single or basket stock or index call and put options as well as equity option contracts with more complex features.

Note 24 Fair value measurement (continued)

Valuation: equity forward contracts have a single stock or index underlying and are valued using market standard models. The key inputs to the models are stock prices, estimated dividend rates and equity funding rates (which are implied from prices of forward contracts observed in the market). Estimated cash flows are then discounted using market standard discounted cash flow models using a rate that reflects the appropriate funding rate for that portion of the portfolio. When no market data is available for the instrument maturity, they are valued by extrapolation of available data, use of historical dividend data, or use of data for a related equity. Equity option contracts are valued using market standard models that estimate the equity forward level as described for equity forward contracts and incorporate inputs for stock volatility and for correlation between stocks within a basket. The probability-weighted expected option payoff generated is then discounted using market standard discounted cash flow models applying a rate that reflects the appropriate funding rate for that portion of the portfolio. When volatility, forward or correlation inputs are not available, they are valued using extrapolation of available data, historical dividend, correlation or volatility data, or the equivalent data for a related equity.

Fair value hierarchy: as inputs are derived mostly from standard market contracts traded in active and observable markets, a significant proportion of equity forward contracts are

classified as Level 2. Equity option positions for which inputs are derived from standard market contracts traded in active and observable markets are also classified as Level 2. Level 3 positions are those for which volatility, forward or correlation inputs are not observable.

Commodity contracts

Product description: commodity derivative contracts include forward, swap and option contracts on individual commodities and on commodity indices.

Valuation: commodity forward and swap contracts are measured using market standard models that use market forward levels on standard instruments. Commodity option contracts are measured using market standard option models that estimate the commodity forward level as described for commodity forward and swap contracts, incorporating inputs for the volatility of the underlying index or commodity. For commodity options on baskets of commodities or bespoke commodity indices, the valuation technique also incorporates inputs for the correlation between different commodities or commodity indices.

Fair value hierarchy: individual commodity contracts are typically classified as Level 2 because active forward and volatility market data is available.

→ Refer to Note 11 for more information on derivative instruments

d) Valuation adjustments

The output of a valuation technique is always an estimate of a fair value that cannot be measured with complete certainty. As a result, valuations are adjusted, where appropriate and when such factors would be considered by market participants in estimating fair value, to reflect close-out costs, credit exposure, model-driven valuation uncertainty, funding costs and benefits, trading restrictions and other factors. Valuation adjustments are an important component of fair value for assets and liabilities that are measured using valuation techniques. Such adjustments are applied to reflect uncertainties within the fair value measurement process, to adjust for an identified model simplification or to incorporate an aspect of fair value that requires an overall portfolio assessment rather than an evaluation based on an individual instrument level characteristic.

Deferred day-1 profit or loss reserves

For new transactions where the valuation technique used to measure fair value requires significant inputs that are not based on observable market data, the financial instrument is initially recognized at the transaction price. The transaction price may differ from the fair value obtained using a valuation technique, where any such difference is deferred and not initially recognized in the income statement. These day-1 profit or loss reserves are reflected, where appropriate, as valuation adjustments.

Deferred day-1 profit or loss related to financial instruments other than financial assets measured at fair value through other comprehensive income is released into *Other net income from fair value changes on financial instruments* when pricing of equivalent products or the underlying parameters become observable or when the transaction is closed out.

Deferred day-1 profit or loss related to financial assets measured at fair value through other comprehensive income is released into *Other comprehensive income* when pricing of equivalent products or the underlying parameters become observable and is released into *Other income* when the assets are sold.

In the second quarter of 2018, a day-1 profit or loss reserve release of USD 196 million was recognized in the income statement related to long-dated UBS-issued structured notes, which are reported within *Debt issued designated at fair value* on the balance sheet. The day-1 profit or loss reserve release was driven by increased observability of the own credit adjustment (OCA) curve used to value these positions following the issuance of a 30-year senior unsecured bond in the second quarter of 2018.

The table on the next page summarizes the changes in deferred day-1 profit or loss reserves during the respective period.

Note 24 Fair value measurement (continued)**Deferred day-1 profit or loss reserves**

(Profit) / loss recognized in the income statement	(417)	(279)	(293)
(Profit) / loss recognized in other comprehensive income			(23)
Foreign currency translation	(6)	6	4
Reserve balance at the end of the year	255	338	365

Own credit

In addition to considering the valuation of the derivative risk component, the valuation of financial liabilities designated at fair value also requires consideration of the funded component and specifically the own credit component of fair value. Own credit risk is reflected in the valuation of UBS's fair value option liabilities where this component is considered relevant for valuation purposes by UBS's counterparties and other market participants. However, own credit risk is not reflected in the valuation of UBS's liabilities that are fully collateralized or for other obligations for which it is established market practice not to include an own credit component.

Changes in the fair value of financial liabilities designated at fair value through profit or loss related to own credit are recognized in *Other comprehensive income* directly within *Retained earnings*. As the Group does not hedge changes in own credit arising on financial liabilities designated at fair value, presenting own credit within *Other comprehensive income* does not create or increase an accounting mismatch in the income statement. The unrealized and any realized own credit recognized in *Other comprehensive income* will not be reclassified to the income statement in future periods.

Own credit is estimated using an OCA curve, which incorporates observable market data, including market-observed

secondary prices for UBS senior debt, UBS credit default swap (CDS) spreads and senior debt curves of peers. The table below summarizes the effects of own credit adjustments related to financial liabilities designated at fair value. The change in unrealized own credit consists of changes in fair value that are attributable to the change in UBS's credit spreads, as well as the effect of changes in fair values attributable to factors other than credit spreads, such as redemptions, effects from time decay and changes in interest and other market rates. Realized own credit is recognized when an instrument with an associated unrealized own credit adjustment is repurchased prior to the contractual maturity date. Life-to-date amounts reflect the cumulative unrealized change since initial recognition.

In June 2018, UBS AG issued a 30-year senior unsecured bond as part of its ongoing funding requirements. The market-observable secondary prices for this bond have been incorporated into the OCA curve construction, resulting in a widening of the curve at the long end. An own credit gain of USD 253 million was recognized in *Other comprehensive income* in the second quarter of 2018, mainly reflecting this OCA curve change.

→ **Refer to Note 19 for more information on debt issued designated at fair value**

Note 24 Fair value measurement (continued)**Credit valuation adjustments**

In order to measure the fair value of OTC derivative instruments, including funded derivative instruments that are classified as *Financial assets at fair value not held for trading*, credit valuation adjustments (CVA) are necessary to reflect the credit risk of the counterparty inherent in these instruments. This amount represents the estimated fair value of protection required to hedge the counterparty credit risk of such instruments. A CVA is determined for each counterparty, considering all exposures to that counterparty, and is dependent on the expected future value of exposures, default probabilities and recovery rates, applicable collateral or netting arrangements, break clauses and other contractual factors.

Funding valuation adjustments

Funding valuation adjustments (FVA) reflect the costs and benefits of funding associated with uncollateralized and partially collateralized derivative receivables and payables and are calculated as the valuation effect from moving the discounting of the uncollateralized derivative cash flows from LIBOR to OCA using the CVA framework.

An FVA is also applied to collateralized derivative assets in cases where the collateral cannot be sold or repledged.

Debit valuation adjustments

A debit valuation adjustment (DVA) is estimated to incorporate own credit in the valuation of derivatives, effectively consistent with the CVA framework. A DVA is determined for each counterparty, considering all exposures with that counterparty and taking into account collateral netting agreements, expected future mark-to-market movements and UBS's credit default spreads.

Other valuation adjustments

Instruments that are measured as part of a portfolio of combined long and short positions are valued at mid-market levels to ensure consistent valuation of the long- and short-component risks. A liquidity valuation adjustment is then made to the overall net long or short exposure to move the fair value to bid or offer as appropriate, reflecting current levels of market liquidity. The bid-offer spreads used in the calculation of this valuation adjustment are obtained from market transactions and other relevant sources and are updated periodically.

Uncertainties associated with the use of model-based valuations are incorporated into the measurement of fair value through the use of model reserves. These reserves reflect the amounts that the Group estimates should be deducted from valuations produced directly by models to incorporate uncertainties in the relevant modeling assumptions, in the model and market inputs used, or in the calibration of the model output to adjust for known model deficiencies. In arriving at these estimates, the Group considers a range of market practices, including how it believes market participants would assess these uncertainties. Model reserves are reassessed periodically in light of data from market transactions, consensus pricing services and other relevant sources.

In the second quarter of 2018, a USD 65 million expense was recognized in the income statement reflecting the model valuation adjustment recorded to capture the spread between OCA and LIBOR volatility affecting the valuation of certain structured note issuances.

Note 24 Fair value measurement (continued)

e) Transfers between Level 1 and Level 2

The amounts provided below reflect transfers between Level 1 and Level 2 for instruments that were held for the entire reporting period.

Assets totaling approximately USD 0.6 billion, which were mainly comprised of financial assets held for trading, predominantly investment fund units as well as corporate and municipal bonds, were transferred from Level 2 to Level 1 during 2018, generally resulting from increased levels of trading activity observed within the market. Transfers of financial liabilities from Level 2 to Level 1 during 2018 were not significant.

Assets totaling approximately USD 0.7 billion, which were mainly comprised of financial assets held for trading, predominantly investment fund units and equity instruments, were transferred from Level 1 to Level 2 during 2018, generally resulting from diminished levels of trading activity observed within the market. Transfers of financial liabilities from Level 1 to Level 2 during 2018 were not significant.

Note 24 Fair value measurement (continued)**f) Level 3 instruments: valuation techniques and inputs**

The table below presents material Level 3 assets and liabilities together with the valuation techniques used to measure fair value, the significant inputs used in a given valuation technique that are considered unobservable and a range of values for those unobservable inputs. Several inputs disclosed in prior periods are not disclosed in the table below because they are not considered significant to the respective valuation technique as of 31 December 2018.

The range of values represents the highest- and lowest-level input used in the valuation techniques. Therefore, the range does not reflect the level of uncertainty regarding a particular input, but rather the different underlying characteristics of the relevant assets and liabilities. The ranges will therefore vary from period to period and parameter to parameter based on characteristics of the instruments held at each balance sheet date. Further, the ranges of unobservable inputs may differ across other financial institutions, reflecting the diversity of the products in each firm's inventory.

Valuation techniques and inputs used in the fair value measurement of Level 3 assets and liabilities

USD billion	Fair value				Valuation technique(s)	Significant unobservable input(s) ¹	Range of inputs						unit ¹

						Equity-to-equity correlation	(50)	97		(50)	97		%

¹ The ranges of significant unobservable inputs are represented in points, percentages and basis points. Points are a percentage of par (e.g., 100 points would be 100% of par). ² Weighted averages are provided for non-derivative financial instruments and were calculated by weighting inputs based on the fair values of the respective instruments. Weighted averages are not provided for inputs related to derivative contracts as this would not be meaningful. ³ Comparative-period information includes equity instruments that were formerly classified as available for sale under IAS 39 and have been reclassified to Financial assets at fair value not held for trading upon adoption of IFRS 9 on 1 January 2018. Refer to Note 1c for more information. ⁴ Comparative-period information is not disclosed for financial assets and liabilities that were measured at amortized cost prior to the adoption of IFRS 9. Refer to Note 1c for more information. ⁵ The range of inputs is not disclosed as there is a dispersion of values given the diverse nature of the investments. ⁶ Valuation techniques, significant unobservable inputs and the respective input ranges for Debt issued designated at fair value and Other financial liabilities designated at fair value, which are primarily comprised of over-the-counter debt instruments, are the same as the equivalent derivative or structured financing instruments presented elsewhere in this table. ⁷ Effective in 2018, the range of inputs reported for this significant unobservable input is based on normal volatility and the unit has been updated to basis points. Log-normal volatility with the unit as points was reported previously. Prior-period information has been restated to reflect this change in presentation.

Note 24 Fair value measurement (continued)**Significant unobservable inputs in Level 3 positions**

This section discusses the significant unobservable inputs used in the valuation of Level 3 instruments and assesses the potential effect that a change in each unobservable input in isolation may have on a fair value measurement, including information to facilitate an understanding of factors that give rise to the input ranges shown. Relationships between observable and unobservable inputs have not been included in the summary below.

Bond price equivalent

Where market prices are not available for a bond, fair value is measured by comparison with observable pricing data from similar instruments. Factors considered when selecting comparable instruments include credit quality, maturity and industry of the issuer. Fair value may be measured either by a direct price comparison or by conversion of an instrument price into a yield (either as an outright yield or as a spread to LIBOR). Bond prices are expressed as points of the nominal, where 100 represents a fair value equal to the nominal value (i.e., par).

For corporate and municipal bonds, the range represents the range of prices from reference issuances used in determining fair value. Bonds priced at 0 are distressed to the point that no recovery is expected, while prices significantly in excess of 100 or par relate to inflation-linked or structured issuances that pay a coupon in excess of the market benchmark as of the measurement date.

For credit derivatives, the bond price range represents the range of prices used for reference instruments that are typically converted to an equivalent yield or credit spread as part of the valuation process.

Loan price equivalent

Where market prices are not available for a traded loan, fair value is measured by comparison with observable pricing data for similar instruments. Factors considered when selecting comparable instruments include industry segment, collateral quality, maturity and issuer-specific covenants. Fair value may be measured either by a direct price comparison or by conversion of an instrument price into a yield. The range represents the range of prices derived from reference issuances of a similar credit quality used in measuring fair value for loans classified as Level 3. Loans priced at 0 are distressed to the point that no recovery is expected, while a current price of 100 represents a loan that is expected to be repaid in full.

Credit spread

Valuation models for many credit derivatives require an input for the credit spread, which is a reflection of the credit quality of the associated referenced underlying. The credit spread of a particular security is quoted in relation to the yield on a benchmark security or reference rate, typically either US Treasury or LIBOR, and is generally expressed in terms of basis points. An increase / (decrease) in credit spread will increase / (decrease) the value of credit protection offered by CDS and other credit derivative products. The income statement effect from such changes depends on the nature and direction of the positions held. Credit spreads may be negative where the asset is more creditworthy than the benchmark against which the spread is calculated. A wider credit spread represents decreasing creditworthiness. The range represents a diverse set of underlyings, with the lower end of the range representing credits of the highest quality (e.g., approximating the risk of LIBOR) and the upper end of the range representing greater levels of credit risk.

Discount margin (DM)

The DM spread represents the discount rates used to present value cash flows of an asset to reflect the market return required for uncertainty in the estimated cash flows. DM spreads are a rate or rates applied on top of a floating index (e.g., LIBOR) to discount expected cash flows. Generally, a decrease / (increase) in the DM in isolation would result in a higher / (lower) fair value.

The high end of the range relates to securities that are priced low within the market relative to the expected cash flow schedule. This indicates that the market is pricing an increased risk of credit loss into the security that is greater than what is being captured by the expected cash flow generation process. The low ends of the ranges are typical of funding rates on better-quality instruments.

Funding spread

Structured financing transactions are valued using synthetic funding curves that best represent the assets that are pledged as collateral for the transactions. They are not representative of where UBS can fund itself on an unsecured basis, but provide an estimate of where UBS can source and deploy secured funding with counterparties for a given type of collateral. The funding spreads are expressed in terms of basis points over or under LIBOR, and if funding spreads widen, this increases the effect of discounting.

A small proportion of structured debt instruments and non-structured fixed-rate bonds within financial liabilities designated at fair value had an exposure to funding spreads that was longer in duration than the actively traded market.

Note 24 Fair value measurement (continued)**Volatility**

Volatility measures the variability of future prices for a particular instrument and is generally expressed as a percentage, where a higher number reflects a more volatile instrument for which future price movements are more likely to occur. The minimum level of volatility is 0% and there is no theoretical maximum. Volatility is a key input into option models, where it is used to derive a probability-based distribution of future prices for the underlying instrument. The effect of volatility on individual positions within the portfolio is driven primarily by whether the option contract is a long or short position. In most cases, the fair value of an option increases as a result of an increase in volatility and is reduced by a decrease in volatility. Generally, volatility used in the measurement of fair value is derived from active-market option prices (referred to as implied volatility). A key feature of implied volatility is the volatility "smile" or "skew," which represents the effect of pricing options of different option strikes at different implied volatility levels.

The volatility of interest rates reflects the range of unobservable volatilities across different currencies and related underlying interest rate levels. Volatilities of low interest rates tend to be much higher than volatilities of high interest rates. In addition, different currencies may have significantly different implied volatilities. The volatility of equity stocks, equity and other indices reflects the range of underlying stock volatilities.

Correlation

Correlation measures the interrelationship between the movements of two variables. It is expressed as a percentage between -100% and +100%, where +100% represents

perfectly correlated variables (meaning a movement of one variable is associated with a movement of the other variable in the same direction) and -100% implies the variables are inversely correlated (meaning a movement of one variable is associated with a movement of the other variable in the opposite direction). The effect of correlation on the measurement of fair value depends on the specific terms of the instruments being valued, reflecting the range of different payoff features within such instruments.

Equity-to-FX correlation is important for equity options based on a currency different than the currency of the underlying stock. Equity-to-equity correlation is particularly important for complex options that incorporate, in some manner, different equities in the projected payoff.

Equity dividend yields

The derivation of a forward price for an individual stock or index is important for measuring fair value for forward or swap contracts and for measuring fair value using option pricing models. The relationship between the current stock price and the forward price is based on a combination of expected future dividend levels and payment timings, and, to a lesser extent, the relevant funding rates applicable to the stock in question. Dividend yields are generally expressed as an annualized percentage of the share price with the lowest limit of 0% representing a stock that is not expected to pay any dividend. The dividend yield and timing represents the most significant parameter in determining fair value for instruments that are sensitive to an equity forward price.

Note 24 Fair value measurement (continued)**g) Level 3 instruments: sensitivity to changes in unobservable input assumptions**

The table below summarizes those financial assets and liabilities classified as Level 3 for which a change in one or more of the unobservable inputs to reflect reasonably possible alternative assumptions would change fair value significantly, and the estimated effect thereof.

The table shown presents the favorable and unfavorable effects for each class of financial assets and liabilities for which the potential change in fair value is considered significant. The sensitivity data presented represent an estimation of valuation uncertainty based on reasonably possible alternative values for Level 3 inputs at the balance sheet date and do not represent the estimated effect of stress scenarios. Typically, these financial assets and liabilities are sensitive to a combination of inputs from Levels 1–3. Although well-defined interdependencies may exist between Levels 1–2 and Level 3 parameters (e.g., between interest rates, which are generally Level 1 or Level 2, and prepayments, which are generally Level 3), these have not been incorporated in the table. Further, direct interrelationships between the Level 3 parameters discussed below are not a significant element of the valuation uncertainty.

Sensitivity data are estimated using a number of techniques, including the estimation of price dispersion among different market participants, variation in modeling approaches and

reasonably possible changes to assumptions used within the fair value measurement process. The sensitivity ranges are not always symmetrical around the fair values as the inputs used in valuations are not always precisely in the middle of the favorable and unfavorable range.

Sensitivity data are determined at a product or parameter level and then aggregated assuming no diversification benefit. The calculated sensitivity is applied to both the outright position and any related Level 3 hedge. The main interdependencies across different Level 3 products to a single unobservable input parameter have been included in the basis of netting exposures within the calculation. Aggregation without allowing for diversification involves the simple summation of individual results with the total sensitivity, therefore representing the effect of all unobservable inputs that, if moved to a reasonably possible favorable or unfavorable level at the same time, would result in a significant change in the valuation. Diversification would incorporate estimated correlations across different sensitivity results and, as such, would result in an overall sensitivity that would be less than the sum of the individual component sensitivities. The Group believes that, while there are diversification benefits within the portfolios representing these sensitivity numbers, they are not significant to this analysis.

Sensitivity of fair value measurements to changes in unobservable input assumptions

<i>USD million</i>	31.12.18		31.12.17

¹ Comparative-period information as of 31 December 2017 is not disclosed for financial assets that were measured at amortized cost prior to the adoption of IFRS 9 on 1 January 2018. Refer to Note 1c for more information.

Note 24 Fair value measurement (continued)**h) Level 3 instruments: movements during the period****Significant changes in Level 3 instruments**

The table on the following pages presents additional information about Level 3 assets and liabilities measured at fair value on a recurring basis. Level 3 assets and liabilities may be hedged with instruments classified as Level 1 or Level 2 in the fair value hierarchy and, as a result, realized and unrealized gains and losses included in the table may not include the effect of related hedging activity. Furthermore, the realized and unrealized gains and losses presented within the table are not limited solely to those arising from Level 3 inputs, as valuations are generally derived from both observable and unobservable parameters.

Assets and liabilities transferred into or out of Level 3 are presented as if those assets or liabilities had been transferred at the beginning of the year.

Upon adoption of IFRS 9 on 1 January 2018, certain financial assets and liabilities were newly classified at fair value through profit or loss and were designated as Level 3 in the fair value hierarchy. These financial instruments are presented in the table on the following pages, including the associated effect upon adoption. This includes auction rate securities held in Corporate Center and certain loans held in the Investment Bank.

In addition to various financial assets and liabilities being newly classified at fair value through profit or loss, certain equity investments and investment fund units measured at fair value through other comprehensive income were reclassified to *Financial assets at fair value not held for trading* under the

revised IFRS 9 classification and measurement rules, which resulted in an opening balance reclassification between reporting lines in the table on the following pages.

Assets transferred into and out of Level 3 totaled USD 1.4 billion and USD 0.4 billion, respectively. Transfers into Level 3 were primarily comprised of corporate and municipal bonds, reflecting decreased observability of the respective bond price equivalent. Transfers out of Level 3 were primarily comprised of equity / index contracts resulting from increased observability of the respective equity volatility inputs.

Liabilities transferred into and out of Level 3 totaled USD 2.5 billion and USD 4.8 billion, respectively. Transfers into Level 3 were primarily comprised of rates-linked and equity-linked issued debt instruments, reflecting decreased observability of the respective rates volatility and equity volatility inputs. Transfers out of Level 3 were primarily comprised of rates-linked fixed-rate and equity-linked issued debt instruments resulting from changes in the observability of the OCA curve and equity volatility inputs used to determine the fair value of these instruments. In the second quarter of 2018, USD 2.9 billion of UBS-issued structured notes, which are reported within *Debt issued designated at fair value* on the balance sheet, were transferred from Level 3 to Level 2 in the fair value hierarchy, reflecting increased observability of the OCA curve used to value these notes.

Consolidated financial statements

Note 24 Fair value measurement (continued)

i) Maximum exposure to credit risk for financial instruments measured at fair value

The tables below provide UBS AG's maximum exposure to credit risk for financial instruments measured at fair value and the respective collateral and other credit enhancements mitigating credit risk for these classes of financial instruments.

The maximum exposure to credit risk includes the carrying amounts of financial instruments recognized on the balance sheet subject to credit risk and the notional amounts for off-balance sheet arrangements. Where information is available, collateral is presented at fair value. For other collateral, such as

real estate, a reasonable alternative value is used. Credit enhancements, such as credit derivative contracts and guarantees, are included at their notional amounts. Both are capped at the maximum exposure to credit risk for which they serve as security. The "Risk management and control" section of this report describes management's view of credit risk and the related exposures, which can differ in certain respects from the requirements of IFRS.

Maximum exposure to credit risk

USD billion	31.12.18								
	Maximum exposure to credit risk	Collateral				Credit enhancements			Exposure to credit risk after collateral and credit enhancements
		Cash collateral received	Collateralized by securities	Secured by real estate	Other collateral ¹	Netting	Credit derivative contracts	Guarantees	
Financial assets measured at fair value on the balance sheet									
Financial assets at fair value held for trading – debt instruments ^{2,3}	22.0								22.0
Derivative financial instruments ⁴	126.2		4.1			110.8			11.4
Brokerage receivables	16.8	0.0	16.5						0.3
Financial assets at fair value not held for trading – debt instruments ⁶	59.8		16.7		0.1				43.1
Total financial assets measured at fair value	224.9	0.0	37.3	0.0	0.1	110.8	0.0	0.0	76.7
Guarantees ⁷	1.6							0.2	1.4
Loan commitments ⁷	3.5				2.4		0.2	0.1	0.7
Forward starting transactions, reverse repurchase and securities borrowing agreements	8.1		8.1						0.0
Total maximum exposure to credit risk not reflected on the balance sheet	13.3	0.0	8.1	0.0	2.4	0.0	0.2	0.4	2.1

USD billion	31.12.17								
	Maximum exposure to credit risk	Collateral				Credit enhancements			Exposure to credit risk after collateral and credit enhancements
		Cash collateral received	Collateralized by securities	Secured by real estate	Other collateral ¹	Netting	Credit derivative contracts	Guarantees	
Financial assets measured at fair value on the balance sheet									
Financial assets at fair value held for trading – debt instruments ^{2,5}	26.4								26.4
Derivative financial instruments ⁴	121.3		4.1			102.8			14.4
Financial assets at fair value not held for trading – debt instruments ^{3,6}	59.9		10.1						49.8
Total financial assets measured at fair value	207.5	0.0	14.1	0.0	0.0	102.8	0.0	0.0	90.6
Guarantees ⁷	1.7								1.7
Loan commitments ⁷	8.0				3.9		1.0	0.2	2.8
Total maximum exposure to credit risk not reflected on the balance sheet	9.6	0.0	0.0	0.0	3.9	0.0	1.0	0.2	4.5

¹ Includes but is not limited to life insurance contracts, inventory, accounts receivable, mortgage loans, patents and copyrights. ² These positions are generally managed under the market risk framework. For the purpose of this disclosure, collateral and credit enhancements were not considered. ³ Does not include investment fund units. ⁴ The amount shown in the "Netting" column represents the netting potential not recognized on the balance sheet. Refer to Note 25 for more information. ⁵ Does not include debt instruments held for unit-linked investment contracts and investment fund units. ⁶ Financial assets at fair value not held for trading collateralized by securities consisted of structured loans and reverse repurchase and securities borrowing agreements. ⁷ The amount shown in the "Guarantees" column largely relates to sub-participations. Refer to Note 34 for more information.

Note 24 Fair value measurement (continued)**j) Financial instruments not measured at fair value**

The table below provides the estimated fair values of financial instruments not measured at fair value.

Financial instruments not measured at fair value

¹ As of 31 December 2018, USD 0 billion of Loans and advances to banks, USD 1 billion of Receivables from securities financing transactions, USD 139 billion of Loans and advances to customers and USD 15 billion of Other financial assets measured at amortized cost are expected to be recovered or settled after 12 months. As of 31 December 2017, USD 0 billion of Loans and advances to banks, USD 2 billion of Receivables from securities financing transactions, USD 137 billion of Loans and advances to customers and USD 7 billion of Other financial assets measured at amortized cost were expected to be recovered or settled after 12 months. ² Upon adoption of IFRS 9 on 1 January 2018, prime brokerage receivables and payables were reclassified from amortized cost to fair value through profit or loss. Refer to Note 1c for more information.

The fair values included in the table above were calculated for disclosure purposes only. The valuation techniques and assumptions described below relate only to the fair value of UBS's financial instruments not measured at fair value. Other institutions may use different methods and assumptions for their fair value estimation, and therefore such fair value disclosures cannot necessarily be compared from one financial institution to another. The following principles were applied when determining fair value estimates for financial instruments not measured at fair value:

- For financial instruments with remaining maturities greater than three months, the fair value was determined from quoted market prices, if available.
- Where quoted market prices were not available, the fair values were estimated by discounting contractual cash flows using current market interest rates or appropriate yield curves for instruments with similar credit risk and maturity. These estimates generally include adjustments for counterparty credit risk or UBS's own credit.
- For short-term financial instruments with remaining maturities of three months or less, the carrying amount, which is net of

- credit loss allowances, is generally considered a reasonable estimate of fair value. The following financial instruments not measured at fair value had remaining maturities of three months or less as of 31 December 2018: 100% of cash and balances at central banks, 96% of loans and advances to banks, 89% of receivables from securities financing transactions, 100% of cash collateral receivables on derivative instruments, 48% of loans and advances to customers, 26% of other financial assets measured at amortized cost, 81% of amounts due to banks, 97% of payables from securities financing transactions, 100% of cash collateral payables on derivative instruments, 97% of customer deposits, 0% of funding from UBS Group AG and its subsidiaries, 11% of debt issued measured at amortized cost and 100% of other financial liabilities measured at amortized cost.
- The fair value estimates for repurchase and reverse repurchase agreements with variable and fixed interest rates, for all maturities, include the valuation of the interest rate component of these instruments. Credit and debit valuation adjustments have not been included in the valuation given the short-term nature of these instruments.

Note 25 Offsetting financial assets and financial liabilities

UBS AG enters into netting agreements with counterparties to manage the credit risks associated primarily with repurchase and reverse repurchase transactions, securities borrowing and lending, over-the-counter derivatives and exchange-traded derivatives. These netting agreements and similar arrangements generally enable the counterparties to set off liabilities against available assets received in the ordinary course of business and / or in the event that the counterparty to the transaction is unable to fulfill its contractual obligations. The right of setoff is a legal right to settle or otherwise eliminate all or a portion of an amount due by applying an amount receivable from the same counterparty against it, thus reducing credit exposure.

The table below provides a summary of financial assets subject to offsetting, enforceable master netting arrangements and similar agreements, as well as financial collateral received to mitigate credit exposures for these financial assets. The gross

financial assets of UBS AG that are subject to offsetting, enforceable netting arrangements and similar agreements are reconciled to the net amounts presented within the associated balance sheet line, after giving effect to financial liabilities with the same counterparties that have been offset on the balance sheet and other financial assets not subject to an enforceable netting arrangement or similar agreement. Further, related amounts for financial liabilities and collateral received that are not offset on the balance sheet are shown to arrive at financial assets after consideration of netting potential.

UBS AG engages in a variety of counterparty credit mitigation strategies in addition to netting and collateral arrangements. Therefore, the net amounts presented in the tables on this and on the next page do not purport to represent their actual credit exposure.

Financial assets subject to offsetting, enforceable master netting arrangements and similar agreements

Total assets	287.8	(82.0)	205.8	(105.4)	(83.7)	16.8	91.6	108.3	297.4	

¹ Certain reverse repurchase agreements were reclassified from amortized cost to fair value through profit or loss upon adoption of IFRS 9 as of 1 January 2018. This has resulted in an increase in amounts presented on the line "Financial assets at fair value not held for trading" and a decrease in amounts presented on the line "Receivables from securities financing transactions." Refer to Note 1c for more information. ² The net amount of Cash collateral receivables on derivative instruments recognized on the balance sheet includes certain OTC derivatives that are net settled on a daily basis either legally or in substance under IAS 32 principles and exchange-traded derivatives that are economically settled on a daily basis. ³ The logic of the table results in amounts presented in the "Netting with gross liabilities" column corresponding directly to the amounts presented in the "Netting with gross assets" column in the liabilities table presented on the following page. Netting in this column for reverse repurchase agreements presented within the lines "Receivables from securities financing transactions" and "Financial assets at fair value not held for trading" taken together corresponds to the amounts presented for repurchase agreements in the "Payables from securities financing transactions" and "Other financial liabilities designated at fair value" lines in the liabilities table presented on the following page. ⁴ For the purpose of this disclosure, the amounts of financial instruments and cash collateral presented have been capped by the relevant netting agreement so as not to exceed the net amount of financial assets presented on the balance sheet; i.e., over-collateralization, where it exists, is not reflected in the table. ⁵ Includes assets not subject to enforceable netting arrangements and other out-of-scope items.

Note 25 Offsetting financial assets and financial liabilities (continued)

The table below provides a summary of financial liabilities subject to offsetting, enforceable master netting arrangements and similar agreements, as well as financial collateral pledged to mitigate credit exposures for these financial liabilities. The gross financial liabilities of UBS AG that are subject to offsetting, enforceable netting arrangements and similar agreements are reconciled to the net amounts presented within the associated

balance sheet line, after giving effect to financial assets with the same counterparties that have been offset on the balance sheet and other financial liabilities not subject to an enforceable netting arrangement or similar agreement. Further, related amounts for financial assets and collateral pledged that are not offset on the balance sheet are shown to arrive at financial liabilities after consideration of netting potential.

This has resulted in an increase in amounts presented on the line "Other financial liabilities designated at fair value" and a decrease in amounts presented on the line "Payables from securities financing transactions." Refer to Note 1c for more information. ² The net amount of Cash collateral payables on derivative instruments recognized on the balance sheet includes certain exchange-traded derivatives that are net settled on a daily basis either legally or in substance under IAS 32 principles and exchange-traded derivatives that are economically settled on a daily basis. ³ The logic of the table results in amounts presented in the "Netting with gross assets" column corresponding to the amounts presented in the "Netting with gross liabilities" column in the assets table presented on the previous page. Netting in this column for repurchase agreements presented within the lines "Payables from securities financing transactions" and "Other financial liabilities designated at fair value" taken together corresponds to the amounts presented for reverse repurchase agreements in the "Receivables from securities financing transactions" and "Financial assets at fair value not held for trading" lines in the assets table presented on the previous page. ⁴ For the purpose of this disclosure, the amounts of financial instruments and cash collateral presented have been capped by the relevant netting agreement so as not to exceed the net amount of financial liabilities presented on the balance sheet; i.e., over-collateralization, where it exists, is not reflected in the table. ⁵ Includes liabilities not subject to enforceable netting arrangements and other out-of-scope items.

Note 26 Restricted and transferred financial assets

This Note provides information on restricted financial assets (Note 26a), transfers of financial assets (Note 26b and 26c) and financial assets that are received as collateral with the right to resell or repledge these assets (Note 26d).

a) Restricted financial assets

Restricted financial assets consist of assets pledged as collateral against an existing liability or contingent liability and other assets that are otherwise explicitly restricted such that they cannot be used to secure funding.

Financial assets are mainly pledged as collateral in securities lending transactions, in repurchase transactions, against loans from Swiss mortgage institutions and in connection with the issuance of covered bonds. UBS AG generally enters into repurchase and securities lending arrangements under standard market agreements. For securities lending, the cash received as collateral may be more or less than the fair value of the securities loaned, depending on the nature of the transaction. For repurchase agreements, the fair value of the collateral sold under an agreement to repurchase is generally in excess of the cash borrowed. Pledged mortgage loans serve as collateral for

existing liabilities against Swiss central mortgage institutions and for existing covered bond issuances of USD 12,516 million as of 31 December 2018 (31 December 2017: USD 12,779 million).

Other restricted financial assets include assets protected under client asset segregation rules, assets held by UBS AG's insurance entities to back related liabilities to the policy holders, assets held in certain jurisdictions to comply with explicit minimum local asset maintenance requirements and assets held in consolidated bankruptcy remote entities such as certain investment funds and other structured entities. The carrying value of the liabilities associated with these other restricted financial assets is generally equal to the carrying value of the assets, with the exception of assets held to comply with local asset maintenance requirements, for which the associated liabilities are greater.

Restricted financial assets

<i>USD million</i>	31.12.18	31.12.17
Financial assets pledged as collateral

Total financial assets pledged and other restricted financial assets	96,016	89,512

¹ All related to mortgage loans that serve as collateral for existing liabilities against Swiss central mortgage institutions and for existing covered bond issuances. Of these pledged mortgage loans, approximately USD 3.2 billion for 31 December 2018 (31 December 2017: approximately USD 2.2 billion) could be withdrawn or used for future liabilities or covered bond issuances without breaching existing collateral requirements. ² Does not include assets placed with central banks related to undrawn credit lines and for payment, clearing and settlement purposes (31 December 2018: USD 0.3 billion; 31 December 2017: USD 2.6 billion). ³ Financial assets for unit-linked investment contracts were reclassified from Financial assets at fair value held for trading to Financial assets at fair value not held for trading upon adoption of IFRS 9 as of 1 January 2018. Refer to Note 1c for more information.

In addition to restrictions on financial assets, UBS AG and its subsidiaries are, in certain cases, subject to regulatory requirements that affect the transfer of dividends and capital within UBS AG. Supervisory authorities also may require entities to measure capital and leverage ratios on a stressed basis, such as the Federal Reserve Board's Comprehensive Capital Analysis

and Review (CCAR) process, which affects UBS Americas Holding LLC, and may limit the ability of the intermediate holding company sub-group to make distributions of capital based on the results of those tests. In June 2018, the Federal Reserve Board released the 2018 CCAR results and did not object to UBS Americas Holding LLC's capital plan.

Note 26 Restricted and transferred financial assets (continued)

Certain regulated subsidiaries are required to maintain capital and / or liquidity to comply with local regulations and may be subject to prudential limitations by regulators that limit the amount of funds that they can distribute or otherwise transfer. Supervisory authorities generally have discretion to impose higher requirements or to otherwise limit the activities of subsidiaries.

Non-regulated subsidiaries are generally not subject to such requirements and transfer restrictions. However, restrictions can

also be the result of different legal, regulatory, contractual, entity- or country-specific arrangements and / or requirements.

→ Refer to “Financial and regulatory key figures for our significant regulated subsidiaries and sub-groups” in the “Significant regulated subsidiary and sub-group information” section of this report for financial information on significant regulated subsidiaries of the Group

b) Transferred financial assets that are not derecognized in their entirety

The table below presents information for financial assets that have been transferred but are subject to continued recognition in full, as well as recognized liabilities associated with those transferred assets.

Transferred financial assets subject to continued recognition in full

<i>USD million</i>	31.12.18		31.12.17	
	Carrying value of transferred assets	Carrying value of associated liabilities recognized on balance sheet	Carrying value of transferred assets	Carrying value of associated liabilities recognized on balance sheet
Financial assets at fair value held for trading that may be sold or repledged by counterparties	32,121	4,674	36,277	13,277
<i>relating to securities lending and repurchase agreements in exchange for cash received</i>	4,726	4,674	13,485	13,277
<i>relating to securities lending agreements in exchange for securities received</i>	26,234	0	21,684	0
<i>relating to other financial asset transfers</i>	1,161	0	1,109	0
Financial assets at fair value not held for trading that may be sold or repledged by counterparties	0	0	174	173
Total financial assets transferred	32,121	4,674	36,451	13,450

Transactions in which financial assets are transferred, but continue to be recognized in their entirety on UBS AG’s balance sheet include securities lending and repurchase agreements as well as other financial asset transfers. Repurchase and securities lending arrangements are, for the most part, conducted under standard market agreements and are undertaken with counterparties subject to UBS AG’s normal credit risk control processes.

→ Refer to Note 1a item 3e for more information on repurchase and securities lending agreements

As of 31 December 2018, approximately 14% of the transferred financial assets were assets held for trading transferred in exchange for cash, in which case the associated recognized liability represents the amount to be repaid to counterparties. For securities lending and repurchase agreements, a haircut between 0% and 15% is generally applied to the transferred assets, which results in associated liabilities having a carrying value below the carrying value of the transferred assets. The counterparties to the associated liabilities presented in the table above have full recourse to UBS AG.

In securities lending arrangements entered into in exchange for the receipt of other securities as collateral, neither the securities received nor the obligation to return them are recognized on UBS AG’s balance sheet, as the risks and rewards of ownership are not transferred to UBS AG. In cases where such financial assets received are subsequently sold or repledged in another transaction, this is not considered to be a transfer of financial assets.

Other financial asset transfers primarily include securities transferred to collateralize derivative transactions, for which the carrying value of associated liabilities is not provided in the table above because those replacement values are managed on a portfolio basis across counterparties and product types, and therefore there is no direct relationship between the specific collateral pledged and the associated liability.

Transferred financial assets that are not subject to derecognition in full, but remain on the balance sheet to the extent of UBS AG’s continuing involvement, were not material as of 31 December 2018 and as of 31 December 2017.

Note 26 Restricted and transferred financial assets (continued)**c) Transferred financial assets that are derecognized in their entirety with continuing involvement**

Continuing involvement in a transferred and fully derecognized financial asset may result from contractual provisions in the transfer agreement or from a separate agreement with the counterparty or a third party entered into in connection with the transfer.

Purchased and retained interests in securitization vehicles

In cases where UBS AG has transferred assets into a securitization vehicle and retained or purchased interests therein, UBS AG has a continuing involvement in those transferred assets.

As of 31 December 2018, the majority of the retained continuing involvement related to securitization positions held as financial assets at fair value held for trading, primarily collateralized debt obligations, US commercial mortgage-backed securities and residential mortgage-backed securities. The fair value and carrying amount of UBS AG's continuing involvement related to these purchased and retained interests was USD 6 million as of 31 December 2018, and UBS AG recognized gains of USD 3 million in 2018 related to these positions. As of 31 December 2018, life-to-date losses of USD 1,198 million were recorded related to the positions held as of 31 December 2018.

As of 31 December 2017, the fair value and carrying amount of UBS AG's continuing involvement related to purchased and retained interests in securitization vehicles was USD 8 million, and UBS AG recognized gains of USD 4 million in 2017 related to these positions. As of 31 December 2017, life-to-date losses of USD 1,200 million were recorded related to the positions held as of 31 December 2017.

The maximum exposure to loss related to purchased and retained interests in securitization structures was USD 10 million as of 31 December 2018, compared with USD 15 million as of 31 December 2017.

Undiscounted cash outflows of USD 4 million may be payable to the transferee in future periods as a consequence of holding the purchased and retained interests. The earliest period in which payment may be required is less than one month.

d) Off-balance sheet assets received

The table below presents assets received from third parties that can be sold or repledged, that are not recognized on the balance sheet, but that are held as collateral, including amounts that have been sold or repledged.

Off-balance sheet assets received

<i>USD million</i>	31.12.18	31.12.17
Fair value of assets received that can be sold or repledged	483,688	481,265
<i>received as collateral under reverse repurchase, securities borrowing and lending arrangements, derivative and other transactions¹</i>	473,302	474,420
<i>received in unsecured borrowings</i>	10,385	6,845
Thereof sold or repledged ²	356,752	346,243
<i>in connection with financing activities</i>	315,402	300,880
<i>to satisfy commitments under short sale transactions</i>	28,949	31,251
<i>in connection with derivative and other transactions¹</i>	12,400	14,112

¹ Includes securities received as initial margin from its clients that UBS AG is required to remit to central counterparties, brokers and deposit banks through its exchange-traded derivative clearing and execution services. ² Does not include off-balance sheet securities (31 December 2018: USD 24.5 billion; 31 December 2017: USD 28.8 billion) placed with central banks related to undrawn credit lines and for payment, clearing and settlement purposes for which there are no associated liabilities or contingent liabilities.

Note 27 Maturity analysis of financial liabilities

The contractual maturities for non-derivative and non-trading financial liabilities as of 31 December 2018 are based on the earliest date on which UBS could be contractually required to pay. The total amounts that contractually mature in each time band are also shown for 31 December 2017. Derivative positions

and trading liabilities, predominantly made up of short sale transactions, are assigned to the column *Due within 1 month*, as this provides a conservative reflection of the nature of these trading activities. The contractual maturities may extend over significantly longer periods.

Maturity analysis of financial liabilities

¹ Except for financial liabilities at fair value held for trading and derivative financial instruments (see footnote 3), the amounts presented generally represent undiscounted cash flows of future interest and principal payments. ² The time bucket Due after 5 years includes perpetual loss-absorbing additional tier 1 capital instruments. ³ Carrying value is fair value. Management believes that this best represents the cash flows that would have to be paid if these positions had to be settled or closed out. Refer to Note 28 for undiscounted cash flows of derivatives designated in hedge accounting relationships. ⁴ Contractual maturities of financial liabilities at fair value held for trading are: USD 28.3 billion due within one month (2017: USD 30.3 billion), USD 0.6 billion due between one month and one year (2017: USD 0.8 billion) and USD 0 billion due between 1 and 5 years (2017: USD 0.1 billion). ⁵ Future interest payments on variable-rate liabilities are determined by reference to the applicable interest rate prevailing as of the reporting date. Future principal payments that are variable are determined by reference to the conditions existing at the reporting date. ⁶ Comprises the maximum irrevocable amount of guarantees, commitments and forward starting transactions. ⁷ Loan commitments measured at fair value of USD 3.5 billion, guarantees measured at fair value of USD 1.6 billion and forward starting reverse repurchase agreements measured at fair value of USD 8.1 billion are under the time bucket Due within 1 month.

Note 28 Hedge accounting

Derivatives transacted for hedging purposes

UBS AG enters into derivative transactions for the purpose of hedging risks inherent in assets, liabilities and forecast transactions. The accounting treatment of hedge transactions varies according to the nature of the instrument hedged and whether the hedge qualifies as such for accounting purposes.

Derivative transactions that qualify and are designated as hedges for accounting purposes are described under the corresponding risk category headings in this Note (interest rate risk hedge accounting and structural foreign exchange risk hedge accounting). In addition, UBS designates certain non-derivative financial assets and liabilities as hedging instruments in structural foreign exchange risk hedge accounting, as described under the corresponding risk category headings of this Note.

UBS AG has also executed various hedging strategies utilizing derivatives for which hedge accounting has not been applied. These economic hedges include interest rate swaps and other interest rate derivatives (e.g., futures) for day-to-day economic interest rate risk management purposes. In addition, UBS AG has used equity futures, options and, to a lesser extent, swaps in a variety of equity trading strategies to offset underlying equity and equity volatility exposure. UBS AG has also entered into credit default swaps that provide economic hedges for credit risk exposures (refer to "Credit derivatives" in Note 11). UBS AG's accounting policies for derivatives designated and accounted for as hedging instruments or economic hedges that do not qualify for hedge accounting are described in Note 1a item 3j, where terms used in the following sections are explained.

Note 28 Hedge accounting (continued)**Interest rate risk hedge accounting****Fair value hedges: interest rate risk related to debt instruments**

UBS AG issues various long-term, fixed-rate debt instruments measured at amortized cost, such as senior unsecured debt, covered bonds and subordinated debt, that are exposed to changes in fair value due to movements in market interest rates. Interest rate swaps are used as fair value hedges to protect against changes in the fair value of the issued debt.

Fair value hedges of interest rate risk related to debt instruments involve swapping fixed cash flows associated with the debt issued to floating cash flows by entering into interest rate swaps that receive fixed and pay floating cash flows. The variable future cash flows are based on the following benchmark rates: USD LIBOR, CHF LIBOR, EURIBOR, GBP LIBOR, AUD LIBOR, JPY LIBOR and SGD LIBOR.

The issued debt and interest rate swaps are designated in a fair value hedge relationship. The notional of the designated hedging instrument matches the notional of the hedged item.

The hedged risk is determined as the change in the fair value of the debt issued arising solely from changes in the designated benchmark interest rate (e.g., one-month or three-month LIBOR). Such change is usually the largest component of the overall change in the fair value of the hedged position in transaction currency.

Hedge effectiveness is assessed by comparing changes in the fair value of the debt issued attributable to changes in the designated benchmark interest rate with the changes in the fair value of the interest rate swaps.

Hedge ineffectiveness can arise from different curves used for the discounting of the hedging instruments and the hedged items, or from mismatches of critical terms between fixed-term lending products and hedging interest rate swaps.

Interest rate swaps			4	43	17	64

Note 28 Hedge accounting (continued)**Fair value hedges: portfolio interest rate risk related to loans**

UBS AG has a portfolio of long-term fixed-rate mortgage loans in CHF that are measured at amortized cost and exposed to changes in the fair value attributable to movements in market interest rates. Interest rate swaps that pay a fixed rate of interest and receive a floating rate of interest are used as fair value hedges to protect against changes in the fair value of the originated loans.

The portfolio of mortgage loans and interest rate swaps are designated in a fair value hedge relationship. The notional of the designated hedging instrument matches the notional of the hedged item.

The hedging strategy involves an open portfolio of hedged items, i.e., mortgage loans. Both the hedged items and the hedging instruments are adjusted on a monthly basis to reflect changes in size and the maturity profile of the hedged portfolio. The existing hedging relationship is discontinued and a new one

is designated. Changes in the portfolio are driven by new loans originated or existing loans repaid.

The hedged risk is determined as the change in the fair value of the loans arising solely from changes in the designated benchmark interest rate (e.g., one-month or three-month LIBOR). Such change is usually the largest component of the overall change in the fair value of the hedged position in transaction currency.

Hedge effectiveness is assessed by comparing changes in the fair value of the hedged portfolio of loans attributable to changes in the designated benchmark interest rate with the changes in the fair value of the interest rate swaps.

Hedge ineffectiveness can arise from different curves used for the discounting of the hedging instruments and the hedged items, or from mismatches of critical terms between fixed-term lending products and hedging interest rate swaps.

¹ For prior periods, the amounts included offsetting accrued interest, which had no effect on net gains / (losses) related to hedge ineffectiveness.

Note 28 Hedge accounting (continued)**Cash flow hedges of forecast transactions**

UBS AG is exposed to variability in future interest cash flows on non-trading financial assets and liabilities that bear interest at variable rates or are expected to be refinanced or reinvested in the future, due to movements in future market rates. The amounts and timing of future cash flows, representing both principal and interest flows, are projected on the basis of contractual terms and other relevant factors, including estimates of prepayments and defaults. The aggregate principal balances and interest cash flows across all portfolios over time form the basis for identifying the non-trading interest rate risk of UBS AG, which is hedged with interest rate swaps, the maximum maturity of which is 10 years.

The group of forecast cash flows and interest rate swaps are designated in cash flow hedge relationships. The notional of the designated hedging instrument matches the notional of the hedged item for newly transacted swaps. For swaps that are re-designated, the ratio of the designation is determined based on the swap sensitivity.

The hedging strategy involves designation of each interest rate swap in a separate hedge relationship against a group of hedged items that share the same risk. The hedged items giving rise to the hedged cash flows are fungible and could be substituted for each other over the lifetime of the hedge. Cash flow forecasts and risk exposures are monitored and adjusted on an ongoing basis, and consequently hedging instruments are added or taken out of the program accordingly.

The hedged risk is determined as the variability of future cash flows arising solely from changes in the designated benchmark interest rate, i.e., overnight index swap rate / one-month or three-month LIBOR. Hedge effectiveness is assessed by comparing changes in the fair value of the hedged cash flows attributable to changes in the designated benchmark interest rate with the changes in the fair value of the interest rate swaps.

Hedge ineffectiveness can arise from differences in the reference index of the hedging instruments and hedged items, or from inception of the hedge relationship after the trade date of the hedging derivative.

Note 28 Hedge accounting (continued)**Structural foreign exchange risk hedge accounting****Hedges of net investments in foreign operations**

UBS AG applies hedge accounting for certain net investments in foreign operations. For this purpose, foreign exchange (FX) derivatives, mainly FX forwards and FX swaps, as well as non-derivative financial assets or liabilities are used and designated as hedging instruments. The notional of the designated hedging instrument matches the notional of the hedged item.

Based on UBS's risk management strategy, the hedges are adjusted on at least a monthly basis to reflect the changes in the hedged position.

The hedged risk is determined as the change in the carrying amount of net assets of foreign operations arising solely from changes in spot foreign exchange rates. Consequently, UBS AG only designates the spot element of the FX forwards as hedging instruments. Changes in the fair value of the hedging instruments attributable to changes in forward points and the effect of discounting are not part of a hedge accounting designation. These amounts, therefore, do not form part of the effectiveness assessment and are recognized directly in profit or loss.

The effective portion of gains and losses of these FX swaps, i.e., the spot element, is transferred directly to OCI to offset foreign currency translation (FCT) gains and losses on the net investments in foreign branches and subsidiaries. As such, these

FX swaps hedge the structural FX exposure, resulting in the accumulation of FCT at the level of individual foreign branches and subsidiaries, which make up the total FCT OCI of UBS AG.

When UBS designates as hedging instruments certain non-derivative foreign currency financial assets and liabilities of foreign branches or subsidiaries, the FX translation difference recorded in FCT OCI of the non-derivative hedging instrument of one foreign entity offsets the structural FX exposure of another foreign entity. Therefore, the aggregated FCT OCI of UBS AG is unchanged from this hedge designation.

Due to the fact that only the spot element of hedging instruments is designated in hedging relationships, ineffectiveness is unlikely unless the hedged net assets fall below the designated hedged amount. The exceptions are hedges where the hedging currency is not the same as the currency of the foreign operation, where the currency basis may cause ineffectiveness.

As of 31 December 2017, the notional amount of hedging instruments exceeded the underlying hedged structural FX exposures, due to the fact that non-US dollar structural FX exposures were hedged against the US dollar first and then against Swiss francs, the former functional currency of the parent entity. As of 31 December 2018 all structural FX exposures are hedged directly against the US dollar.

Note 29 Pension and other post-employment benefit plans (continued)

UBS AG recognizes assets and liabilities with respect to defined benefit plans within *Other non-financial assets* and *Other non-financial liabilities*.

As of 31 December 2018 and 31 December 2017, the Swiss pension plan was in a surplus situation. However, a surplus is

only recognized on the balance sheet to the extent that it does not exceed the estimated future economic benefit. Since the estimated future economic benefit was zero as of 31 December 2018 and 31 December 2017, no net defined benefit pension asset was recognized on the balance sheet.

The table below provides a breakdown of liabilities recognized on the balance sheet within *Other non-financial liabilities* related to defined benefit plans.

Balance sheet – net defined benefit pension and post-employment liability

a) Defined benefit pension plans

UBS AG has established defined benefit pension plans for its employees in various jurisdictions, with the major plans located in Switzerland, the UK, the US and Germany.

The overall investment policy and strategy for UBS AG's defined benefit pension plans is guided by the objective of achieving an investment return that, together with contributions, ensures that there will be sufficient assets to pay pension benefits as they fall due while also mitigating various risks. For the plans with assets, i.e. funded plans, the investment strategies are managed under local laws and regulations in each jurisdiction. The asset allocation is determined by the governance body with reference to the current and expected economic and market conditions and in consideration of specific asset class risk in the risk profile. Within this framework, UBS AG ensures that the fiduciaries consider how the asset investment strategy correlates with the maturity profile of the plan liabilities and the respective potential effect on the funded status of the plans, including potential short-term liquidity requirements.

The defined benefit obligations (DBOs) for all of UBS AG's

defined benefit pension plans are directly affected by changes in yields of high-quality corporate bonds quoted in an active market in the currency of the respective pension plan, as the applicable discount rate used to determine the DBO is based on these yields. For the funded plans, the pension assets are invested in a diversified portfolio of financial assets, including real estate, bonds, investment funds and cash, across geographic regions, to ensure a balance of risk and return. Under IFRS, volatility arises in each pension plan's net asset / liability position because the fair value of the plan's financial assets is not fully correlated to movements in the value of the plan's DBO. Specific asset-liability matching strategies for each pension plan are independently determined by the responsible governance body. The net asset / liability volatility for each plan is dependent on the specific financial assets chosen by each plan's governance body. For certain pension plans, a liability-driven investment approach is applied to a portion of the plan assets to reduce potential volatility.

Note 29 Pension and other post-employment benefit plans (continued)**Swiss pension plan**

The Swiss pension plan covers employees of UBS AG and employees of companies having close economic or financial ties with UBS AG, and exceeds the minimum benefit requirements under Swiss pension law.

In 2017, a significant number of employees transferred from UBS AG to UBS Business Solutions AG, which is a directly held subsidiary of UBS Group AG. There continues to be one pooled pension plan in Switzerland covering the employees of UBS AG and those transferred to UBS Business Solutions AG. UBS AG and UBS Business Solutions AG both are legal sponsors of UBS's Swiss pension plan. Since the date of the employee transfer, UBS AG and UBS Business Solutions AG apply proportionate defined benefit accounting, i.e., the net pension cost, any OCI impacts from remeasurements and the net pension asset / liability of the Swiss pension plan are allocated proportionally between UBS AG and UBS Business Solutions AG based on the aggregated net pension cost and defined benefit obligations related to their employees.

Contributions to the pension plan are paid by both the employer and the employees. The Swiss pension plan allows employees to choose the level of contributions paid by them. Employee contributions are calculated as a percentage of the contributory salary and are deducted monthly. The percentages deducted from salary depend on age and choice of contribution category and vary between 1% and 13.5% of contributory base salary and between 0% and 9% of contributory variable compensation. Depending on the age of the employee, UBS AG pays a contribution that ranges between 6.5% and 27.5% of contributory base salary and between 3.6% and 9% of contributory variable compensation. UBS AG also pays risk contributions that are used to finance benefits paid out in the event of death and disability, as well as to finance bridging pensions.

The plan benefits include retirement, disability and survivor benefits. The pension plan offers to members at the normal retirement age of 64 a choice between a lifetime pension with or without full restitution and a partial or full lump sum

payment. Members can draw early retirement benefits starting from the age of 58. Employees have the opportunity to make additional purchases of benefits to fund early retirement benefits (Plan 58+).

The pension amount payable is a result of the conversion rate applied on the accumulated balance of the individual plan participant's pension account at the retirement date. The accumulated balance of each individual plan participant's pension account is based on credited vested benefits transferred from previous employers, purchases of benefits, and the employee and employer contributions that have been made to the pension account of each individual plan participant, as well as the interest accrued on the accumulated balance. The interest rate accrued is defined annually by the Pension Foundation Board.

Although the Swiss pension plan is based on a defined contribution promise under Swiss pension law, it is accounted for as a defined benefit plan under IFRS, primarily because of the obligation to accrue interest on the pension accounts and the payment of lifetime pension benefits.

The Swiss pension plan is governed by a Pension Foundation Board. The responsibilities of this board are defined by Swiss pension law and by the plan rules. An actuarial valuation under Swiss pension law is performed regularly. According to Swiss pension law, a temporary limited underfunding is permitted. However, should an underfunded situation occur, the Pension Foundation Board is required to take the necessary measures to ensure that full funding can be expected to be restored within a maximum period of 10 years. If a Swiss pension plan were to become significantly underfunded on a Swiss pension law basis, additional employer and employee contributions could be required. In this situation, the risk is shared between employer and employees, and the employer is not legally obliged to cover more than 50% of the additional contributions required. As of 31 December 2018, the Swiss pension plan had a technical funding ratio under Swiss pension law of 124.2% (31 December 2017: 131.9%).

Note 29 Pension and other post-employment benefit plans (continued)

The investment strategy of the Swiss plan is implemented on the basis of a multi-level investment and risk management process and complies with Swiss pension law, including the rules and regulations relating to diversification of plan assets. These rules, among others, specify restrictions on the composition of plan assets; e.g., there is a limit of 50% for investments in equities. The investment strategy of the Swiss plan is aligned with the defined risk budget set out by the Pension Foundation Board. The risk budget is determined on the basis of regularly performed asset and liability management analyses. In order to implement the risk budget, the Swiss plan may use direct investments, investment funds and derivatives. To mitigate foreign currency risk, a specific currency hedging strategy is in place. The Pension Foundation Board strives for a medium- and long-term balance between assets and liabilities.

As of 31 December 2018, the Swiss pension plan was in a surplus situation on an IFRS measurement basis, as the fair value of plan assets exceeded the DBO by USD 1,998 million (31 December 2017: surplus of USD 1,990 million). However, a surplus is only recognized on the balance sheet to the extent that it does not exceed the estimated future economic benefit, which equals the difference between the present value of the estimated future net service cost and the present value of the estimated future employer contributions. The maximum future economic benefit is highly variable based on changes in the discount rate. As of both 31 December 2018 and 31 December 2017, the estimated future economic benefit was zero and hence no net defined benefit asset was recognized on the balance sheet. As of 31 December 2018, the difference between the pension plan surplus and the estimated future economic benefit, i.e., the asset ceiling effect, was USD 1,998 million (31 December 2017: USD 1,990 million).

Changes to the Swiss pension plan

As a result of the effects of continuing low and in some cases negative interest rates, diminished investment return expectations and increasing life expectancy, the pension fund of UBS AG in Switzerland and UBS AG agreed to measures that have taken effect from the start of 2019 to support the long-term financial stability of the Swiss pension fund. As a result, the conversion rate was lowered, the regular retirement age was increased to 65, employee contributions were increased to vary between 2.5% and 13.5% of the contributory base salary, and savings contributions start from age 20 instead of the previous starting age of 25. Pensions already in payment on 1 January 2019 were not affected by these measures.

To mitigate the effects of the reduction of the conversion rate on future pensions, UBS AG will make a payment to employees' retirement assets in the Swiss pension fund of up to USD 448 million in three installments in 2020, 2021 and 2022.

In accordance with IFRS, these measures led to a reduction in the pension obligation recognized by UBS AG, resulting in a pre-tax gain of USD 132 million in 2018. In addition, 2018 service costs were lower by USD 34 million due to the decrease in benefits. These effects were recognized as a reduction in *Personnel expenses* within the income statement across the business divisions and Corporate Center, with a corresponding effect in *Other comprehensive income*, as the Swiss pension plan was in a surplus situation that could not be recognized due to the IFRS asset ceiling restriction. If the Swiss pension plan remains in an asset ceiling position, the three annual payments, adjusted for expected forfeitures, are expected to reduce total equity by approximately USD 130 million per year over the installment period, with no effect on the income statement.

The employer contributions expected to be made to the Swiss pension plan in 2019 are estimated to be USD 275 million.

Non-Swiss pension plans

UBS AG locations outside of Switzerland established various defined benefit pension plans in accordance with local regulations and practices. The non-Swiss locations with major defined benefit pension plans are the UK, the US and Germany. Defined benefit pension plans in other locations are not material to the financial results of UBS AG and hence not separately disclosed.

The non-Swiss plans provide benefits in the event of retirement, death or disability. The level of benefits provided depends on the specific rate of benefit accrual and the level of employee compensation. UBS AG's general principle is to ensure that the plans are adequately funded on the basis of actuarial valuations. Local pension regulations and tax requirements are the primary drivers for determining when contributions are required.

UK pension plan

The UK plan is a career-average revalued earnings scheme, and benefits increase automatically based on UK price inflation. The normal retirement age for participants in the UK plan is 60. Since 2000, the UK plan has been closed to new entrants and, since 2013, pension plan participants are no longer accruing benefits for current or future service. Employees instead participate in the UK defined contribution plan.

The governance responsibility for the UK plan lies jointly with the Pension Trustee Board, which is required under local pension laws, and UBS AG. The employer contributions to the pension fund reflect agreed-upon deficit funding contributions, which are determined on the basis of the most recent actuarial valuation using assumptions agreed by the Pension Trustee Board and UBS AG. In the event of underfunding, UBS AG and the Pension Trustee Board must agree on a deficit recovery plan within statutory deadlines. In 2018 and 2017, UBS AG did not make any deficit funding contributions.

Note 29 Pension and other post-employment benefit plans (continued)

The plan assets are invested in a diversified portfolio of financial assets. A liability-driven investment approach is applied, as a portion of the plan assets is invested in inflation-indexed bonds that provide a partial hedge against price inflation. If price inflation increases, the DBO is likely to increase by more than the change in the fair value of plan assets, which would result in an increase in the net defined benefit liability. Plan rules and local pension legislation cap the level of inflationary increase that can be applied to plan benefits.

As the plan is obligated to provide guaranteed lifetime pension benefits to plan participants upon retirement, increases in life expectancy will result in an increase in the plan's liabilities. The sensitivity to changes in life expectancy is particularly high in the UK plan as the pension benefits are indexed to price inflation.

As of 31 December 2018, the UK plan was in a deficit situation on an IFRS measurement basis as the DBO exceeded the fair value of plan assets by USD 160 million (31 December 2017: deficit of USD 275 million).

Following the most recent triennial statutory actuarial valuation as of 30 June 2017, UBS AG agreed to minimum cash contributions of USD 26 million in 2019 and USD 13 million in 2020. Total contributions expected to be made to the UK defined benefit pension plan in 2019 are estimated at USD 128 million, subject to regular funding reviews during the year.

In addition, UBS AG and the Pension Trustee Board have entered into an arrangement whereby a collateral pool was established to provide security for the pension fund, effective 31 January 2019, at a value of USD 574 million. The collateral pool includes corporate bonds and government-related debt instruments. The Pension Trustee Board and UBS AG may agree adjustments to the collateral pool value in the future. The arrangement provides the Pension Trustee Board dedicated access to a pool of assets in the event of UBS AG insolvency or not paying a required deficit funding contribution.

Following a UK High Court ruling requiring pension trustees to equalize benefits for men and women in relation to guaranteed minimum pensions (GMP), UBS AG recorded an increase of USD 4 million in the DBO, resulting in a corresponding loss recognized in the income statement in 2018.

US pension plans

There are two distinct major defined benefit pension plans in the US, both with a normal retirement age of 65. Since 1998 and 2001, respectively, the plans have been closed to new entrants, who instead can participate in defined contribution plans.

One of the major defined benefit pension plans is a contribution-based plan in which each participant accrues a percentage of salary in a pension account. The pension account is credited annually with interest based on a rate that is linked to the average yield on one-year US government bonds. For the other major defined benefit pension plan, retirement benefits accrue based on the career-average earnings of each individual

plan participant. Former employees with vested benefits have the option to take a lump sum payment or a lifetime annuity commencing early or at retirement age.

As required under local state pension laws, both plans have fiduciaries who, together with UBS AG, are responsible for the governance of the plans. UBS AG regularly reviews the contribution strategy for these plans, considering local statutory funding rules and the cost of any premiums that must be paid to the Pension Benefit Guaranty Corporation for having an underfunded plan. In 2018, the contributions made by UBS AG were USD 42 million (2017: USD 92 million).

The plan assets for both plans are invested in a diversified portfolio of financial assets. Each pension plan's fiduciaries are responsible for the investment decisions with respect to the plan assets. Both US plans apply a liability-driven investment approach to support the volatility management in the net asset / liability position. Derivative instruments may also be employed to manage volatility.

The employer contributions expected to be made to the US defined benefit pension plans in 2019 are estimated at USD 9 million.

German pension plans

There are two different defined benefit pension plans in Germany, and both are contribution-based plans. No plan assets are set aside to fund these plans, and benefits are paid directly by UBS AG. The normal retirement age for the participants in the German plans is 65. Within the larger of the two plans, each participant accrues a percentage of salary in a pension account. The accumulated account balance of the plan participant is credited on an annual basis with guaranteed interest at a rate of 5%. In the other plan, amounts are accrued annually based on employee elections. For this plan, the accumulated account balance is credited on an annual basis with a guaranteed interest rate of 6% for amounts accrued before 2010, of 4% for amounts accrued from 2010 to 2017 and of 0.9% for amounts accrued after 2017. Both plans are regulated under German pension law, under which the responsibility to pay pension benefits when they are due rests entirely with UBS AG. For these plans, a portion of the pension payments is directly increased in line with price inflation.

The benefits expected to be paid by UBS AG to the participants of the German plans in 2019 are estimated at USD 11 million.

Financial information by plan

The tables on the following pages provide an analysis of the movement in the net asset / liability recognized on the balance sheet for defined benefit pension plans, as well as an analysis of amounts recognized in net profit and in *Other comprehensive income*.

¹ The duration of the defined benefit obligation represents a weighted average across US and German plans.

Note 29 Pension and other post-employment benefit plans (continued)**Actuarial assumptions**

The measurement of each pension plan's DBO considers different actuarial assumptions. Changes in those assumptions lead to volatility in the DBO. The following significant actuarial assumptions are applied:

- Discount rate: the discount rate is based on the yield of high-quality corporate bonds quoted in an active market in the currency of the respective pension plan. Consequently, a decrease in the yield of high-quality corporate bonds increases the DBO. Conversely, an increase in the yield of high-quality corporate bonds decreases the DBO.
- Rate of salary increase: an increase in the salary of plan participants generally increases the DBO, specifically for the Swiss and German plans. For the UK plan, as the plan is closed for future service, UBS AG employees no longer accrue future service benefits and thus salary increases have no effect on the DBO. For the US plans, only a small percentage of the total population continues to accrue benefits for future service and therefore the effect of a salary increase on the DBO is minimal.
- Rate of pension increase: for the Swiss plan, there is no automatic indexing of pensions. Any increase would be decided by the Pension Foundation Board. For the US plans, there is also no automatic indexing of pensions. For the UK plan, pensions are automatically indexed to price inflation as per plan rules and local pension legislation. The German plans are also automatically indexed and a portion of the pensions are directly increased by price inflation. An increase in price inflation in the UK or Germany increases the respective plan's DBO.
- Rate of interest credit on retirement savings: the Swiss plan and one of the US plans have retirement saving balances that are increased annually by an interest credit rate. For each of these plans, an increase in the interest credit rate increases the plan's DBO.
- Life expectancy: most of UBS AG's defined benefit pension plans are obligated to provide guaranteed lifetime pension benefits. The DBO for all plans is calculated using an underlying best estimate of the life expectancy of plan participants. An increase in the life expectancy of plan participants increases the plan's DBO.

The actuarial assumptions used for the pension plans are based on the economic conditions prevailing in the jurisdiction in which they are offered.

→ **Refer to Note 1a item 7 for a description of the accounting policy for defined benefit pension plans**

Changes in actuarial assumptions

UBS AG regularly reviews the actuarial assumptions used in calculating its DBO to determine their continuing relevance.

Swiss pension plan

In 2018, a net gain of USD 263 million was recognized in *Other comprehensive income* (OCI) related to the remeasurement of the DBO. This was primarily due to a market-driven increase in the discount rate, which resulted in an OCI gain of USD 478 million. This effect was partly offset by experience losses of USD 128 million, reflecting differences between the previous actuarial assumptions and what actually occurred, and market-driven changes to the assumed rate of interest credit on retirement savings, which resulted in a loss of USD 77 million. Changes in other assumptions were not significant.

In 2017, a net loss of USD 47 million was recognized in OCI related to the remeasurement of the DBO. This was primarily due to a market-driven decrease in the discount rate, which resulted in an OCI loss of USD 159 million. This effect was partially offset by experience gains of USD 92 million and market-driven changes to the assumed rate of interest credit on retirement savings, which resulted in a gain of USD 25 million. Changes in other assumptions were not significant.

UK pension plan

In 2018, a net gain of USD 266 million was recognized in OCI related to the remeasurement of the DBO for the UK plan. This was primarily due to a market-driven increase in the discount rate, which resulted in an OCI gain of USD 219 million, as well as changes in the pension increase assumption, which resulted in an OCI gain of USD 37 million.

In 2017, a net gain of USD 88 million was recognized in OCI related to the remeasurement of the DBO for the UK plan. This was primarily driven by changes in the life expectancy assumption, which resulted in a gain of USD 82 million. In addition, market-driven changes in the inflation rate assumption resulted in a gain of USD 60 million and experience gains were USD 50 million. These gains were partly offset by a market-driven decrease in the discount rate, which resulted in a loss of USD 102 million.

US and German pension plans

In 2018, a net gain of USD 69 million was recognized in OCI related to the remeasurement of the DBO for the US and German plans, compared with a net loss of USD 82 million in 2017. OCI gains and losses in both years were primarily driven by market-driven movements in discount rates.

Note 29 Pension and other post-employment benefit plans (continued)**b) Post-employment medical insurance plans**

In the US and the UK, UBS AG offers post-employment medical insurance benefits that contribute to the health care coverage of certain employees and their beneficiaries after retirement. The UK post-employment medical insurance plan is closed to new entrants. In the US, retiree medical premiums are subsidized for eligible participants who retired before 2014.

These plans are not prefunded. In the US, the retirees also contribute to the cost of the post-employment medical benefits.

In 2018, UBS AG announced changes to one of the US post-employment medical insurance plans that replaced the UBS AG retiree medical subsidy with a new subsidy to purchase medical coverage through a private Medicare exchange. This change

reduced the post-employment benefit obligation by USD 14 million, resulting in a corresponding gain recognized in the income statement in 2018.

The benefits expected to be paid by UBS AG to the post-employment medical insurance plans in 2019 are estimated at USD 5 million.

The table below provides an analysis of the movement in the net asset / liability recognized on the balance sheet for post-employment medical insurance plans, as well as an analysis of amounts recognized in net profit and in *Other comprehensive income*.

Post-employment medical insurance plans

USD million	UK plan		US plans		Total	
	2018	2017	2018	2017	2018	2017
Post-employment benefit obligation at the beginning of the year	27	26	61	64	88	90

Remeasurement of post-employment benefit obligation	3	1	4	0	7	1
Total gains / (losses) recognized in other comprehensive income, before tax	3	1	4	0	7	1

¹ Experience (gains) / losses are a component of actuarial remeasurements of the post-employment benefit obligation that reflect the effects of differences between the previous actuarial assumptions and what has actually occurred. ² Benefit payments are funded by employer contributions and plan participant contributions.

Note 29 Pension and other post-employment benefit plans (continued)**Actuarial assumptions**

The measurement of each medical insurance plan's post-employment benefit obligation considers different actuarial assumptions. Changes in assumptions lead to volatility in the post-employment benefit obligation. The following significant actuarial assumptions are applied:

- Discount rate: discount rates used for post-employment medical insurance plans are the same as those used for defined benefit pension plans. A decrease in the yield of high-quality corporate bonds increases the post-employment benefit obligation. Conversely, an increase in the yield of high-quality corporate bonds decreases the post-employment benefit obligation.

- Average health care cost trend rate: an increase in health care costs generally increases the post-employment benefit obligation.
- Life expectancy: as some plan participants have lifetime benefits under these plans, an increase in life expectancy increases the post-employment benefit obligation.

UBS AG regularly reviews the actuarial assumptions used in calculating its post-employment benefit obligations to determine their continuing relevance. Significant actuarial assumptions used to determine post-employment benefit obligations at the end of the year were:

Significant actuarial assumptions used¹

In %	UK plan		US plans ²	
	31.12.18	31.12.17	31.12.18	31.12.17
Discount rate	2.90	2.55	4.20	3.54
Average health care cost trend rate – initial	5.10	5.10	7.79	7.99
Average health care cost trend rate – ultimate	5.10	5.10	4.50	4.50

¹ The assumptions for life expectancies are provided within Note 29a. ² Represents weighted average assumptions across US plans.

Sensitivity analysis of significant actuarial assumptions

The table below presents a sensitivity analysis for each significant actuarial assumption showing how the post-employment benefit obligation would have been affected by changes in the relevant actuarial assumption that were reasonably possible at the balance sheet date. Unforeseen circumstances may arise, which

could result in variations that are outside the range of alternatives deemed reasonably possible. Caution should be used in extrapolating the sensitivities below on the post-employment benefit obligation, as the sensitivities may not be linear.

Sensitivity analysis of significant actuarial assumptions¹

¹ The sensitivity analyses are based on a change in one assumption while holding all other assumptions constant, so that interdependencies between the assumptions are excluded.

c) Defined contribution plans

UBS AG sponsors a number of defined contribution plans in locations outside Switzerland. The locations with significant defined contribution plans are the US and the UK. Certain plans allow employees to make contributions and earn matching or other contributions from UBS AG. Employer contributions to

defined contribution plans are recognized as an expense, which, for the years ended 31 December 2018, 2017 and 2016, amounted to USD 223 million, USD 236 million and USD 238 million, respectively.

Note 29 Pension and other post-employment benefit plans (continued)**d) Related-party disclosure**

UBS AG is the principal provider of banking services for the pension fund of UBS AG in Switzerland. In this capacity, UBS AG is engaged to execute most of the pension fund's banking activities. These activities can include, but are not limited to, trading, securities lending and borrowing and derivative transactions. The non-Swiss UBS AG pension funds do not have a similar banking relationship with UBS AG.

Also, UBS AG leases certain properties that are owned by the Swiss pension fund. As of 31 December 2018, the minimum commitment toward the Swiss pension fund under the related

leases was approximately USD 10 million (31 December 2017: USD 5 million).

→ Refer to the "Composition and fair value of plan assets" table in Note 29a for more information on fair value of investments in UBS AG and UBS Group AG instruments held by the Swiss pension fund

The following amounts have been received or paid by UBS AG from and to the pension and other post-employment benefit plans located in Switzerland, the UK and the US in respect of these banking activities and arrangements.

Note 30 Employee benefits: variable compensation

a) Plans offered

UBS has several share-based and other compensation plans that align the interests of Group Executive Board (GEB) members and other employees with the interests of investors. These compensation plans are also designed to meet regulatory requirements. The most significant compensation plans are described below.

For the majority of variable compensation awards granted under such plans to employees of UBS AG, the grantor entity is UBS Group AG. Expenses associated with these awards are charged by UBS Group AG to UBS AG. For the purpose of this Note, references to shares refer to UBS Group AG shares.

→ Refer to Note 1a item 6 for a description of the accounting policy related to share-based and other deferred compensation plans

Mandatory deferred compensation plans

Equity Ownership Plan (EOP)

The EOP is a mandatory deferred share-based compensation plan for all employees with total annual compensation greater than USD / CHF 300,000.

EOP awards granted to GEB members and certain other employees will only vest if both Group and business division performance conditions are met. For all awards granted for the performance year 2017 (awarded in early 2018) and before, the Group performance condition is based on the average adjusted return on tangible equity (RoTE) excluding deferred tax assets over the performance period. Starting with the EOP awards granted in 2019 for the performance year 2018, the Group performance condition is based on the average reported return on common equity tier 1 capital (RoCET1). Business division performance is measured on the basis of their average adjusted return on attributed equity (RoAE). For Corporate Center employees, it is measured on the basis of the average operating businesses' adjusted RoAE.

Certain awards, such as replacement awards issued outside the normal performance year cycle, may take the form of deferred cash under the EOP plan rules.

Notional shares represent a promise to receive UBS shares at vesting and do not carry voting rights during the vesting period. Notional shares granted prior to February 2014 have no rights to dividends, whereas awards granted since February 2014 carry a dividend equivalent that may be paid in notional shares or cash and that vests on the same terms and conditions as the awards. However, starting with awards granted for the performance year 2017, European Banking Authority guidelines do not permit

individuals who are deemed to be Material Risk Takers (MRTs) to receive dividend or interest payments on instruments awarded as deferred variable remuneration. Where dividend payments are not permitted, the grant price of the EOP award is adjusted for the expected dividend yield over the vesting period to reflect the fair value of the non-dividend-bearing award.

Awards are settled by delivering UBS shares at vesting, except in jurisdictions where this is not permitted for legal or tax reasons. EOP awards generally vest in equal installments after two and three years following grant (for GEB members, generally after three, four and five years). The awards are generally forfeitable upon, among other circumstances, voluntary termination of employment with UBS.

Deferred Contingent Capital Plan (DCCP)

The DCCP is a mandatory deferred compensation plan for all employees with total annual compensation greater than USD / CHF 300,000.

DCCP awards granted up to January 2015 represent a right to receive a cash payment at vesting. For awards granted since February 2015, DCCP takes the form of notional additional tier 1 (AT1) capital instruments, which at the discretion of UBS can be settled in either a cash payment or a perpetual, marketable AT1 capital instrument. DCCP awards vest in full after five years, and up to seven years for UK senior management functions, unless there is a trigger event.

Awards are forfeited if a viability event occurs, that is, if FINMA notifies the firm in writing that the DCCP awards must be written down to prevent an insolvency, bankruptcy or failure of UBS, or if UBS receives a commitment of extraordinary support from the public sector that is necessary to prevent such an event. Additionally, they are written down if the Group's common equity tier 1 capital ratio falls below 10% for GEB members and below 7% for all other employees. As an additional performance condition, GEB members forfeit 20% of their award for each loss-making year during the vesting period.

For awards granted up to January 2015, interest on the awards is paid annually, provided that UBS achieved an adjusted profit before tax in the preceding year. For awards granted since February 2015, interest payments are discretionary. Where interest payments are not permitted, such as for MRTs, the DCCP award reflects the fair value of the granted non-interest-bearing award.

The awards are generally forfeitable upon, among other circumstances, voluntary termination of employment with UBS.

Note 30 Employee benefits: variable compensation (continued)**Asset Management EOP**

In order to align deferred compensation of certain Asset Management employees with the performance of the investment funds they manage, awards are granted to such employees in the form of cash-settled notional investment funds. The amount delivered depends on the value of the underlying investment funds at the time of vesting. The awards are generally forfeitable upon, among other circumstances, voluntary termination of employment with UBS.

Financial advisor variable compensation

In line with market practice for US wealth management businesses, the compensation for US financial advisors in Global Wealth Management is comprised of production payout and deferred compensation awards. Production payout is primarily based on compensable revenue and is paid monthly.

Financial advisors may also qualify for deferred compensation awards, which generally vest over a six-year period. The awards are based on strategic performance measures, including production, length of service with the firm and net new business. Production payout rates and deferred compensation awards may be reduced for, among other things, errors, negligence or carelessness, or a failure to comply with the firm's rules, standards, practices and policies or applicable laws and regulations.

Strategic objective awards

Strategic objective awards are deferred compensation awards based on strategic performance measures, including production, length of service with the firm and net new business. These awards are granted in the form of both deferred share-based and deferred cash-based awards, with a vesting period of up to six years.

Through performance year 2016, strategic objective awards were partly granted under the PartnerPlus deferred cash plan. In addition to such granted awards (UBS company contributions), participants were allowed to voluntarily contribute additional amounts otherwise payable as production payout up to a certain percentage, which vested upon contribution. Company contributions and voluntary contributions were credited with interest in accordance with the terms of the plan. Rather than being credited with interest, a participant could elect to have voluntary contributions, along with vested company contributions, credited with notional earnings based on the performance of various mutual funds. Company contributions and interest on both company and voluntary contributions ratably vest in 20% installments six to 10 years following grant date. Company contributions and interest on notional earnings on both company and voluntary contributions are forfeitable under certain circumstances.

GrowthPlus

GrowthPlus is a compensation plan for selected financial advisors whose revenue production and length of service exceed defined thresholds from 2010 through 2017. Awards were granted in 2010, 2011, 2015 and 2018. The awards are cash-based and are distributed over seven years, with the exception of 2018 awards, which are distributed over five years.

Other compensation plans**Equity Plus Plan (Equity Plus)**

Equity Plus is a voluntary share-based compensation plan that provides eligible employees with the opportunity to purchase UBS shares at market value and receive one notional share for every three shares purchased, up to a maximum annual limit. Share purchases may be made annually from the performance award and / or monthly through deductions from salary. If the shares purchased are held until three years from the start of the associated plan year and, in general, if the employee remains employed by UBS, the notional shares vest. For notional shares granted since April 2014, employees are entitled to receive a dividend equivalent, which may be paid in notional shares and / or cash.

Role-based allowances (RBAs)

Certain employees of legal entities regulated in the EU may receive an RBA in addition to their base salary. This allowance reflects the market value of a specific role and is fixed, non-forfeitable compensation. Unlike salary, an RBA is paid only as long as the employee is in such a role. RBAs consist of a cash portion and, where applicable, a blocked UBS share award. Such shares will be unblocked in equal installments after two and three years. The compensation expense is recognized in the year of grant.

Note 30 Employee benefits: variable compensation (continued)

Discontinued deferred compensation plans

The following plans have been discontinued. Expenses related to these plans were fully recognized in the income statement in periods prior to 2018. Any remaining outstanding options and stock appreciation rights under these awards will expire during 2019.

Senior Executive Equity Ownership Plan (SEEOP)

Up to February 2012, GEB members and selected senior executives received a portion of their mandatory deferral in UBS shares or notional shares, which vested in equal installments over a five-year vesting period and were forfeitable if certain conditions had not been met. The employee's business division or the Group as a whole had to be profitable in the financial year preceding scheduled vesting. Awards granted under SEEOP were settled by delivering UBS shares at vesting. No SEEOP awards have been granted since 2012.

Senior Executive Stock Option Plan (SESOP)

Up to February 2008, GEB members and selected senior executives were granted UBS options with a strike price set at 110% of the market value of a UBS share on the grant date. These awards vested in full following a three-year vesting period and generally expired 10 years from the grant date. No SESOP awards have been granted since 2008.

Long-Term Deferred Retention Senior Incentive Scheme (LTDRSIS)

Awards under the LTDRSIS were granted to employees in Australia up to and including 2014 and represented a profit share amount based on the profitability of the Australian business. Awards vested after three years and included an arrangement that allowed for unpaid installments to be reduced if the business recorded a loss for the calendar year preceding vesting. The awards were generally forfeitable upon voluntary termination of employment with UBS.

Key Employee Stock Appreciation Rights Plan (KESAP) and Key Employee Stock Option Plan (KESOP)

Until 2009, certain key and high-potential employees were granted discretionary share-settled stock appreciation rights (SARs) or options on UBS shares with a strike price not less than the market value of a UBS share on the date of grant. A SAR gives employees the right to receive a number of UBS shares equal to the value of any market price increase of a UBS share between the grant date and the exercise date. One option entitles the holder to acquire one registered UBS share at the option's strike price. SARs and options are settled by delivering UBS shares, except in jurisdictions where this is not permitted for legal reasons. No options or SARs awards have been granted since 2009.

Note 30 Employee benefits: variable compensation (continued)**b) Effect on the income statement****Effect on the income statement for the financial year and future periods**

The table below provides information on compensation expenses related to total variable compensation, including financial advisor variable compensation, that were recognized in the financial year ended 31 December 2018, as well as expenses that were deferred

and will be recognized in the income statement for 2019 and later. The majority of expenses deferred to 2019 and later that are related to the performance year 2018 relates to awards granted in March 2019. The total compensation expense for unvested share-based awards granted up to 31 December 2018 will be recognized in future periods over a weighted average period of 2.3 years.

A further USD 90 million in expenses related to share-based compensation was recognized within other Note 6 expense categories (Salaries: USD 39 million, related to role-based allowances; Social security: USD 27 million; Other personnel expenses: USD 24 million, related to the Equity Plus Plan).

Note 30 Employee benefits: variable compensation (continued)**c) Outstanding share-based compensation awards****Share and performance share awards**

Movements in outstanding share-based awards under the EOP during 2018 and 2017 are provided in the table below. The awards presented are granted by UBS AG, but are based on UBS Group AG shares.

Movements in outstanding share and performance share awards granted under the EOP

	Number of shares 2018	Weighted average grant date fair value (USD)	Number of shares 2017	Weighted average grant date fair value (USD)
Outstanding, at the beginning of the year	404,720	15	512,185	16
Shares awarded during the year	26,005	13	117,082	14
Distributions during the year	(228,932)	15	(212,984)	17
Forfeited during the year	0	0	(11,563)	15
Outstanding, at the end of the year	201,793	15	404,720	15
<i>of which: shares vested for accounting purposes</i>	<i>133,225</i>		<i>132,117</i>	

The total carrying amount of the liability related to cash-settled share-based awards as of 31 December 2018 and 31 December 2017 was USD 2 million and USD 5 million, respectively.

d) Valuation**Share awards**

UBS AG measures compensation expense based on the average market price of the UBS share on the grant date as quoted on the SIX Swiss Exchange, taking into consideration post-vesting sale and hedge restrictions, non-vesting conditions and market conditions, where applicable. The fair value of the share awards subject to post-vesting sale and hedge restrictions is discounted on the basis of the duration of the post-vesting restriction and is

referenced to the cost of purchasing an at-the-money European put option for the term of the transfer restriction. The weighted average discount for share and performance share awards granted during 2018 was approximately 18.0% (2017: 20.2%) of the market price of the UBS share. The grant date fair value of notional shares without dividend entitlements also includes a deduction for the present value of future expected dividends to be paid between the grant date and distribution.

Note 31 Interests in subsidiaries and other entities**a) Interests in subsidiaries**

UBS AG defines its significant subsidiaries as those entities that, either individually or in aggregate, contribute significantly to UBS AG's financial position or results of operations, based on a number of criteria, including the subsidiaries' equity and their contribution to UBS AG's total assets and profit or loss before tax, in accordance with the requirements set by IFRS 12, Swiss regulations and the rules of the US Securities and Exchange Commission (SEC).

Individually significant subsidiaries

The table below lists UBS AG's individually significant subsidiaries as of 31 December 2018. Unless otherwise stated, the subsidiaries listed below have share capital consisting solely

of ordinary shares that are held fully by UBS AG, and the proportion of ownership interest held is equal to the voting rights held by UBS AG.

The country where the respective registered office is located is also the principal place of business. UBS AG operates through a global network of branches and a significant proportion of its business activity is conducted outside Switzerland in the UK, US, Singapore, Hong Kong and other countries. UBS Europe SE has branches and offices in a number of EU member states, including Germany, Italy, Luxembourg, Spain and Austria. Share capital is provided in the currency of the legally registered office.

Individually significant subsidiaries as of 31 December 2018¹

Consolidated structured entities

UBS AG consolidates a structured entity (SE) if it has power over the relevant activities of the entity, exposure to variable returns and the ability to use its power to affect its returns. Consolidated SEs include certain investment funds, securitization vehicles and client investment vehicles. UBS AG has no individually significant subsidiaries that are SEs.

Investment fund SEs are generally consolidated when UBS AG's aggregate exposure combined with its decision-making rights indicate the ability to use such power in a principal capacity. Typically UBS AG will have decision-making rights as fund manager, earning a management fee, and will provide seed capital at the inception of the fund or hold a significant percentage of the fund units. Where other investors do not have the substantive ability to remove UBS as decision maker, UBS AG is deemed to have control and therefore consolidates the fund.

Securitization SEs are generally consolidated when UBS AG holds a significant percentage of the asset-backed securities

issued by the SE and has the power to remove without cause the servicer of the asset portfolio.

Client investment SEs are generally consolidated when UBS AG has a substantive liquidation right over the SE or a decision right over the assets held by the SE and has exposure to variable returns through derivatives traded with the SE or holding notes issued by the SE.

In 2018 and 2017, UBS AG did not enter into any contractual obligation that could require UBS AG to provide financial support to consolidated SEs. In addition, UBS AG did not provide support, financial or otherwise, to a consolidated SE when UBS AG was not contractually obligated to do so, nor has UBS AG an intention to do so in the future. Further, UBS AG did not provide support, financial or otherwise, to a previously unconsolidated SE that resulted in UBS AG controlling the SE during the reporting period.

Note 31 Interests in subsidiaries and other entities (continued)**b) Interests in associates and joint ventures**

As of 31 December 2018 and 2017, no associate or joint venture was individually material to UBS AG. In addition, there were no significant restrictions on the ability of associates or joint ventures to transfer funds to UBS AG or its subsidiaries in the form of cash dividends or to repay loans or advances made. There were no quoted market prices for any associates or joint ventures of UBS AG.

UBS Securities China is no longer recognized as an investment in associate as of 31 December 2018 as this entity was consolidated following an increase in stake from 24.99% to 51% and UBS AG acquiring control in December 2018.

→ Refer to Note 32 for more information

In November 2018, SIX and Worldline entered into a strategic partnership in the cards business under which SIX transferred its existing cards business to Worldline and received a 27% stake in Worldline. UBS AG recognized a gain of USD 460 million in the income statement, proportional to UBS AG's 17.31% equity ownership in SIX.

¹ In December 2018, UBS AG increased its shareholding in UBS Securities China from 24.99% to 51%, acquiring control of the entity in accordance with IFRS 10, Consolidated Financial Statements. Upon acquisition of control, UBS AG derecognized its former investment in associate. Refer to Note 32 for more information. ² Reflects reclassifications to Properties and other non-current assets held for sale. ³ For 2018, consists of USD 511 million from associates, of which USD 460 million reflected a valuation gain on the equity ownership in SIX related to the sale of SIX Payment Services to Worldline, and USD 18 million from joint ventures. For 2017, consists of USD 61 million from associates and USD 15 million from joint ventures. ⁴ For 2018, the total of USD 1 million is from associates. For 2017, consists of USD 24 million from associates and negative USD 1 million from joint ventures. ⁵ In 2018, UBS AG's equity interest amounts to 17.31%. UBS AG is represented on the Board of Directors.

Note 31 Interests in subsidiaries and other entities (continued)**c) Interests in unconsolidated structured entities**

During 2018, UBS AG sponsored the creation of various SEs and interacted with a number of non-sponsored SEs, including securitization vehicles, client vehicles as well as certain investment funds, that UBS did not consolidate as of 31 December 2018 because it did not control these entities.

The table below presents UBS AG's interests in and maximum exposure to loss from unconsolidated SEs as well as the total assets held by the SEs in which UBS had an interest as of year-end, except for investment funds sponsored by third parties, for which the carrying value of UBS's interest as of year-end has been disclosed.

Interests in unconsolidated structured entities

	31.12.18

Total liabilities	21	54	208	283	
Assets held by the unconsolidated structured entities in which UBS had an interest (USD billion)⁹	58⁶	80⁷	422⁸		

¹ For the purpose of this disclosure, maximum exposure to loss amounts do not consider the risk-reducing effects of collateral or other credit enhancements. ² Represents the carrying value of loan commitments. The maximum exposure to loss for these instruments is equal to the notional amount. ³ Upon adoption of IFRS 9 on 1 January 2018, investment fund units that were formerly classified as available for sale under IAS 39 were reclassified to Financial assets at fair value not held for trading. Refer to Note 1c for more information. ⁴ As of 31 December 2018, USD 0.6 billion of the USD 0.8 billion (31 December 2017: USD 0.7 billion of the USD 0.8 billion) was held in Corporate Center – Non-core and Legacy Portfolio. ⁵ Comprised of credit default swap liabilities and other swap liabilities. The maximum exposure to loss for credit default swap liabilities is equal to the sum of the negative carrying value and the notional amount. For other swap liabilities, no maximum exposure to loss is reported. ⁶ Represents the principal amount outstanding. ⁷ Represents the market value of total assets. ⁸ Represents the net asset value of the investment funds sponsored by UBS and the carrying value of UBS's interests in the investment funds not sponsored by UBS. ⁹ In 2018 UBS has refined the methodology applied to identify significant interests in the scope of disclosure under IFRS 12, Disclosure of Interests in Other Entities. This change has been applied prospectively as the effect on interests disclosed was not material in prior periods. Had this methodology been applied in 2017, the interests in unconsolidated structured entities at 31 December 2017 would have been USD 0.3 million and USD 0.2 million lower for securitization vehicles and client vehicles, respectively. Assets held by the unconsolidated structured entities in which UBS had an interest at 31 December 2017 would have been USD 26 billion lower for securitization vehicles and USD 22 billion lower for client vehicles.

Note 31 Interests in subsidiaries and other entities (continued)

UBS AG retains or purchases interests in unconsolidated SEs in the form of direct investments, financing, guarantees, letters of credit, derivatives and through management contracts.

UBS AG's maximum exposure to loss is generally equal to the carrying value of UBS AG's interest in the SE, with the exception of guarantees, letters of credit and credit derivatives, for which the contract's notional amount, adjusted for losses already incurred, represents the maximum loss that UBS AG is exposed to. In addition, the current fair value of derivative swap instruments with a positive replacement value only, such as total return swaps, is presented as the maximum exposure to loss. Risk exposure for these swap instruments could change over time with market movements.

The maximum exposure to loss disclosed in the table on the previous page does not reflect UBS AG's risk management activities, including effects from financial instruments that may be used to economically hedge the risks inherent in the unconsolidated SE or the risk-reducing effects of collateral or other credit enhancements.

In 2018 and 2017, UBS AG did not provide support, financial or otherwise, to an unconsolidated SE when not contractually obligated to do so, nor has UBS AG an intention to do so in the future.

In 2018 and 2017, income and expenses from interests in unconsolidated SEs primarily resulted from mark-to-market movements recognized in other net income from fair value changes on financial instruments, which have generally been hedged with other financial instruments, as well as fee and commission income received from UBS-sponsored funds.

Interests in securitization vehicles

As of 31 December 2018 and 31 December 2017, UBS AG held interests, both retained and acquired, in various securitization vehicles, a majority of which are held within Corporate Center – Non-core and Legacy Portfolio. The Investment Bank also retained interests in securitization vehicles related to financing, underwriting, secondary market and derivative trading activities. In some cases UBS AG may be required to absorb losses from an unconsolidated SE before other parties because UBS AG's interest is subordinated to others in the ownership structure.

An overview of UBS AG's interests in unconsolidated securitization vehicles and the relative ranking and external credit rating of those interests is presented in the table on the following pages. The numbers outlined in this table may

differ from the securitization positions presented in the 31 December 2018 Pillar 3 report under "Pillar 3 disclosures" at www.ubs.com/investors, for the following reasons: (i) exclusion from the table on the following pages of synthetic securitizations transacted with entities that are not SEs and transactions in which UBS AG did not have an interest because it did not absorb any risk, (ii) a different measurement basis in certain cases (e.g., IFRS carrying value within the table above compared with net exposure amount at default for Pillar 3 disclosures) and (iii) different classification of vehicles viewed as sponsored by UBS AG versus sponsored by third parties.

- **Refer to Note 1a item 1 for more information on the Group's accounting policies regarding consolidation and sponsorship of securitization vehicles and other structured entities**
- **Refer to the 31 December 2018 Pillar 3 report under "Pillar 3 disclosures" at www.ubs.com/investors for more information**

Interests in client vehicles

As of 31 December 2018 and 31 December 2017, UBS AG retained interests in client vehicles sponsored by UBS and third parties that relate to financing and derivative activities, and to hedge structured product offerings. Included within these investments are securities guaranteed by US government agencies.

Interests in investment funds

UBS AG holds interests in a number of investment funds, primarily resulting from seed investments or in order to hedge structured product offerings. In addition to the interests disclosed in the table on the previous page, UBS AG manages the assets of various pooled investment funds and receives fees that are based, in whole or part, on the net asset value of the fund and / or the performance of the fund. The specific fee structure is determined on the basis of various market factors and considers the nature of the fund and the jurisdiction of incorporation, as well as fee schedules negotiated with clients. These fee contracts represent an interest in the fund as they align UBS AG's exposure with investors, providing a variable return that is based on the performance of the entity. Depending on the structure of the fund, these fees may be collected directly from the fund assets and / or from the investors. Any amounts due are collected on a regular basis and are generally backed by the assets of the fund. UBS AG did not have any material exposure to loss from these interests as of 31 December 2018 or as of 31 December 2017.

¹ This table excludes receivables and derivative transactions with securitization vehicles. ² Includes credit card, auto and student loan structures. ³ Includes collateralized debt obligations. ⁴ In 2018 UBS has refined the methodology applied to identify significant interests in the scope of disclosure under IFRS 12, Disclosure of Interests in Other Entities. This change has been applied prospectively as the effect on interests disclosed was not material in prior periods. Had this methodology been applied in 2017, the interests in unconsolidated securitization vehicles at 31 December 2017 would have been USD 0.3 million lower and the assets held by these unconsolidated securitization vehicles would have been USD 26 billion lower.

Note 31 Interests in subsidiaries and other entities (continued)**Sponsored unconsolidated structured entities in which UBS did not have an interest**

For several sponsored SEs, no interest was held by UBS AG at year-end. However, during the respective reporting period UBS AG transferred assets, provided services and held instruments that did not qualify as an interest in these sponsored SEs, and accordingly earned income or incurred expenses from these entities. The table below presents the income earned and expenses incurred directly from these entities during the year as well as corresponding asset information. The table does not include income earned and expenses incurred from risk management activities, including income and expenses from financial instruments used to economically hedge instruments transacted with the unconsolidated SEs.

The majority of the fee income arose from investment funds that are sponsored and administrated by UBS AG, but managed by third parties. As UBS AG does not provide any active management services, UBS AG was not exposed to risk from the performance of these entities and was therefore deemed not to have an interest in them. In certain structures, the fees receivable may be collected directly from the investors and have therefore not been included in the table below.

UBS AG also recorded other net income from fair value changes on financial instruments from mark-to-market movements arising primarily from derivatives, such as interest rate and currency swaps as well as credit derivatives, through which UBS AG purchases protection, and financial liabilities designated at fair value, which do not qualify as interests because UBS AG does not absorb variability from the performance of the entity. Total income reported does not reflect economic hedges or other mitigating effects from UBS AG's risk management activities.

During 2018, UBS AG and third parties transferred assets of USD 1 billion and USD 1 billion, respectively, into sponsored securitization vehicles created in the year (2017: USD 2 billion and USD 8 billion, respectively). UBS and third parties also transferred assets of USD 2 billion and USD 0 billion, respectively, into sponsored client vehicles created in the year (2017: USD 3 billion and USD 1 billion, respectively). For sponsored investment funds, transfers arose during the period as investors invested and redeemed positions, thereby changing the overall size of the funds, which, when combined with market movements, resulted in a total closing net asset value of USD 18 billion (31 December 2017: USD 15 billion).

Sponsored unconsolidated structured entities in which UBS did not have an interest at year-end¹

	As of or for the year ended			
	31.12.18

¹ For the year ended 31 December 2018, no profit attributable to non-controlling interests was excluded from the table (31 December 2017: USD 73 million). ² Represents the amount of assets transferred to the respective securitization vehicles. ³ Represents the amount of assets transferred to the respective client vehicles. Information in the comparative period has been restated. Asset information as of 31 December 2017 has decreased by USD 3 billion as a result. ⁴ Represents the total net asset value of the respective investment funds.

Note 32 Changes in organization and acquisitions and disposals of subsidiaries and businesses**Changes in Group structure and organization****UBS Business Solutions AG**

In 2015, UBS Business Solutions AG was established as a direct subsidiary of UBS Group AG to act as the Group service company and UBS AG transferred the ownership of the majority of its existing service subsidiaries outside the US to UBS Business Solutions AG. In 2017, shared services functions in Switzerland and the UK were transferred from UBS AG to UBS Business Solutions AG. In 2017, UBS AG also completed the transfer of the shared services employees in the US to its US service company, UBS Business Solutions US LLC, a wholly owned subsidiary of UBS Americas Holding LLC.

UBS Europe SE

In 2016, UBS AG merged its Wealth Management subsidiaries in Italy, Luxembourg (including its branches in Austria, Denmark and Sweden), the Netherlands and Spain into UBS Deutschland AG, which was renamed to UBS Europe SE, in order to establish UBS AG's new European legal entity, which is headquartered in Frankfurt, Germany.

The previously announced combined UK business transfer and cross-border merger of UBS Limited into UBS Europe SE took place on 1 March 2019.

Transfer of assets and liabilities from UBS Limited to UBS AG, London Branch

In the fourth quarter of 2018, clients and other counterparties of UBS Limited who can be serviced by UBS AG, London Branch were generally migrated to UBS AG, London Branch. Transactions affecting the businesses that were transferred which occurred on or after the transfer date were recorded in UBS AG, London Branch.

UBS Asset Management AG

In 2016, UBS AG transferred the majority of the operating subsidiaries of Asset Management to UBS Asset Management AG.

Increase of stake in and consolidation of UBS Securities China

In December 2018, UBS AG increased its shareholding in UBS Securities China from 24.99% to 51%, acquiring control of the entity in accordance with IFRS 10, *Consolidated Financial Statements*. Upon acquisition of control, UBS AG remeasured its former 24.99% holding at fair value, resulting in a pre-tax loss of USD 270 million, recognized in *Other income*. In addition, a net foreign currency translation gain of USD 46 million was recognized upon derecognition of the former investment in associate, also in *Other income*.

The cost of acquisition of the additional 26.01% stake was USD 125 million. Upon consolidation, UBS AG recognized USD 102 million of goodwill and USD 278 million of other net assets. In addition, a non-controlling interest of USD 136 million was recognized.

Acquisitions

In October 2018, UBS AG acquired certain assets and liabilities from Nordea's Luxembourg-based private banking business for a consideration of approximately EUR 120 million. As a result of the transaction, UBS AG recognized a total of EUR 1.1 billion of loans (mortgages, Lombard loans, overdrafts), EUR 1.3 billion of cash and EUR 2.4 billion of deposits, as well as approximately EUR 75 million of intangible assets and approximately EUR 50 million of goodwill, recognized in Global Wealth Management. In addition, UBS AG reported an increase of approximately EUR 9.5 billion in client assets, of which approximately EUR 6.1 billion count as invested assets.

Sales and disposals of subsidiaries and businesses

In 2018, 2017 and 2016, no significant subsidiaries were removed from the scope of consolidation as a result of sales or disposals.

In the third quarter of 2018, UBS AG completed the sale of Widder Hotel, resulting in a pre-tax gain on sale of subsidiaries and businesses of USD 25 million and a pre-tax gain on sale of real estate of USD 31 million.

In 2017, UBS AG completed the sale of Asset Management's fund administration servicing units in Luxembourg and Switzerland to Northern Trust, resulting in a pre-tax gain on sale of USD 153 million. Also in 2017, UBS AG completed the sale of a life insurance subsidiary within Global Wealth Management. A loss on sale of USD 24 million was recognized in 2016 relating to this transaction.

Note 33 Operating leases and finance leases

Information on lease contracts classified as operating leases where UBS AG is the lessee is provided in Note 33a and information on finance leases where UBS AG acts as a lessor is provided in Note 33b.

a) Operating lease commitments

As of 31 December 2018, UBS AG was obligated under a number of non-cancelable operating leases for premises and equipment used primarily for banking purposes. The significant premises leases usually include renewal options and escalation clauses in line with general office rental market conditions, as well as rent adjustments based on price indices. However, the

lease agreements do not contain contingent rent payment clauses and purchase options, nor do they impose any restrictions on UBS AG's ability to pay dividends, engage in debt financing transactions or enter into further lease agreements.

→ Refer to Note 1d for more information on the expected effects of adoption of IFRS 16, *Leases*, effective 1 January 2019

<i>USD million</i>	31.12.18
Expenses for operating leases to be recognized in:	
2019	658
2020	622
2021	528
2022	474
2023	434
2024 and thereafter	1,830

Sublease rental income	52	68	79
Net operating lease expense recognized in the income statement	611	629	666

b) Finance lease receivables

UBS AG leases a variety of assets to third parties under finance leases, such as commercial vehicles, production lines, medical equipment, construction equipment and aircraft. At the end of the respective lease term, assets may be sold to third parties or further leased. Lessees may participate in any sales proceeds achieved. Lease expenses cover the cost of the assets less their residual value as well as financing costs.

As of 31 December 2018, unguaranteed residual values of USD 156 million had been accrued, and the ECL stage 3 allowance for uncollectible minimum lease payments receivable amounted to USD 7 million. No contingent rents were received in 2018. Amounts in the table below are disclosed on a gross basis. The finance lease receivable in Note 17a of USD 1,091 million is presented net of expected credit loss allowances.

Lease receivables

¹ Cash to be paid in the future by either UBS AG or the counterparty. Certain reverse repurchase agreements and repurchase agreements were reclassified from amortized cost to fair value through profit or loss upon adoption of IFRS 9 as of 1 January 2018. Refer to Note 1c for more information.

Note 35 Related parties

UBS AG defines related parties as associates (entities that are significantly influenced by UBS), joint ventures (entities in which UBS shares control with another party), post-employment benefit plans for UBS AG employees, key management personnel, close family members of key management personnel

and entities that are, directly or indirectly, controlled or jointly controlled by key management personnel or their close family members. Key management personnel is defined as members of the Board of Directors (BoD) and Executive Board (EB).

a) Remuneration of key management personnel

The Chairman of the BoD has a specific management employment contract and receives pension benefits upon retirement. Total remuneration of the Chairman of the Board of Directors and all EB members is included in the table below.

Total (CHF million)⁴	100	98	97

¹ Includes role-based allowances in line with market practice in response to regulatory requirements. ² The cash portion may also include blocked shares in line with regulatory requirements. ³ Expenses for shares granted are calculated at grant date of the respective award and allocated over the vesting period of generally 5 years. Refer to Note 30 for more information. In 2018, 2017 and 2016, equity-based compensation was entirely comprised of EOP awards. ⁴ Swiss franc amounts disclosed represent the respective US dollar amounts translated at the applicable performance award currency exchange rates (2018: CHF / USD 0.98; 2017: CHF / USD 1.00; 2016: CHF / USD 0.99).

The independent members of the BoD do not have employment or service contracts with UBS AG, and thus are not entitled to benefits upon termination of their service on the BoD. Payments to these individuals for their services as external board members

amounted to USD 7.6 million (CHF 7.4 million) in 2018, USD 7.1 million (CHF 7.1 million) in 2017 and USD 7.2 million (CHF 7.2 million) in 2016.

b) Equity holdings of key management personnel

Equity holdings of key management personnel

	31.12.18	31.12.17
Number of stock options from equity participation plans held by non-independent members of the BoD and the EB members ¹	0	398,867
Number of shares held by members of the BoD, EB and parties closely linked to them ²	5,676,989	3,709,539

¹ Refer to Note 30 for more information. ² Excludes shares granted under variable compensation plans with forfeiture provisions.

Of the share totals above, 95,597 shares were held by close family members of key management personnel on 31 December 2018 and 31 December 2017. No shares were held by entities that are directly or indirectly controlled or jointly controlled by key management personnel or their close family members on

31 December 2018 and 31 December 2017. Refer to Note 30 for more information. As of 31 December 2018, no member of the BoD or EB was the beneficial owner of more than 1% of UBS Group AG's shares.

Note 35 Related parties (continued)**c) Loans, advances and mortgages to key management personnel**

The non-independent members of the BoD and EB members are granted loans, fixed advances and mortgages in the ordinary course of business on substantially the same terms and conditions that are available to other employees, including interest rates and collateral, and neither involve more than the normal risk of collectibility nor contain any other unfavorable

features for the firm. Independent BoD members are granted loans and mortgages in the ordinary course of business at general market conditions.

Movements in the loan, advances and mortgage balances are as follows.

Loans, advances and mortgages to key management personnel¹

<i>USD million, except where indicated</i>	2018	2017

¹ All loans are secured loans. ² Excludes unused uncommitted credit facilities for one EB member of USD 3,000,000 (CHF 2,949,690) as of 31 December 2018 and for two EB and one BoD member of USD 5,330,670 (CHF 5,196,294) as of 31 December 2017. ³ Swiss franc amounts disclosed represent the respective US dollar amounts translated at the relevant year-end closing exchange rate.

d) Other related-party transactions with entities controlled by key management personnel

In 2018 and 2017, UBS AG did not enter into transactions with entities that are directly or indirectly controlled or jointly controlled by UBS AG's key management personnel or their close family members and as of 31 December 2018, 31 December 2017 and 31 December 2016, there were no outstanding balances related to such transactions. Furthermore,

in 2018 and 2017, entities controlled by key management personnel did not sell any goods or provide any services to UBS AG, and therefore did not receive any fees from UBS AG. UBS AG also did not provide services to such entities in 2018 and 2017, and therefore also received no fees.

Note 36 Invested assets and net new money**Invested assets**

Invested assets include all client assets managed by or deposited with UBS AG for investment purposes. Invested assets include managed fund assets, managed institutional assets, discretionary and advisory wealth management portfolios, fiduciary deposits, time deposits, savings accounts and wealth management securities or brokerage accounts. All assets held for purely transactional purposes and custody-only assets, including corporate client assets held for cash management and transactional purposes, are excluded from invested assets as UBS AG only administers the assets and does not offer advice on how the assets should be invested. Also excluded are non-bankable assets (e.g., art collections) and deposits from third-party banks for funding or trading purposes.

Discretionary assets are defined as client assets that UBS AG decides how to invest. Other invested assets are those where the client ultimately decides how the assets are invested. When a single product is created in one business division and sold in another, it is counted in both the business division that manages the investment and the one that distributes it. This results in double counting within UBS AG total invested assets, as both business divisions are independently providing a service to their respective clients, and both add value and generate revenue.

Net new money

Net new money in a reporting period is the amount of invested assets that are entrusted to UBS AG by new and existing clients, less those withdrawn by existing clients and clients who terminated their relationship with UBS AG.

Net new money is calculated using the direct method, under which inflows and outflows to / from invested assets are determined at the client level based on transactions. Interest and dividend income from invested assets are not counted as net new money inflows. Market and currency movements as well as fees, commissions and interest on loans charged are excluded from net new money, as are the effects resulting from any acquisition or divestment of a UBS AG subsidiary or business. Reclassifications between invested assets and custody-only assets as a result of a change in the service level delivered are generally treated as net new money flows; however, where such change in service level directly results from a new externally imposed regulation, the one-time net effect of the implementation is reported as an asset reclassification without net new money impact.

The Investment Bank does not track invested assets and net new money. However, when a client is transferred from the Investment Bank to another business division, this produces net new money even though client assets were already with UBS AG. There were no such transfers between the Investment Bank and other business divisions in 2018 and 2017.

Invested assets and net new money

¹ Includes double counts. ² Includes interest and dividend income.

Note 37 Currency translation rates

The following table shows the rates of the main currencies used to translate the financial information of UBS AG's operations with a functional currency other than the US dollar into US dollars.

	Closing exchange rate		Average rate ¹		
	As of		For the year ended		
	31.12.18	31.12.17	31.12.18	31.12.17	31.12.16
1 CHF	1.02	1.03	1.02	1.02	1.01
1 EUR	1.15	1.20	1.18	1.14	1.10
1 GBP	1.28	1.35	1.33	1.30	1.34
100 JPY	0.91	0.89	0.91	0.89	0.92

¹ Monthly income statement items of operations with a functional currency other than the US dollar are translated with month-end rates into US dollars. Disclosed average rates for a year represent an average of 12 month-end rates, weighted according to the income and expense volumes of all operations of UBS AG with the same functional currency for each month. Weighted average rates for individual business divisions may deviate from the weighted average rates for UBS AG.

Note 38 Events after the reporting period

Events subsequent to the publication of the unaudited fourth quarter 2018 report

The 2018 results and the balance sheet as of 31 December 2018 differ from those presented in the unaudited fourth quarter 2018 report published on 22 January 2019 as a result of events adjusted for after the balance sheet date. Provisions for litigation, regulatory and similar matters increased, which reduced 2018 operating profit before tax and 2018 net profit attributable to shareholders each by USD 382 million.

→ Refer to Note 21 for more information on provisions for litigation, regulatory and similar matters

Note 39 Main differences between IFRS and Swiss GAAP

The consolidated financial statements of UBS AG are prepared in accordance with International Financial Reporting Standards (IFRS). The Swiss Financial Market Supervisory Authority (FINMA) requires financial groups that present their financial statements under IFRS to provide a narrative explanation of the main differences between IFRS and Swiss GAAP (FINMA Circular 2015 / 1 and the Banking Ordinance). Included in this Note are the significant differences in the recognition and measurement between IFRS and the provisions of the Banking Ordinance and the guidelines of FINMA governing true and fair view financial statement reporting pursuant to article 25 through article 42 of the Banking Ordinance.

1. Consolidation

Under IFRS, all entities that are controlled by the holding entity are consolidated.

Under Swiss GAAP, controlled entities that are deemed immaterial to UBS AG or that are held temporarily only are exempt from consolidation, but instead are recorded as participations accounted for under the equity method of accounting or as financial investments measured at the lower of cost or market value.

2. Classification and measurement of financial assets

Under IFRS, financial assets are classified as measured at amortized cost, fair value through other comprehensive income (FVOCI) or fair value through profit or loss (FVTPL). Whereas all equity instruments are accounted for at FVTPL by UBS AG, the classification and measurement of debt instruments depends on the nature of the business model within which the asset is held and the characteristics of the contractual cash flows of the asset.

Under Swiss GAAP, debt instruments are generally measured at amortized cost. The classification and measurement of financial assets in the form of securities depend on the nature of the asset: debt instruments that are not held to maturity (available for sale), as well as equity instruments with no permanent holding intent, are classified as *Financial investments* and measured at the lower of (amortized) cost or market value. Market value adjustments up to the original cost amount and realized gains or losses upon disposal of the investment are recorded in the income statement as *Other income from ordinary activities*. Equity instruments with a permanent holding intent are classified as participations in *Non-consolidated investments in subsidiaries and other participations* and measured at cost less impairment.

Impairment losses are recorded in the income statement as *Impairment of investments in non-consolidated subsidiaries and other participations*. Reversals of impairments up to the original cost amount as well as realized gains or losses upon disposal of the investment are recorded as *Extraordinary income / Extraordinary expenses* in the income statement.

3. Fair value option applied to financial liabilities

Under IFRS, UBS AG applies the fair value option to certain financial liabilities not held for trading. Instruments for which the fair value option is applied are accounted for at FVTPL. The amount of change in the fair value that is attributable to changes in UBS AG's own credit is presented in *Other comprehensive income* directly within *Retained earnings*. The fair value option is applied primarily to issued structured debt instruments; certain non-structured debt instruments; certain payables under repurchase agreements and cash collateral on securities lending agreements; amounts due under unit-linked investment contracts; brokerage payables; and certain loan commitments.

Under Swiss GAAP, the fair value option can only be applied to structured debt instruments that consist of a debt host contract and one or more embedded derivatives that do not relate to own equity. Furthermore, unrealized changes in fair value attributable to changes in UBS AG's own credit are not recognized, whereas realized own credit is recognized in *Net trading income*.

4. Allowances and provisions for credit losses

Under IFRS, allowances and provisions for credit losses are estimated based on an expected credit loss model. Expected credit losses (ECL) are recognized for financial assets measured at amortized cost, financial assets measured at FVOCI, fee and lease receivables, financial guarantees, loan commitments and certain other credit facilities. Maximum 12-month ECL are recognized from initial recognition of instruments in stage 1. Lifetime ECL are recognized for instruments in stage 2 if a significant increase in credit risk is detected subsequent to the instrument's initial recognition. Lifetime ECL are also recognized for credit-impaired financial instruments, referred to as instruments in stage 3. Determination of whether an instrument is credit impaired is based on the occurrence of one or more loss events.

Note 39 Main differences between IFRS and Swiss GAAP (continued)

Under Swiss GAAP, a claim is impaired and an allowance or provision for credit losses is recognized when objective evidence demonstrates that a loss event has occurred after the initial recognition and that the loss event has an effect on future cash flows that can be reliably estimated (incurred loss approach). UBS AG considers a claim to be impaired if it will be unable to collect all amounts due on it based on the original contractual terms as a result of credit deterioration of the issuer or counterparty. Impairment under the incurred loss approach is in line with ECL for credit-impaired claims in stage 3 under IFRS. A claim can be a loan or receivable or other debt instrument held to maturity carried at amortized cost, a debt instrument available for sale carried at the lower of amortized cost or market value, or a commitment, such as a letter of credit, a guarantee or a similar instrument.

An allowance for credit losses is reported as a decrease in the carrying value of a financial asset. For an off-balance sheet item, such as a commitment, a provision for credit loss is reported in *Provisions*. Changes to allowances and provisions for credit losses are recognized in *Credit loss (expense) / recovery*.

5. Hedge accounting

Under IFRS, when cash flow hedge accounting is applied, the fair value gain or loss on the effective portion of the derivative designated as a cash flow hedge is recognized in equity. When fair value hedge accounting is applied, the fair value gains or losses of the derivative and the hedged item are recognized in the income statement.

Under Swiss GAAP, the effective portion of the fair value change of the derivative instrument designated as a cash flow or as fair value hedge is deferred on the balance sheet as *Other assets* or *Other liabilities*. The carrying value of the hedged item designated in fair value hedges is not adjusted for fair value changes attributable to the hedged risk.

6. Goodwill and intangible assets

Under IFRS, goodwill acquired in a business combination is not amortized but tested annually for impairment. Intangible assets with an indefinite useful life are also not amortized but tested annually for impairment.

Under Swiss GAAP, goodwill and intangible assets with indefinite useful lives are amortized over a period not exceeding five years, unless a longer useful life, which may not exceed 10 years, can be justified. In addition, these assets are tested annually for impairment.

7. Pension and other post-employment benefit plans

Swiss GAAP permits the use of IFRS or Swiss accounting standards for pension and other post-employment benefit plans, with the election made on a plan-by-plan basis.

UBS AG has elected to apply IFRS (IAS 19) for the non-Swiss defined benefit plans and Swiss GAAP (FER 16) for the Swiss pension plan in its standalone financial statements. The requirements of Swiss GAAP are better aligned with the specific nature of Swiss pension plans, which are hybrid in that they combine elements of defined contribution and defined benefit plans, but are treated as defined benefit plans under IFRS. Key differences between Swiss GAAP and IFRS include the treatment of dynamic elements, such as future salary increases and future interest credits on retirement savings, which are not considered under the static method used in accordance with Swiss GAAP. Also, the discount rate used to determine the defined benefit obligation in accordance with IFRS is based on the yield of high-quality corporate bonds of the market in the respective pension plan country. The discount rate used in accordance with Swiss GAAP (i.e., the technical interest rate) is determined by the Pension Foundation Board based on the expected returns of the Board's investment strategy.

For defined benefit plans, IFRS requires the full defined benefit obligation net of the plan assets to be recorded on the balance sheet, with changes resulting from remeasurements recognized directly in equity. However, for non-Swiss defined benefit plans for which IFRS accounting is elected, changes due to remeasurements are recognized in the income statement of UBS AG standalone under Swiss GAAP.

Swiss GAAP requires that employer contributions to the pension fund are recognized as personnel expenses in the income statement. Further, Swiss GAAP requires an assessment as to whether, based on the financial statements of the pension fund prepared in accordance with Swiss accounting standards (FER 26), an economic benefit to, or obligation of, the employer arises from the pension fund which is recognized in the balance sheet when conditions are met. Conditions for recording a pension asset or liability would be met if, for example, an employer contribution reserve is available or the employer is required to contribute to the reduction of a pension deficit (on an FER 26 basis).

Note 39 Main differences between IFRS and Swiss GAAP (continued)

8. Netting of replacement values

Under IFRS, replacement values and related cash collateral are reported on a gross basis unless the restrictive IFRS netting requirements are met: i) existence of master netting agreements and related collateral arrangements that are unconditional and legally enforceable, both in the normal course of business and in the event of default, bankruptcy or insolvency of UBS AG and its counterparties; and ii) UBS AG's intention to either settle on a net basis or to realize the asset and settle the liability simultaneously.

Under Swiss GAAP, replacement values and related cash collateral are generally reported on a net basis, provided the master netting and the related collateral agreements are legally enforceable in the event of default, bankruptcy or insolvency of UBS AG's counterparties.

9. Negative interest

Under IFRS, negative interest income arising on a financial asset does not meet the definition of interest income and, therefore, negative interest on financial assets and negative interest on financial liabilities are presented within interest expense and interest income, respectively.

Under Swiss GAAP, negative interest on financial assets is presented within interest income and negative interest on financial liabilities is presented within interest expense.

10. Extraordinary income and expense

Certain non-recurring and non-operating income and expense items, such as realized gains or losses from the disposal of participations, fixed and intangible assets, as well as reversals of impairments of participations and fixed assets, are classified as extraordinary items under Swiss GAAP. This distinction is not available under IFRS. ▲

Note 40 Supplemental guarantor information required under SEC regulations

Joint liability of UBS Switzerland AG

In 2015, the Personal & Corporate Banking and Wealth Management businesses booked in Switzerland were transferred from UBS AG to UBS Switzerland AG through an asset transfer in accordance with the Swiss Merger Act. Under the terms of the asset transfer agreement, UBS Switzerland AG assumed joint liability for contractual obligations of UBS AG existing on the asset transfer date, including the full and unconditional guarantee of certain registered debt securities issued by UBS AG. To reflect this joint liability, UBS Switzerland AG is presented in a separate column as a subsidiary co-guarantor.

The joint liability of UBS Switzerland AG for contractual obligations of UBS AG decreased by USD 45 billion in 2018 to USD 26 billion as of 31 December 2018, mainly as the joint liability related to demand obligations booked in foreign branches expired three years after the effective date of the asset transfer.

Guarantee of PaineWebber securities

Prior to its acquisition by UBS in 2000, Paine Webber Group Inc. (PaineWebber) was an SEC registrant. Upon acquisition, PaineWebber was merged into UBS Americas Inc., a wholly owned subsidiary of UBS AG. Following the acquisition, UBS AG entered into a full and unconditional guarantee of the senior notes (Debt Securities) issued by PaineWebber. Under the guarantee, if UBS Americas Inc. failed to make any timely payment under the Debt Securities agreements, the holders of the Debt Securities or the Debt Securities trustee could have demanded payment from UBS AG without first proceeding against UBS Americas Inc. These Debt Securities matured in May 2018 and the guarantee ceased to exist. UBS Americas Inc. is therefore no longer presented in a separate column in the tables on the following pages.

Adoption of IFRS 9

Effective 1 January 2018, UBS AG adopted IFRS 9, *Financial Instruments*. The adoption of IFRS 9 has resulted in changes to the classification and measurement of certain financial instruments, which have been applied prospectively in the balance sheet from 1 January 2018.

Although the effect of IFRS 9 classification and measurement changes has been applied prospectively, UBS AG has made a series of changes to the presentation of its IFRS balance sheet to facilitate comparability and prior-period information is presented for periods ending before 1 January 2018 in this revised structure.

→ Refer to "Note 1c Changes in accounting policies and comparability and transition effects from the adoption of IFRS 9 *Financial Instruments*" in the "Consolidated financial statements" section of this report for more information

Transfer of shared services functions to Group service companies

Amounts presented in the following pages for UBS AG standalone for the years ended 31 December 2017 and 2016 include the results of shared services functions in Switzerland, the UK and the US, which were substantially transferred to Group service companies during 2017. Following the transfer, these Group service companies charge other legal entities within the Group for services provided, including a markup on costs incurred.

→ Refer to the 2017 standalone financial statements of UBS AG, available under "Holding company and significant regulated subsidiaries and sub-groups" at www.ubs.com/investors for more information on the transfer of shared services functions in 2017

Statement of appropriation of total profit / (loss) carried forward and proposed dividend distribution out of capital contribution reserve

The Board of Directors proposes that the Annual General Meeting of Shareholders (AGM) on 2 May 2019 approve the following appropriation of total profit / (loss) carried forward.

Proposed appropriation of total profit / (loss) carried forward

	USD million	CHF million
	For the year ended	For the year ended
	31,12.18	31,12.18
Net profit for the period	3,171	3,111
Profit / (loss) carried forward	0	0
Total profit / (loss) carried forward available for appropriation	3,171	3,111
Appropriation of total profit / (loss) carried forward		
Appropriation to voluntary earnings reserve	(3,171)	(3,111)
Profit / (loss) carried forward	0	0

Statement of appropriation of total profit / (loss) carried forward and proposed dividend distribution out of capital contribution reserve (continued)

Proposed dividend distribution out of capital contribution reserve

The Board of Directors proposes that the AGM on 2 May 2019 approve an ordinary dividend distribution of CHF 0.70 in cash per share of CHF 0.10 par value payable out of the capital contribution reserve. Dividends are declared and paid in Swiss francs. The total amount of the dividends will be capped at USD 3,255 million (Cap). To the extent that the USD dividend calculated based on CHF 0.70 per share would exceed the Cap on the day of the AGM, due to the exchange rate determined by the Board of Directors in its reasonable opinion, the CHF per

share amount of the dividend will be reduced on a pro-rata basis so that the total USD amount does not exceed the Cap. Provided that the proposed dividend distribution out of the capital contribution reserve is approved, the payment of CHF 0.70 per share will be made on 8 May 2019 to holders of shares on the record date 7 May 2019. The shares will be traded ex-dividend as of 6 May 2019 and, accordingly, the last day on which the shares may be traded with entitlement to receive the dividend will be 3 May 2019.

	USD million	CHF million
	For the year ended	For the year ended
	31.12.18	31.12.18
Total statutory capital reserve: capital contribution reserve before proposed distribution¹	30,846	30,271
Proposed ordinary distribution of capital contribution reserve within statutory capital reserve: CHF 0.70 per dividend-bearing share ²	(3,255)	(2,699)
Total statutory capital reserve: capital contribution reserve after proposed distribution	27,591	27,572

¹ The Swiss Federal Tax Administration's current position is that, of the CHF 30.3 billion capital contribution reserve available as of 31 December 2018, an amount limited to CHF 15.6 billion is available from which dividends may be paid without a Swiss withholding tax deduction. ² Dividend-bearing shares are all shares issued except for treasury shares held by UBS Group AG as of the record date. The amount of USD 3,255 million represents the Cap. The amount of CHF 2,699 million presented is based on the total number of shares issued as of 31 December 2018.

Note 1 Corporate information

UBS Group AG is incorporated and domiciled in Switzerland and its registered office is at Bahnhofstrasse 45, CH-8001 Zurich, Switzerland. UBS Group AG operates under article 620ff. of the Swiss Code of Obligations as an *Aktiengesellschaft* (a corporation limited by shares).

UBS Group AG is the ultimate holding company of the UBS Group, the grantor of the majority of UBS's deferred compensation plans and the guarantor of perpetual capital notes which qualify as Basel III additional tier 1 (AT1) capital on a consolidated UBS Group basis and senior debt which contributes to the total loss-absorbing capacity (TLAC) of the Group, issued by UBS Group Funding (Switzerland) AG.

Issuance of additional tier 1 capital instruments

During 2016 and 2015, UBS Group AG issued perpetual capital notes, which qualify as Basel III AT1 capital on a consolidated UBS Group basis. The proceeds from the issuances of those instruments were on-lent to UBS AG.

In May 2018, these perpetual capital notes were transferred to UBS Group Funding (Switzerland) AG at book value with a retrospective effect as of 1 January 2018. The transfer was carried out by means of an issuer substitution pursuant to the voluntary substitution provisions provided in the terms and conditions of the relevant instruments. Following the transfer, the outstanding perpetual capital notes are guaranteed by UBS Group AG, and investors' seniority of claims against UBS Group AG remains unchanged.

In December 2018, the Swiss Parliament approved changes to the tax treatment of too big to fail (TBTF) instruments issued by

the holding companies of Swiss systemically important banks. The new law aims to eliminate the additional tax burden imposed on systemically important banks as a result of required issuances of TBTF instruments at the holding company level. In March 2019, the Swiss Federal Council determined that the rule would enter into force retroactively as of 1 January 2019. Going forward, new loss-absorbing additional tier 1 capital instruments and total loss-absorbing capacity (TLAC)-eligible senior unsecured debt will be issued directly out of UBS Group AG. It is also expected that UBS Group AG will assume outstanding capital and debt instruments that were previously issued by UBS Group Funding (Switzerland) AG as a means of managing the aforementioned tax burden.

→ **Refer to Note 16 for more information on the main terms and conditions of the perpetual capital notes issued during 2016 and 2015**

Furthermore, UBS Group AG grants Deferred Contingent Capital Plan (DCCP) awards to UBS Group employees. These DCCP awards also qualify as Basel III AT1 capital on a consolidated UBS Group basis.

As of 31 December 2018, UBS Group AG's distributable items for the purpose of AT1 capital instruments were USD 38.8 billion (CHF 38.2 billion) (31 December 2017: USD 38.8 billion (CHF 37.8 billion)). For this purpose, distributable items are defined in the terms and conditions of the relevant instruments as the aggregate of (i) net profits carried forward and (ii) freely distributable reserves, in each case, less any amounts that must be contributed to legal reserves under applicable law.

Note 2 Accounting policies

The UBS Group AG standalone financial statements are prepared in accordance with the principles of the Swiss Law on Accounting and Financial Reporting (32nd title of the Swiss Code of Obligations).

The functional currency of UBS Group AG is the US dollar. The significant accounting and valuation principles applied are described below.

Change in functional and presentation currency

As of 1 October 2018 (the conversion date) UBS Group AG prospectively changed its functional currency from Swiss francs to US dollars.

UBS Group AG also prospectively changed the presentation currency of its standalone financial statements from Swiss francs to US dollars. The interim Swiss franc financial information of UBS Group AG as of 30 September 2018, including the balance sheet, year-to-date income statement and all related notes, was translated into US dollars at the closing rate on 30 September 2018 (the conversion date rate). This conversion had no impact on the income statement or equity.

As the primary presentation currency of the standalone financial statements of UBS Group AG is US dollars, amounts in Swiss francs are additionally presented for each component of the financial statements. UBS Group AG applies the modified closing rate method for translating the US dollar amounts into Swiss francs: assets and liabilities are translated at the closing rate, equity positions at historic rates and income and expense items at the weighted average rate for the period. All resulting currency translation effects are recognized separately in Voluntary earnings reserve, amounting to a positive currency translation effect of CHF 81 million as of 31 December 2018. Under Swiss Code of Obligations, prior-period financial statements have not been restated. All comparative prior-period information as of and for the year ended 31 December 2017 is translated at the closing rate as of 31 December 2017.

Foreign currency translation

Transactions denominated in foreign currency are translated into US dollars at the spot exchange rate on the date of the transaction. At the balance sheet date, all current assets and short-term liabilities as well as *Financial assets* measured at fair value, which are denominated in a foreign currency, are translated into US dollars using the closing exchange rate. For other non-current assets and long-term liabilities, where the asset mirrors the terms of a corresponding liability or the asset and liability otherwise form an economic hedge relationship, the asset and liability are treated as one unit of account for foreign currency translation purposes, with offsetting unrealized foreign currency translation gains and losses based on the closing exchange rate presented net in the income statement. *Investments in subsidiaries* measured at historic cost are translated at the spot exchange rate on the date of the

transaction. Currency translation effects from dividends paid in Swiss francs are recognized in equity. All other currency translation effects are recognized in the income statement.

The main currency translation rates used by UBS Group AG are provided in Note 37 of the consolidated financial statements.

Marketable securities

Marketable securities include investments in alternative investment vehicles (AIVs) with a short-term holding period. The holding period is deemed short term if the vesting of the awards hedged by the AIV is within 12 months after the balance sheet date. These are equity instruments and are measured at fair value based on quoted market prices or other observable market prices as of the balance sheet date. Gains and losses resulting from fair value changes are recognized in *Financial income* and *Financial expenses*, respectively.

Financial assets

Financial assets include investments in AIVs with a long-term holding period. The holding period is deemed long-term if the vesting of the awards hedged by the AIV is more than 12 months after the balance sheet date. These are equity instruments and are measured at fair value based on their quoted market prices or other observable market prices as of the balance sheet date. Gains and losses resulting from fair value changes are recognized in *Financial income* and *Financial expenses*, respectively.

Investments in AIVs that have no quoted market price or no other observable market price are recognized as *Financial assets* and are measured at their acquisition cost adjusted for impairment losses.

Financial assets further include loans granted to UBS AG that substantially mirror the terms of AT1 perpetual capital notes issued and fixed-term deposits with UBS AG with maturities more than 12 months after the balance sheet date. The loans and deposits are measured at nominal value.

→ Refer to Note 14 for more information

Derivative instruments

UBS Group AG uses derivative instruments to manage exposures to foreign currency risks from investments in foreign subsidiaries. The derivative instruments are entered into with UBS AG, mirroring the conditions of the closing transactions UBS AG enters into with third parties.

Derivative instruments are measured at fair value based on quoted market prices or other observable market prices as of the balance sheet date. Unrealized gains and losses are recognized as *Accrued income and prepaid expenses* and *Accrued expenses and deferred income*, respectively. Corresponding gains and losses resulting from fair value changes are recognized in *Financial income* and *Financial expenses*, respectively.

Note 2 Accounting policies (continued)

Investments in subsidiaries

Investments in subsidiaries are equity interests that are held to carry on the business of UBS Group or for other strategic purposes. They include all subsidiaries directly held by UBS Group AG through which UBS conducts its business on a global basis. The investments are measured individually and carried at cost less impairment.

- Refer to Note 13 for more information
- Refer to Note 2 in the “Consolidated financial statements” section of this report for a description of businesses of the UBS Group

Treasury shares

Treasury shares acquired by UBS Group AG are recognized at acquisition cost and are presented as a deduction from shareholders' equity. Upon disposal or settlement of related share awards, the realized gain or loss is recognized through the income statement as *Financial income* and *Financial expenses*, respectively. For settlement of related share awards, the realized gains and losses on treasury shares represent the difference between the market price of the treasury shares at settlement and their acquisition cost.

For shares of UBS Group AG acquired by a direct or indirect subsidiary, a *Reserve for own shares held by subsidiaries* is generally created in UBS Group AG's equity. However, where UBS AG or UBS Switzerland AG acquire shares of UBS Group AG and hold them in their trading portfolios, no *Reserve for own shares held by subsidiaries* is created.

- Refer to Note 19 for more information

Equity participation and other compensation plans

Transfer from UBS AG to UBS Group AG

The transfer of the deferred compensation plans and related hedging assets in 2014 was conducted on an arm's length basis, with a step-up of the plan obligation to fair value. This step-up resulted in a net liability that was recorded in the standalone financial statements of UBS AG and transferred to UBS Group AG (net liability related to deferred compensation plan transfer) in 2014. The fair value of this net liability is taken into account in the income statement over the average vesting period (for share awards) or upon exercise / expiry (for option awards) as *Other operating income*. Upon exercise of option awards that are settled using conditional capital, the fair value of this net liability is recorded in the *Statutory capital reserve* within *General reserves*. The difference between the fair value of the hedging assets and the fair value of the obligations on the plans transferred was compensated for with a loan from UBS AG to UBS Group AG.

Equity participation plans

The grant date fair value of equity-settled share-based compensation awards granted to employees is generally recognized over the vesting period of the awards. Awards granted in the form of UBS Group AG shares and notional shares are settled by delivering UBS Group AG shares at vesting and are recognized as *Compensation-related long-term liabilities* if vesting is more than 12 months after the balance sheet date or as *Accrued expenses and deferred income* if vesting is within 12 months from the balance sheet date. The amount recognized is adjusted for forfeiture assumptions, such that the amount ultimately recognized is based on the number of awards that meet the related service conditions at the vesting date. The grant date fair value is based on the UBS Group AG share price, taking into consideration post-vesting sale and hedge restrictions, non-vesting conditions and market conditions, where applicable.

Upon settlement of the share awards, any realized gain or loss is recognized in the income statement as *Other operating income* and *Other operating expenses*, respectively. Realized gains and losses on share awards represent the difference between the market price of the treasury shares at settlement and the grant date fair value of the share awards.

For certain awards, employees receive beneficial and legal ownership of the underlying UBS Group AG shares at the grant date (prepaid awards). Such prepaid awards are recognized as *Prepaid assets* if vesting is more than 12 months after the balance sheet date or as *Accrued income and prepaid expenses* if vesting is within 12 months from the balance sheet date.

Shares awarded to employees that are settled using conditional capital are accounted for as follows at settlement: the amount paid by the employees for the nominal value of the shares awarded is recorded in *Share capital*, while any paid amount exceeding the nominal value is considered to be share premium and is recorded in the *Statutory capital reserve* within *General reserves*.

Other compensation plans

Deferred compensation plans that are not share-based, including DCCP awards and awards in the form of AIVs, are accounted for as cash-settled awards. The present value or fair value of the amount payable to employees that is settled in cash is recognized as a liability generally over the vesting period, as *Compensation-related long-term liabilities* if vesting is more than 12 months after the balance sheet date and as *Accrued expenses and deferred income* if vesting is within 12 months from the balance sheet date. The liabilities are remeasured at each balance sheet date at the present value of the corresponding DCCP award and the fair value of investments in AIVs, respectively. Gains and losses resulting from remeasurement of the liabilities are recognized in *Other operating income* and *Other operating expenses*, respectively.

Note 2 Accounting policies (continued)

Recharge of compensation expenses

Expenses related to deferred compensation plans are recharged by UBS Group AG to its subsidiaries employing the personnel. Upon recharge, UBS Group AG recognizes a receivable from its subsidiaries corresponding to a liability representing its obligation toward employees.

Dispensations in the standalone financial statements

As UBS Group AG prepares consolidated financial statements in accordance with IFRS, UBS Group AG is exempt from various disclosures in the standalone financial statements. The dispensations include the management report and the statement of cash flows, as well as certain note disclosures.

Income statement notes

Note 3 Dividend income from investments in subsidiaries

Dividend income from investments in subsidiaries in 2018 consists of USD 3,123 million (CHF 3,065 million) received from UBS AG related to the financial year 2017, which was approved by the Annual General Meeting of Shareholders of UBS AG on 26 April 2018, USD 86 million (CHF 84 million) received from UBS Business Solutions AG related to the financial year ended 31 December 2017, which was approved by the Annual General Meeting of Shareholders of UBS Business Solutions AG on 19 April 2018, and USD 3 million (CHF 3 million) received from UBS Group Funding (Switzerland) AG related to the financial year ended 31 December 2017, which was approved by the

Annual General Meeting of Shareholders of UBS Group Funding (Switzerland) AG on 8 March 2018. In 2017, dividend income from investments in subsidiaries consisted of USD 5 million (CHF 5 million) received from UBS Business Solutions AG related to the financial year ended 31 December 2016, which was approved by the Annual General Meeting of Shareholders of UBS Business Solutions AG on 27 April 2017, and USD 5 million (CHF 5 million) received from UBS Group Funding (Jersey) Ltd. in the course of the liquidation of the entity, which was dissolved on 24 November 2017.

Note 13 Investments in subsidiaries

Unless otherwise stated, the subsidiaries listed below have share capital consisting solely of ordinary shares, which are held by UBS Group AG or UBS AG, respectively. The proportion of ownership interest held is equal to the voting rights held by UBS Group AG or UBS AG, respectively. The country where the respective registered office is located is also the principal place of business. UBS AG operates through a global network of branches and a significant proportion of its business activity is conducted outside Switzerland in the UK, US, Singapore, Hong Kong and other countries. UBS Europe SE has branches and

offices in a number of EU member states, including Germany, Italy, Luxembourg, Spain and Austria. Share capital is provided in the currency of the legally registered office.

In 2017, UBS transferred shared services functions in Switzerland from UBS AG to UBS Business Solutions AG. This transfer resulted in a decrease of the investment value of UBS AG and a corresponding increase in the investment value of UBS Business Solutions AG.

UBS Group Funding (Jersey) Ltd. was dissolved in 2017.

Subsidiaries of UBS Group AG as of 31 December 2018

Company	Registered office	Share capital in million	Equity interest accumulated in %
UBS AG	Zurich and Basel, Switzerland	CHF 385.8	100.0
UBS Business Solutions AG ¹	Zurich, Switzerland	CHF 1.0	100.0
UBS Group Funding (Switzerland) AG	Zurich, Switzerland	CHF 0.1	100.0

¹ UBS Business Solutions AG holds subsidiaries in Poland, China and India.

Individually significant subsidiaries of UBS AG as of 31 December 2018¹

¹ Treasury shares held by UBS Group AG had a carrying value of USD 2,612 million (CHF 2,569 million) as of 31 December 2018 (31 December 2017: USD 2,201 million (CHF 2,145 million)).

Additional information

Note 20 Guarantees

As of 31 December 2018, UBS Group Funding (Switzerland) AG, a subsidiary of UBS Group AG, had issued USD 31,448 million (CHF 30,920 million) equivalent of senior debt which contributes to the total loss-absorbing capacity (TLAC) of the Group (31 December 2017: USD 28,422 million (CHF 27,706 million)). Further, UBS Group Funding (Switzerland) AG had issued

USD 10,334 million (CHF 10,161 million) equivalent of perpetual capital notes which qualify as Basel III AT1 capital on a consolidated UBS Group basis. UBS Group AG issued guarantees to the external investors against any default in payments of interest and principal by UBS Group Funding (Switzerland) AG.

Note 21 Assets pledged to secure own liabilities

As of 31 December 2018, total pledged assets of UBS Group AG amounted to USD 1,862 million (CHF 1,831 million). These assets consisted of certain liquid assets, marketable securities and financial assets and were pledged to UBS AG. As of 31 December 2017, total pledged assets of UBS Group AG

amounted to USD 4,449 million (CHF 4,337 million). The associated liabilities secured by these pledged assets were USD 633 million (CHF 623 million) and USD 1,846 million (CHF 1,800 million) as of 31 December 2018 and 31 December 2017, respectively.

Note 22 Contingent liabilities

UBS Group AG is jointly and severally liable for the combined value added tax (VAT) liability of UBS entities that belong to the VAT group of UBS in Switzerland.

General rules

Under the Swiss Federal Act on Financial Market Infrastructures and Market Conduct in Securities and Derivatives Trading of 19 June 2015 (FMIA), anyone holding shares in a company listed in Switzerland, or holding derivative rights related to shares of such a company, must notify the company and the SIX Swiss Exchange (SIX) if the holding reaches, falls below or exceeds one of the following thresholds: 3, 5, 10, 15, 20, 25, 33 $\frac{1}{3}$, 50, or 66 $\frac{2}{3}$ % of voting rights, regardless of whether or not such rights may be exercised. Nominee companies that cannot autonomously decide how voting rights are exercised are not obligated to notify the company and SIX if they reach, exceed or fall below the threshold percentages.

Pursuant to the Swiss Code of Obligations, UBS discloses in its financial statements the identity of any shareholder with a holding of more than 5% of the total share capital of UBS Group AG.

Shareholders not registered in the UBS share register

According to the FMIA disclosure notifications filed with UBS Group AG and the SIX as of 31 December 2018, the following entities held more than 3% of the total share capital of UBS Group AG: Dodge & Cox, San Francisco, disclosed a holding of 3.03% of the total share capital of UBS Group AG on 30 November 2018; BlackRock Inc., New York, disclosed a holding of 4.99% on 28 August 2018; and MFS Investment Management, Boston, disclosed a holding of 3.05% on

10 February 2016. The above disclosures have not been subsequently superseded and no new disclosures of significant shareholdings have been made since 31 December 2018.

In accordance with the FMIA, the aforementioned holdings are calculated in relation to the total share capital of UBS Group AG reflected in its Articles of Association at the time of the respective disclosure notification.

Information on disclosures under the FMIA is available at www.six-exchange-regulation.com/en/home/publications/significant-shareholders.html.

Shareholders registered in the UBS share register

The shareholders (acting in their own name or in their capacity as nominees for other investors or beneficial owners) listed in the table above were registered in the UBS share register with 3% or more of the total share capital of UBS Group AG as of 31 December 2018 or as of 31 December 2017.

Cross-shareholdings

UBS Group AG has no cross-shareholdings where reciprocal ownership would be in excess of 5% of capital or voting rights with any other company.

Note 24 Share and option ownership of the members of the Board of Directors, the Group Executive Board and other employees

To the General Meeting of
UBS Group AG, Zurich

Basel, 14 March 2019

Report of the statutory auditor on the financial statements

As statutory auditor, we have audited the financial statements of UBS Group AG, which comprise the balance sheet, income statement and notes for the year ended 31 December 2018.

Board of Directors' responsibility

The Board of Directors is responsible for the preparation of the financial statements in accordance with the requirements of Swiss law and the company's articles of incorporation. This responsibility includes designing, implementing and maintaining an internal control system relevant to the preparation of financial statements that are free from material misstatement, whether due to fraud or error. The Board of Directors is further responsible for selecting and applying appropriate accounting policies and making accounting estimates that are reasonable in the circumstances.

Auditor's responsibility

Our responsibility is to express an opinion on these financial statements based on our audit. We conducted our audit in accordance with Swiss law and Swiss Auditing Standards. Those standards require that we plan and perform the audit to obtain reasonable assurance whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers the internal control system relevant to the entity's preparation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control system. An audit also includes evaluating the appropriateness of the accounting policies used and the reasonableness of accounting estimates made, as well as evaluating the overall presentation of the financial statements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the financial statements for the year ended 31 December 2018 comply with Swiss law and the company's articles of incorporation.

Report on key audit matters based on the circular 1/2015 of the Federal Audit Oversight Authority

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the financial statements of the current period. These matters were addressed in the context of our audit of the financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters. For each matter below, our description of how our audit addressed the matter is provided in that context.

We have fulfilled the responsibilities described in the *Auditor's responsibility* section of our report, including in relation to these matters. Accordingly, our audit included the performance of procedures designed to respond to our assessment of the risks of material misstatement of the financial statements. The results of our audit procedures, including the procedures performed to address the matters below, provide the basis for our audit opinion on the financial statements.

Change in functional and presentation currency

Area of focus As of 1 October 2018 (the conversion date) UBS Group AG prospectively changed its functional and presentation currency from Swiss francs to US dollars. The interim Swiss franc financial information of UBS Group AG as of 30 September 2018, including the balance sheet, year-to-date income statement and all related notes, was translated into US dollars at the closing rate on 30 September 2018 (the conversion date rate). This conversion had no impact on the income statement or equity. See note 2 to the UBS Group AG financial statements.

Our audit response We obtained an understanding, evaluated the design and tested the operating effectiveness of the key controls over the prospective application of the change in functional and presentation currency of the standalone financial statements of UBS Group AG. We assessed the completeness and accuracy of the data used in the calculation in US dollars. We have also assessed the disclosure regarding the change in functional and presentation currency (see note 2).

Report on other legal requirements

We confirm that we meet the legal requirements on licensing according to the Auditor Oversight Act (AOA) and independence (article 728 CO and article 11 AOA) and that there are no circumstances incompatible with our independence.

In accordance with article 728a para. 1 item 3 CO and Swiss Auditing Standard 890, we confirm that an internal control system exists, which has been designed for the preparation of financial statements according to the instructions of the Board of Directors.

We further confirm that the proposed appropriation of available earnings complies with Swiss law and the company's articles of incorporation. We recommend that the financial statements submitted to you be approved.

Independent Auditor's Report
to the Board of Directors of

UBS Group AG, Zurich

As special auditors of UBS Group AG, we have audited the issuance of new shares and the preconditions for the adjustment of the provisions regarding the conditional capital increase according to article 4a of the articles of association in the period from 1 January 2018 to 31 December 2018 in accordance with article 653f paragraph 1 of the Swiss code of obligations (CO).

According to article 4a of the articles of association, the following possibilities for the issue of conditional capital exist:

- Paragraph 1; employee stock option plans of UBS Group AG, based on the resolution of the extraordinary general meeting of 26 November 2014.
- Paragraph 2; conversion rights and/or warrants granted in connection with the issue of bonds or similar financial instruments, based on the resolution of the extraordinary general meeting of 26 November 2014.

Board of Directors' Responsibility

The Board of Directors is responsible for the new share issue in accordance with the legal requirements and the company's articles of association.

Auditor's Responsibility

Our responsibility is to express an opinion based on our audit as to whether the new share issue complies with Swiss law and the company's articles of incorporation. We conducted our audit in accordance with Swiss Auditing Standards. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the new share issue complies with the legal requirements and the company's articles of incorporation.

An audit involves performing procedures to obtain audit evidence so that significant breaches of the legal requirements and the company's articles of incorporation for the new share issue may be identified with reasonable assurance. The procedures selected depend on the auditor's judgement, including the assessment of the risks of material breaches of the requirements concerning the new share issue, whether due to fraud or error.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion

- the issue of 2'538'146 new registered shares with a nominal value of CHF 0.10 per share relating to the employee stock option plans of UBS Group AG, according to article 4a paragraph 1 of the articles of association, was in accordance with the provisions of Swiss law and the company's articles of association;
- no new registered shares relating to the conversion rights and/or warrants granted in connection with the issue of bonds or similar financial instruments, according to article 4a paragraph 2 of the articles of association, were issued in the reporting period.

¹ As of 1 October 2018, UBS AG prospectively changed the presentation currency of its financial statements from Swiss francs to US dollars. Refer to "Note 2b Changes in accounting policies" in the "UBS AG standalone financial statements (audited)" section of the UBS AG standalone financial statements and regulatory information for the year ended 31 December 2018 under "Holding company and significant regulated subsidiaries and sub-groups" at www.ubs.com/investors for more information. ² Figures as of or for the year ended 31 December 2017 have been adjusted for consistency with the full-year audited financial statements and / or local regulatory reporting, which were finalized after the publication of the UBS Group AG Annual Report 2017 and the 31 December 2017 Pillar 3 report on 9 March 2018. ³ UBS AG and UBS Switzerland AG financial information is prepared in accordance with Swiss GAAP (FINMA Circular 2015/1 and Banking Ordinance), but does not represent financial statements under Swiss GAAP. ⁴ UBS Limited financial information is prepared in accordance with International Financial Reporting Standards (IFRS), as endorsed by the EU, but does not represent financial statements under IFRS. ⁵ UBS Americas Holding LLC financial information is prepared in accordance with accounting principles generally accepted in the US (US GAAP), but does not represent financial statements under US GAAP. ⁶ For UBS AG and UBS Switzerland AG, based on applicable transitional arrangements for Swiss systemically relevant banks (SRBs). For UBS Limited, based on Directive 2013/36/EU and Regulation 575/2013 (together known as CRD IV) and their related technical standards, as implemented within the UK by the Prudential Regulation Authority (PRA). For UBS Americas Holding LLC, based on applicable US Basel III rules, with total loss-absorbing capacity requirements effective from 1 January 2019 only. ⁷ Refer to the 31 December 2018 Pillar 3 report under "Pillar 3 disclosures" at www.ubs.com/investors for more information. ⁸ For UBS AG, on the basis of going concern capital. On the basis of tier 1 capital for UBS Limited and UBS Americas Holding LLC. ⁹ There was no local disclosure requirement for UBS Americas Holding LLC as of 31 December 2018 and 31 December 2017. ¹⁰ For UBS Limited, the values represent an average of the month-end balances for the twelve months ending 31 December 2018 and 31 December 2017 in line with the European Banking Authority guidelines on the liquidity coverage ratio disclosure (EBA/GL/2017/01). Including PRA Pillar 2 requirements, the equivalent average ratios were 179% and 187% for 31 December 2018 and 31 December 2017, respectively. ¹¹ UBS AG is required to maintain a minimum liquidity coverage ratio of 105% as communicated by FINMA. ¹² UBS Switzerland AG, as a Swiss SRB, is required to maintain a minimum liquidity coverage ratio of 100%. ¹³ Refer to the "Capital management" section of this report for more information on the joint and several liability. Under certain circumstances, the Swiss Banking Act and FINMA's Banking Insolvency Ordinance authorize FINMA to modify, extinguish or convert to common equity liabilities of a bank in connection with a resolution or insolvency of such bank.

UBS Group AG is a holding company and conducts substantially all of its operations through UBS AG and its subsidiaries. UBS Group AG and UBS AG have contributed a significant portion of their respective capital and provide substantial liquidity to subsidiaries. Many of these subsidiaries are subject to regulations requiring compliance with minimum capital, liquidity and similar requirements. The table in this section summarizes the regulatory capital components and capital ratios of our significant regulated subsidiaries and sub-groups determined under the regulatory framework of each subsidiary's or sub-group's home jurisdiction.

- **Refer to "Capital and capital ratios of our significant regulated subsidiaries" in the "Capital management" section of this report for more information**
- **Refer to "Note 26 Restricted and transferred financial assets" in the "Consolidated financial statements" section of this report for more information.**

Supervisory authorities generally have discretion to impose higher requirements or to otherwise limit the activities of subsidiaries. Supervisory authorities also may require entities to measure capital and leverage ratios on a stressed basis and may limit the ability of the entity to engage in new activities or take capital actions based on the results of those tests.

In June 2018, the Federal Reserve Board released the results of its Comprehensive Capital Analysis and Review (CCAR) and did not object to UBS Americas Holding LLC's capital plan.

Standalone regulatory information for UBS AG, UBS Switzerland AG and UBS Limited as well as consolidated regulatory information for UBS Americas Holding LLC is provided in the

31 December 2018 Pillar 3 report, which is available under "Pillar 3 disclosures" at www.ubs.com/investors. Standalone financial statements for UBS Group AG as well as standalone financial statements and regulatory information for UBS AG and UBS Switzerland AG are available under "Holding company and significant regulatory subsidiaries and sub-groups" at www.ubs.com/investors.

Asset transfer from UBS Limited to UBS AG and merger of UBS Limited into UBS Europe SE

On 1 March 2019, the previously announced combined UK business transfer and cross-border merger of UBS Limited into UBS Europe SE took place.

Former clients and other counterparties of UBS Limited who can be serviced by UBS AG's London Branch were migrated to UBS AG's London Branch prior to the merger. This business transfer included a transfer of net assets against cash consideration of USD 0.7 billion, with no effect on the equity or profit or loss of UBS AG. Total assets of UBS AG increased by USD 4.4 billion, and total liabilities increased by USD 3.7 billion.

As a result of the cross-border merger, we expect that UBS Europe SE will become subject to direct supervision by the European Central Bank and will be considered a significant regulated subsidiary from a Group reporting perspective. Starting with the first quarter of 2019, we will include financial and regulatory information of UBS Europe SE in our quarterly reports and Pillar 3 reports.

- **Refer to the "Regulatory and legal developments" and "Risk factors" sections of this report for more information**

UBS Group AG consolidated supplemental disclosures required under SEC regulations

A – Introduction

The following pages contain supplemental UBS Group AG disclosures that are required under SEC regulations. UBS Group AG's consolidated financial statements have been prepared in accordance with International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB) and are denominated in US dollars (USD), which is also the functional currency of UBS Group AG, UBS AG's Head Office, UBS AG's London Branch and UBS's US-based operations.

Effective 1 January 2018, UBS adopted IFRS 9, *Financial Instruments*. The adoption of IFRS 9 has resulted in changes to the classification and measurement of certain financial instruments, which have been applied prospectively in the balance sheet from 1 January 2018.

Although the effect of IFRS 9 classification and measurement changes has been applied prospectively, UBS has made a series of changes to the presentation of its IFRS balance sheet to facilitate comparability and prior-period information is presented for periods ending before 1 January 2018 in this revised structure.

→ **Refer to "Note 1c Changes in accounting policies and comparability and transition effects from the adoption of IFRS 9 *Financial Instruments*" in the "Consolidated financial statements" section of this report for more information**

¹ Refer to "Note 9 Earnings per share (EPS) and shares outstanding" in the "Consolidated financial statements" section of this report for more information. ² Refer to the "Performance targets and measurement" section of this report for more information on our performance targets. ³ Calculated as net profit attributable to shareholders / average equity attributable to shareholders. ⁴ Calculated as net profit attributable to shareholders before amortization and impairment of goodwill and intangible assets / average equity attributable to shareholders less average goodwill and intangible assets. ⁵ Calculated as adjusted net profit attributable to shareholders before amortization and impairment of goodwill and intangible assets and before deferred tax expense or benefit / average equity attributable to shareholders less average goodwill and intangible assets and less average deferred tax assets that do not qualify as common equity tier 1 capital. ⁶ Calculated as net profit attributable to shareholders / average common equity tier 1 capital. ⁷ Calculated as operating income before credit loss expense or recovery / average risk-weighted assets and average leverage ratio denominator, respectively. ⁸ Calculated as operating expenses / operating income before credit loss expense or recovery. ⁹ Calculated as adjusted operating expenses / adjusted operating income before credit loss expense or recovery. ¹⁰ Calculated as change in net profit attributable to shareholders from continuing operations between current and comparison periods / net profit attributable to shareholders from continuing operations of comparison period. ¹¹ Based on the Swiss systemically relevant bank (SRB) framework as of 1 January 2020 and the fully applied Basel III framework. Refer to the "Capital management" section of the report for the respective period for more information. ¹² Based on the Swiss SRB framework as of 1 January 2020. Refer to the "Capital management" section of this report for more information. ¹³ From 31 December 2015 onward, the leverage ratio denominator calculation is aligned with the Basel III rules. Figures for periods prior to 31 December 2015 are calculated in accordance with former Swiss SRB rules and are therefore not fully comparable. ¹⁴ Based on the revised Swiss SRB framework that became effective on 1 July 2016, therefore figures for periods prior to 31 December 2015 are not available. Refer to the "Capital management" section of this report for more information. ¹⁵ Calculated as average equity / average assets. ¹⁶ Includes invested assets for Global Wealth Management, Asset Management and Personal & Corporate Banking. ¹⁷ Refer to "UBS shares" in the "Capital management" section of this report for more information. ¹⁸ The calculation of market capitalization has been amended to reflect total shares outstanding multiplied by the share price at the end of the period. The calculation was previously based on total shares issued multiplied by the share price at the end of the period. Market capitalization has been reduced by USD 2.1 billion as of 31 December 2018, by USD 2.4 billion as of 31 December 2017, by USD 2.2 billion as of 31 December 2016, by USD 1.9 billion as of 31 December 2015 and by USD 1.5 billion as of 31 December 2014 as a result.

¹ Calculated as operating expenses / operating income before credit loss expense or recovery. ² Refer to "Note 9 Earnings per share (EPS) and shares outstanding" in the "Consolidated financial statements" section of this report for more information. ³ Dividends and / or distribution of the capital contribution reserve are normally approved and paid in the year subsequent to the reporting period. ⁴ Refer to "Proposed dividend distribution out of capital contribution reserve" in the UBS Group AG standalone financial statements for more information. ⁵ The dividend payout ratio for the year ended 31 December 2018 was calculated based on the proposed dividend per share in Swiss francs translated to US dollars using the closing exchange rate as of 31 December 2018. ⁶ The calculation of the dividend payout ratio for the year ended 31 December 2014 excludes the supplementary distribution of a dividend upon the completion of the acquisition of all shares in UBS AG by means of the SESTA procedure. Refer to the Annual Report 2015 for more information on the SESTA procedure.

Cash dividends received from investments in subsidiaries

In 2018, UBS Group AG received cash dividends of USD 3,180 million (2017: USD 2,256 million; 2016: USD 3,457 million) from its subsidiaries. Dividends disclosed were translated to US dollar from the functional currency of the entity paying the dividend, using the closing exchange rate of the month the dividend was received.

C – Information on the company

Property, plant and equipment

As of 31 December 2018, UBS operated about 790 business and banking locations worldwide, of which approximately 41% were in Switzerland, 41% in the Americas, 10% in the rest of Europe, Middle East and Africa and 8% in Asia Pacific. Of the business and banking locations in Switzerland, 32% were owned directly

by UBS, with the remainder, along with most of UBS's offices outside Switzerland, being held under commercial leases. These premises are subject to continuous maintenance and upgrading and are considered suitable and adequate for current and anticipated operations.

D – Information required by industry guide 3

Selected statistical information

The following tables set forth select statistical information regarding the Group's banking operations extracted from the financial statements. Unless otherwise indicated, average balances for the years ended 31 December 2018, 31 December 2017 and 31 December 2016 are calculated from monthly data.

The distinction between domestic (Swiss) and foreign (non-Swiss) is generally based on the booking location. For loans, this method is not significantly different from an analysis based on the domicile of the borrower.

Average balances and interest rates

The following table sets forth average interest-earning assets and average interest-bearing liabilities, along with the average yield, for 2018, 2017 and 2016. Refer to "Note 3 Net interest income and other net income from fair value changes on financial instruments" in the "Consolidated financial statements" section of this report for more information on interest income and interest expense.

¹ Certain reverse repurchase agreements with an average balance of USD 73 billion in 2017 and USD 51 billion in 2016 were reclassified from amortized cost (presented under Receivables from securities financing transactions) to measured at fair value through profit or loss (presented under Financial assets at fair value not held for trading) upon adoption of IFRS 9, Financial Instruments on 1 January 2018. Prior period information is still presented under IAS 39 requirements and therefore may not be comparable. ² In 2017 and 2016 Other interest-earning assets included prime brokerage receivables, which mainly included margin lending receivables. Upon adoption of IFRS 9, Financial Instruments on 1 January 2018, prime brokerage receivables are measured at fair value and are presented separately on the balance sheet under Brokerage receivables. Gross receivable and payable balances within a single prime brokerage arrangement are presented as either a net receivable or a net payable on the balance sheet. ³ Upon adoption of IFRS 9, Financial Instruments effective 1 January 2018, UBS has elected to reclassify assets held to hedge unit-linked investment contracts of USD 12 billion from Financial assets at fair value held for trading to Financial assets at fair value not held for trading. ⁴ Interest income and average interest-earning assets have been adjusted to exclude dividend income and the associated equity instruments that generate dividend income, respectively. Interest income has been reduced by USD 1,775 million for 2017 and by USD 1,568 million for 2016. Average interest earning assets have been reduced by USD 84 billion in 2017 and USD 77 billion in 2016 as a result. ⁵ For the purpose of this disclosure, negative interest income on assets is presented as a reduction to interest income, while in the consolidated income statement negative interest income on assets is presented as interest expense. Refer to Note 3 in the "Consolidated financial statements" section of this report for more information.

¹ Certain repurchase agreements with an average balance of USD 73 billion in 2017 and USD 51 billion in 2016 were reclassified from amortized cost (presented under Payables from securities financing transactions) to measured at fair value through profit or loss (presented under Other financial liabilities designated at fair value) upon adoption of IFRS 9, Financial Instruments on 1 January 2018. Prior period information is still presented under IAS 39 requirements and therefore may not be comparable. ² In 2017 and 2016 Other interest-bearing liabilities included prime brokerage payables, which mainly included client securities financing and deposits. Upon adoption of IFRS 9, Financial Instruments on 1 January 2018, prime brokerage payables are measured at fair value and are presented separately on the balance sheet under Brokerage payables designated at fair value. Gross receivable and payable balances within a single prime brokerage arrangement are presented as either a net receivable or a net payable on the balance sheet. ³ Interest expense and average interest-bearing liabilities have been adjusted to exclude dividend expense and the associated liabilities that generate dividend expense, respectively. Interest expense has been reduced by USD 1,190 million for 2017 and by USD 1,286 million for 2016. Average interest-bearing liabilities have been reduced by USD 17 billion in 2017 and USD 20 billion in 2016 as a result. ⁴ For the purpose of this disclosure, negative interest expense on liabilities is presented as a reduction to interest expense, while in the consolidated income statement negative interest income on liabilities is presented as interest income. Refer to Note 3 in the "Consolidated financial statements" section of this report for more information.

Average balances and interest rates (continued)

The percentage of total average interest-earning assets attributable to foreign activities was 62% for 2018 (62% for 2017 and 62% for 2016). The percentage of total average interest-bearing liabilities attributable to foreign activities was 61% for 2018 (61% for 2017 and 63% for 2016). All assets and liabilities are translated into USD at uniform month-end rates. Interest income and expense are translated at monthly average rates.

Average rates earned and paid on assets and liabilities can change from period to period based on the changes in interest rates in general, but are also affected by changes in the currency mix included in the assets and liabilities. Tax-exempt income is not recorded on a tax-equivalent basis. For all three years presented, tax-exempt income is considered to be insignificant and the impact from such income is therefore negligible.

Analysis of changes in interest income and expense

The following tables provide information by categories of interest-earning assets and interest-bearing liabilities on the changes in interest income and expense due to changes in volume and interest rates for the year ended 31 December 2018 compared with the year ended 31 December 2017, and for the

year ended 31 December 2017 compared with the year ended 31 December 2016. Volume and rate variances have been calculated on movements in average balances and changes in interest rates. Changes due to a combination of volume and rates have been allocated proportionally.

Deposits

The following table analyzes average deposits and average rates on each deposit category for the years ended 31 December 2018, 2017 and 2016. The geographic allocation is based on the location of the office or branch where the deposit is made.

Deposits by foreign depositors in domestic offices were USD 63,174 million, USD 67,633 million and USD 75,407 million at 31 December 2018, 31 December 2017 and 31 December 2016, respectively.

	31.12.18		31.12.17		31.12.16

¹ Due to banks is considered to represent short-term borrowings to the extent that the total Due to banks exceeds total Due from banks, without differentiating between domestic and foreign offices. The remainder of total Due to banks is considered to represent deposits for the purpose of this disclosure.

As of 31 December 2018, the maturity of time deposits was as follows:

<i>USD million</i>	Domestic	Foreign
Within 3 months	9,686	54,965
3 to 6 months	739	3,764
6 to 12 months	997	2,346
1 to 5 years	127	4,469
Over 5 years	41	22
Total time deposits	11,591	65,567

Short-term borrowings

The table below presents the period-end, average and maximum month-end outstanding amounts for short-term borrowings, along with average and period-end interest rates.

USD million, except where indicated	Short-term debt ¹			Due to banks ²			Repurchase agreements ³		
	31.12.18	31.12.17	31.12.16	31.12.18	31.12.17	31.12.16	31.12.18	31.12.17	31.12.16
Period-end balance	39,025	52,270	25,720	0	0	0	108,584	94,437	76,718
Average balance	47,782	43,084	28,982	0	0	181	96,338	88,995	74,683
Maximum month-end balance	57,860	56,588	32,832	0	0	2,355	115,395	108,265	85,321
Average interest rate during the period (%)	1.3	0.7	0.7	0.0	0.0	0.3	1.0	0.2	0.0
Average interest rate at period end (%)	1.9	0.7	0.9	0.0	0.0	0.0	1.5	0.2	(0.1)

¹ Short-term debt is comprised of certificates of deposit, commercial paper, acceptances and promissory notes, and other money market paper reported within Debt issued measured at amortized cost. ² Amounts due to banks are presented net of amounts due from banks in order to reflect short-term borrowings. The difference between the gross Due to banks amount and the amount disclosed here is presented as deposits from banks on the preceding page. ³ Repurchase agreements are presented on a gross basis and therefore, for the purpose of this disclosure, do not reflect the effect of netting permitted under IFRS.

Investments in debt instruments

The table below presents the carrying value and yield of debt instruments (presented within Financial assets measured at fair value not held for trading, Financial assets measured at fair value through other comprehensive income and Other financial assets measured at amortized cost on the balance sheet) by contractual maturity bucket. The maturity information presented does not consider any early redemption features and debt instruments without fixed maturities are not included.

¹ Includes investments in debt instruments as of 31 December 2018 issued by US government and government agencies of USD 34,285 million (31 December 2017: USD 23,758 million, 31 December 2016: USD 33,281 million), the German government of USD 9,026 million (31 December 2017: USD 7,043 million, 31 December 2016: USD 11,752 million), the Japanese government of USD 5,588 million (31 December 2017: USD 3,589 million, 31 December 2016: USD 3,750 million) and the French government of USD 2,844 million (31 December 2017: USD 6,098 million, 31 December 2016: USD 3,949 million).

Loans and advances to banks and customers by industry (gross)

The Group's lending portfolio is widely diversified across industry sectors. An amount of USD 197 billion (58% of the total) relates to loans to thousands of private households, predominantly in Switzerland, and mostly secured by mortgages, financial collateral or other assets. Exposure to banks and financial institutions amounted to USD 81 billion (24% of the total). Exposure to banks includes money market deposits with highly rated institutions. Excluding banks and financial institutions, the largest industry sector exposure as of 31 December 2018 was USD 21 billion (6% of the total) to Services. For further

discussion of the loan portfolio, refer to the "Risk management and control" section of this report.

The table below illustrates the diversification of the loan portfolio among industry sectors. The industry categories presented are consistent with the classification of loans for reporting to the Swiss Financial Market Supervisory Authority (FINMA) and the Swiss National Bank. Loans presented within the balance sheet reporting lines "Financial assets at fair value held for trading" and "Financial assets at fair value not held for trading" are excluded from the tables below.

Total gross	201,975	88,774	47,251	338,000

As of 31 December 2018, total loans and advances to banks and customers granted at fixed and floating interest rates were as follows:

<i>USD million</i>	Within 1 year	1 to 5 years	Over 5 years	Total
Fixed-rate loans	135,586	66,944	35,004	237,534
Adjustable or floating-rate loans	66,390	21,829	12,247	100,466
Total	201,975	88,774	47,251	338,000

Non-performing loans

A claim is considered as non-performing when (i) it is more than 90 days past due; (ii) it is subject to restructuring proceedings, where preferential conditions concerning interest rates, subordination, tenor etc. have been granted in order to avoid default of the counterparty (forbearance); or (iii) the counterparty is subject to bankruptcy / enforced liquidation proceedings in any form, even if there is sufficient collateral to cover the due payment.

Refer to "Credit policies for distressed assets" in the "Risk management and control" section in the UBS Group AG Annual Report 2018 for comprehensive information on UBS's distressed asset definitions, of which non-performing is a component.

Also, refer to Note 1 and Note 23 of the consolidated financial statements for more information on the various risk factors that are considered to be indicative of credit-impairment.

The table below provides the Group's non-performing loans and advances to banks and customers.

<i>USD million</i>	31.12.18	31.12.17	31.12.16	31.12.15	31.12.14
Non-performing loans and advances to banks and customers:					
Domestic	1,548	1,374	1,497	1,172	1,300
Foreign	871	776	859	455	311
Total non-performing loans and advances to banks and customers	2,419	2,150	2,357	1,627	1,611

<i>USD million</i>	31.12.18	31.12.17	31.12.16	31.12.15	31.12.14
Gross interest income not collected on non-performing loans and advances to banks and customers:¹					
Domestic	12	8	5	6	8
Foreign	36	25	22	7	5
Interest income included in Net profit for non-performing loans and advances to banks and customers:					
Domestic	20	32	36	25	20
Foreign	15	6	10	5	6

¹ For credit impaired financial assets, interest income is determined by applying the effective interest rate (EIR) to the amortized cost of the instrument, which represents the gross carrying amount adjusted for any loss allowance.

Forbearance (Credit Restructuring)

Under imminent payment default or where default has already occurred, UBS may grant concessions to borrowers in financial difficulties that it would otherwise not consider in the normal course of its business, such as preferential interest rates, extension of maturity, modifying the schedule of repayments, debt / equity swap, subordination, etc. When a forbearance measure takes place, each case is considered individually and the exposure is generally classified in default. Forbearance classification will remain until the loan is collected or written off, non-preferential conditions are granted that supersede the

preferential conditions or until the counterparty has recovered and the preferential conditions no longer exceed UBS's risk appetite.

Contractual adjustments when there is no evidence of imminent payment default, or where changes to terms and conditions are within UBS's usual risk appetite, are not considered to be forbore.

Gross interest income not collected that relates to restructured non-performing loans and advances to banks and customers was not material to the results of operations in 2018, 2017, 2016, 2015 or 2014.

Cross-border outstandings

Cross-border outstandings consist of balances with central banks and other financial institutions, loans and advances to banks and customers and receivables from securities financing transactions with counterparties domiciled outside Switzerland. Guarantees and commitments are provided separately in the table below.

The following tables list those countries for which cross-border outstandings exceeded 0.75% of total IFRS assets at 31 December 2018, 2017 and 2016. As of 31 December 2018, there were no outstandings that exceeded 0.75% of total IFRS assets in any country currently facing debt restructuring or

liquidity problems that the Group expects would materially impact the country's ability to service its obligations. Aggregate country risk exposures are monitored and reported on an ongoing basis. The internal risk view is not directly comparable to the cross-border outstandings in the table below due to different approaches to netting, differing trade populations and differing approach to allocation of exposures to countries. For more information on the country framework within risk control, refer to the "Risk management and control" section of this report.

UBS AG consolidated supplemental disclosures required under SEC regulations

A – Introduction

The following pages contain supplemental UBS AG disclosures that are required under SEC regulations. UBS AG's consolidated financial statements have been prepared in accordance with International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB) and are denominated in US dollars (USD), which is also the functional currency of UBS AG's Head Office, UBS AG's London Branch and UBS AG's US-based operations.

Effective 1 January 2018, UBS AG adopted IFRS 9, *Financial Instruments*. The adoption of IFRS 9 has resulted in changes to the classification and measurement of certain financial instruments, which have been applied prospectively in the balance sheet from 1 January 2018.

Although the effect of IFRS 9 classification and measurement changes has been applied prospectively, UBS AG has made a series of changes to the presentation of its IFRS balance sheet to facilitate comparability and prior-period information is presented for periods ending before 1 January 2018 in this revised structure.

→ Refer to “**Note 1c Changes in accounting policies and comparability and transition effects from the adoption of IFRS 9 *Financial Instruments***” in the “**Consolidated financial statements**” section of this report for more information

¹ Refer to the "Performance targets and measurement" section of this report for more information on our performance targets. ² Calculated as net profit attributable to shareholders / average equity attributable to shareholders. ³ Calculated as net profit attributable to shareholders before amortization and impairment of goodwill and intangible assets / average equity attributable to shareholders less average goodwill and intangible assets. ⁴ Calculated as net profit attributable to shareholders / average common equity tier 1 capital. ⁵ Calculated as operating income before credit loss expense or recovery / average risk-weighted assets and average leverage ratio denominator, respectively. ⁶ Calculated as operating expenses / operating income before credit loss expense or recovery. ⁷ Calculated as change in net profit attributable to shareholders from continuing operations between current and comparison periods / net profit attributable to shareholders from continuing operations of comparison period. ⁸ Based on the Swiss systemically relevant bank (SRB) framework as of 1 January 2020 and the fully applied Basel III framework. Refer to the "Capital management" section of the report for the respective period for more information. ⁹ Based on the Swiss SRB framework as of 1 January 2020. Refer to the "Capital management" section of this report for more information. ¹⁰ From 31 December 2015 onward, the leverage ratio denominator calculation is aligned with the Basel III rules. Figures for periods prior to 31 December 2015 are calculated in accordance with former Swiss SRB rules and are therefore not fully comparable. ¹¹ Based on the revised Swiss SRB framework that became effective on 1 July 2016, therefore figures for periods prior to 31 December 2015 are not available. Refer to the "Capital management" section of this report for more information. ¹² Calculated as average equity / average assets. ¹³ Includes invested assets for Global Wealth Management, Asset Management and Personal & Corporate Banking. ¹⁴ As of 31 December 2018, the breakdown of personnel by business division and Corporate Center unit was: Global Wealth Management: 23,554; Personal & Corporate Banking: 5,100; Asset Management: 2,273; Investment Bank: 4,928; Corporate Center – Services: 11,576; Corporate Center – Group ALM: 169; Corporate Center – Non-core and Legacy Portfolio: 44.

C – Information on the company

Property, plant and equipment

As of 31 December 2018, UBS AG operated about 759 business and banking locations worldwide, of which approximately 40% were in Switzerland, 43% in the Americas, 10% in the rest of Europe, Middle East and Africa and 7% in Asia Pacific. Of the business and banking locations in Switzerland, 29% were

owned directly by UBS AG, with the remainder, along with most of UBS AG's offices outside Switzerland, being held under commercial leases. These premises are subject to continuous maintenance and upgrading and are considered suitable and adequate for current and anticipated operations.

D – Information required by industry guide 3

Selected statistical information

The following tables set forth select statistical information regarding the UBS AG's banking operations extracted from the financial statements. Unless otherwise indicated, average balances for the years ended 31 December 2018, 31 December 2017 and 31 December 2016 are calculated from monthly data.

The distinction between domestic (Swiss) and foreign (non-Swiss) is generally based on the booking location. For loans, this method is not significantly different from an analysis based on the domicile of the borrower.

Average balances and interest rates

The following table sets forth average interest-earning assets and average interest-bearing liabilities, along with the average yield, for 2018, 2017 and 2016. Refer to "Note 3 Net interest income and other net income from fair value changes on financial instruments" in the "Consolidated financial statements" section of this report for more information on interest income and interest expense.

¹ Certain reverse repurchase agreements with an average balance of USD 73 billion in 2017 and USD 51 billion in 2016 were reclassified from amortized cost (presented under Receivables from securities financing transactions) to measured at fair value through profit or loss (presented under Financial assets at fair value not held for trading) upon adoption of IFRS 9, Financial Instruments on 1 January 2018. Prior period information is still presented under IAS 39 requirements and therefore may not be comparable. ² In 2017 and 2016 Other interest-earning assets included prime brokerage receivables, which mainly included margin lending receivables. Upon adoption of IFRS 9, Financial Instruments on 1 January 2018, prime brokerage receivables are measured at fair value and are presented separately on the balance sheet under Brokerage receivables. Gross receivable and payable balances within a single prime brokerage arrangement are presented as either a net receivable or a net payable on the balance sheet. ³ Upon adoption of IFRS 9, Financial Instruments effective 1 January 2018, UBS has elected to reclassify assets held to hedge unit-linked investment contracts of USD 12 billion from Financial assets at fair value held for trading to Financial assets at fair value not held for trading. ⁴ Interest income and average interest-earning assets have been adjusted to exclude dividend income and the associated equity instruments that generate dividend income, respectively. Interest income has been reduced by USD 1,775 million for 2017 and by USD 1,568 million for 2016. Average interest earning assets have been reduced by USD 84 billion in 2017 and USD 77 billion in 2016 as a result. ⁵ For the purpose of this disclosure, negative interest income on assets is presented as a reduction to interest income, while in the consolidated income statement negative interest income on assets is presented as interest expense. Refer to Note 3 in the "Consolidated financial statements" section of this report for more information.

¹ Certain repurchase agreements with an average balance of USD 73 billion in 2017 and USD 51 billion in 2016 were reclassified from amortized cost (presented under Payables from securities financing transactions) to measured at fair value through profit or loss (presented under Other financial liabilities designated at fair value) upon adoption of IFRS 9, Financial Instruments on 1 January 2018. Prior period information is still presented under IAS 39 requirements and therefore may not be comparable. ² In 2017 and 2016 Other interest-bearing liabilities included prime brokerage payables, which mainly included client securities financing and deposits. Upon adoption of IFRS 9, Financial Instruments on 1 January 2018, prime brokerage payables are measured at fair value and are presented separately on the balance sheet under Brokerage payables designated at fair value. Gross receivable and payable balances within a single prime brokerage arrangement are presented as either a net receivable or a net payable on the balance sheet. ³ Interest expense and average interest-bearing liabilities have been adjusted to exclude dividend expense and the associated liabilities that generate dividend expense, respectively. Interest expense has been reduced by USD 1,190 million for 2017 and by USD 1,286 million for 2016. Average interest-bearing liabilities have been reduced by USD 17 billion in 2017 and USD 20 billion in 2016 as a result. ⁴ For the purpose of this disclosure, negative interest expense on liabilities is presented as a reduction to interest expense, while in the consolidated income statement negative interest income on liabilities is presented as interest income. Refer to Note 3 in the "Consolidated financial statements" section of this report for more information.

Average balances and interest rates (continued)

The percentage of total average interest-earning assets attributable to foreign activities was 62% for 2018 (62% for 2017 and 62% for 2016). The percentage of total average interest-bearing liabilities attributable to foreign activities was 60% for 2018 (61% for 2017 and 63% for 2016). All assets and liabilities are translated into USD at uniform month-end rates. Interest income and expense are translated at monthly average rates.

Average rates earned and paid on assets and liabilities can change from period to period based on the changes in interest rates in general, but are also affected by changes in the currency mix included in the assets and liabilities. Tax-exempt income is not recorded on a tax-equivalent basis. For all three years presented, tax-exempt income is considered to be insignificant and the impact from such income is therefore negligible.

UBS AG consolidated supplemental disclosures required under SEC regulations

Analysis of changes in interest income and expense

The following tables provide information by categories of interest-earning assets and interest-bearing liabilities on the changes in interest income and expense due to changes in volume and interest rates for the year ended 31 December 2018 compared with the year ended 31 December 2017, and for the

year ended 31 December 2017 compared with the year ended 31 December 2016. Volume and rate variances have been calculated on movements in average balances and changes in interest rates. Changes due to a combination of volume and rates have been allocated proportionally.

Deposits

The following table analyzes average deposits and average rates on each deposit category for the years ended 31 December 2018, 2017 and 2016. The geographic allocation is based on the location of the office or branch where the deposit is made.

Deposits by foreign depositors in domestic offices were USD 63,184 million, USD 67,644 million and USD 75,417 million at 31 December 2018, 31 December 2017 and 31 December 2016, respectively.

¹ Due to banks is considered to represent short-term borrowings to the extent that the total Due to banks exceeds total Due from banks, without differentiating between domestic and foreign offices. The remainder of total Due to banks is considered to represent deposits for the purpose of this disclosure.

As of 31 December 2018, the maturity of time deposits was as follows:

<i>USD million</i>	Domestic	Foreign
Within 3 months	10,070	54,965
3 to 6 months	739	3,764
6 to 12 months	997	2,346
1 to 5 years	21,231	4,469
Over 5 years	21,129	22
Total time deposits	54,167	65,567

Short-term borrowings

The table below presents the period-end, average and maximum month-end outstanding amounts for short-term borrowings, along with average and period-end interest rates.

USD million, except where indicated	Short-term debt ¹			Due to banks ²			Repurchase agreements ³		
	31.12.18	31.12.17	31.12.16	31.12.18	31.12.17	31.12.16	31.12.18	31.12.17	31.12.16

Average interest rate during the period (%)	1.3	0.7	0.7	0.0	0.0	0.3	1.0	0.2	0.0
Average interest rate at period end (%)	1.9	0.7	0.9	0.0	0.0	0.0	1.5	0.2	(0.1)

¹ Short-term debt is comprised of certificates of deposit, commercial paper, acceptances and promissory notes, and other money market paper reported within Debt issued measured at amortized cost. ² Amounts due to banks are presented net of amounts due from banks in order to reflect short-term borrowings. The difference between the gross Due to banks amount and the amount disclosed here is presented as deposits from banks on the preceding page. ³ Repurchase agreements are presented on a gross basis and therefore, for the purpose of this disclosure, do not reflect the effect of netting permitted under IFRS.

Investments in debt instruments

The table below presents the carrying value and yield of debt instruments (presented within Financial assets measured at fair value not held for trading, Financial assets measured at fair value through other comprehensive income and Other financial assets measured at amortized cost on the balance sheet) by contractual maturity bucket. The maturity information presented does not consider any early redemption features and debt instruments without fixed maturities are not included.

¹ Includes investments in debt instruments as of 31 December 2018 issued by US government and government agencies of USD 34,285 million (31 December 2017: USD 23,758 million, 31 December 2016: USD 33,281 million), the German government of USD 9,026 million (31 December 2017: USD 7,043 million, 31 December 2016: USD 11,752 million), the Japanese government of USD 5,588 million (31 December 2017: USD 3,589 million, 31 December 2016: USD 3,750 million) and the French government of USD 2,844 million (31 December 2017: USD 6,098 million, 31 December 2016: USD 3,949 million).

Loans and advances to banks and customers by industry (gross)

UBS AG's lending portfolio is widely diversified across industry sectors. An amount of USD 197 billion (58% of the total) relates to loans to thousands of private households, predominantly in Switzerland, and mostly secured by mortgages, financial collateral or other assets. Exposure to banks and financial institutions amounted to USD 82 billion (24% of the total). Exposure to banks includes money market deposits with highly rated institutions. Excluding banks and financial institutions, the largest industry sector exposure as of 31 December 2018 was USD 21 billion (6% of the total) to Services. For further

discussion of the loan portfolio, refer to the "Risk management and control" section of this report.

The table below illustrates the diversification of the loan portfolio among industry sectors. The industry categories presented are consistent with the classification of loans for reporting to the Swiss Financial Market Supervisory Authority (FINMA) and the Swiss National Bank. Loans presented within the balance sheet reporting lines "Financial assets at fair value held for trading" and "Financial assets at fair value not held for trading" are excluded from the tables below.

Total gross	202,419	89,079	47,406	338,904

As of 31 December 2018, total loans and advances to banks and customers granted at fixed and floating interest rates were as follows:

<i>USD million</i>	Within 1 year	1 to 5 years	Over 5 years	Total
Fixed-rate loans	135,716	67,181	35,122	238,020
Adjustable or floating-rate loans	66,703	21,898	12,284	100,884
Total	202,419	89,079	47,406	338,904

Non-performing loans

A claim is considered as non-performing when (i) it is more than 90 days past due; (ii) it is subject to restructuring proceedings, where preferential conditions concerning interest rates, subordination, tenor etc. have been granted in order to avoid default of the counterparty (forbearance); or (iii) the counterparty is subject to bankruptcy / enforced liquidation proceedings in any form, even if there is sufficient collateral to cover the due payment.

Refer to "Credit policies for distressed assets" in the "Risk management and control" section in the UBS Group AG Annual Report 2018 for comprehensive information on UBS AG's distressed asset definitions, of which non-performing is a component.

Also, refer to Note 1 and Note 23 of the consolidated financial statements for more information on the various risk factors that are considered to be indicative of credit-impairment.

The table below provides UBS AG's non-performing loans and advances to banks and customers.

<i>USD million</i>	31.12.18	31.12.17	31.12.16	31.12.15	31.12.14
Non-performing loans and advances to banks and customers:					
Domestic	1,548	1,374	1,497	1,172	1,300
Foreign	871	776	859	455	311
Total non-performing loans and advances to banks and customers	2,419	2,150	2,357	1,627	1,611

<i>USD million</i>	31.12.18	31.12.17	31.12.16	31.12.15	31.12.14
Gross interest income not collected on non-performing loans and advances to banks and customers:¹					
Domestic	12	8	5	6	8
Foreign	36	25	22	7	5
Interest income included in Net profit for non-performing loans and advances to banks and customers:					
Domestic	20	32	36	25	20
Foreign	15	6	10	5	6

¹ For credit impaired financial assets, interest income is determined by applying the effective interest rate (EIR) to the amortized cost of the instrument, which represents the gross carrying amount adjusted for any loss allowance.

Forbearance (Credit Restructuring)

Under imminent payment default or where default has already occurred, UBS AG may grant concessions to borrowers in financial difficulties that it would otherwise not consider in the normal course of its business, such as preferential interest rates, extension of maturity, modifying the schedule of repayments, debt / equity swap, subordination, etc. When a forbearance measure takes place, each case is considered individually and the exposure is generally classified in default. Forbearance classification will remain until the loan is collected or written off, non-preferential conditions are granted that supersede the

preferential conditions or until the counterparty has recovered and the preferential conditions no longer exceed UBS AG's risk appetite.

Contractual adjustments when there is no evidence of imminent payment default, or where changes to terms and conditions are within UBS AG's usual risk appetite, are not considered to be forbore.

Gross interest income not collected that relates to restructured non-performing loans and advances to banks and customers was not material to the results of operations in 2018, 2017, 2016, 2015 or 2014.

Cross-border outstandings

Cross-border outstandings consist of balances with central banks and other financial institutions, loans and advances to banks and customers and receivables from securities financing transactions with counterparties domiciled outside Switzerland. Guarantees and commitments are provided separately in the table below.

The following tables list those countries for which cross-border outstandings exceeded 0.75% of total IFRS assets at 31 December 2018, 2017 and 2016. As of 31 December 2018, there were no outstandings that exceeded 0.75% of total IFRS assets in any country currently facing debt restructuring or

liquidity problems that UBS AG expects would materially impact the country's ability to service its obligations. Aggregate country risk exposures are monitored and reported on an ongoing basis. The internal risk view is not directly comparable to the cross-border outstandings in the table below due to different approaches to netting, differing trade populations and differing approach to allocation of exposures to countries. For more information on the country framework within risk control, refer to the "Risk management and control" section of this report.

Information sources

Reporting publications

Annual publications: *Annual Report (SAP no. 80531)*: Published in English, this single-volume report provides descriptions of: our Group strategy and performance; the strategy and performance of the business divisions and Corporate Center; risk, treasury and capital management; corporate governance, corporate responsibility and our compensation framework, including information on compensation for the Board of Directors and the Group Executive Board members; and financial information, including the financial statements. *Auszug aus dem Geschäftsbericht (SAP no. 80531)*: This publication provides the translation into German of selected sections of the Annual Report. *Annual Review (SAP no. 80530)*: This booklet contains key information on our strategy and performance, with a focus on corporate responsibility at UBS. It is published in English, German, French and Italian. *Compensation Report (SAP no. 82307)*: The report discusses our compensation framework and provides information on compensation for the Board of Directors and the Group Executive Board members. It is available in English and German.

Quarterly publications: The quarterly financial report provides an update on our strategy and performance for the respective quarter. It is available in English.

How to order publications: The annual and quarterly publications are available in PDF at www.ubs.com/investors in the "UBS Group AG and UBS AG consolidated financial information" section, and printed copies can be requested from UBS free of charge. For annual publications refer to www.ubs.com/investors in the "Investor services" section, which can be accessed via the link on the left-hand side of the screen. Alternatively, they can be ordered by quoting the SAP number and the language preference, where applicable, from UBS AG, F4UK-AUL, P.O. Box, CH-8098 Zurich, Switzerland.

Other information

Website: The "Investor Relations" website at www.ubs.com/investors provides the following information on UBS: news releases; financial information, including results-related filings with the US Securities and Exchange Commission; information for shareholders, including UBS share price charts as well as data and dividend information, and for bondholders; the UBS corporate calendar; and presentations by management for investors and financial analysts. Information on the internet is available in English, with some information also available in German.

Results presentations: Our quarterly results presentations are webcast live. A playback of most presentations is downloadable at www.ubs.com/presentations.

Messaging service: Email alerts to news about UBS can be subscribed to under "UBS news alert" at www.ubs.com/investors. Messages are sent in English, German, French or Italian, with an option to select theme preferences for such alerts.

Form 20-F and other submissions to the US Securities and Exchange Commission: We file periodic reports and submit other information about UBS to the US Securities and Exchange Commission (SEC). Principal among these filings is the annual report on Form 20-F, filed pursuant to the US Securities Exchange Act of 1934. The filing of Form 20-F is structured as a wrap-around document. Most sections of the filing can be satisfied by referring to parts of the annual report. However, there is a small amount of additional information in Form 20-F that is not presented elsewhere and is particularly targeted at readers in the US. Readers are encouraged to refer to this additional disclosure. Any document that we file with the SEC is available on the SEC's website www.sec.gov. Refer to www.ubs.com/investors for more information.

Cautionary Statement Regarding Forward-Looking Statements | This report contains statements that constitute “forward-looking statements,” including but not limited to management’s outlook for UBS’s financial performance and statements relating to the anticipated effect of transactions and strategic initiatives on UBS’s business and future development. While these forward-looking statements represent UBS’s judgments and expectations concerning the matters described, a number of risks, uncertainties and other important factors could cause actual developments and results to differ materially from UBS’s expectations. These factors include, but are not limited to: (i) the degree to which UBS is successful in the ongoing execution of its strategic plans, including its cost reduction and efficiency initiatives and its ability to manage its levels of risk-weighted assets (RWA) and leverage ratio denominator (LRD), including to counteract regulatory-driven increases, liquidity coverage ratio and other financial resources, and the degree to which UBS is successful in implementing changes to its businesses to meet changing market, regulatory and other conditions; (ii) the continuing low or negative interest rate environment in Switzerland and other jurisdictions, developments in the macroeconomic climate and in the markets in which UBS operates or to which it is exposed, including movements in securities prices or liquidity, credit spreads, and currency exchange rates, and the effects of economic conditions, market developments, and geopolitical tensions on the financial position or creditworthiness of UBS’s clients and counterparties as well as on client sentiment and levels of activity; (iii) changes in the availability of capital and funding, including any changes in UBS’s credit spreads and ratings, as well as availability and cost of funding to meet requirements for debt eligible for total loss-absorbing capacity (TLAC); (iv) changes in or the implementation of financial legislation and regulation in Switzerland, the US, the UK, the European Union and other financial centers that have imposed, or resulted in, or may do so in the future, more stringent or entity-specific capital, TLAC, leverage ratio, liquidity and funding requirements, incremental tax requirements, additional levies, limitations on permitted activities, constraints on remuneration, constraints on transfers of capital and liquidity and sharing of operational costs across the Group or other measures, and the effect these will or would have on UBS’s business activities; (v) the degree to which UBS is successful in implementing further changes to its legal structure to improve its resolvability and meet related regulatory requirements and the potential need to make further changes to the legal structure or booking model of UBS Group in response to legal and regulatory requirements, proposals in Switzerland and other jurisdictions for mandatory structural reform of banks or systemically important institutions or to other external developments, and the extent to which such changes will have the intended effects; (vi) UBS’s ability to maintain and improve its systems and controls for the detection and prevention of money laundering and compliance with sanctions to meet evolving regulatory requirements and expectations, in particular in the US; (vii) the uncertainty arising from the timing and nature of the UK exit from the EU; (viii) changes in UBS’s competitive position, including whether differences in regulatory capital and other requirements among the major financial centers will adversely affect UBS’s ability to compete in certain lines of business; (ix) changes in the standards of conduct applicable to our businesses that may result from new regulation or new enforcement of existing standards, including recently enacted and proposed measures to impose new and enhanced duties when interacting with customers and in the execution and handling of customer transactions; (x) the liability to which UBS may be exposed, or possible constraints or sanctions that regulatory authorities might impose on UBS, due to litigation, contractual claims and regulatory investigations, including the potential for disqualification from certain businesses, potentially large fines or monetary penalties, or the loss of licenses or privileges as a result of regulatory or other governmental sanctions, as well as the effect that litigation, regulatory and similar matters have on the operational risk component of our RWA as well as the amount of capital available for return to shareholders; (xi) the effects on UBS’s cross-border banking business of tax or regulatory developments and of possible changes in UBS’s policies and practices relating to this business; (xii) UBS’s ability to retain and attract the employees necessary to generate revenues and to manage, support and control its businesses, which may be affected by competitive factors; (xiii) changes in accounting or tax standards or policies, and determinations or interpretations affecting the recognition of gain or loss, the valuation of goodwill, the recognition of deferred tax assets and other matters; (xiv) UBS’s ability to implement new technologies and business methods, including digital services and technologies and ability to successfully compete with both existing and new financial service providers, some of which may not be regulated to the same extent; (xv) limitations on the effectiveness of UBS’s internal processes for risk management, risk control, measurement and modeling, and of financial models generally; (xvi) the occurrence of operational failures, such as fraud, misconduct, unauthorized trading, financial crime, cyberattacks, and systems failures; (xvii) restrictions on the ability of UBS Group AG to make payments or distributions, including due to restrictions on the ability of its subsidiaries to make loans or distributions, directly or indirectly, or, in the case of financial difficulties, due to the exercise by FINMA or the regulators of UBS’s operations in other countries of their broad statutory powers in relation to protective measures, restructuring and liquidation proceedings; (xviii) the degree to which changes in regulation, capital or legal structure, financial results or other factors may affect UBS’s ability to maintain its stated capital return objective; and (xix) the effect that these or other factors or unanticipated events may have on our reputation and the additional consequences that this may have on our business and performance. The sequence in which the factors above are presented is not indicative of their likelihood of occurrence or the potential magnitude of their consequences. Our business and financial performance could be affected by other factors identified in our past and future filings and reports, including those filed with the SEC. More detailed information about those factors is set forth in documents furnished by UBS and filings made by UBS with the SEC, including UBS’s Annual Report on Form 20-F for the year ended 31 December 2018. UBS is not under any obligation to (and expressly disclaims any obligation to) update or alter its forward-looking statements, whether as a result of new information, future events, or otherwise.

Rounding | Numbers presented throughout this report may not add up precisely to the totals provided in the tables and text. Starting in 2018, percentages, percent changes, and adjusted results are calculated on the basis of unrounded figures. Information on absolute changes between reporting periods, which is provided in text and that can be derived from figures displayed in the tables, is calculated on a rounded basis.

Tables | Within tables, blank fields generally indicate that the field is not applicable or not meaningful, or that information is not available as of the relevant date or for the relevant period. Zero values generally indicate that the respective figure is zero on an actual or rounded basis. Percentage changes are presented as a mathematical calculation of the change between periods.

¹ Effective 1 January 2011, the Swiss withholding tax law provides that payments out of the capital contribution reserve are not subject to withholding tax. This law has led to interpretational differences between the Swiss Federal Tax Administration and companies about the qualifying amounts of capital contribution reserve and the disclosure in the financial statements. In view of this, the Swiss Federal Tax Administration has confirmed that UBS AG would be able to repay shareholders CHF 20.5 billion of disclosed capital contribution reserve without being subject to the withholding tax deduction that applies to dividends paid out of retained earnings. The confirmation by the Swiss Tax Administration was dated 7 June 2018. The decision about the remaining amount has been deferred to a future point in time. ² Cash to be paid in the future by either UBS AG or the counterparty.

Off-balance sheet items

Off-balance sheet items include indemnities and guarantees issued by UBS AG for the benefit of subsidiaries and creditors of subsidiaries.

Where the indemnity amount issued by UBS AG is not specifically defined, the indemnity relates to the solvency or minimum capitalization of a subsidiary, and therefore no amount is included in the table above.

Joint and several liability – Value added tax (VAT)

UBS AG is jointly and severally liable for the combined VAT liability of UBS entities that belong to the VAT group of UBS in Switzerland. This contingent liability is not included in the table above.

Guarantees – UBS Limited and UBS Europe SE

In 2003 UBS AG issued a guarantee for the benefit of each counterparty of UBS Limited. Under this guarantee, UBS AG irrevocably and unconditionally guarantees each and every obligation that UBS Limited entered into prior to the combined UK business transfer and cross-border merger of UBS Limited into UBS Europe SE. This guarantee is included in the off-balance sheet items table above. Effective after the merger in March 2019, UBS AG issued a similar guarantee for the benefit of each counterparty of UBS Europe SE acting out of its Investment Bank, covering transactions subject to master netting agreements. UBS AG promises to pay to beneficiary counterparties on demand any unpaid balance of such liabilities under the terms of the guarantees.

→ Refer to Note 27 for more information

Indemnities – UBS Europe SE

In connection with the establishment of UBS Europe SE in 2016, UBS AG entered into an agreement with UBS Europe SE under which UBS AG would provide UBS Europe SE with limited indemnification of payment obligations that may arise from certain litigation, regulatory and similar matters.

As of 31 December 2018, the amount of such potential payment obligations could not be reliably estimated and the table above does therefore not include any amount related to this limited indemnification.

In addition, in accordance with the bylaws of the Deposit Protection Fund of the Association of German Banks, UBS AG issued on behalf of UBS Europe SE an indemnity in favor of this fund. The probability of an outflow was assessed to be remote, and as a result, the table above does not include any exposure arising under this indemnity.

Statement of appropriation of total profit / (loss) carried forward

The Board of Directors proposes that the Annual General Meeting of Shareholders (AGM) on 18 April 2019 approve an ordinary dividend distribution of USD 3,250 million. Dividends are declared and paid in US dollars. The total amount of the dividends will be capped at CHF 4,062 million (Cap). To the extent that the CHF dividend calculated based on USD 3,250

million would exceed the Cap on the day of the AGM, due to the exchange rate determined by the Board of Directors in its reasonable opinion, the USD amount of the dividend will be reduced on a pro-rata basis so that the total CHF amount does not exceed the Cap.

Proposed appropriation of total profit / (loss) carried forward if Cap is not triggered

The Board of Directors proposes that the AGM on 18 April 2019 approve the following appropriation of total profit / (loss) carried forward and dividend distribution.

	USD million	CHF million
	For the year ended	For the year ended
	31.12.18	31.12.18
Net profit for the period	3,333	3,269
Profit / (loss) carried forward	0	0
Total profit / (loss) carried forward available for appropriation	3,333	3,269
Appropriation of total profit / (loss) carried forward		
Appropriation to voluntary earnings reserve	(83)	(74)
Dividend distribution	(3,250)	(3,196) ¹
Profit / (loss) carried forward	0	0

¹ Translated at closing exchange rate as of 31 December 2018 (CHF / USD 1.02).

Proposed appropriation of total profit / (loss) carried forward and proposed dividend distribution out of voluntary earnings reserve if Cap is triggered

The Board of Directors proposes that the AGM on 18 April 2019 approve the following appropriation of total profit / (loss) carried forward and dividend distribution.

	USD million	CHF million
	For the year ended	For the year ended
	31.12.18	31.12.18
Net profit for the period	3,333	3,269
Profit / (loss) carried forward	0	0
Total profit / (loss) carried forward available for appropriation	3,333	3,269
Appropriation of total profit / (loss) carried forward		
Appropriation to voluntary earnings reserve	(83)	0
Dividend distribution	(3,250)	(3,269)
Profit / (loss) carried forward	0	0
Proposed dividend distribution out of voluntary earnings reserve		
Total voluntary earnings reserve before distribution	11,054	10,946
Dividend distribution	0	(793)
Total voluntary earnings reserve after distribution	11,054	10,153

The total CHF dividend is capped at CHF 4,062 million. The USD amount (3,250 million) will be reduced to CHF 4,062 million multiplied by the exchange rate determined by the Board of Directors on the day of the AGM.

Note 1 Name, legal form and registered office

UBS AG is incorporated and domiciled in Switzerland. Its registered offices are at Bahnhofstrasse 45, CH-8001 Zurich and Aeschenvorstadt 1, CH-4051 Basel, Switzerland. UBS AG operates under art. 620ff. of the Swiss Code of Obligations and Swiss banking law as an Aktiengesellschaft, a corporation limited by shares.

UBS AG is a regulated bank in Switzerland and is 100% owned by UBS Group AG, the ultimate parent of the UBS Group. UBS AG holds investments in and provides funding to subsidiaries, including the other banking subsidiaries of the UBS Group. In addition, UBS AG operates globally, including business activities from all four UBS business divisions and Corporate Center. In the ordinary course of business, main contributors to the profitability of UBS AG are the Investment Bank, Wealth Management business booked outside of Switzerland and

Corporate Center – Group Asset and Liability Management (Group ALM). The balance sheet is mainly composed of financial assets and liabilities from the Investment Bank, Corporate Center – Group ALM and Wealth Management business booked outside of Switzerland as well as investments in subsidiaries and other participations in Corporate Center – Group ALM and fixed assets of Corporate Center – Services.

During 2017, shared services functions previously provided by UBS AG to subsidiaries and self-consumed in Switzerland, the UK and US were substantially transferred to Group service companies. UBS AG employed 11,099 personnel on a full-time equivalent basis as of 31 December 2018 compared with 10,551 personnel as of 31 December 2017.

→ **Refer to Note 2b of the UBS AG standalone Annual Report 2017 for more information**

Note 2 Accounting policies

a) Significant accounting policies

UBS AG standalone financial statements are prepared in accordance with Swiss GAAP (FINMA Circular 2015 / 1 and the Banking Ordinance) and represent "reliable assessment statutory single-entity financial statements." The accounting policies are principally the same as for the consolidated financial statements of UBS AG outlined in Note 1 to the consolidated financial statements of UBS AG included in the UBS Group AG and UBS AG Annual Report 2018. Major differences between the Swiss GAAP requirements and International Financial Reporting Standards are described in Note 39 of the consolidated financial statements of UBS AG. The significant accounting policies applied for the standalone financial statements of UBS AG are discussed below.

→ **Refer to the UBS Group AG and UBS AG Annual Report 2018 for more information**

Risk management

UBS AG is fully integrated into the Group-wide risk management process described in the audited part of the "Risk management and control" section of the UBS Group AG and UBS AG Annual Report 2018.

Further information on the use of derivative instruments and hedge accounting is provided in Notes 1, 11 and 28 to the consolidated financial statements of UBS AG.

→ **Refer to the UBS Group AG and UBS AG Annual Report 2018 for more information**

Compensation policy

The compensation structure and processes of UBS AG conform to the compensation principles and framework of UBS Group AG. For detailed information, refer to the Compensation Report of UBS Group AG.

Foreign currency translation

Transactions denominated in foreign currency are translated into US dollars at the spot exchange rate on the date of the transaction. At the balance sheet date, all monetary assets and liabilities, as well as equity instruments recorded in *Trading portfolio assets* and *Financial investments* denominated in foreign currency, are translated into US dollars using the closing exchange rate. Non-monetary items measured at historic cost are translated at the spot exchange rate on the date of the transaction. Assets and liabilities of branches with functional currencies other than the US dollar are translated into US dollars at the closing exchange rate. Income and expense items of such branches are translated at weighted average exchange rates for the period. All currency translation effects are recognized in the income statement.

The main currency translation rates used by UBS AG are provided in Note 37 of the consolidated financial statements of UBS AG.

→ **Refer to the UBS Group AG and UBS AG Annual Report 2018 for more information**

Note 2 Accounting policies (continued)

Structured debt instruments

Structured debt instruments comprise structured debt instruments issued and transacted over-the-counter and include a host contract and one or more embedded derivatives that do not relate to UBS AG's own equity. By applying the fair value option, the vast majority of structured debt instruments are measured at fair value as a whole and recognized in *Financial liabilities designated at fair value*. The fair value option for structured debt instruments can be applied only if the following criteria are cumulatively met:

- The structured debt instrument is measured on a fair value basis and is subject to risk management that is equivalent to risk management for trading activities;
- The application of the fair value option eliminates or significantly reduces an accounting mismatch that would otherwise arise.
- Changes in fair value attributable to changes in unrealized own credit are not recognized.

Fair value changes related to *Financial liabilities designated at fair value*, excluding changes in unrealized own credit, are recognized in *Net trading income*. Interest expense on *Financial liabilities designated at fair value* is recognized in *Interest expense*.

Where the designation criteria for the fair value option are not met, the embedded derivatives are assessed for bifurcation for measurement purposes. Bifurcated embedded derivatives are measured at fair value through profit or loss and presented in the same balance sheet line as the host contract.

→ Refer to Note 20 for more information

Group-internal funding

UBS AG obtains funding from UBS Group AG and UBS Group Funding (Switzerland) AG in the form of loans that qualify as going concern additional tier 1 capital at the UBS AG consolidated and standalone levels and as gone concern loss-absorbing capacity at the UBS AG consolidated level. A portion of Group-internal funding obtained is further on-lent by UBS AG to certain subsidiaries in the form of loans.

Where such Group-internal funding is eligible to meet the requirements for total loss-absorbing capacity (TLAC) at the level of UBS AG consolidated or standalone, or at the levels of significant regulated subsidiaries as defined for Pillar 3 disclosure purposes, the aggregate amounts of the respective obligations and claims are separately disclosed on the balance sheet. For those TLAC instruments that are eligible to meet the going concern capital requirements (i.e., are subordinated and subject to mandatory conversion and / or debt waiver, as explained below), the aggregate corresponding amounts are disclosed on the balance sheet.

UBS AG obligations arising from Group-internal funding it has received are presented as *Funding received from UBS Group*

AG and UBS Group Funding (Switzerland) AG and measured at amortized cost. UBS AG claims arising from Group-internal funding it has provided are presented as *Due from banks* and *Due from customers* and measured at amortized cost less any allowance for credit losses. Further information on the assessment and recognition of credit losses of claims is provided in Note 1 to the consolidated financial statements of UBS AG.

→ Refer to the UBS Group AG and UBS AG Annual Report 2018 for more information

Subordinated assets and liabilities

Subordinated assets are comprised of claims that, based on an irrevocable written declaration, in the event of liquidation, bankruptcy or composition concerning the debtor, rank after the claims of all other creditors and may not be offset against amounts payable to the debtor nor be secured by its assets. Subordinated liabilities are comprised of corresponding obligations.

Subordinated assets and liabilities that contain a point-of-non-viability clause in accordance with Swiss capital requirements per articles 29 and 30 of the Capital Adequacy Ordinance are disclosed as being *Subject to mandatory conversion and / or debt waiver* and provide for the claim or the obligation to be written off or converted into equity in the event that the issuing bank reaches a point of non-viability.

Investments in subsidiaries and other participations

Investments in subsidiaries and other participations are equity interests that are held to carry on the business of UBS AG or for other strategic purposes. They include all subsidiaries directly held by UBS AG through which UBS AG conducts its business on a global basis. The investments are measured individually and carried at cost less impairment. The carrying value is tested for impairment annually and when indications for a decrease in value exist, which include incurrence of significant operating losses or a severe depreciation of the currency in which the investment is denominated. If an investment in a subsidiary is impaired, its value is generally written down to the net asset value. Subsequent recoveries in value are recognized up to the original cost value based on either the increased net asset value or a value above the net asset value if, in the opinion of management, forecasts of future profitability provide sufficient evidence that a carrying value above net asset value is supported. Management may exercise its discretion as to what extent and in which period a recovery in value is recognized.

Impairments of investments are presented as *Impairment of investments in subsidiaries and other participations*. Reversals of impairments are presented as *Extraordinary income* in the income statement. Impairments and partial or full reversals of impairments for a subsidiary during the same annual period are determined on a net basis.

→ Refer to Note 16 for more information

Note 2 Accounting policies (continued)

Services received from and provided to Group entities

UBS AG receives services from UBS Business Solutions AG, the main Group service company, mainly relating to Group Technology, Group Operations and Group Corporate Services, as well as certain other services from other Group entities. UBS AG provides services to Group entities mainly relating to real estate and selected other Corporate Center – Services functions. Services received from and provided to Group entities are settled in cash as hard cost transfers or hard revenue transfers paid or received.

When the nature of the underlying transaction between UBS AG and the Group entity contains a single, clearly identifiable service element, related income and expenses are presented in the respective income statement line item, e.g., *Fee and commission income from securities and investment business and other fee and commission income*, *Fee and commission expense*, *Net trading income* or *General and administrative expenses*. To the extent the nature of the underlying transaction contains various service elements and is not clearly attributable to a particular income statement line item, related income and expenses are presented in *Sundry ordinary income* and *Sundry ordinary expenses*.

→ Refer to Notes 5 and 7 for more information

Pension and other post-employment benefit plans

Swiss GAAP permits the use of IFRS or Swiss accounting standards for pension and other post-employment benefit plans, with the election made on a plan-by-plan basis.

UBS AG has elected to apply Swiss GAAP (FER 16) for the Swiss pension plan in its standalone financial statements. The requirements of Swiss GAAP are better aligned with the specific nature of Swiss pension plans, which are hybrid in that they combine elements of defined contribution and defined benefit plans, but are treated as defined benefit plans under IFRS. Swiss GAAP requires that the employer contributions to the pension fund are recognized as *Personnel expenses* in the income statement. The employer contributions to the Swiss pension fund are determined as a percentage of contributory compensation. Furthermore, Swiss GAAP requires an assessment as to whether, based on the financial statements of the pension fund prepared in accordance with Swiss accounting standards (FER 26), an economic benefit to, or obligation of, UBS AG arises from the pension fund which is recognized in the balance sheet when conditions are met. Conditions for recording a pension asset or liability would be met if, for example, an employer contribution reserve is available or UBS AG is required to contribute to the reduction of a pension deficit (on a FER 26 basis).

Key differences between Swiss GAAP and IFRS include the treatment of dynamic elements, such as future salary increases

and future interest credits on retirement savings, which are not considered under the static method used in accordance with Swiss GAAP. Also, the discount rate used to determine the defined benefit obligation in accordance with IFRS is based on the yield of high-quality corporate bonds of the market in the respective pension plan country. The discount rate used in accordance with Swiss GAAP, i.e., the technical interest rate, is determined by the Pension Foundation Board based on the expected returns of the Board's investment strategy.

→ Refer to Note 22 for more information

UBS AG has elected to apply IFRS (IAS 19) for its non-Swiss defined benefit plans. However, remeasurements of the defined benefit obligation and the plan assets are recognized in the income statement rather than directly in equity. For corresponding disclosures in accordance with IAS 19 requirements, refer to Note 29 of the consolidated financial statements of UBS AG.

→ Refer to the UBS Group AG and UBS AG Annual Report 2018 for more information

After the transfer of shared services functions to UBS Business Solutions AG as further outlined in Note 2c, UBS AG ceased to make direct contributions to the respective pension plans for transferred employees. Instead, UBS AG receives a service charge from the Group service companies including their respective pension costs, which is recognized as *General and administrative expenses*.

Deferred taxes

Deferred tax assets are not recognized in UBS AG's standalone financial statements. However, deferred tax liabilities may be recognized for taxable temporary differences. Changes in the deferred tax liability balance are recognized in the income statement.

Dispensations in the standalone financial statements

As UBS AG prepares consolidated financial statements in accordance with IFRS, UBS AG is exempt from various disclosures in the standalone financial statements. The dispensations include the management report, the statement of cash flows and various note disclosures, as well as the publication of full interim financial statements. As a Swiss issuer of debt, in order to validly issue debt throughout the year, UBS AG discloses interim mid-year financial information as per the requirements of Article 1156 in conjunction with Article 652a of the Swiss Code of Obligations, including an income statement, a balance sheet and a note on the basis of accounting.

Note 2 Accounting policies (continued)

b) Changes in accounting policies

Change in functional and presentation currency

As of 1 October 2018 (the conversion date) UBS AG Head office, which comprises the entity's Swiss operations except for its Swiss Real Estate operation, prospectively changed its functional currency from Swiss francs to US dollars. UBS AG London Branch prospectively changed its functional currency from British pounds to US dollars.

UBS AG also prospectively changed the presentation currency of its financial statements from Swiss francs to US dollars. The interim Swiss franc financial information of UBS AG as of 30 September 2018, including the balance sheet, year-to-date income statement, year-to-date statement of changes in equity, including all components, and all related notes, was translated into US dollars at the closing rate on 30 September 2018 (the conversion date rate), except for Notes 26a and 26b. This conversion had no effect on the income statement or equity.

As the primary presentation currency of the financial statements of UBS AG is US dollars, amounts in Swiss francs are additionally presented for each component of the financial statements. UBS AG applies the modified closing rate method for translating the US dollar amounts into Swiss francs: assets and liabilities are translated at the closing rate, equity positions at historic rates and income and expense items at the weighted average rate for the period. All resulting currency translation effects are recognized separately in Voluntary earnings reserve, amounting to a positive currency translation effect of CHF 98 million as of 31 December 2018. Under Swiss GAAP, prior period financial statements are not restated. All comparative prior period information as of and for the year ended 31 December 2017 is translated at the closing rate as of 31 December 2017.

c) Other events affecting comparability

Asset transfer from UBS Limited to UBS AG

In the fourth quarter of 2018, the previously announced business transfer in connection with the UK withdrawal from the EU was largely completed. Clients and other counterparties of UBS Limited who can be serviced by UBS AG, London Branch were generally migrated in 2018.

This business transfer included a transfer of net assets against cash consideration of USD 0.7 billion (CHF 0.7 billion), with no effect on the equity or profit or loss of UBS AG. Total assets increased by USD 4.4 billion (CHF 4.3 billion) (primarily Due from banks, Due from customers, Trading portfolio assets and Derivative financial instruments), and total liabilities increased by USD 3.7 billion (CHF 3.6 billion) (primarily Due to Banks, Due to customers, Trading portfolio liabilities and Derivative financial instruments).

The business transfer also resulted in a decrease of contingent liabilities in connection with the guarantee issued by UBS AG for the benefit of UBS Limited of USD 4.5 billion (CHF 4.4 billion).

→ **Refer to Note 27 for information on the combined UK business transfer and cross-border merger of UBS Limited into UBS Europe SE**

Increase of stake in UBS Securities China

In December 2018, UBS AG increased its shareholding in UBS Securities China from 24.99% to 51% by completing a share purchase from existing shareholders. As a consequence of market changes, an impairment charge of USD 276 million (CHF 271 million) has been booked against the increased cost of the investment arising from the acquisition.

Transfers of shared services functions to UBS Business Solutions AG and UBS Business Solutions US LLC

The comparative figures presented as of and for the year ended 31 December 2017 include the financial effect of shared services functions in Switzerland, the UK and the US. These functions were substantially transferred to Group service companies in 2017. The transfer in Switzerland to UBS Business Solutions AG, the main Group service company and a wholly owned subsidiary of UBS Group AG, was executed in the second quarter of 2017. For UK shared services, a similar transfer to the UK branch of UBS Business Solutions AG was completed in the fourth quarter of 2017. In the second quarter of 2017, UBS also completed the transfer of the shared services functions in the US, which started in 2016, to its US service company, UBS Business Solutions US LLC, a wholly owned subsidiary of UBS Americas Holding LLC.

Other extraordinary income	37	6	36	6
Total extraordinary income	170	391	167	382
Total extraordinary expenses	0	4	0	4

In 2018, UBS recorded gains of USD 31 million (CHF 30 million) on the sale of real estate and USD 25 million (CHF 25 million) on the sale of subsidiaries and businesses, both related to the sale of Widder Hotel.

In 2017, UBS recorded a gain of USD 110 million (CHF 107

million) on the sale of its remaining investment in IHS Markit. Also in 2017, UBS completed the sale of a life insurance subsidiary, which resulted in a gain of USD 58 million (CHF 57 million).

Note 9 Taxes

	USD million		CHF million	
	For the year ended		For the year ended	
	31.12.18	31.12.17	31.12.18	31.12.17
Income tax expense / (benefit)	(708)	(121)	(696)	(118)
<i>of which: current</i>	(715)	(151)	(703)	(148)
<i>of which: deferred</i>	7	30	7	29
Capital tax	45	49	45	48
Total tax expense / (benefit)	(663)	(72)	(651)	(70)

There was an income tax benefit of USD 708 million (CHF 696 million) for the year ended 31 December 2018, compared with an income tax benefit of USD 121 million (CHF 118 million) for the year ended 31 December 2017. The income tax benefit for the year ended 31 December 2018 reflected a benefit of USD 26 million (CHF 26 million) (2017: USD 154 million / CHF 150 million) from the utilization of tax losses carried forward in UBS AG's main tax jurisdictions and also a benefit of USD 809 million (CHF 795 million) (2017: USD 250 million / CHF 244 million) as compensation received from other Group companies in respect of tax losses that were utilized by those companies. The benefit

of USD 809 million was mainly driven by a one-time election by UBS Securities LLC to capitalize real estate costs for US tax purposes resulting in a significant amount of taxable income, which was offset by the utilization of UBS AG's tax losses. UBS AG agreed to waive the payment of the related benefit resulting in a capital contribution by UBS AG into UBS Americas Holding LLC.

For the year ended 31 December 2018, the average tax rate, defined as income tax expense divided by the sum of operating profit and extraordinary income minus extraordinary expenses and capital tax, was negative 27.0% (2017: negative 14.9%).

Note 18 Pledged assets¹

The table below provides information on assets that are primarily pledged in connection with derivative transactions and properties. The table excludes securities financing transactions.

→ Refer to Note 10 for more information on securities financing transactions

USD million	31.12.18		31.12.17	
	Carrying value of pledged assets	Effective commitment	Carrying value of pledged assets	Effective commitment
Securities	4,532	187	2,469	162
Pledges of property, equipment and software ²	2,636	0	0	0
Total pledged assets	7,168	187	2,469	162

¹ Excludes assets placed with central banks related to undrawn credit lines and for payment, clearing and settlement purposes (31 December 2018: USD 0.8 billion; 31 December 2017: USD 2.7 billion). ² These pledged properties serve as collateral for an existing mortgage loan from UBS Switzerland AG.

CHF million	31.12.18		31.12.17	
	Carrying value of pledged assets	Effective commitment	Carrying value of pledged assets	Effective commitment
Securities	4,456	183	2,407	158
Pledges of property, equipment and software ²	2,592	0	0	0
Total pledged assets	7,048	183	2,407	158

¹ Excludes assets placed with central banks related to undrawn credit lines and for payment, clearing and settlement purposes (31 December 2018: CHF 0.8 billion; 31 December 2017: CHF 2.7 billion). ² These pledged properties serve as collateral for an existing mortgage loan from UBS Switzerland AG.

Note 19 Country risk of total assets

The table below provides a breakdown of total non-Swiss assets by credit rating. These credit ratings reflect the sovereign credit rating of the country to which the ultimate risk of the underlying asset is related. The ultimate country of risk for unsecured loan positions is the domicile of the immediate borrower or, in the case of a legal entity, the domicile of the ultimate parent entity. For collateralized or guaranteed positions, the ultimate country of risk is the domicile of the provider of the collateral or guarantor or, if applicable, the domicile of the ultimate parent entity of the provider of the collateral or guarantor. For

mortgage loans, the ultimate country of risk is the country where the real estate is located. Similarly, the ultimate country of risk for property and equipment is the country where the property and equipment is located. Assets for which Switzerland is the ultimate country of risk are provided separately in order to reconcile them to total balance sheets assets.

Note 20 Structured debt instruments

The table below provides a breakdown of financial liabilities designated at fair value that are considered structured debt instruments.

	USD million		CHF million	
	31.12.18	31.12.17	31.12.18	31.12.17
Fixed-rate bonds with structured features	3,510	2,949	3,451	2,875
Structured debt instruments issued:				
Equity-linked	34,528	35,073	33,949	34,189
Rates-linked	11,785	5,837	11,587	5,689
Credit-linked	2,331	1,685	2,292	1,642
Commodities-linked ¹	1,774	2,038	1,745	1,986
FX-linked	274	442	270	431
Structured over-the-counter (OTC) debt instruments	2,023	4,472	1,989	4,359
Total financial liabilities designated at fair value	56,226	52,495	55,283	51,171

¹ Includes precious metals-linked debt instruments issued.

In addition to *Financial liabilities designated at fair value*, certain structured debt instruments were reported within the balance sheet lines *Due to banks*, *Due to customers* and *Bonds issued*. These instruments were bifurcated for measurement purposes. As of 31 December 2018, the total carrying value of the host instruments was USD 4,465 million (CHF 4,390 million)

(31 December 2017: USD 4,034 million (CHF 3,932 million)) and the total carrying value of the bifurcated embedded derivatives was positive USD 76 million (CHF 75 million) (31 December 2017: positive USD 70 million (CHF 68 million)).

Note 21a Share capital

UBS AG shares

As of 31 December 2018, UBS AG's share capital of CHF 386 million (31 December 2017: CHF 386 million) consisted of fully paid up registered issued shares with a par value of CHF 0.10, which entitle the holder to one vote at the UBS AG shareholders' meeting, if entered into the share register as having the right to vote, as well as a proportionate share of distributed dividends. UBS AG's shares are not subject to any restrictions or limitations on their transferability.

As of 31 December 2018, shares issued by UBS AG totaled 3,858,408,466 shares (unchanged from 31 December 2017). The shares were all dividend bearing and held by UBS Group AG.

Additionally, as of 31 December 2018, 380,000,000 registered shares with a par value of CHF 0.10 each were available to be issued out of conditional capital (31 December 2017: 516,200,312 registered shares). During 2018, 136,200,312 conditional capital shares available upon the exercise of employee options were cancelled.

During 2018 and 2017, there were no new share issuances out of conditional capital.

Non-cash dividend

There was no non-cash dividend in 2018. With the transfer of shared services functions in Switzerland, UBS AG transferred its participation in a service center subsidiary to UBS Group AG in June 2017 by way of distribution of a dividend in kind, which resulted in a USD 256 million (CHF 250 million) reduction in the capital contribution reserve.

→ Refer to Note 2c for more information on the transfer of shared services functions

Non-distributable reserves

Non-distributable reserves consist of 50% of the share capital of UBS AG, amounting to USD 197 million (CHF 193 million) as of 31 December 2018 (USD 198 million / CHF 193 million as of 31 December 2017).

Note 21b Significant shareholders

The sole direct shareholder of UBS AG is UBS Group AG, which holds 100% of UBS AG shares. These shares are entitled to voting rights. Indirect shareholders of UBS AG included in the table below comprise direct shareholders of UBS Group AG (acting in their own name or in their capacity as nominees for other investors or beneficial owners) that were registered in the UBS Group AG share register with 3% or more of the share capital of UBS Group AG as of 31 December 2018 or as of

31 December 2017. The shares and share capital of UBS AG held by indirect shareholders, as shown in the table below, represent their relative holding of UBS Group AG shares. They do not have voting rights in UBS AG.

→ **Refer to Note 23 of the UBS Group AG standalone financial statements in the UBS Group AG Annual Report 2018 for more information on significant shareholders of UBS Group AG**

Total liabilities related to Swiss pension plan and non-Swiss defined benefit plans	302	449	297	438

¹ As of 31 December 2018, USD 160 million (CHF 157 million) related to the UK defined benefit pension plan and USD 22 million (CHF 22 million) related to the UK post-employment medical insurance plan. As of 31 December 2017, USD 275 million (CHF 268 million) related to the UK defined benefit pension plan and USD 27 million (CHF 26 million) related to the UK post-employment medical insurance plan.

b) Swiss pension plan

	USD million		CHF million	
	As of or for the year ended			
	31.12.18	31.12.17	31.12.18	31.12.17
Pension plan surplus ¹	637	806	626	786
Economic benefit / (obligation) of UBS AG	0	0	0	0
Change in economic benefit / (obligation) recognized in the income statement	0	0	0	0
Employer contributions in the period recognized in the income statement	48	92	47	90
Performance awards-related employer contributions accrued	10	13	10	12
Total pension expense recognized in the income statement within Personnel expenses	58	105	57	102

¹ The pension plan surplus is determined in accordance with FER 26 and consists of the reserve for the fluctuation in asset value. The surplus did not represent an economic benefit for UBS AG in accordance with FER 16 both as of 31 December 2018 and 31 December 2017.

UBS AG has elected to apply FER 16 for its Swiss pension plan and IFRS (IAS 19) for its UK and other non-Swiss defined benefit plans. However, remeasurements of the defined benefit obligations for UK and other non-Swiss defined benefit plans are recognized in the income statement rather than directly in equity.

- Refer to Note 2 for more information
- Refer to Note 29 of the UBS AG consolidated financial statements in the UBS Group AG and UBS AG Annual Report 2018 for more information on non-Swiss defined benefit plans in accordance with IFRS

The Swiss pension plan had no employer contribution reserve as of both 31 December 2018 and 31 December 2017.

Note 23 Share-based compensation

Expenses for awards under employee share, option, notional fund and deferred cash compensation plans granted to UBS AG employees are generally charged by UBS Group AG to UBS AG. Obligations related to other compensation vehicles, such as local awards, are held by the relevant employing and / or sponsoring

subsidiaries, such as UBS AG.

- Refer to Note 30 of the UBS AG consolidated financial statements in the UBS Group AG and UBS AG Annual Report 2018 for more information

UBS AG standalone financial statements (audited)

Note 24 Related parties

Transactions with related parties are conducted at internally agreed transfer prices, at arm's length or, with respect to loans, fixed advances and mortgages to non-independent members of the governing bodies in the ordinary course of business, on substantially the same terms and conditions that are available to other employees, including interest rates and collateral, and

neither involve more than the normal risk of collectability nor contain any other unfavorable features for the firm. Independent members of the governing bodies are granted loans and mortgages in the ordinary course of business at general market conditions.

Total fiduciary transactions	145	211	143	205

Fiduciary transactions encompass transactions entered into or granted by UBS AG that result in holding or placing assets on behalf of individuals, trusts, defined benefit plans and other institutions. Unless the recognition criteria for the assets are satisfied, these assets and the related income are excluded from UBS AG's balance sheet and income statement but disclosed in

this Note as off-balance sheet fiduciary transactions. Client deposits that are initially placed as fiduciary transactions with UBS AG may be recognized on UBS AG's balance sheet in situations in which the deposit is subsequently placed within UBS AG. In such cases, these deposits are not reported in the table above.

Note 27 Events after the reporting period

Merger of UBS Limited into UBS Europe SE

On 1 March 2019, the previously announced combined UK business transfer and cross-border merger of UBS Limited into UBS Europe SE was formally concluded. As a result of this transaction the impairment loss of the investment in UBS Limited for the year 2018 was reduced by USD 0.2 billion (CHF 0.2 billion). As the transaction was substantially completed in 2018, the effect of the transaction was recognized in the UBS AG standalone financial statements for the year ended 31 December 2018.

Provisions for litigation, regulatory and similar matters

Provisions for litigation, regulatory and similar matters reflect the effects of adjusting events after the balance sheet date of USD 340 million (CHF 334 million).

To the General Meeting of
UBS AG, Zurich and Basel

Basel, 14 March 2019

Report of the statutory auditor on the financial statements

As statutory auditor, we have audited the financial statements of UBS AG, which comprise the balance sheet, income statement and notes (pages 1 to 28) for the year ended 31 December 2018.

Board of Directors' responsibility

The Board of Directors is responsible for the preparation of the financial statements in accordance with the requirements of Swiss law and the company's articles of incorporation. This responsibility includes designing, implementing and maintaining an internal control system relevant to the preparation of financial statements that are free from material misstatement, whether due to fraud or error. The Board of Directors is further responsible for selecting and applying appropriate accounting policies and making accounting estimates that are reasonable in the circumstances.

Auditor's responsibility

Our responsibility is to express an opinion on these financial statements based on our audit. We conducted our audit in accordance with Swiss law and Swiss Auditing Standards. Those standards require that we plan and perform the audit to obtain reasonable assurance whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers the internal control system relevant to the entity's preparation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control system. An audit also includes evaluating the appropriateness of the accounting policies used and the reasonableness of accounting estimates made, as well as evaluating the overall presentation of the financial statements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the financial statements for the year ended 31 December 2018 comply with Swiss law and the company's articles of incorporation.

Report on key audit matters based on the circular 1/2015 of the Federal Audit Oversight Authority

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the financial statements of the current period. These matters were addressed in the context of our audit of the financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters. For each matter below, our description of how our audit addressed the matter is provided in that context.

We have fulfilled the responsibilities described in the *Auditor's responsibility* section of our report, including in relation to these matters. Accordingly, our audit included the performance of procedures designed to respond to our assessment of the risks of material misstatement of the financial statements. The results of our audit procedures, including the procedures performed to address the matters below, provide the basis for our audit opinion on the financial statements.

Legal provision and contingencies

Area of focus We focused on this area because UBS AG operates in a legal and regulatory environment that is exposed to significant litigation and similar risks arising from disputes and regulatory proceedings. Such matters are subject to many uncertainties and the outcome may be difficult to predict. These uncertainties inherently affect the amount and timing of potential outflows with respect to the provisions which have been established and other contingent liabilities. Overall, the legal provision represents UBS AG's best estimate for existing legal matters that have a probable and estimable impact on the financial position of UBS AG. See note 12b to the UBS AG financial statements on page 16.

Our audit response We obtained an understanding, evaluated the design and tested the operational effectiveness of UBS AG's key controls over the legal provision and contingencies process.

We assessed the methodologies on which the provision amounts are based, recalculated the provisions, and tested the completeness and accuracy of the underlying information. We read the legal analyses supporting the judgmental aspects impacted by legal interpretations. We obtained correspondence directly from external legal counsel to assess the information provided by UBS AG and followed up directly with external counsel as deemed necessary.

We also assessed UBS AG's provisions and contingent liabilities disclosure (within note 12b).

Valuation of investments in subsidiaries and other participations

Area of focus We focused on this area because of the judgments and assumptions over the valuation of the investments in subsidiaries and other participations. Investments in subsidiaries and other participations comprise directly held equity interests. See note 16 to the UBS AG financial statements on page 20.

Our audit response We obtained an understanding, evaluated the design and tested the operating effectiveness of the key controls over the valuation of investments in subsidiaries and other participations at UBS AG.

We tested a sample of the valuation models and the inputs used in those models.

We also assessed UBS AG's disclosure (within note 16).

Valuation of complex or illiquid trading portfolio assets and liabilities, other financial instruments and liabilities and derivative financial instruments measured at fair value

Area of focus We focused on this area because of the complexity and judgments and assumptions over the fair valuation of financial assets and liabilities with significant unobservable inputs. We focused on market developments in fair value methodologies and specifically on the higher estimation uncertainty (“HEU”) products, credit valuation adjustment (“CVA”) and funding valuation adjustment (“FVA”). See note 13 and 14 to the UBS AG financial statements on pages 17 to 19.

Our audit response We obtained an understanding, evaluated the design and tested the operating effectiveness of the key controls over the financial instrument valuation processes, including controls over market data inputs into valuation models, model governance, and valuation adjustments.

We tested a sample of the valuation models and the inputs used in those models, using a variety of techniques, including comparing inputs to available market data. We selected a sample of positions and independently calculated estimated values and compared the values to UBS AG’s recorded values. In addition, we evaluated the methodology and inputs used by the UBS AG in determining funding and credit fair value adjustments on uncollateralized derivatives and fair value option liabilities.

We also assessed UBS AG’s disclosure (within note 13 and 14).

IT Controls relevant to financial reporting

Area of focus We focused on this area because UBS AG is highly dependent on its IT systems for business processes and financial reporting. UBS AG continues to invest in its IT systems to meet client needs and business requirements including the effectiveness of its logical access and change management IT controls. IT implementations are complex by nature and impose risks related to the migration of data and the design and operating effectiveness of key controls that could have a significant impact on the financial statements.

Our audit response In assessing the reliability of electronic data processing, we included specialized IT auditors as part of our audit team. Our audit procedures focused on the IT infrastructure and applications relevant to financial reporting including evaluation of the design and testing of the operating effectiveness of key IT logical access, change management and IT automated controls. Our audit procedures related to logical access included testing of user access management, privileged user access, periodic access right recertifications and user authentication controls.

Our audit procedures related to change management included testing of management’s program change test approach, approval of change requests as well as segregation of duties.

Change in functional and presentation currency

Area of focus As of 1 October 2018 (the conversion date) UBS AG prospectively changed its functional and presentation currency from Swiss francs to US dollars. The interim Swiss franc financial information of UBS AG as of 30 September 2018, including the balance sheet, year-to-date income statement, year-to-date statement of changes in equity and all related notes, was translated into US dollars at the closing rate on 30 September 2018 (the conversion date rate). This conversion had no impact on the income statement or equity. See note 2b to the UBS AG financial statements on page 9.

Our audit response We obtained an understanding, evaluated the design and tested the operating effectiveness of the key controls over the prospective application of the change in functional and presentation currency of the standalone financial statements of UBS AG. We assessed the completeness and accuracy of the data used in the calculation in US dollars. We have also assessed UBS AG's disclosure regarding the change in functional and presentation currency (see note 2b).

Subsequent Event – French cross-border wealth management business

Area of focus On 20 February 2019 the 32nd Chamber of the First Instance Court in France (the "Court") found UBS AG guilty of illicit solicitation for 2004-2011 and aggravated laundering of the proceeds of tax fraud for 2004-2012, and assessed a penalty of EUR 3.7 billion. In addition, the Court found UBS (France) SA ("UBS France") guilty of aiding and abetting illicit solicitation for 2004-2009 and for aiding and abetting the laundering of the proceeds of tax fraud for 2004-2008 and assessed a penalty of EUR 15 million. The Court also awarded civil damages of EUR 800 million jointly for UBS AG, UBS France and three individuals. UBS AG, UBS France and the three individuals are appealing the decision. See note 27 to the UBS AG financial statements on page 28.

We focused on this area because of the complexity and judgements over the accounting for this litigation contingency. This litigation contingency is subject to many uncertainties and the ultimate outcome is difficult to predict. These uncertainties inherently affect the amount and timing of any potential outflow with respect to the ultimate resolution of this matter.

Our audit response We obtained an understanding, evaluated the design and tested the operational effectiveness of UBS AG's key controls over this litigation contingency.

We assessed the methodology on which the provision was based, recalculated the provision and tested the completeness and accuracy of the underlying information. We read the legal analyses supporting the judgmental aspects impacted by legal interpretations and obtained correspondence directly from external legal counsel to assess the information provided by UBS AG and followed up directly with external counsel as deemed necessary. We involved EY specialists to assist in the understanding of the judgement and the evaluation of the responses from external counsel. We also assessed UBS AG's disclosure for this litigation contingency in note 27.

Report on other legal requirements

We confirm that we meet the legal requirements on licensing according to the Auditor Oversight Act (AOA) and independence (article 728 CO and article 11 AOA) and that there are no circumstances incompatible with our independence.

In accordance with article 728a paragraph 1 item 3 CO and Swiss Auditing Standard 890, we confirm that an internal control system exists, which has been designed for the preparation of financial statements according to the instructions of the Board of Directors.

We further confirm that the proposed appropriation of available earnings complies with Swiss law and the company's articles of incorporation. We recommend that the financial statements submitted to you be approved.

UBS AG standalone regulatory information

UBS AG standalone regulatory information**Key metrics**

The table below is based on BCBS Basel III phase-in rules. During the fourth quarter of 2018, CET1 capital remained largely stable. RWA increased USD 4.8 billion to USD 292.9 billion, mainly reflecting a USD 7.2 billion increase in market risk RWA due to higher average regulatory and stressed value-at-risk levels, partly offset by a USD 3.0 billion decrease in operational risk RWA after the recalibration of the advanced measurement approach model used for calculation of operational risk capital.

Leverage ratio exposure decreased by USD 19 billion to USD 601 billion, mainly due to on-balance sheet exposures (excluding derivative exposures and SFT).

Effective from 31 December 2018, UBS opted to phase in the effects from IFRS 9 expected credit loss (ECL) on CET1 capital, if any, over a five-year transitional period. This conclusion did not have an effect on our CET1 capital as of 31 December 2018.

¹ Based on BCBS Basel III phase-in rules. ² Swiss SRB going concern requirements and information for UBS AG standalone is provided in the following pages in this section.

Swiss SRB going concern requirements and information

UBS AG standalone is considered a systemically relevant bank (SRB) under Swiss banking law and is subject to capital regulations on a standalone basis. Under Swiss SRB regulations, article 125 “Reliefs for financial groups and individual institutions” of the Capital Adequacy Ordinance stipulates that the Swiss Financial Market Supervisory Authority (FINMA) may grant, under certain conditions, capital relief to individual institutions to ensure that an individual institution’s compliance with the capital requirements does not lead to a de facto overcapitalization of the group of which it is a part.

FINMA granted relief concerning the regulatory capital requirements of UBS AG on a standalone basis by means of decrees issued on 20 December 2013 and 20 October 2017, the latter effective as of 1 July 2017 and partly replacing the former.

The FINMA decree issued in 2017 established the measure of total going concern capital for UBS AG. Common equity tier 1 (CET1) and high-trigger additional tier 1 capital instruments are eligible as going concern capital, and low-trigger tier 2 capital instruments remain eligible until the earlier of (i) their maturity or the first call date or (ii) 31 December 2019.

Capital requirements based on risk-weighted assets (RWA) and leverage ratio denominator (LRD) are the same under both

the phase-in and fully applied rules. The capital requirements based on RWA include a minimum CET1 capital requirement of 10% plus the effects from countercyclical buffers (CCBs), and a total going concern capital requirement of 14.3% plus the effects from CCBs. The capital requirements based on LRD include a minimum CET1 capital requirement of 3.5% and a total going concern leverage ratio requirement of 5.0%. For direct and indirect investments, including holding of regulatory capital instruments of UBS AG in subsidiaries that are active in banking and finance, the FINMA decree introduced a risk-weighting approach, with a phase-in period until 1 January 2028. Starting 1 July 2017, these investments have been risk-weighted at 200%. As of 1 January 2019, the risk weights will gradually be raised by 5 percentage points per year for Swiss-domiciled investments and by 20 percentage points per year for foreign-domiciled investments until the fully applied risk weights are 250% and 400%, respectively.

More information on this change is provided in “Section 2 UBS AG standalone” of the UBS Group AG and significant regulated subsidiaries and sub-groups third quarter 2017 Pillar 3 report available under “Pillar 3 disclosures” at www.ubs.com/investors.

Swiss SRB going concern requirements and information

¹ Calculated after the application of haircuts and inflow and outflow rates. ² Calculated based on an average of 64 data points in the fourth quarter of 2018 and 63 data points in the fourth quarter of 2017.

Notice to investors | This document and the information contained herein are provided solely for information purposes, and are not to be construed as solicitation of an offer to buy or sell any securities or other financial instruments in Switzerland, the United States or any other jurisdiction. No investment decision relating to securities of or relating to UBS Group AG, UBS AG or their affiliates should be made on the basis of this document. Refer to UBS's Annual Report 2018 for additional information. This report is available at www.ubs.com/investors.

Rounding | Numbers presented throughout this report may not add up precisely to the totals provided in the tables and text. Starting in 2018, percentages, percent changes, and adjusted results are calculated on the basis of unrounded figures. Information on absolute changes between reporting periods, which is provided in text and that can be derived from figures displayed in the tables, is calculated on a rounded basis.

Tables | Within tables, blank fields generally indicate that the field is not applicable or not meaningful, or that information is not available as of the relevant date or for the relevant period. Zero values generally indicate that the respective figure is zero on an actual or rounded basis. Percentage changes are presented as a mathematical calculation of the change between periods.

¹ Refer to "Note 9 Earnings per share (EPS) and shares outstanding" in the "Consolidated financial statements" section of this report for more information. ² Refer to the "Performance targets and measurement" section of our Annual Report 2018 for more information on our performance targets. ³ Calculated as net profit attributable to shareholders (annualized as applicable) / average equity attributable to shareholders. ⁴ Calculated as net profit attributable to shareholders (annualized as applicable) / average equity attributable to shareholders less average goodwill and intangible assets. The definition of the numerator for return on tangible equity has been revised to align with numerators for return on equity and return on CET1 capital; i.e., we no longer adjust for amortization and impairment of goodwill and intangible assets. Prior periods have been restated. ⁵ Calculated as net profit attributable to shareholders (annualized as applicable) / average common equity tier 1 capital. ⁶ Calculated as operating income before credit loss expense or recovery (annualized as applicable) / average risk-weighted assets and average leverage ratio denominator, respectively. ⁷ Calculated as operating expenses / operating income before credit loss expense or recovery. ⁸ Calculated as adjusted operating expenses / adjusted operating income before credit loss expense or recovery. ⁹ Calculated as change in net profit attributable to shareholders from continuing operations between current and comparison periods / net profit attributable to shareholders from continuing operations of comparison period. ¹⁰ Based on the Swiss systemically relevant bank framework as of 1 January 2020. Refer to the "Capital management" section of this report for more information. ¹¹ Refer to the "Balance sheet, liquidity and funding management" section of this report for more information. ¹² Includes invested assets for Global Wealth Management, Asset Management and Personal & Corporate Banking. ¹³ Refer to "UBS shares" in the "Capital management" section of this report for more information. ¹⁴ Beginning with our Annual Report 2018, the calculation of market capitalization has been amended to reflect total shares outstanding multiplied by the share price at the end of the period. The calculation was previously based on total shares issued multiplied by the share price at the end of the period. Market capitalization has been reduced by USD 2.1 billion as of 31 December 2018 and by USD 1.7 billion as of 31 March 2018 as a result. ¹⁵ Total book value per share and tangible book value per share in Swiss francs are calculated based on a translation of equity under our US dollar presentation currency. As a consequence of the restatement to a US dollar presentation currency, amounts may differ from those originally published in our quarterly and annual reports.

Performance measures: reasons for use

Return on equity	This measure provides information on the profitability of the business in relation to equity.
Return on tangible equity	This measure provides information on the profitability of the business in relation to tangible equity.
Return on common equity tier 1 capital	This measure provides information on the profitability of the business in relation to common equity tier 1 capital.
Return on risk-weighted assets, gross	This measure provides information on the revenues of the business in relation to risk-weighted assets.
Return on leverage ratio denominator, gross	This measure provides information on the revenues of the business in relation to leverage ratio denominator.
Cost / income ratio	This measure provides information on the efficiency of the business by comparing operating expenses with gross income.
Adjusted cost / income ratio	This measure provides information on the efficiency of the business by comparing operating expenses with gross income, while excluding items that management believes are not representative of the underlying performance of the businesses.
Net profit growth	This measure provides information on profit growth in comparison with the prior-year period.

UBS Group

Management report

Changes to our presentation currency

Effective from 1 October 2018, the presentation currency of UBS Group AG's consolidated financial statements has changed from Swiss francs to US dollars. Comparative information in this report for periods prior to the fourth quarter of 2018 has been restated. Assets, liabilities and total equity were translated to US dollars at closing exchange rates prevailing on the respective balance sheet dates, and income and expenses were translated at the respective average rates prevailing for the relevant periods.

Recent developments

Regulatory and legal developments

Revised gone concern capital requirements in Switzerland

In April 2019, the Swiss Federal Department of Finance issued a revised Capital Adequacy Ordinance for consultation. Among other items, the proposal introduces gone concern capital requirements for Swiss-based legal entities of global systemically important banks. Under the proposal, UBS AG would be subject to a gone concern capital requirement on its third-party exposure on a standalone basis, as well as to an additional gone concern capital buffer requirement on its consolidated exposure. UBS Switzerland AG would continue to be required to maintain gone concern capital. These gone concern requirements would become effective on 1 January 2020 and the buffer would be phased in in full between 1 January 2021 and 1 January 2024.

The proposal also caps the maximum gone concern rebate relevant for UBS Group AG consolidated and UBS AG at 1.25% of total exposure, compared with a maximum rebate level of 2.0% under the current regime.

Finally, the eligibility of bail-in bonds with a remaining maturity between one and two years would increase, from 50% under the current regime to 100% effective 1 January 2020; however, their share in total gone concern capital would be capped at 20%.

Based on our initial assessment, we would expect that when fully phased in on 1 January 2024, UBS would be required to maintain a gone concern leverage ratio of around 100 basis points higher than otherwise needed to meet the Group requirements.

→ **Refer to the “Capital management” section of our Annual Report 2018 for information on the current capital requirements**

UK withdrawal from the EU

The previously announced combined UK business transfer and cross-border merger of UBS Limited into UBS Europe SE became legally effective on 1 March 2019. As a result, we are able to continue to serve our clients and access relevant markets in any political Brexit scenario, including a scenario in which the UK leaves the EU without a binding withdrawal agreement (a “no-deal scenario”).

The cross-border merger of UBS Limited into UBS Europe SE resulted in a combined balance sheet of EUR 57 billion. Following the merger, UBS Europe SE is subject to direct supervision by the European Central Bank and is considered a significant regulated subsidiary. Effective from the first quarter of 2019, we include financial and regulatory information of UBS Europe SE in our quarterly and annual Group reporting.

- **Refer to the “Significant regulated subsidiary and sub-group information” section of this report for the financial and regulatory key figures for UBS Europe SE consolidated**
- **Refer to the 31 March 2019 Pillar 3 report under “Pillar 3 disclosures” at www.ubs.com/investors for more information on the regulatory capital components and capital ratios, as well as the leverage ratio of UBS Europe SE consolidated**

The UK’s Prudential Regulation Authority (PRA) and Financial Conduct Authority (FCA) have opened registration for the Temporary Permissions Regime (TPR). This regime will allow firms and funds domiciled in the European Economic Area (EEA) that currently are passported into the UK to continue operating within the scope of their existing permissions for a limited period after the UK’s withdrawal. UBS has provided TPR notifications for UBS subsidiaries in the EEA that currently passport into the UK, in order to ensure the continuity of UK regulatory permissions in the event of a no-deal scenario.

In addition, the European Securities and Markets Authority (ESMA) has taken measures to mitigate potential disruptions in a no-deal scenario. It agreed to recognize the three UK-authorized central counterparties (CCPs): LCH Limited, ICE Clear Europe Ltd and LME Clear Limited. This will allow them to continue to provide clearing services in the EU for a limited period in a no-deal scenario and will avoid the need to migrate UBS Europe SE’s current derivatives exposures from a UK CCP to an EU CCP ahead of the exit date. ESMA has also announced a recognition decision for the UK-authorized Central Securities Depository – Euroclear UK & Ireland Limited – for a limited period. This will make possible the continued use of the Euroclear UK & Ireland securities depository to settle Irish securities for as long as they are recognized by ESMA.

These ESMA decisions will be effective from 31 October 2019 unless there is a change in circumstances.

Tailoring of regulation for foreign banks in the US

In April 2019, the US Federal banking agencies released two proposals that would tailor how certain capital and liquidity requirements and enhanced prudential standards (EPS) apply to foreign banking organizations (FBO) with significant US operations. Under the proposal, FBOs with USD 100 billion or more, over USD 250 billion and over USD 700 billion or more in combined US assets and their US intermediate holding companies (IHC) would be assigned to categories based on their size in total assets and scores for four other risk-based indicators: non-bank assets, a weighted measure of short-term wholesale funding, off-balance sheet exposure and cross-jurisdictional activity. The category determined based on calculations at the organizational level of an FBO's intermediate holding company (IHC), would determine capital requirements and capital-related EPS applicable to the FBO's IHC and, in some cases, a US depository institution subsidiary. The category, determined based on calculations at the organizational level of an FBO's combined US operations (CUSO), would determine liquidity requirements, liquidity-related EPS and other EPS applicable to the FBO's CUSO, IHC or certain US depository institution subsidiaries. The Federal Reserve Board has estimated that we would be a category III firm. In this category, among other things, UBS Americas Holding LLC would continue to be subject to annual assessments of its capital plan through the Comprehensive Capital Analysis and Review (CCAR) process, the supplementary leverage ratio, the newly applicable liquidity coverage ratio requirements and the proposed net stable funding ratio requirements.

We are evaluating the proposal's implications.

Other developments

IFRS 16, Leases

We have adopted IFRS 16, *Leases*, effective 1 January 2019, fundamentally changing how we account for operating leases when acting as a lessee. Upon adoption, assets and liabilities increased by USD 3.5 billion, with a corresponding increase in risk-weighted assets (RWA) and leverage ratio denominator (LRD).

In the income statement, the adoption of the new standard has resulted in increases in *Depreciation and impairment of property, equipment and software* and *Interest expense*, which have been partly offset by a decrease in *General and administrative expenses*. In the first quarter of 2019, this resulted in a net decrease in operating profit or loss of USD 12 million. For the full year 2019, IFRS 16 is expected to result in a total net decrease in operating profit or loss of approximately USD 60 million, with this effect reversing over the tenor of the leases.

As permitted by IFRS 16, we elected not to restate prior-period information.

→ **Refer to "Note 1 Basis of accounting" in the "Consolidated financial statements" section of this report for more information on the adoption of IFRS 16**

Presentation of dividend income and expense from financial instruments measured at fair value through profit or loss

Effective from 1 January 2019, we refined the presentation of dividend income and expense, reclassifying dividends from financial instruments measured at fair value through profit or loss from *Net interest income* to *Other net income from financial instruments measured at fair value through profit or loss* (prior to 1 January 2019: *Other net income from fair value changes on financial instruments*), in order to align the presentation of dividends with other associated fair value changes. There is no effect on *Total operating income* or *Net profit/(loss)*. The change reduces the significant volatility in *Net interest income* that previously arose on a quarterly basis.

Prior periods have been restated for this presentation change. For the financial year 2018, this resulted in a decrease of USD 976 million in *Net interest income* and a corresponding increase in *Other net income from financial instruments measured at fair value through profit or loss*.

→ **Refer to "Note 1 Basis of accounting" in the "Consolidated financial statements" section of this report for more information**

Changes in Corporate Center cost and resource allocation to business divisions

In order to further align Group and divisional performance, we have adjusted our methodology for the allocation of Corporate Center funding costs and expenses to the business divisions. At the same time, we updated our funds transfer pricing framework to better reflect the sources and usage of funding. All of these changes were effective as of 1 January 2019. Prior periods have been restated.

Together, for the full year 2018, these changes reduced the business divisions' operating results and thereby increased their adjusted cost / income ratios by approximately 1–2 percentage points, while Corporate Center's 2018 operating loss before tax decreased by USD 0.7 billion.

In Corporate Center, we retain funding costs for deferred tax assets, costs relating to our legal entity transformation program and other costs not attributable to, or representative of the performance of, the business divisions.

Alongside the updates to cost allocations and to our funds transfer pricing framework, we increased the allocation of balance sheet resources from Corporate Center to the business divisions. For 2018, the restatement resulted in USD 26 billion of additional RWA and USD 93 billion of additional LRD allocated from Corporate Center to the business divisions.

The additional USD 3.5 billion RWA and LRD that resulted from the adoption of IFRS 16, *Leases*, have been fully allocated to the business divisions.

Recent developments

Changes in equity attribution

The aforementioned changes in resource allocation from Corporate Center to the business divisions are reflected in the equity attribution to the business divisions. Furthermore, we have updated our equity attribution framework, revising the capital ratio for RWA from 11% to 12.5% and incrementally allocating to business divisions USD 2 billion of attributed equity that is related to certain common equity tier 1 (CET1) deduction items previously held centrally. In aggregate, we allocated USD 7 billion of additional attributed equity to the business divisions. The remaining attributed equity retained in Corporate Center primarily relates to deferred tax assets, dividend accruals and the Non-core and Legacy Portfolio. Prior periods have been restated.

For the full year 2018, the combined effect from the changes in equity attribution and the aforementioned changes in cost and resource allocation to the business divisions led to a 3–7 percentage point reduction in their respective return on attributed equity.

→ **Refer to “Equity attribution and return on attributed equity” in the “Capital management” section of this report for more information on the equity attributed to the business divisions**

Changes in Corporate Center segment reporting

Beginning with this report and in compliance with IFRS 8, *Operating Segments*, we provide results for total Corporate Center only and do not separately report Corporate Center – Services, Group ALM and Non-core and Legacy Portfolio. Furthermore, we operationally combined Group Treasury with Group ALM and call this combined function Group Treasury. Commentary on the performance of this function is included in the Corporate Center management discussion and analysis in our quarterly and annual reporting, with total revenue information for this function presented under *Net treasury income* as a separate line item. Prior-period information has been restated. In addition, we provide in separate line items information on net operating income and operating expenses after allocations related to Non-core and Legacy Portfolio.

→ **Refer to the “Note 1 Basis of accounting” in the “Consolidated financial statements” section of this report for more information**

¹ Adjusted results are non-GAAP financial measures as defined by SEC regulations. ² Comparative figures in this table have been restated for the changes in Corporate Center cost and resource allocation to the business divisions and the changes in the equity attribution framework. Refer to the "Recent developments" section and "Note 1 Basis of accounting" in the "Consolidated financial statements" section of this report for more information. Comparatives may additionally differ due to adjustments following organizational changes, restatements due to the retrospective adoption of new accounting standards or changes in accounting policies, and events after the reporting period. ³ Corporate Center operating expenses presented in this table are after service allocations to business divisions. ⁴ Reflects restructuring expenses related to legacy cost programs as well as expenses for new restructuring initiatives. ⁵ Reflects the net increase in / (release of) provisions for litigation, regulatory and similar matters recognized in the income statement. Refer to "Note 16 Provisions and contingent liabilities" in the "Consolidated financial statements" section of this report for more information. Also includes recoveries from third parties (first quarter of 2019: USD 7 million; fourth quarter of 2018: USD 1 million; first quarter of 2018: USD 17 million). ⁶ Related to Worldline acquisition of SIX Payment Services. ⁷ Related to the increase of stake in and consolidation of UBS Securities China. ⁸ Changes to the Pension Fund of UBS in Switzerland in the first quarter of 2018 resulted in a reduction in the pension obligation recognized by UBS. As a consequence, a pre-tax gain of USD 241 million was recognized in the income statement in the first quarter of 2018, with no overall effect on total equity. Refer to "Note 5 Personnel expenses" in the "Consolidated financial statements" section of the first quarter 2018 report for more information.

Group performance

Results: 1Q19 vs 1Q18

Profit before tax decreased by USD 554 million or 26% to USD 1,546 million, reflecting a decrease in operating income, partly offset by lower operating expenses. Operating income decreased by USD 950 million or 12% to USD 7,218 million mainly reflecting USD 612 million lower net fee and commission income and a USD 350 million decrease in net interest income and other net income from financial instruments measured at fair value through profit or loss. Operating expenses decreased by USD 397 million or 7% to USD 5,672 million, primarily due to a USD 323 million decrease in general and administrative expenses and a USD 211 million decrease in personnel expenses, partly offset by a USD 139 million increase in depreciation, amortization and impairment of property, equipment and software.

In addition to reporting our results in accordance with International Financial Reporting Standards (IFRS), we report adjusted results that exclude items that management believes are not representative of the underlying performance of our businesses. Such adjusted results are non-GAAP financial measures as defined by US Securities and Exchange Commission (SEC) regulations. These adjustments include restructuring expenses related to our CHF 2.1 billion cost reduction program

completed at the end of 2017 (referred to as our “legacy cost programs” in this report). For the full year 2019, we expect residual restructuring expenses in connection with such legacy cost programs, as well as expenses relating to new restructuring initiatives to be approximately USD 0.2 billion.

For the purpose of determining adjusted results for the first quarter of 2019, we excluded USD 31 million of these net restructuring expenses. For the first quarter of 2018, we excluded a gain related to changes to our Swiss pension plan of USD 241 million and net restructuring expenses of USD 135 million.

On this adjusted basis, profit before tax for the first quarter of 2019 decreased by USD 417 million or 21% to USD 1,577 million, driven by a USD 950 million, or 12%, decrease in operating income, partly offset by a USD 533 million, or 9%, decrease in operating expenses.

Operating income: 1Q19 vs 1Q18

Total operating income decreased by USD 950 million or 12% to USD 7,218 million, mainly reflecting USD 612 million lower net fee and commission income and a USD 350 million decrease in net interest income and other net income from financial instruments measured at fair value through profit or loss.

¹ Effective as of 1 January 2019, UBS refined the presentation of dividend income and expense by reclassifying dividends from Net interest income from financial instruments measured at fair value through profit or loss to Other net income from financial instruments measured at fair value through profit or loss. Prior-period information was restated accordingly and the total effect to the Group was as follows: For the quarters ended 31 December 2018 and 31 March 2018, respectively USD 250 million and USD 412 million net dividend income was reclassified. Refer to the "Recent developments" section and "Note 1 Basis of accounting" in the "Consolidated financial statements" section of this report for more information. ² Comparative figures have been restated for changes in Corporate Center cost allocations to the business divisions. Refer to the "Recent developments" section and "Note 1 Basis of accounting" in the "Consolidated financial statements" section of this report for more information. ³ Mainly includes spread-related income in connection with client-driven transactions, foreign currency translation effects and income and expenses from precious metals, which are included in the income statement line Other net income from financial instruments measured at fair value through profit or loss. The amounts reported on this line are one component of Transaction-based income in the management discussion and analysis of Global Wealth Management and Personal & Corporate Banking in the "Global Wealth Management" and "Personal & Corporate Banking" sections of this report. ⁴ Investment Bank information is provided at the business line level rather than by financial statement reporting line in order to reflect the underlying business activities, which is consistent with the structure of the management discussion and analysis in the "Investment Bank" section of this report.

Net interest income and other net income from financial instruments measured at fair value through profit or loss

Total combined net interest income and other net income from financial instruments measured at fair value through profit or loss decreased by USD 350 million to USD 3,058 million. This was mainly driven by a USD 311 million decrease in net interest income, mainly in our Equities and Corporate Client Solutions businesses in the Investment Bank and in Corporate Center, with the latter reflecting higher funding costs relating to Corporate Center balance sheet assets, most of which were allocated to the business divisions.

Global Wealth Management

In Global Wealth Management, net interest income decreased by USD 12 million to USD 1,009 million, mainly reflecting lower loan volumes, mostly caused by currency effects, as well as reductions in net income from structural risk management activities and banking book interest income. This was partly offset by higher investment of equity income.

Transaction-based income from foreign exchange and other intermediary activity decreased by USD 44 million to USD 252 million, mainly due to lower client activity across all regions.

Personal & Corporate Banking

In Personal & Corporate Banking, net interest income decreased by USD 23 million to USD 493 million, reflecting foreign currency effects and higher funding costs for total loss-absorbing capacity, partly offset by an increase in deposit and loan revenues.

Transaction-based income from foreign exchange and other intermediary activity increased by USD 9 million to USD 116 million, mainly driven by higher client activity in derivatives.

Investment Bank

In the Investment Bank, net interest income and other net income from financial instruments measured at fair value through profit or loss decreased by USD 428 million to USD 1,094 million. This was driven by a USD 253 million decrease in Corporate Client Solutions, mainly reflecting lower revenues from private transactions in Equity Capital Markets. Additionally, a USD 211 million decrease in Investor Client Services – Equities was driven by lower client activity in Derivatives, as well as reduced net interest income in Financing Services, reflecting lower Prime Brokerage and Equity Finance revenues as a result of lower client balances and activity levels. These effects were partly offset by an increase of USD 37 million in Investor Client Services – Foreign Exchange, Rates and Credit.

Group performance

Corporate Center

In Corporate Center, net interest income and other net income from fair value changes on financial instruments increased by USD 140 million to USD 94 million. Net treasury income increased by USD 255 million, reflecting net income from centralized Group Treasury risk management services, revenues from accounting asymmetries, mark-to-market effects from certain internal funding transactions and income related to hedge accounting ineffectiveness. This was partly offset by a decrease in other Corporate Center revenues, driven mainly by higher funding costs relating to Corporate Center balance sheet assets, most of which were allocated to the business divisions through the line "Services (to) / from business divisions." These costs included USD 32 million of additional interest expense related to lease liabilities recognized as a result of the adoption of IFRS 16, *Leases*, effective from 1 January 2019. The adoption of IFRS 16 has also resulted in a decrease in rental expense of USD 136 million, and an increase in depreciation expense of USD 118 million in the first quarter of 2019.

- Refer to "Note 1 Basis of accounting" in the "Consolidated financial statements" section of this report for more information on the adoption of IFRS 16
- Refer to "Note 3 Net interest income" in the "Consolidated financial statements" section of this report for more information on net interest income

Net fee and commission income

Net fee and commission income was USD 4,132 million compared with USD 4,744 million.

Net brokerage fees decreased by USD 189 million to USD 748 million, mainly in Global Wealth Management, driven by lower client activity across all regions.

Portfolio management and related services decreased by USD 145 million to USD 1,804 million, mainly in Global Wealth Management, primarily driven by a decline in average invested assets as a result of the lower market levels in the fourth quarter of 2018 and margin compression, mainly reflecting shifts into lower margin products, partly offset by an increase in mandate penetration.

Investment fund fees decreased by USD 102 million to USD 1,177 million, mainly in Global Wealth Management, Asset Management and Personal & Corporate Banking, primarily driven by a decline in average invested assets as a result of the lower market levels in the fourth quarter of 2018 and lower sales volumes, as well as continued pressure on margins in Asset Management.

M&A and corporate finance fees decreased by USD 89 million to USD 117 million, primarily reflecting lower revenues from merger and acquisition transactions against a global fee pool decline of 6% and a decrease in revenues from private transactions.

Underwriting fees decreased by USD 84 million to USD 155 million, mainly in our Corporate Client Solutions business in the Investment Bank, driven by lower revenues from public offerings, where the global fee pool decreased 21%.

- Refer to "Note 4 Net fee and commission income" in the "Consolidated financial statements" section of this report for more information

Other income

Other income was broadly unchanged at USD 49 million compared with USD 42 million.

- Refer to "Note 5 Other income" in the "Consolidated financial statements" section of this report for more information

¹ Reflects restructuring expenses related to legacy cost programs as well as expenses for new restructuring initiatives. ² Changes to the Pension Fund of UBS in Switzerland in the first quarter of 2018 resulted in a reduction in the pension obligation recognized by UBS. As a consequence, a pre-tax gain of USD 241 million was recognized in the income statement in the first quarter of 2018, with no overall effect on total equity. Refer to "Note 5 Personnel expenses" in the "Consolidated financial statements" section of the first quarter 2018 report for more information. ³ Adjusted results are non-GAAP financial measures as defined by SEC regulations. ⁴ Financial advisor variable compensation consists of formulaic compensation based directly on compensable revenues generated by financial advisors and supplemental compensation calculated on the basis of financial advisor productivity, firm tenure, new assets and other variables. It also includes expenses related to compensation commitments with financial advisors entered into at the time of recruitment that are subject to vesting requirements. ⁵ Consists of expenses related to contractors, social security, pension and other post-employment benefit plans and other personnel expenses. Refer to "Note 6 Personnel expenses" in the "Consolidated financial statements" section of this report for more information.

Group performance

Operating expenses: 1Q19 vs 1Q18

Total operating expenses decreased by USD 397 million or 7% to USD 5,672 million. Adjusted total operating expenses decreased by USD 533 million or 9% to USD 5,641 million. These exclude net restructuring expenses related to legacy cost programs and new restructuring initiatives of USD 31 million, compared with USD 135 million in the prior year, and a gain related to changes to our Swiss pension plan of USD 241 million in the first quarter of 2018.

Personnel expenses

Personnel expenses decreased by USD 211 million to USD 4,043 million on a reported basis, primarily due to lower variable compensation and a decrease in net restructuring expenses, partly offset by higher pension costs when compared with the first quarter of 2018, which included a gain of USD 241 million related to changes to our Swiss pension plan.

On an adjusted basis, personnel expenses decreased by USD 402 million to USD 4,026 million, primarily due to the aforementioned decrease in variable compensation.

→ Refer to "Note 6 Personnel expenses" in the "Consolidated financial statements" section of this report for more information

General and administrative expenses

General and administrative expenses decreased by USD 323 million to USD 1,187 million, mainly driven by lower expenses related to outsourcing and professional fees. Additionally, rent expenses have decreased by USD 136 million following the adoption of IFRS 16, Leases. This decrease is more than offset by an increase of USD 118 million in depreciation expense and an increase of USD 32 million in interest expense relating to lease liabilities, also as a result of the adoption of IFRS 16.

On an adjusted basis, general and administrative expenses decreased by USD 265 million to USD 1,177 million, largely due to the aforementioned decreases in outsourcing and professional fees, as well as the decrease in rent expenses.

We believe that the industry continues to operate in an environment in which expenses associated with litigation, regulatory and similar matters will remain elevated for the foreseeable future and we continue to be exposed to a number of significant claims and regulatory matters. The outcome of many of these matters, the timing of a resolution, and the potential effects of resolutions on our future business, financial results or financial condition are extremely difficult to predict.

- Refer to "Note 1 Basis of accounting" in the "Consolidated financial statements" section of this report for more information on the adoption of IFRS 16
- Refer to "Note 7 General and administrative expenses" in the "Consolidated financial statements" section of this report for more information
- Refer to "Note 16 Provisions and contingent liabilities" in the "Consolidated financial statements" section of this report and to the "Regulatory and legal developments" and "Risk factors" sections of our Annual Report 2018 for more information on litigation, regulatory and similar matters

Depreciation, amortization and impairment

Depreciation, amortization and impairment of property, equipment and software increased by USD 138 million to USD 442 million, mainly resulting from USD 118 million higher depreciation expenses following the adoption of IFRS 16 in the first quarter of 2019.

On an adjusted basis, depreciation, amortization and impairment of property, equipment and software increased by USD 134 million to USD 438 million, primarily due to the aforementioned effect of the adoption of IFRS 16.

→ Refer to "Note 1 Basis of accounting" in the "Consolidated financial statements" section of this report for more information on the adoption of IFRS 16

Tax: 1Q19 vs 1Q18

We recognized income tax expenses of USD 407 million for the first quarter of 2019, compared with USD 533 million for the first quarter of 2018.

Current tax expenses were USD 170 million, compared with USD 215 million, and related to taxable profits of UBS Switzerland AG and other entities.

Deferred tax expenses were USD 237 million, compared with USD 318 million. These include expenses of USD 218 million relating to profits for the current quarter, which primarily reflect the amortization of deferred tax assets (DTAs) previously recognized in relation to tax losses carried forward and deductible temporary differences to reflect their offset against profits for the quarter, including the amortization of US tax loss DTAs at the level of UBS Americas Inc. In addition, deferred tax expenses in the first quarter of 2019 included a net expense of USD 19 million, mainly relating to a decrease in temporary difference DTAs of USD 29 million as the expected value of future tax deductions for deferred compensation awards decreased. This deferred tax expense was partially offset by a tax loss DTA increase of USD 10 million for locations affected by our UK business transfer activity during the quarter.

For 2019, we expect a full-year tax rate of approximately 25%, excluding the effect of remeasurements of DTAs in the year.

→ Refer to "Note 8 Income taxes" in the "Consolidated financial statements" section of this report for more information

Total comprehensive income attributable to shareholders: 1Q19 vs 1Q18

Total comprehensive income attributable to shareholders was USD 1,037 million compared with USD 1,850 million. Net profit attributable to shareholders was USD 1,141 million compared with USD 1,566 million and other comprehensive income (OCI) attributable to shareholders, net of tax, was negative USD 104 million compared with positive USD 285 million.

In the first quarter of 2019, OCI related to own credit on financial liabilities designated at fair value was negative USD 318 million compared with positive USD 178 million and mainly reflected a tightening of credit spreads in the first quarter of 2019.

Defined benefit plan OCI was negative USD 179 million compared with negative USD 107 million. We recorded net pre-tax OCI losses of USD 153 million related to our non-Swiss pension plans, mainly driven by the UK defined benefit plans, which recorded OCI losses of USD 144 million. This reflected OCI losses of USD 316 million from the remeasurement of the defined benefit obligation, partly offset by OCI gains of USD 172 million due to a positive return on plan assets. Net pre-tax OCI losses related to the Swiss pension plans amounted to USD 10 million.

Foreign currency translation OCI was negative USD 128 million in the first quarter of 2019, mainly resulting from the weakening of the Swiss franc and the euro against the US dollar. OCI related to foreign currency translation in the same quarter of last year was positive USD 758 million.

OCI related to cash flow hedges was positive USD 459 million in the first quarter of 2019, mainly reflecting an increase in unrealized gains on US dollar hedging derivatives resulting from decreases in the relevant US dollar long-term interest rates. In the first quarter of 2018, OCI related to cash flow hedges was negative USD 488 million.

OCI associated with financial assets measured at fair value was positive USD 62 million compared with negative USD 57 million and mainly reflected net unrealized gains following decreases in the relevant US dollar long-term interest rates in the first quarter of 2019.

- Refer to “Statement of comprehensive income” in the “Consolidated financial statements” section of this report for more information
- Refer to “Note 29 Pension and other post-employment benefit plans” in the “Consolidated financial statements” section of our Annual Report 2018 for more information on other comprehensive income related to defined benefit plans

Sensitivity to interest rate movements

As of 31 March 2019, we estimate that a parallel shift in yield curves by +100 basis points could lead to a combined increase in annual net interest income of approximately USD 0.6 billion in Global Wealth Management and Personal & Corporate Banking. Of this increase, approximately USD 0.3 billion and USD 0.2 billion would result from changes in US dollar and euro interest rates, respectively.

The immediate effect on shareholders’ equity of such a shift in yield curves would be a decrease of approximately USD 2.3 billion recognized in OCI, of which approximately USD 1.7 billion would result from changes in US dollar interest rates. The immediate effect on regulatory capital would be immaterial, as OCI from cash flow hedges is not recognized in capital and the effect from debt instruments measured at fair value through OCI would be offset by a positive effect from pension fund assets and liabilities.

The aforementioned estimates are based on a hypothetical scenario of an immediate increase in interest rates, equal across all currencies and relative to implied forward rates applied to our banking book and financial assets measured at fair value through OCI. These estimates further assume no change to balance sheet size and structure, constant foreign exchange rates and no specific management action.

Key figures and personnel

Return on common equity tier 1 (CET1) capital: 1Q19 vs 1Q18

The annualized return on CET1 capital (RoCET1) was 13.3% compared with 18.3%, reflecting a decrease in net profit / (loss) attributable to shareholders of USD 0.4 billion and a USD 0.1 billion decrease in CET1 capital.

Adjusted cost / income ratio: 1Q19 vs 1Q18

The adjusted cost / income ratio was 77.9% compared with 75.3%.

Risk-weighted assets: 1Q19 vs 4Q18

During the first quarter of 2019, risk-weighted assets (RWA) increased by USD 3.8 billion to USD 267.6 billion. USD 3.8 billion higher RWA from methodology and policy changes, including an increase of USD 3.5 billion from the adoption of IFRS 16, as well as increased RWA of USD 3.9 billion from model updates and USD 0.9 billion higher RWA from regulatory add-ons were partly offset by USD 3.8 billion lower RWA from asset size and other movements and currency effects of USD 0.9 billion. The increase in RWA from model updates was mainly due to an increase of USD 2.8 billion in operational risk RWA, as model inputs in the advanced measurement approach model were updated during the quarter to reflect developments related to litigation on the cross-border matter.

- Refer to the “Capital management” section of this report for more information

Group performance

Common equity tier 1 capital ratio: 1Q19 vs 4Q18

Our CET1 capital ratio increased 0.1 percentage points to 13.0%, reflecting a USD 0.5 billion increase in CET1 capital, partly offset by a USD 3.8 billion increase in RWA.

→ Refer to the “Capital management” section of this report for more information

Leverage ratio denominator: 1Q19 vs 4Q18

During the first quarter of 2019, the leverage ratio denominator (LRD) increased by USD 6 billion to USD 911 billion. This increase was driven by asset size and other movements of USD 8 billion, as well as policy changes of USD 4 billion related to the adoption of IFRS 16, Leases, partly offset by a decrease in currency effects of USD 5 billion.

→ Refer to the “Capital management” section of this report for more information

Common equity tier 1 leverage ratio: 1Q19 vs 4Q18

Our CET1 leverage ratio increased from 3.77% to 3.80% in the first quarter of 2019, reflecting the aforementioned increase in CET1 capital, partly offset by a USD 6 billion increase in the LRD.

→ Refer to the “Capital management” section of this report for more information

Going concern leverage ratio: 1Q19 vs 4Q18

Our going concern leverage ratio increased from 5.1% to 5.4%, reflecting a USD 3.2 billion increase in going concern capital, partly offset by a USD 6 billion increase in the LRD.

→ Refer to the “Capital management” section of this report for more information

Net new money and invested assets

Management’s discussion and analysis of net new money and invested assets is provided in the “UBS business divisions and Corporate Center” section of this report.

Personnel: 1Q19 vs 4Q18

We employed 67,481 personnel (full-time equivalents) as of 31 March 2019, a net increase of 593 compared with 31 December 2018. Corporate Center personnel increased by 639, primarily due to higher staffing levels related to continued insourcing of certain activities from third-party vendors to our Business Solutions Centers, mainly in Group Technology. At the same time, we have seen a decrease of 1,256 in external staff.

Return on equity

USD million, except where indicated	As of or for the quarter ended		
	31.3.19	31.12.18	31.3.18

¹ Effective 1 January 2019, certain assets have been reclassified between asset classes to better reflect their underlying nature, with prior-period information restated. The adjustments have no effect on total invested assets. This change resulted in a reclassification from invested assets excluding money market funds to invested assets from money market funds of USD 10 billion and USD 11 billion for 31 December 2018 and 31 March 2018, respectively.

Outlook

The overall pace of growth has decreased as a result of a synchronized global slowdown. Economic growth and markets are expected to continue to recover and stabilize at different speeds across regions and asset classes.

We are likely to benefit from this environment as a result of our regional and business diversification. Higher invested assets are expected to lead to an increase in recurring revenues in

Global Wealth Management and Asset Management, compared with the first quarter of 2019. Further momentum would require a sustained improvement in market activity and client sentiment across our businesses.

We will continue to execute our strategy with discipline, focusing on balancing efficiency and investments for growth, to deliver on our capital return objectives and to create sustainable long-term value for our shareholders.

¹ Refer to the "Performance targets and measurement" section of our Annual Report 2018 for the definitions of our performance measures. ² Excluding minor functions with 110 advisors, USD 4 billion of invested assets, USD 0.6 billion of loans and USD 0.1 billion of net new money inflows in the first quarter of 2019. ³ Loans include customer brokerage receivables, which with the adoption of IFRS 9 effective 1 January 2018 have been reclassified to a separate reporting line on the balance sheet. ⁴ Represents advisors who exclusively serve ultra high net worth clients in a globally managed unit.

Results: 1Q19 vs 1Q18

Profit before tax decreased by USD 239 million, or 22%, to USD 863 million. Excluding a credit of USD 66 million related to changes to our Swiss pension plan in the first quarter of 2018 and restructuring expenses, adjusted profit before tax decreased by USD 226 million, or 21%, to USD 873 million, reflecting lower operating income, partly offset by lower operating expenses.

Operating income

Total operating income decreased by USD 406 million, or 9%, to USD 4,003 million, mainly driven by lower recurring net fee income and transaction-based income.

Net interest income decreased by USD 12 million to USD 1,009 million, mainly reflecting lower loan volumes, mostly caused by currency effects, as well as reductions in net income from structural risk management activities and banking book interest income. This was partly offset by higher investment of equity income.

Recurring net fee income decreased by USD 201 million to USD 2,218 million, primarily driven by a decline in average invested assets as a result of the lower market levels in the fourth quarter of 2018. Margin compression also contributed to the decrease, mainly reflecting shifts into lower-margin products, although this was partly offset by an increase in mandate penetration.

Transaction-based income decreased by USD 188 million to USD 765 million, mainly due to lower client activity in all regions, most notably in Asia Pacific and, to a lesser extent, the Americas.

Other income was unchanged at USD 11 million.

Operating expenses

Total operating expenses decreased by USD 166 million, or 5%, to USD 3,140 million and adjusted operating expenses decreased by USD 180 million, or 5%, to USD 3,130 million.

Personnel expenses decreased by USD 73 million. Excluding the aforementioned credit related to changes to our Swiss pension plan in the first quarter of 2018 and personnel-related restructuring expenses, adjusted personnel expenses decreased by USD 135 million to USD 1,901 million. This decrease was mainly due to lower variable compensation.

General and administrative expenses decreased by USD 55 million and adjusted general and administrative expenses decreased by USD 45 million to USD 249 million, predominantly driven by lower expenses for provisions for litigation matters.

Net expenses for services from Corporate Center and other business divisions decreased by USD 40 million to USD 975 million, while adjusted net expenses for services remained stable at USD 965 million.

Net new money: 1Q19 vs 1Q18

Net new money was USD 22.3 billion, including a small number of large inflows, compared with USD 20.0 billion; an annualized net new money growth rate of 3.9% compared with 3.3%. Net new money was notably strong in Asia Pacific, with USD 16.3 billion. Net new money from ultra high net worth clients was USD 20.5 billion.

Invested assets: 1Q19 vs 4Q18

Invested assets increased by USD 172 billion to USD 2,432 billion, driven by a positive market performance of USD 160 billion and net new money inflows of USD 22 billion, slightly offset by currency effects of USD 7 billion and reclassifications of USD 3 billion from invested assets to client assets, mainly related to regulatory change. Mandate penetration increased to 33.9% from 33.6%.

We do not measure net new money for Personal & Corporate Banking. ¹⁰ Refer to the "Risk management and control" section of this report for more information on (credit-)impaired exposures.

Results: 1Q19 vs 1Q18

Profit before tax increased by CHF 1 million to CHF 385 million. Excluding a credit of CHF 35 million related to changes to our Swiss pension plan in the first quarter of 2018 and restructuring expenses, adjusted profit before tax increased by CHF 30 million, or 8%, to CHF 389 million, predominantly reflecting higher operating income.

Operating income

Total operating income increased by 3% to CHF 954 million from CHF 925 million, mainly reflecting a net credit loss recovery of CHF 2 million compared with credit loss expenses of CHF 13 million in the first quarter of 2018, as well as higher other income and net interest income.

Net interest income increased by CHF 4 million to CHF 491 million as a result of higher deposit and loan revenues, partly offset by higher funding costs for total loss-absorbing capacity.

Recurring net fee income was CHF 155 million compared with CHF 154 million in the first quarter of 2018.

Transaction-based income increased by CHF 1 million to CHF 282 million. Higher fees in the Corporate Clients business were partly offset by lower fees received from Global Wealth Management, reflecting decreased referral volumes.

Other income increased by CHF 6 million to CHF 23 million, primarily due to the sale of an investment in an associate.

Net credit loss recovery was CHF 2 million, compared with losses of CHF 13 million in the first quarter of 2018, as small stage 3 expected credit losses, primarily in the Corporate Clients area, were more than offset by a release of CHF 4 million of stage 1 and 2 expected credit losses.

Operating expenses

Total operating expenses increased by CHF 27 million, or 5%, to CHF 568 million. Excluding a credit of CHF 35 million related to changes to our Swiss pension plan in the first quarter of 2018 and a reduction in restructuring expenses, adjusted operating expenses decreased by CHF 2 million to CHF 564 million.

Personnel expenses increased by CHF 40 million to CHF 218 million. Excluding the aforementioned credit of CHF 35 million related to changes to our Swiss pension plan in the first quarter of 2018 and personnel-related restructuring expenses, adjusted personnel expenses increased by CHF 7 million to CHF 218 million, reflecting higher salaries and variable compensation. General and administrative expenses decreased by CHF 7 million to CHF 52 million, mainly reflecting lower marketing and consulting costs.

Net expenses for services from Corporate Center and other business divisions decreased by CHF 6 million to CHF 295 million. On an adjusted basis, net expenses for services from Corporate Center and other business divisions decreased by CHF 2 million to CHF 291 million. This reflected lower expenses for Group Operations as well as strategic and regulatory initiatives, partly offset by higher expenses from Group Technology.

¹ Comparative figures in this table have been restated for the changes in Corporate Center cost and resource allocation to the business divisions and the changes in the equity attribution framework. Refer to the "Recent developments" section and "Note 1 Basis of accounting" in the "Consolidated financial statements" section of this report for more information. Comparatives may additionally differ due to adjustments following organizational changes, restatements due to the retrospective adoption of new accounting standards or changes in accounting policies, and events after the reporting period. ² Net management fees include transaction fees, fund administration revenues (including net interest and trading income from lending activities and foreign exchange hedging as part of the fund services offering), gains or losses from seed money and co-investments, funding costs, and other items that are not performance fees. ³ Adjusted results are non-GAAP financial measures as defined by SEC regulations. ⁴ Reflects restructuring expenses related to legacy cost programs as well as expenses for new restructuring initiatives. ⁵ Refer to the "Performance targets and measurement" section of our Annual Report 2018 for the definitions of our performance measures. ⁶ Effective 1 January 2019, certain assets have been reclassified between asset classes to better reflect their underlying nature, with prior-period information restated. The adjustments have no effect on total net new money and total invested assets. This primarily resulted in the following effects for invested assets: for the quarter ended 31 December 2018, USD 13 billion was reclassified from Equities to Multi-asset & Solutions and USD 10 billion was reclassified within Fixed Income to money market instruments. The change had a corresponding effect on the composition of net new money for the respective periods resulting in an immaterial effect on net new money growth excluding money market flows. ⁷ Excluding the effect of business exits. ⁸ Refer to the "Capital management" section of this report for more information. ⁹ Calculated as operating profit before tax (annualized as applicable) / average invested assets.

Results: 1Q19 vs 1Q18

Profit before tax decreased by USD 2 million, or 2%, to USD 103 million. Excluding a credit of USD 10 million related to changes to our Swiss pension plan in the first quarter of 2018 and restructuring expenses, adjusted profit before tax increased by USD 2 million, or 2%, to USD 109 million, reflecting reduced operating expenses, largely offset by lower operating income.

Operating income

Total operating income decreased by USD 20 million, or 4%, to USD 446 million. Net management fees decreased by USD 32 million to USD 419 million, driven by lower average invested assets as a result of the lower market levels in the fourth quarter of 2018, and continued pressure on margins.

Performance fees increased by USD 12 million to USD 27 million, mainly driven by an increase in performance fees in Equities.

We expect to see a continuation of the trend of clients moving invested assets into lower-margin passive products, which is expected to have a dampening effect on margins.

Operating expenses

Total operating expenses decreased by USD 17 million, or 5%, to USD 343 million, and adjusted operating expenses decreased by USD 22 million, or 6%, to USD 337 million.

Personnel expenses remained stable at USD 178 million. Excluding the aforementioned credit related to changes to our Swiss pension plan in the first quarter of 2018 and personnel-related restructuring expenses, adjusted personnel expenses decreased by USD 9 million to USD 176 million, primarily driven by reduced salaries and lower expenses for variable compensation.

General and administrative expenses decreased by USD 4 million to USD 48 million, and on an adjusted basis by USD 3 million to USD 46 million. This reduction in adjusted general and

administrative expenses was mainly due to lower expenses for tax-related provisions, reduced marketing costs and lower expenses for travel and entertainment.

Net expenses for services to / from Corporate Center and other business divisions decreased by USD 14 million to USD 117 million, and on an adjusted basis by USD 9 million to USD 115 million, reflecting lower expenses from Group Operations, variable compensation, and strategic and regulatory initiatives, partly offset by higher expenses from Group Technology.

Net new money: 1Q19 vs 1Q18

Net new money was USD 0.1 billion compared with net inflows of USD 33.3 billion. Excluding money market flows, net new money was negative USD 2.3 billion compared with net inflows of USD 27.8 billion, an annualized net new money growth rate of negative 1.3% compared with positive 15.7%. The first quarter of 2018 included two large inflows from institutional clients totaling USD 22.5 billion.

Invested assets: 1Q19 vs 4Q18

Invested assets increased by USD 43 billion to USD 824 billion, reflecting positive market performance of USD 48 billion, partly offset by currency effects of USD 4 billion, resulting primarily from the strengthening of the US dollar against the euro and the Swiss franc.

Following an internal asset reporting methodology review, we have adjusted our asset classification, effective as of 1 January 2019, in order to better reflect the underlying nature of respective assets. The adjustments had no effect on total net new money and total invested assets. Prior-period information was restated, primarily resulting for 2018 in a 12% increase in fixed income money market instruments, a 10% increase in Multi-asset & Solutions and a 5% decrease in Equities.

Results: 1Q19 vs 1Q18

Profit before tax decreased by USD 369 million, or 64%, to USD 207 million. Excluding restructuring expenses and a credit related to changes to our Swiss pension plan in the first quarter of 2018, adjusted profit before tax decreased by USD 398 million, or 64%, to USD 221 million. This was driven mainly by lower operating income in Corporate Client Solutions and Equities, partly offset by lower operating expenses and higher Foreign Exchange, Rates and Credit revenues.

Operating income

Total operating income decreased by USD 650 million, or 27%, to USD 1,765 million, driven by a decrease in Corporate Client Solutions and Equities revenues, partly offset by higher Foreign Exchange, Rates and Credit revenues.

Corporate Client Solutions

Corporate Client Solutions revenues decreased by USD 424 million, or 48%, to USD 451 million. This mainly reflected lower revenues in Equity Capital Markets, Debt Capital Markets and Advisory, the result of significantly lower levels of market activity and significantly reduced private transaction revenues, particularly in Equity Capital Markets, compared with a strong first quarter of 2018.

Advisory revenues decreased to USD 109 million from USD 197 million, due to lower revenues from merger and acquisition transactions, where the global fee pool declined 6%, as well as from private transactions. The reduction in merger and acquisition revenues was partly a result of participating in fewer large deals.

Equity Capital Markets revenues decreased by USD 186 million to USD 126 million, compared with a strong first quarter of 2018, mainly due to reduced revenues from private transactions. Revenues from public offerings were also lower, with the global fee pool decreasing 42%.

Debt Capital Markets revenues decreased to USD 154 million from USD 262 million, primarily reflecting lower leveraged finance revenues, where the fee pool decreased 21%.

Financing Solutions revenues decreased to USD 57 million from USD 72 million, reflecting lower client activity across most products.

Risk Management revenues decreased by USD 26 million to USD 5 million, mainly as the first quarter 2018 included gains related to a portfolio of loans, almost all of which have been subsequently sold.

Investor Client Services

Investor Client Services revenues decreased by USD 219 million, or 14%, to USD 1,337 million, reflecting a decrease in Equities revenues, partly offset by higher Foreign Exchange, Rates and Credit revenues.

Equities

Equities revenues decreased by USD 255 million, or 22%, to USD 883 million, reflecting reduced client activity amid challenging market conditions and lower market volatility, as well as a strong first quarter of 2018.

Cash revenues decreased to USD 302 million from USD 346 million, mainly due to lower client activity levels.

Derivatives revenues decreased to USD 258 million from USD 362 million, reflecting a strong first quarter of 2018 and reduced client activity.

Financing Services revenues decreased to USD 338 million from USD 434 million, driven by lower prime brokerage and equity finance revenues as a result of lower client balances and activity levels.

Foreign Exchange, Rates and Credit

Foreign Exchange, Rates and Credit revenues increased by USD 37 million, or 9%, to USD 454 million, driven by higher Rates and Credit revenues. Foreign Exchange revenues decreased, reflecting lower volatility and client activity levels. Rates and Credit revenues increased across most regions, reflecting higher revenues across most products.

Operating expenses

Total operating expenses decreased by USD 280 million, or 15%, to USD 1,558 million and adjusted operating expenses decreased by USD 252 million, or 14%, to USD 1,544 million.

Personnel expenses decreased by USD 247 million to USD 705 million and adjusted personnel expenses decreased by USD 242 million to USD 704 million, mainly due to lower variable compensation and salaries.

General and administrative expenses decreased by USD 11 million to USD 141 million, and on an adjusted basis by USD 10 million to USD 139 million, mainly due to the reclassification of certain administration costs to personnel expenses following the consolidation of UBS Securities China, as well as lower expenses for communication and market data services.

Net expenses for services from Corporate Center and other business divisions decreased to USD 708 million from USD 730 million. Excluding a reduction in restructuring expenses, adjusted net expenses remained stable at USD 697 million.

Risk-weighted assets and leverage ratio denominator: 1Q19 vs 4Q18

Risk-weighted assets

Total risk-weighted assets (RWA) were stable at USD 93 billion. A decrease in market risk RWA, reflecting lower average regulatory and stressed value-at-risk (VaR) levels following reduced market volatility in the quarter, was offset by a credit risk RWA increase from asset size and other movements.

→ **Refer to the “Capital management” section of this report for more information**

Leverage ratio denominator

The leverage ratio denominator (LRD) increased by USD 5 billion to USD 288 billion, mainly due to higher trading portfolio assets in Equities, reflecting market-driven effects.

→ **Refer to the “Capital management” and “Balance sheet, liquidity and funding management” sections of this report for more information**

Results: 1Q19 vs 1Q18

Corporate Center recorded a loss before tax of USD 15 million compared with a loss of USD 92 million in the prior-year quarter, and an adjusted loss before tax of USD 17 million compared with a loss of USD 211 million.

Operating income

Operating income was positive USD 47 million compared with negative USD 101 million. An increase in net treasury income of USD 255 million was partly offset by slightly lower net income from Non-core and Legacy Portfolio and a decrease in other Corporate Center revenues, driven mainly by higher funding costs relating to Corporate Center balance sheet assets, most of which were allocated to the business divisions through the line "Services (to) / from business divisions." These costs included additional interest expenses related to right-of-use assets as a result of the adoption of IFRS 16, *Leases*, effective from 1 January 2019.

→ Refer to "Note 1 Basis of accounting" in the "Consolidated financial statements" section of this report for more information about the adoption of IFRS 16

Net treasury income

The net treasury income result was positive USD 124 million in the first quarter of 2019 compared with negative USD 131 million.

This included negative revenues of USD 19 million relating to centralized Group Treasury risk management services (previously called total risk management net income after allocations), compared with negative revenues of USD 89 million.

Revenues from accounting asymmetries related to economic hedges and the mark-to-market effects from certain internal funding transactions were positive USD 80 million compared with positive USD 5 million.

Income related to hedge accounting ineffectiveness was positive USD 60 million compared with negative USD 55 million. The prior-year quarter was negatively affected by increases in the London Interbank Offered Rate (LIBOR) rates and overnight index swap (OIS) rates and a widening of the spread between the rates. The first quarter of 2019 was positively affected by decreases in rates and a tightening of the spread.

Operating income from Non-core and Legacy Portfolio

The operating income from Non-core and Legacy Portfolio was USD 47 million compared with USD 50 million. The first quarter of 2019 included valuation gains on financial assets measured at fair value through profit or loss and gains related to the unwinding of certain transactions.

Operating expenses**Operating expenses before service allocations to / from business divisions**

Before service allocations to business divisions, total operating expenses decreased by USD 29 million to USD 2,157 million, for reasons including favorable currency effects and lower

restructuring costs. The first quarter of 2018 included a credit of USD 122 million related to changes to our Swiss pension plan. Adjusted operating expenses before allocations decreased by USD 73 million, or 3%, to USD 2,132 million.

Personnel expenses increased by USD 75 million to USD 1,040 million, mainly due to the credit of USD 122 million in the first quarter of 2018 related to changes to our Swiss pension plan, partly offset by lower restructuring costs. On an adjusted basis, personnel expenses decreased by USD 11 million or 1%, to USD 1,026 million, mainly driven by lower variable compensation and favorable currency movements, partly offset by continued insourcing of certain activities and staff from third-party vendors to our Business Solutions Centers.

General and administrative expenses decreased by USD 243 million to USD 697 million and on an adjusted basis decreased by USD 196 million to USD 691 million. This was mainly due to the adoption of IFRS 16 resulting in lower rental costs, a reduction in outsourcing costs following the aforementioned insourcing of certain activities and staff, and lower professional fees, as well as favorable currency movements.

Depreciation expenses increased to USD 420 million from USD 281 million, primarily reflecting higher depreciation charges related to right-of-use assets resulting from the adoption of IFRS 16 and increased amortization expenses for internally generated capitalized software.

Services to / from business divisions

Corporate Center allocated net expenses of USD 2,095 million to the business divisions, compared with USD 2,195 million. Adjusted allocated net expenses for services to business divisions were USD 2,069 million compared with USD 2,096 million, mainly reflecting the aforementioned movements in operating expenses before allocations, partly offset by the allocation of certain funding costs, including additional interest expenses relating to the adoption of IFRS 16.

Operating expenses after service allocations to / from business divisions

Corporate Center retains costs mainly related to our legal entity transformation program and other costs not attributable to, or representative of the performance of, the business divisions. Total operating expenses remaining in Corporate Center after allocations were USD 62 million compared with negative USD 9 million, which included the aforementioned credit related to changes to our Swiss pension plan, and USD 63 million on an adjusted basis compared with USD 109 million, mainly related to the allocation of the funding costs recorded under operating income.

Personnel: 1Q19 vs 4Q18

As of 31 March 2019, Corporate Center employed 31,220 personnel (full-time equivalents), a net increase of 639 compared with 31 December 2018. The increase was primarily due to the continued insourcing of certain activities from third-party vendors to our Business Solutions Centers, mainly in Group Technology. At the same time, we have seen a decrease of 1,256 in external staff.

Risk management and control

This section provides information on key developments during the reporting period and should be read in conjunction with the “Risk management and control” section of our Annual Report 2018.

Credit risk

Total net credit loss expenses were USD 20 million in the first quarter of 2019, mainly in the Investment Bank, reflecting losses of USD 15 million from credit-impaired (stage 3) positions and USD 5 million in expected credit losses from stage 1 and 2 positions.

Overall credit risk exposures were broadly unchanged during the first quarter of 2019.

We continue to manage our Swiss lending portfolios prudently and remain watchful for any signs of deterioration that could affect our counterparties.

Within the Investment Bank, our leveraged loan underwriting business’s overall ability to distribute risk remained robust. Loan underwriting exposures are held for trading, with fair values reflecting the market conditions at the end of the quarter.

Market risk

We continued to manage market risks at generally low levels of management value-at-risk (VaR). Average management VaR (1-day, 95% confidence level) remained unchanged, at USD 11 million, compared with the fourth quarter of 2018. Average regulatory VaR and stressed VaR decreased in the first quarter. This decrease was driven by the Investment Bank’s Equities business due to a reduction in market volatility, a decrease in client activity and an overall reduction in credit exposure in the Foreign Exchange, Rates and Credit business.

There were no Group VaR negative backtesting exceptions in the first quarter of 2019, and the total number of negative backtesting exceptions within the most recent 250-business-day window remained at 2. The FINMA VaR multiplier for market risk RWA was unchanged compared with the prior quarter, at 3.

As of 31 March 2019, the interest rate sensitivity of our banking book to a +1 basis point parallel shift in yield curves was positive USD 1.1 million, compared with positive USD 1.0 million as of 31 December 2018.

→ **Refer to “Interest rate risk in the banking book” in the “Market risk” section of our Annual Report 2018 for more information on the management of interest rate risk in the banking book**

The interest rate sensitivity to a +1 basis point parallel shift in yield curves of the positions in the banking book that are valued through OCI was negative USD 26 million as of 31 March 2019. This OCI sensitivity was predominantly attributable to cash flow hedges denominated in US dollars and, to a lesser extent, in euros and Swiss francs. The OCI associated with cash flow hedges is not recognized for the purpose of calculating regulatory capital.

→ **Refer to “Sensitivity to interest rate movements” in the “Group performance” section of this report for more information on the effect of increases in interest rates on equity, capital and net interest income**

Country risk

We remain watchful of developments in Europe and political shifts in a number of countries. Our direct exposure to peripheral European countries is limited, although we have significant country risk exposure to major European economies, including the UK, Germany and France. The UK's process of exiting the EU, as well as Italy's deficit and tensions between Italy and the EU are still areas of concern.

→ **Refer to the "Recent developments" section of this report for more information on the UK's withdrawal from the EU**

We are closely monitoring the growing risks stemming from ongoing US trade policy shifts, and their potential effect on key markets, economies and countries.

We also continue to closely monitor our direct exposure to China. In addition, a number of emerging markets are facing economic, political and market pressures. Our exposure to emerging market countries is well diversified.

→ **Refer to the "Risk management and control" section of our Annual Report 2018 for more information**

Operational risk

Operational resilience, conduct and culture, and financial crime continue to be the pervasive consequential risk themes challenging both UBS and the financial industry.

Operational resilience remains a key focus for the firm as we continually enhance our ability to respond to disruptions and maintain effective day-to-day business activities. Cybersecurity and data protection are critical elements of operational resilience, and our cybersecurity objectives are set in line with prevailing international standards, while our data protection standards are intended to align with applicable data protection regulations and standards. We are investing in preemptive and detective measures to defend against evolving and highly sophisticated cyberattacks, to achieve our objectives and meet applicable standards. Our investment priorities focus on increasing readiness to detect and respond to cyber threats and data loss, employee training and behaviors, and application and infrastructure security (including vulnerability management).

Financial crime (including money laundering, terrorist financing, sanctions violations, fraud, bribery and corruption) continues to present a risk, as technological innovation and geopolitical developments increase the complexity of doing business and heightened regulatory attention persists. An effective financial crime prevention program remains essential for the firm. Money laundering and financial fraud techniques are becoming increasingly sophisticated, while geopolitical volatility makes the sanctions landscape more complex. We continue to invest heavily in our detection capabilities and core systems as part of our financial crime prevention program, with a focus on improving these to meet regulatory expectations, including to address the requirements of the May 2018 cease and desist order issued by the Office of the Comptroller of the Currency relating to our US branch know-your-customer and AML programs.

Management of conduct risk is an integral part of our operational risk framework. In managing conduct risk, we are focusing on embedding the framework, enhancing management information and maintaining the momentum of improving culture. Conduct-related management information is reviewed at the business and regional governance level, providing metrics on employee conduct, clients and markets. Furthermore, we continue to pursue behavioral initiatives, such as the "Principles of Good Supervision," and provide mandatory compliance and risk training.

We maintain our focus on regulatory reporting, updating our regulatory process management framework and enhancing our regulatory developments tracking, as well as continuing to enhance our operational risk framework (ORF) assessment processes, including legal entity reporting, to meet evolving regulatory expectations.

¹ Statistics at individual levels may not be summed to deduce the corresponding aggregate figures. The minima and maxima for each level may occur on different days, and likewise, the VaR for each business line or risk type, being driven by the extreme loss tail of the corresponding distribution of simulated profits and losses for that business line or risk type, may well be driven by different days in the historical time series, rendering invalid the simple summation of figures to arrive at the aggregate total. ² Difference between the sum of the standalone VaR for the business divisions and Corporate Center and the VaR for the Group as a whole. ³ As the minimum and maximum occur on different days for different business divisions and Corporate Center, it is not meaningful to calculate a portfolio diversification effect.

¹ In the prevailing negative interest rate environment for the Swiss franc in particular, and to a lesser extent for the euro, interest rates for Global Wealth Management (excluding Americas) and Personal & Corporate Banking client transactions are generally floored at non-negative levels. Accordingly, for the purposes of this disclosure table, downward moves of 100 / 200 basis points are floored to ensure that the resulting shocked interest rates do not turn negative. The flooring results in non-linear sensitivity behavior.

Exposures to eurozone countries rated lower than AAA / Aaa by at least one major rating agency

Balance sheet, liquidity and funding management

Strategy, objectives and governance

This section provides balance sheet, liquidity and funding management information and should be read in conjunction with the "Treasury management" section of our Annual Report 2018, which provides more information about the Group's strategy, objectives and governance for liquidity and funding management.

Balances disclosed in this section represent quarter-end positions, unless indicated otherwise. Intra-quarter balances fluctuate in the ordinary course of business and may differ from quarter-end positions.

Assets and liquidity management

Balance sheet assets (31 March 2019 vs 31 December 2018)

As of 31 March 2019, balance sheet assets totaled USD 957 billion, a decrease of USD 2 billion from 31 December 2018. Total assets excluding derivatives and cash collateral receivables on derivative instruments increased by USD 12 billion to USD 820 billion, mainly driven by increases in trading portfolio assets, non-financial assets and financial assets for unit-linked investment contracts, and securities financing transactions at amortized cost, partly offset by a decrease in other financial assets measured at amortized cost and fair value.

Derivatives and cash collateral receivables on derivative instruments decreased by USD 13 billion, primarily in the Investment Bank, reflecting lower embedded spreads on new trades compared to those rolling off in our Equities and Foreign Exchange, Rates and Credit businesses. Other financial assets measured at

amortized cost and fair value decreased by USD 4 billion, mainly relating to a reduction in receivables for securities financing transactions measured at fair value, as well as transfers into cash within our high-quality liquid assets (HQLA) portfolio. Lending assets decreased by USD 2 billion, driven by Global Wealth Management and Personal & Corporate Banking, mainly reflecting currency effects.

These decreases were partly offset by a USD 5 billion increase in trading portfolio assets, primarily in the Investment Bank, mainly reflecting increases in economic hedges of long-term debt issued measured at fair value in our Equities business and higher client activity in fixed income products in our Foreign Exchange, Rates and Credit business. Non-financial assets and financial assets for unit-linked investment contracts increased by USD 5 billion, driven in part by the recognition of USD 3.4 billion of right-of-use assets with the adoption of IFRS 16, as well as by a USD 2.5 billion increase in assets held to hedge unit-linked investment contracts, reflecting fair value changes. Receivables from securities financing transactions held at amortized cost increased by USD 5 billion, mainly relating to increased client activity in our Equities business. Cash and balances at central banks increased by USD 2 billion, primarily driven by an increase in deposits and reduced funding consumption by the business divisions.

- Refer to "Note 1 Basis of accounting" in the "Consolidated financial statements" section of this report for more information on the adoption of IFRS 16
- Refer to the "Consolidated financial statements" section of this report for more information

Assets

¹ Consists of loans and advances to banks and customers. ² Consists of financial assets at fair value held for trading. ³ Consists of financial assets at fair value not held for trading, financial assets measured at fair value through other comprehensive income and other financial assets measured at amortized cost, but excludes financial assets for unit-linked investment contracts and cash collateral receivables on derivative instruments.

Liquidity coverage ratio

In the first quarter of 2019, the UBS Group liquidity coverage ratio (LCR) increased by 17 percentage points to 153%, remaining above the 110% Group LCR minimum communicated by the Swiss Financial Market Supervisory Authority (FINMA). The LCR increase was primarily driven by additional HQLA relating to higher average cash balances, reflecting higher deposit volumes and reduced funding consumption by the

business divisions, as well as lower net cash outflows, mainly from secured financing transactions, driven by additional inflows from excess cash investments and lower outflows from client activity.

→ Refer to the “Treasury management” section of our Annual Report 2018 for more information on liquidity management and the liquidity coverage ratio

Liquidity coverage ratio

¹ Calculated based on an average of 63 data points in the first quarter of 2019 and 64 data points in the fourth quarter of 2018. ² Calculated after the application of haircuts. ³ Includes cash and balances at central banks and other eligible balances as prescribed by FINMA. ⁴ Calculated in accordance with FINMA requirements. ⁵ Calculated after the application of inflow and outflow rates.

Liabilities and funding management

Liabilities (31 March 2019 vs 31 December 2018)

Total liabilities decreased by USD 3 billion to USD 903 billion as of 31 March 2019. Total liabilities excluding derivatives and cash collateral increased to USD 762 billion as of 31 March 2019 from USD 751 billion as of 31 December 2018.

Derivatives and cash collateral payables on derivative instruments decreased by USD 14 billion, in line with the aforementioned decrease in derivative financial assets and cash collateral receivables. Short-term borrowings decreased by USD 9 billion, mainly reflecting net maturities and redemptions of commercial paper and certificates of deposit. Securities financing transactions at amortized cost decreased by USD 5 billion, mainly reflecting reduced funding needs in asset-sourcing and firm-financing activities.

Long-term debt issued increased by USD 13 billion, primarily related to a USD 10 billion increase in debt issued designated at fair value in the Investment Bank, driven by client activity and mark-to-market effects. Long-term debt issued measured at

amortized cost increased by USD 3 billion, reflecting the issuance of a USD 2.5 billion US dollar-denominated high-trigger loss-absorbing additional tier 1 capital instrument and USD 0.4 billion-equivalent Swiss franc-denominated senior unsecured debt that contributes to our total loss-absorbing capacity (TLAC). Customer deposits increased by USD 6 billion, predominantly in Global Wealth Management. Trading portfolio liabilities increased by USD 5 billion, driven by both increased client activity and mark-to-market effects in the Investment Bank.

Other financial liabilities at amortized cost and fair value were stable at USD 19 billion. Upon adoption of IFRS 16, an increase in lease liabilities of USD 4 billion was recognized. This effect was largely offset by a decrease in payables for securities financing transactions measured at fair value.

The “Funding by product and currency” table in this section provides more information on our funding sources.

→ Refer to “Bondholder information” at www.ubs.com/investors for more information on capital and senior debt instruments

→ Refer to the “Consolidated financial statements” section of this report for more information

Balance sheet, liquidity and funding management

Equity

Equity attributable to shareholders increased to USD 53,667 million as of 31 March 2019 from USD 52,928 million as of 31 December 2018.

Total comprehensive income attributable to shareholders was USD 1,037 million, reflecting net profit of USD 1,141 million and negative other comprehensive income (OCI) of USD 104 million. OCI included negative OCI related to own credit of USD 318 million, negative defined benefit plan OCI of USD 179 million and negative foreign currency translation OCI of USD 128 million. These effects were partly offset by positive cash flow hedge OCI of USD 459 million and positive OCI related to debt instruments measured at fair value of USD 62 million.

Share premium decreased by USD 708 million, mainly due to the delivery of treasury shares under share-based compensation plans.

Net treasury share activity increased equity attributable to shareholders by USD 421 million, reflecting the aforementioned delivery of treasury shares, partly offset by the purchase of shares from the market in order to hedge future share delivery

obligations related to employee share-based compensation awards.

The effect of adopting IFRIC 23, *Uncertainty over Income Tax Treatments*, decreased equity attributable to shareholders by USD 11 million.

We expect that the payment of the proposed CHF 0.70 dividend per share, which is subject to approval by the Annual General Meeting of Shareholders on 2 May 2019, will reduce equity attributable to shareholders by approximately USD 2.6 billion in the second quarter of 2019, subject to the CHF / USD exchange rate on 2 May 2019.

Forward starting reverse repurchase agreements	31.3	9.0	248
Forward starting repurchase agreements	16.0	8.3	93

¹ The information provided in this table is aligned with the scope disclosed in "Note 17 Guarantees, commitments and forward starting transactions" in the "Consolidated financial statements" section of this report. ² Total guarantees and Loan commitments are shown net of sub-participations.

Off-balance sheet (31 March 2019 vs 31 December 2018)

Forward starting reverse repurchase agreements and forward starting repurchase agreements increased by USD 22 billion and USD 8 billion, respectively, primarily in Corporate Center,

reflecting higher market activity on the back of a seasonally low year-end period in 2018. Guarantees and Loan commitments each decreased by USD 0.5 billion, primarily in Personal & Corporate Banking.

Pro forma net stable funding ratio

USD billion, except where indicated	31.3.19	31.12.18
Available stable funding	474	469
Required stable funding	432	426
Pro forma net stable funding ratio (%)	110	110

Net stable funding ratio

As of 31 March 2019, our estimated pro forma net stable funding ratio (NSFR) was 110%, unchanged from 31 December 2018, primarily reflecting a USD 5 billion increase in available stable funding, mainly driven by an increase in deposits and debt issuances, offset by a USD 6 billion increase in required stable funding, mainly due to an increase in trading assets and loans.

The calculation of our pro forma NSFR includes estimates of the effect of the Basel Committee on Banking Supervision rules and will be refined when NSFR rule-making is completed in Switzerland and as regulatory interpretations evolve and new models and associated systems are enhanced.

→ Refer to the "Treasury management" section of our Annual Report 2018 for more information on the net stable funding ratio

¹ Short-term debt issued is comprised of certificates of deposit, commercial paper, acceptances and promissory notes, and other money market paper. ² Long-term debt issued also includes debt with a remaining time to maturity of less than one year.

Capital management

This section provides information on key developments during the reporting period and should be read in conjunction with the “Capital management” section of our Annual Report 2018, which provides more information about our strategy, objectives and governance for capital management. Disclosures in this section are provided for UBS Group AG on a consolidated basis and focus on information in accordance with the Basel III framework, as applicable to Swiss systemically relevant banks (SRBs).

Information in accordance with the Basel Committee on Banking Supervision framework for UBS Group AG consolidated together with capital and other regulatory information for UBS AG consolidated and standalone, UBS Switzerland AG standalone, UBS Europe SE consolidated and UBS Americas Holding LLC consolidated is provided in our 31 March 2019 Pillar 3 report – UBS Group and significant regulated subsidiaries and sub-groups, which is available under “Pillar 3 disclosures” at www.ubs.com/investors.

Capital and other regulatory information for UBS AG consolidated is provided in the UBS AG first quarter 2019 report, which will be available as of 30 April 2019 under “Quarterly reporting” at www.ubs.com/investors.

Swiss SRB requirements and information

Information on the Swiss SRB capital framework and on Swiss SRB going and gone concern requirements that are being phased in until the end of 2019 is provided in the “Capital management” section of our Annual Report 2018, which is available under “Annual reporting” at www.ubs.com/investors. These requirements are also applicable to UBS AG consolidated and UBS Switzerland AG standalone. UBS AG is subject to going concern requirements on a standalone basis, for which details are provided in the 31 December 2018 Pillar 3 report – UBS

Group and significant regulated subsidiaries and sub-groups, which is available under “Pillar 3 disclosures” at www.ubs.com/investors, and in our 31 March 2019 Pillar 3 report – UBS Group and significant regulated subsidiaries and sub-groups, which is available under “Pillar 3 disclosures” at www.ubs.com/investors.

The table below provides the risk-weighted assets (RWA)- and leverage ratio denominator (LRD)-based requirements and information as of 31 March 2019.

Swiss SRB going and gone concern requirements and information¹

Total loss-absorbing capacity	25.35	32.69	67,834	87,468	8.83	9.60	80,415	87,468

¹ This table includes a rebate equal to 40% of the maximum rebate on the gone concern requirements, which was granted by FINMA and will be phased in until 1 January 2020, plus an additional reduction of 1.27% for the RWA requirement and 0.37% for the LRD requirement, respectively under Swiss SRB as of 1.1.20 rules, for the usage of low-trigger tier 2 capital instruments to fulfill gone concern requirements.
² Includes outstanding low-trigger loss-absorbing additional tier 1 (AT1) capital instruments, which are available under the transitional rules of the Swiss SRB framework to meet the going concern requirements until their first call date, even if the first call date is after 31 December 2019. As of their first call date, these instruments are eligible to meet the gone concern requirements.
³ Includes outstanding high- and low-trigger loss-absorbing tier 2 capital instruments, which are available under the transitional rules of the Swiss SRB framework to meet the going concern requirements until the earlier of (i) their maturity or first call date or (ii) 31 December 2019, and to meet gone concern requirements thereafter. Outstanding low-trigger loss-absorbing tier 2 capital instruments are subject to amortization starting five years prior to their maturity, with the amortized portion qualifying as gone concern loss-absorbing capacity. Instruments available to meet gone concern requirements are eligible until one year before maturity, with a haircut of 50% applied in the last year of eligibility.
⁴ Consists of a minimum capital requirement of 8% and a buffer capital requirement of 5.89%, including the effect of countercyclical buffers of 0.31%.
⁵ Consists of a minimum leverage ratio requirement of 3% and a buffer leverage ratio requirement of 1.5%.
⁶ Includes applicable add-ons of 1.08% for RWA and 0.38% for LRD and applicable rebate of 1.86% for RWA and 0.64% for LRD.
⁷ Consists of a minimum capital requirement of 8% and a buffer capital requirement of 6.61%, including the effect of countercyclical buffers of 0.31% and applicable add-ons of 1.44%.
⁸ Consists of a minimum leverage ratio requirement of 3% and a buffer leverage ratio requirement of 2%, including applicable add-ons of 0.5%.
⁹ Includes applicable add-ons of 1.44% for RWA and 0.5% for LRD and applicable rebate/reduction of 3.56% for RWA and 1.17% for LRD.

Total loss-absorbing capacity

The table below provides Swiss SRB going and gone concern information based on transitional arrangements and based on the final rules, which will be effective as of 1 January 2020. The remaining differences between the columns "Swiss SRB, including transitional arrangements" and "Swiss SRB as of 1.1.20" are fully related to the eligibility of instruments as

required by the too big to fail provisions in the Swiss Capital Adequacy Ordinance applicable to Swiss SRBs, which are described in the "Swiss SRB total loss-absorbing capacity framework" in the "Capital management" section of our Annual Report 2018.

¹ Under the transitional rules of the Swiss SRB framework, outstanding low-trigger loss-absorbing tier 2 capital instruments are subject to amortization starting five years prior to their maturity, with the amortized portion qualifying as gone concern loss-absorbing capacity. ² Instruments available to meet gone concern requirements are eligible until one year before maturity, with a haircut of 50% applied in the last year of eligibility. ³ Non-Basel III-compliant tier 2 capital instruments qualify as gone concern instruments.

Total loss-absorbing capacity and movement under Swiss SRB rules applicable as of 1 January 2020

Going concern capital and movement

As of 31 March 2019, our common equity tier 1 (CET1) capital increased by USD 0.5 billion to USD 34.7 billion, mainly as a result of higher operating profit before tax, partly offset by accruals for capital returns to shareholders. Our loss-absorbing additional tier 1 (AT1) capital increased by USD 2.6 billion to USD 14.8 billion as of 31 March 2019, following the issuance of a US dollar-denominated high-trigger additional tier 1 capital instrument.

→ Refer to “UBS shares” in this section for more information on the share repurchase program

Gone concern loss-absorbing capacity and movement

Our total gone concern loss-absorbing capacity increased by USD 0.6 billion to USD 38.0 billion, primarily due to the issuance of USD 0.4 billion equivalent of total loss-absorbing capacity (TLAC)-eligible senior unsecured debt instruments denominated in Swiss francs.

→ Refer to “Bondholder information” at www.ubs.com/investors for more information on the eligibility of capital and senior unsecured debt instruments and on key features and terms and conditions of capital instruments

Loss-absorbing capacity and leverage ratios

Our CET1 capital ratio increased 0.1 percentage points to 13.0%, reflecting a USD 0.5 billion increase in CET1 capital, partly offset by a USD 3.8 billion increase in RWA.

Our CET1 leverage ratio increased from 3.77% to 3.80% in the first quarter of 2019, reflecting the aforementioned increase in CET1 capital, partly offset by a USD 6 billion increase in the leverage ratio denominator (LRD).

Our gone concern loss-absorbing capacity ratio remained at 14.2% as increased loss absorbing capacity was offset mainly by the aforementioned increase in RWA. Our gone concern leverage ratio increased 0.1 percentage points to 4.2%, mainly resulting from the aforementioned increase in TLAC-eligible senior unsecured debt instruments.

Reconciliation of IFRS equity to Swiss SRB common equity tier 1 capital

Additional information

Sensitivity to currency movements

Risk-weighted assets

We estimate that a 10% depreciation of the US dollar against other currencies would have increased our RWA by USD 11 billion and our CET1 capital by USD 1.2 billion as of 31 March 2019 (31 December 2018: USD 11 billion and USD 1.2 billion, respectively) and reduced our CET1 capital ratio by 9 basis points (31 December 2018: 9 basis points). Conversely, we estimate that a 10% appreciation of the US dollar against other currencies would have reduced our RWA by USD 10 billion and our CET1 capital by USD 1.1 billion (31 December 2018: USD 10 billion and USD 1.1 billion, respectively) and increased our CET1 capital ratio by 9 basis points (31 December 2018: 9 basis points).

Leverage ratio denominator

We estimate that a 10% depreciation of the US dollar against other currencies would have increased our LRD by USD 58 billion (31 December 2018: USD 57 billion) and reduced our Swiss SRB going concern leverage ratio by 18 basis points (31 December 2018: 15 basis points). Conversely, we estimate that a 10% appreciation of the US dollar against other currencies would have reduced our LRD by USD 52 billion (31 December 2018: USD 51 billion) and increased our Swiss SRB going concern leverage ratio by 18 basis points (31 December 2018: 16 basis points).

The aforementioned sensitivities do not consider foreign currency translation effects related to defined benefit plans other than those related to the currency translation of the net equity of foreign operations.

→ Refer to **“Active management of sensitivity to currency movements”** in the **“Capital management”** section of our **Annual Report 2018** for more information

Estimated effect on capital from litigation, regulatory and similar matters subject to provisions and contingent liabilities

We have estimated the loss in capital that we could incur as a result of the risks associated with the matters described in “Note 16 Provisions and contingent liabilities” in the “Consolidated financial statements” section of this report. We have used for this purpose the advanced measurement approach (AMA) methodology that we use when determining the capital requirements associated with operational risks, based on a 99.9% confidence level over a 12-month horizon. The methodology takes into consideration UBS and industry experience for the AMA operational risk categories to which those matters correspond, as well as the external environment affecting risks of these types, in isolation from other areas. On this standalone basis, we estimate the loss in capital that we could incur over a 12-month period as a result of our risks associated with these operational risk categories at USD 4.6 billion as of 31 March 2019. This estimate is not related to and does not take into account any provisions recognized for any of these matters and does not constitute a subjective assessment of our actual exposure in any of these matters.

→ Refer to **“Operational risk”** in the **“Risk management and control”** section of our **Annual Report 2018** for more information

→ Refer to **“Note 16 Provisions and contingent liabilities”** in the **“Consolidated financial statements”** section of this report for more information

Risk-weighted assets

During the first quarter of 2019, risk-weighted assets (RWA) increased by USD 3.8 billion to USD 267.6 billion, reflecting increases from model updates of USD 3.9 billion, methodology and policy changes of USD 3.8 billion and regulatory add-ons of USD 0.9 billion, partly offset by asset size and other movements of USD 3.8 billion and currency effects of USD 0.9 billion.

Movement in risk-weighted assets by key driver

<i>USD billion</i>	RWA as of 31.12.18	Currency effects	Methodology and policy changes	Model updates / changes	Regulatory add-ons	Asset size and other ¹	RWA as of 31.3.19
Credit and counterparty credit risk ²	147.9	(0.9)	0.3	0.4	0.6	4.3	152.7
Non-counterparty-related risk	18.3	(0.1)	3.5			(0.2)	21.5
Market risk	20.0			0.7	0.3	(8.0)	13.0
Operational risk	77.6			2.8			80.3
Total	263.7	(0.9)	3.8	3.9	0.9	(3.8)	267.6

¹ Includes the Pillar 3 categories "Asset size," "Credit quality of counterparties," "Acquisitions and disposals" and "Other." Refer to the 31 March 2019 Pillar 3 report under "Pillar 3 disclosures" at www.ubs.com/investors for more information. ² Includes settlement risk, credit valuation adjustments, equity exposures in the banking book and securitization exposures in the banking book.

Credit and counterparty credit risk

Credit and counterparty credit risk RWA increased by USD 4.8 billion to USD 152.7 billion as of 31 March 2019.

The RWA increase from asset size and other movements of USD 4.3 billion was mainly driven by a USD 4.3 billion increase in the Investment Bank, primarily reflecting increases in traded loans and exposures in real estate financing within the Corporate Client Solutions business, as well as an increase in derivative exposures within the Foreign Exchange, Rates and Credit business.

A regulatory add-on of USD 0.6 billion was agreed with FINMA in the first quarter for certain portfolios awaiting the development of a formalized rating tool, resulting in an increase of USD 0.5 billion in Corporate Center, and USD 0.1 billion in the Investment Bank. In addition, RWA increased by USD 0.4 billion as a result of model updates, predominantly the continued phasing-in of RWA increases related to probability of default (PD) and loss given default (LGD) changes from the implementation of revised models for Swiss residential mortgages, affecting Personal & Corporate Banking and Global Wealth Management.

A further increase from methodology and policy changes of USD 0.3 billion was related to the removal of the expert rating approach applied for exposures with no approved rating methodology.

We anticipate that methodology changes and model updates, including the continued phase-in of RWA increases related to PD and LGD factors on Swiss mortgages, will increase credit and counterparty credit risk RWA by around USD 1.5 billion for the remainder of 2019, of which approximately USD 0.5 billion is expected in the second quarter of 2019. The extent and timing of RWA changes may vary as methodology changes and model updates are completed and receive regulatory approval, and as regulatory multipliers are adjusted. In addition, changes in the

composition of the relevant portfolios and other factors will affect our RWA.

→ Refer to "Credit risk models" in the "Risk management and control" section of our Annual Report 2018 for more information

Non-counterparty credit risk

Non-counterparty credit risk RWA increased by USD 3.2 billion to USD 21.5 billion as of 31 March 2019, primarily driven by an increase of USD 3.5 billion from the adoption of IFRS 16, Leases.

→ Refer to "Note 1 Basis of accounting" in the "Consolidated financial statements" section of this report for more information on IFRS 16

Market risk

Market risk RWA decreased by USD 7.0 billion in the first quarter of 2019, driven by asset size and other movements resulting from lower average regulatory value-at-risk (VaR), stressed VaR and incremental risk charge (IRC) levels observed in the Investment Bank. This decrease was driven by the Equities business due to a reduction in market volatility as well as a decrease in client activity along with an overall reduction in credit exposure in the FRC business. This was partly offset by an increase of USD 0.7 billion, primarily related to the ongoing parameter update of the VaR model and VaR model changes as well as an increase from regulatory add-ons of USD 0.3 billion, reflecting updates from the monthly risks-not-in-VaR assessment.

→ Refer to the "Risk management and control" section of this report and the 31 March 2019 Pillar 3 report – UBS Group and significant regulated subsidiaries and sub-groups, which is available under "Pillar 3 disclosures" at www.ubs.com/investors, for more information on market risk developments

Operational risk

Operational risk RWA increased by USD 2.8 billion to USD 80.3 billion as of 31 March 2019, as model inputs in the advanced measurement approach (AMA) model were updated during the quarter to reflect developments related to litigation on the cross-border matter.

- Refer to “Operational risk” in the “Risk management and control” section of our Annual Report 2018 for more information on the advanced measurement approach model
- Refer to “Note 16 Provisions and contingent liabilities” in the “Consolidated financial statements” section of this report for more information on the French litigation matter

Total	2.6	0.4	0.5	(0.6)	0.9	3.8

¹ Includes settlement risk, credit valuation adjustments, equity exposures in the banking book and securitization exposures in the banking book. ² Non-counterparty-related risk includes deferred tax assets recognized for temporary differences (31 March 2019: USD 8.7 billion; 31 December 2018: USD 8.8 billion), property, equipment and software (31 March 2019: USD 12.6 billion; 31 December 2018: USD 9.3 billion) and other items (31 March 2019: USD 0.2 billion; 31 December 2018: USD 0.2 billion).

Leverage ratio denominator

During the first quarter of 2019, the leverage ratio denominator (LRD) increased by USD 6 billion to USD 911 billion. This increase was driven by asset size and other movements of USD 8 billion as well as policy changes of USD 4 billion, partly offset by a decrease in currency effects of USD 5 billion.

Movement in leverage ratio denominator by key driver

<i>USD billion</i>	LRD as of 31.12.18	Currency effects	Policy changes	Asset size and other	LRD as of 31.03.19
On-balance sheet exposures (excluding derivative exposures and SFTs) ¹	663.1	(3.9)	3.5	8.4	671.1
Derivative exposures	95.4	(0.3)		0.0	95.0
Securities financing transactions	130.9	(0.3)		1.5	132.1
Off-balance sheet items	29.0	(0.2)		(2.6)	26.3
Deduction items	(13.8)	0.0		0.3	(13.6)
Total	904.6	(4.7)	3.5	7.6	911.0

¹ Excludes positive replacement values, cash collateral receivables on derivative instruments, cash collateral on securities borrowed, reverse repurchase agreements, margin loans and prime brokerage receivables related to securities financing transactions, which are presented separately under Derivative exposures and Securities financing transactions in this table.

The LRD movements described below exclude currency effects.

On-balance sheet exposures (excluding derivatives and securities financing transactions (SFTs)) increased by USD 12 billion due to higher trading portfolio assets resulting from increases in economic hedges of long-term debt issued measured at fair value and higher cash and cash equivalents, positive market-driven effects on certain financial assets measured at fair value, as well as an increase of USD 3.5 billion from the adoption of IFRS 16, *Leases*.

Off-balance sheet items decreased by USD 3 billion, mainly due to client-driven activity and treating certain derivative loan commitments from the first quarter 2019 as derivative exposures to align with the accounting presentation.

SFTs increased by USD 1 billion, due to asset size and other movements, primarily resulting from USD 5 billion increase in receivables from securities financing transactions held at amortized cost, mainly relating to increased client activity. This increase was partly offset by a decrease of USD 3 billion in other financial assets at fair value not held for trading as a result of trade unwinds and reinvestment of cash and cash equivalents in the Corporate Center.

→ **Refer to the “Balance sheet, liquidity and funding management” section of this report for more information on balance sheet movements**

¹ Represents the difference between the IFRS and the regulatory scope of consolidation, which is the applicable scope for the LRD calculation. ² Consists of derivative financial instruments, cash collateral receivables on derivative instruments, receivables from securities financing transactions, and margin loans as well as prime brokerage receivables and financial assets at fair value not held for trading, both related to securities financing transactions, in accordance with the regulatory scope of consolidation, which are presented separately under Derivative exposures and Securities financing transactions.

Equity attribution and return on attributed equity

As of 1 January 2019, we have updated our equity attribution framework. Specifically, we have revised the capital ratio for risk-weighted assets (RWA) from 11% to 12.5% and incrementally allocated to business divisions USD 2 billion of attributed equity that is related to certain common equity tier 1 (CET1) deduction items, previously held centrally.

In aggregate we allocated USD 7 billion of additional attributed equity to the business divisions. Prior periods have been restated to reflect this change.

→ Refer to the “Recent developments” section of this report for more information on the equity attribution framework

Under our equity attribution framework, tangible equity is attributed based on a weighting of 50% each for average RWA and average leverage ratio denominator (LRD), which both include resource allocations from Corporate Center to the business divisions. Average RWA and LRD are converted to their CET1 capital equivalents based on capital ratios of 12.5% and 3.75%, respectively. If the attributed tangible equity calculated under the weighted-driver approach is less than the CET1 capital equivalent of risk-based capital (RBC) for any business division, the CET1 capital equivalent of RBC is used as a floor for that business division.

Furthermore, we allocate to business divisions attributed equity that is related to certain CET1 deduction items, such as compensation-related components and the expected loss on advanced internal ratings-based portfolio less general provisions.

In addition to tangible equity, we allocate equity to our businesses to support goodwill and intangible assets.

We attribute all remaining Basel III capital deduction items to Corporate Center Group items. These deduction items include deferred tax assets (DTAs) recognized for tax loss carry-forwards and DTAs on temporary differences in excess of the threshold, which together constituted the largest component of Corporate Center Group items, dividend accruals and unrealized gains from cash flow hedges.

→ Refer to the “Capital management” section of our Annual Report 2018 for more information on the equity attribution framework

UBS shares

UBS Group AG shares are listed on the SIX Swiss Exchange (SIX). They are also listed on the New York Stock Exchange (NYSE) as global registered shares. Each share has a par value of CHF 0.10 per share.

Shares issued increased by 3 million shares in the first quarter of 2019 due to the issuance of shares out of conditional share capital upon exercise of employee share options.

Treasury shares, which are primarily held to hedge our share delivery obligations related to employee share-based compensation and participation plans, totaled 146 million shares as of 31 March 2019.

Treasury shares held decreased by 21 million shares in the first quarter of 2019, mainly due to the delivery of treasury shares under share-based compensation plans, partly offset by the purchase of shares from the market in order to hedge future share delivery obligations related to employee share-based compensation awards.

¹ Refer to "Note 9 Earnings per share (EPS) and shares outstanding" in the "Consolidated financial statements" section of this report for more information. ² Basic and diluted earnings per share in Swiss francs are calculated based on a translation of net profit / (loss) under our US dollar presentation currency. As a consequence of the restatement to a US dollar presentation currency, amounts may differ from those originally published in our quarterly and annual reports. ³ Represents the share price as listed on the SIX Swiss Exchange, translated to US dollars using the closing exchange rate as of the respective date. ⁴ Beginning with our Annual Report 2018, the calculation of market capitalization has been amended to reflect total shares outstanding multiplied by the share price at the end of the period. The calculation was previously based on total shares issued multiplied by the share price at the end of the period. Market capitalization has been reduced by USD 2.1 billion as of 31 December 2018 and by USD 1.7 billion as of 31 March 2018 as a result.

Refer to "Note 26 Restricted and transferred financial assets" in the "Consolidated financial statements" section in the Annual Report 2018 for more information. ³ Money market paper is included in the balance sheet under Financial assets at fair value held for trading, Financial assets measured at fair value through other comprehensive income, Financial assets at fair value not held for trading and Other financial assets measured at amortized cost. ⁴ Includes dividends received from associates reported within Net cash flow from / (used in) investing activities.

Notes to the UBS Group AG interim consolidated financial statements (unaudited)

Note 1 Basis of accounting

Basis of preparation

The consolidated financial statements (the financial statements) of UBS Group AG and its subsidiaries (together "UBS" or "the Group") are prepared in accordance with International Financial Reporting Standards (IFRS), as issued by the International Accounting Standards Board (IASB), and are presented in US dollars (USD), which is also the functional currency of UBS Group AG, UBS AG's Head Office, UBS AG's London Branch and UBS's US-based operations. These interim financial statements are prepared in accordance with IAS 34, *Interim Financial Reporting*.

In preparing these interim financial statements, the same accounting policies and methods of computation have been applied as in the UBS Group AG consolidated annual financial statements for the period ended 31 December 2018, except for the changes described in this note. These interim financial statements are unaudited and should be read in conjunction with UBS Group AG's audited consolidated financial statements included in the Annual Report 2018. In the opinion of management, all necessary adjustments were made for a fair presentation of the Group's financial position, results of operations and cash flows.

Preparation of these interim financial statements requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, income, expenses and disclosures of contingent assets and liabilities. These estimates and assumptions are based on the best available information. Actual results in the future could differ from such estimates and such differences may be material to the financial statements. Revisions to estimates, based on regular reviews, are recognized in the period in which they occur. For more information on areas of estimation uncertainty that are considered to require critical judgment, refer to "Note 1a Significant accounting policies" in the "Consolidated financial statements" section of the Annual Report 2018.

Adoption of IFRS 16, *Leases*

Application and transition effect

Effective from 1 January 2019, UBS adopted IFRS 16, *Leases*, which replaced IAS 17, *Leases*, and sets out the principles for the recognition, measurement, presentation and disclosure of leases.

IFRS 16 introduces a single lessee accounting model and fundamentally changes how UBS accounts for operating leases when acting as a lessee, with a requirement to record a right-of-use asset and lease liability on the balance sheet. UBS is a lessee in a number of leases, primarily of real estate, including offices, retail branches and sales offices, with a smaller number of IT hardware leases. As permitted by the transitional provisions of IFRS 16, UBS elected to apply the modified retrospective approach and has not restated comparative figures. Overall, adoption of IFRS 16 resulted in a USD 3.5 billion increase in both total assets and total liabilities in UBS's consolidated financial statements. There was no effect on equity.

→ Refer to the table below for more information

UBS applied the following practical expedients that are permitted on transition to IFRS 16 where UBS is the lessee in a lease previously classified as an operating lease:

- to not reassess whether or not a contract contained a lease;
- to rely on previous assessments of whether such contracts were considered onerous;
- to rely on previous sale-and-leaseback assessments;
- adjust lease terms with the benefit of hindsight with respect to whether extension or termination options are reasonably certain of being exercised;
- to discount lease liabilities using the Group's incremental borrowing rate in each currency as at 1 January 2019;
- to initially measure the right-of-use asset at an amount equal to the lease liability for leases previously classified as operating leases, adjusted for existing lease balances such as rent prepayments, rent accruals, lease incentives and onerous lease provisions, but excluding initial direct costs; and
- to not apply IFRS 16 to leases whose remaining term will end within 12 months from the transition date.

Note 1 Basis of accounting (continued)

The measurement of leases previously classified as finance leases, where UBS acts as lessee, has not changed on transition to IFRS 16. Similarly UBS has made no adjustments where UBS acts as lessor, in either a finance or operating lease, of physical assets it owns. Where UBS acts as an intermediate lessor, i.e., enters into a head lease and subleases the asset to a third party, the sublease has been classified as either a finance or operating lease based

primarily on whether the sublease term consumes the majority of the remaining useful life of the right-of-use asset arising from the head lease as at the transition date.

The following table reconciles the obligations in respect of operating leases as at 31 December 2018 to the opening lease liabilities recognized on 1 January 2019:

Reconciliation between operating lease commitments disclosed under IAS 17 and lease liabilities recognized under IFRS 16

<i>USD million</i>	
Total undiscounted operating lease commitments as of 31 December 2018	4,688
Leases with a remaining term of less than one year as of 1 January 2019	(18)
Excluded service components	(296)
Reassessment of lease term for extension or termination options	403
Total undiscounted lease payments	4,777
Discounted at a weighted average incremental borrowing rate of 3.07%	(744)
IFRS 16 transition adjustment	4,033
Finance lease liabilities as of 31 December 2018	24
Carrying amount of total lease liabilities as of 1 January 2019	4,057

The following table provides details on the determination of right-of-use assets on transition:

Determination of right-of-use assets on transition

<i>USD million</i>	<i>Carrying amount</i>
Other financial assets measured at amortized cost (finance lease assets recognized under IAS 17 as of 31 December 2018)	24
IFRS 16 transition adjustment	4,033
Other non-financial assets (prepaid rent)	19
Other non-financial liabilities (lease incentives)	(204)
Other financial liabilities at amortized cost (rent accruals)	(185)
Provisions (onerous lease provisions)	(132)
Other financial assets at amortized cost (finance lease receivables from subleases as intermediate lessor)	(176)
Property, equipment and software (total right-of-use assets as of 1 January 2019)¹	3,378

¹ Upon adoption of IFRS 16 on 1 January 2019, total liabilities for the Group increased by USD 3,512 million, representing USD 4,033 million in newly recognized lease liabilities, less USD 521 million liabilities from lease incentives, rent accruals and onerous lease provisions which were reclassified and presented as part of the right-of-use assets carrying amount. Total assets for the Group increased by USD 3,512 million, representing USD 3,336 million in right-of-use assets and USD 176 million in additional finance lease receivables from subleases.

Lease liabilities are presented within *Other financial liabilities measured at amortized cost* and right-of-use assets within *Property, equipment and software*. Finance lease receivables are included within *Other financial assets measured at amortized cost*. Due to the practical expedients taken on transition, there was no effect on equity.

During the first quarter of 2019, the weighted average lease term was approximately 9 years and the depreciation charge for right-of-use assets presented within *Depreciation and impairment of property, equipment and software* was USD 118

million. The interest charge on lease liabilities presented within *Interest expense from financial instruments measured at amortized cost* was USD 32 million and other rental expenses (including non-lease components paid to landlords) presented within *General and administrative expenses* were USD 16 million during the first quarter of 2019. This compares with a total rental expense presented in *General and administrative expenses* of USD 152 million and USD 141 million for the quarters ended 31 March 2018 and 31 December 2018, respectively.

Note 1 Basis of accounting (continued)**Update to significant accounting policy – Leasing (disclosed in Note 1a item 15 Leasing in the financial statements 2018)**

UBS predominantly enters into lease contracts, or contracts that include lease components, as a lessee of real estate, including offices, retail branches and sales offices, with a small number of IT hardware leases. UBS identifies non-lease components of a contract and accounts for them separately from lease components.

When UBS is lessee in a lease arrangement, UBS recognizes a lease liability and corresponding right-of-use (RoU) asset at the commencement of the lease term when UBS acquires control of the physical use of the asset. Lease liabilities are presented within *Other financial liabilities measured at amortized cost* and RoU assets within *Property, equipment and software*. The lease liability is measured based on the present value of the lease payments over the lease term, discounted using UBS's unsecured borrowing rate given the rate implicit in a lease is generally not observable to the lessee. Interest expense on the lease liability is presented within *Interest expense from financial instruments measured at amortized cost*. The RoU asset is recorded at an amount equal to the lease liability but is adjusted for rent prepayments, initial direct costs, any costs to refurbish the leased asset or lease incentives received. The RoU asset is depreciated over the shorter of the lease term or the useful life of the underlying asset, with the depreciation presented within *Depreciation and impairment of property, equipment and software*.

Lease payments generally include fixed payments and variable payments that depend on an index (such as an inflation index). When the lease contains an extension or termination option that the Group considers reasonably certain to be exercised, the expected rental payments or costs of termination are included within the lease payments used to generate the lease liability. UBS does not typically enter into leases with purchase options or residual value guarantees.

Where UBS acts as lessor or sublessor under a finance lease, a receivable is recognized in *Other financial assets measured at amortized cost* at an amount equal to the present value of the aggregate of the lease payments plus any unguaranteed residual value that UBS expects to recover at the end of the lease term. Initial direct costs are also included in the initial measurement of the lease receivable. Lease payments received during the lease term are allocated as repayments of the outstanding receivable. Interest income reflects a constant periodic rate of return on UBS's net investment using the interest rate implicit in the lease (or, for subleases, the rate for the head lease). UBS reviews the

estimated unguaranteed residual value annually, and if the estimated residual value to be realized is less than the amount assumed at lease inception, a loss is recognized for the expected shortfall. Where UBS acts as a lessor or sublessor in an operating lease of owned real estate, UBS recognizes the operating lease income on a straight-line basis over the lease term.

Lease receivables are subject to impairment requirements as set out in point g. in "Note 1a item 3 Financial instruments." Expected credit losses (ECL) on lease receivables are determined following the general impairment model within IFRS 9, *Financial Instruments*, without utilizing the simplified approach of always measuring impairment at the amount of lifetime ECL.

Other changes to accounting policies**Changes in Corporate Center cost allocations and equity attribution to business divisions**

In order to further align Group and divisional performance, UBS adjusted the methodology for the allocation of Corporate Center – Group Asset and Liability Management (Group ALM) and Corporate Center – Services funding costs and expenses to the business divisions. At the same time, UBS updated its funds transfer pricing framework to better reflect the sources and usage of funding. All of these changes are effective as of 1 January 2019 and prior-period segment information has been restated. Together, these changes have decreased the business divisions' operating results and thereby increased their adjusted cost / income ratios by 1–2 percentage points, with an offsetting effect of USD 0.7 billion in Corporate Center's operating profit / (loss) before tax.

Corporate Center has retained funding costs for deferred tax assets, costs relating to UBS's legal entity transformation program and other costs not attributable to, or representative of the performance of, the business divisions.

Alongside the update to allocations and UBS's funds transfer pricing framework, the Group has increased the allocation of balance sheet resources from Corporate Center to the business divisions, resulting in USD 223 billion of assets allocated from Corporate Center to the business divisions in restated 2018 numbers, predominantly from high-quality liquid assets and certain other assets centrally managed on behalf of the business divisions. Upon adoption of IFRS 16, *Leases*, as of 1 January 2019, UBS additionally allocated approximately USD 3.5 billion of newly recognized right-of-use assets and finance lease receivables to the business divisions.

→ Refer to "Note 2 Segment reporting" for more information

Note 1 Basis of accounting (continued)**Changes to Corporate Center segment reporting**

As announced in the Annual Report 2018, there has been a substantial reduction in the size and resource consumption of the Non-core and Legacy Portfolio. In addition, following the aforementioned changes to UBS's methodology for allocating funding costs and expenses from Corporate Center – Services and Corporate Center – Group Asset and Liability Management (Group ALM) to the business divisions, the operating loss retained in Corporate Center – Services and Corporate Center – Group ALM has been significantly reduced. As a consequence and in compliance with IFRS 8, *Operating Segments*, beginning with the first quarter 2019 report, UBS provides results for total Corporate Center only and does not separately report Corporate Center – Services, Group ALM and Non-core and Legacy Portfolio. Furthermore, UBS has operationally combined Group Treasury with Group ALM and calls this combined unit Group Treasury. Prior-period information has been restated.

→ Refer to "Note 2 Segment reporting" for more information

Presentation of dividend income and expense from financial instruments measured at fair value through profit or loss

Effective from the first quarter of 2019, UBS refined the presentation of dividend income and expense. This resulted in a reclassification of dividends from *Interest income (expense) from financial instruments measured at fair value through profit or loss* into *Other net income from financial instruments measured at fair value through profit or loss* (prior to 1 January 2019: *Other net income from fair value changes on financial instruments*). The change aligns the presentation of dividends with related fair value changes from the equity instruments and economic hedges removing volatility that has historically arisen within both *Net interest income* and *Other net income from fair value changes on financial instruments*. There is no effect on *Total operating income* or *Net profit / (loss)*. Prior periods have been restated for this presentational change and the effect on the respective reporting lines is outlined in the table below.

Changes to the presentation of dividend income and expense from financial instruments measured at fair value through profit or loss

USD million	For the quarter ended				Year-to-date
	31.3.18	30.6.18	30.9.18	31.12.18	31.12.18
Interest income from financial instruments measured at fair value through profit or loss	(572)	(636)	(699)	(401)	(2,308)
Interest expense from financial instruments measured at fair value through profit or loss	160	846	175	151	1,331
Net interest income	(412)	210	(524)	(250)	(976)
Other net income from financial instruments measured at fair value through profit or loss	412	(210)	524	250	976

IFRIC 23, Uncertainty over Income Tax Treatments

Effective 1 January 2019, UBS adopted IFRIC Interpretation 23, *Uncertainty over Income Tax Treatments* (IFRIC 23), which addresses how uncertain tax positions should be accounted for under IFRS. IFRIC 23 requires that, where acceptance of the tax treatment by the relevant tax authority is considered probable, it should be assumed as an accounting recognition matter that treatment of the item will ultimately be accepted. Therefore, no tax provision would be required in such cases. However, if acceptance of the tax treatment is not considered probable, the entity is required to reflect that uncertainty using an expected value (i.e., a probability-weighted approach) or the single most likely amount.

Upon adoption of IFRIC 23, on 1 January 2019 UBS recognized a net tax expense of USD 11 million in retained earnings.

Amendments to IAS 19, Employee Benefits

Effective 1 January 2019, UBS adopted amendments to IAS 19, *Employee Benefits*, which address the accounting when a plan

amendment, curtailment or settlement occurs during the reporting period. The amendments require entities to use the updated actuarial assumption to determine current service cost and net interest for the remainder of the annual reporting period after such an event. The amendments also clarify how the requirements for accounting for a plan amendment, curtailment or settlement affect the asset ceiling requirements. The amendments are effective prospectively for plan amendments, curtailments or settlements that occur on or after 1 January 2019. Adoption on 1 January 2019 had no effect on the Group's financial statements.

Annual Improvements to IFRS Standards 2015–2017 Cycle

Effective 1 January 2019, UBS adopted *Annual Improvements to IFRS Standards 2015–2017 Cycle*, which resulted in amendments to IFRS 3, *Business Combinations*, IFRS 11, *Joint Arrangements*, IAS 12, *Income Taxes*, and IAS 23, *Borrowing Costs*. Adoption of these amendments on 1 January 2019 had no material effect on the Group's financial statements.

Note 2 Segment reporting

Overview and changes in Corporate Center segment reporting

UBS's businesses are organized globally into four business divisions: Global Wealth Management, Personal & Corporate Banking, Asset Management and the Investment Bank, all of which are supported by Corporate Center. The four business divisions qualify as reportable segments for the purpose of segment reporting and, together with Corporate Center, reflect the management structure of the Group.

→ Refer to "Note 1a Significant accounting policies item 2" and "Note 2 Segment reporting" in the "Consolidated financial statements" section of the Annual Report 2018 for more information on the Group's reporting segments

As outlined in Note 1, beginning with the first quarter 2019 report, UBS provides results for total Corporate Center only and does not separately report Corporate Center – Services, Group Asset and Liability Management and Non-core and Legacy Portfolio.

→ Refer to Note 1 for more information

Changes in Corporate Center cost and resource allocation to business divisions

In order to further align Group and divisional performance, UBS has adjusted its methodology for the allocation of Corporate Center funding costs and expenses to the business divisions. At the same time, it has updated its funds transfer pricing framework to better reflect the sources and usage of funding. Prior-period information for the first quarter of 2018 has been restated, resulting in a decrease in *Operating profit / (loss) before tax* for Global Wealth Management of USD 97 million, for Personal & Corporate Banking of USD 37 million, for Asset Management of USD 8 million and for the Investment Bank of USD 51 million, with a corresponding increase in Corporate Center of USD 193 million.

Additionally, UBS has increased the allocation of balance sheet resources from Corporate Center to the business divisions. Prior-period information for the fourth quarter of 2018 has been restated, resulting in an increase of *Total assets* in Global Wealth Management of USD 114 billion, in Personal & Corporate Banking of USD 62 billion, in Asset Management of USD 4 billion and in the Investment Bank of USD 44 billion, with a corresponding decrease of assets in Corporate Center of USD 223 million.

These changes had no effect on the reported results or financial position of the Group.

→ Refer to Note 1 for more information

¹ Comparative figures in this table have been restated for the changes in Corporate Center cost and resource allocation to the business divisions and the changes in the equity attribution framework. Refer to further discussion in this note and in Note 1. ² Effective from the first quarter of 2019, UBS refined the presentation of dividend income and expense, reclassifying dividends from financial instruments measured at fair value through profit or loss from Net interest income to Non-interest income. Prior-period information was restated accordingly, with virtually all of the effect on the Group arising from the Investment Bank. Refer to Note 1 for more information.

Total fee and commission expense	409	439	433
Net fee and commission income	4,132	4,261	4,744
of which: net brokerage fees	748	735	937

¹ Reflects third-party fee and commission income for the first quarter of 2019 of USD 2,817 million for Global Wealth Management (fourth quarter of 2018: USD 2,897 million; first quarter of 2018: USD 3,204 million), USD 324 million for Personal & Corporate Banking (fourth quarter of 2018: USD 321 million; first quarter of 2018: USD 342 million), USD 619 million for Asset Management (fourth quarter of 2018: USD 657 million; first quarter of 2018: USD 646 million), USD 758 million for the Investment Bank (fourth quarter of 2018: USD 802 million; first quarter of 2018: USD 953 million) and USD 22 million for Corporate Center (fourth quarter of 2018: USD 24 million; first quarter of 2018: USD 33 million).

Note 5 Other income

USD million	For the quarter ended		
	31.3.19	31.12.18	31.3.18
Associates, joint ventures and subsidiaries			
Net gains / (losses) from acquisitions and disposals of subsidiaries ¹	1	(310)	0
Net gains / (losses) from disposals of investments in associates	4	46	0
Share of net profits of associates and joint ventures	15	481	16
Total	19	217	16
Financial assets measured at fair value through other comprehensive income			
Dividend income	1	0	0
Net gains / (losses) from disposals	1	0	0
Total	2	1	1
Income from properties ²	7	6	6
Net gains / (losses) from disposals of properties held for sale	0	9	0
Other	21	9	20
Total other income	49	241	42

¹ Includes foreign exchange gains / (losses) reclassified from other comprehensive income related to disposed foreign subsidiaries and branches. ² Includes rent received from third parties.

Note 6 Personnel expenses

USD million	For the quarter ended		
	31.3.19	31.12.18	31.3.18
Salaries and variable compensation	2,420	2,184	2,742
Financial advisor variable compensation ¹	960	999	1,032
Contractors	96	119	123
Social security	213	163	243
Pension and other post-employment benefit plans	224	172	(35) ²
Other personnel expenses	128	203	150
Total personnel expenses	4,043	3,839	4,254

¹ Financial advisor variable compensation consists of grid-based compensation based directly on compensable revenues generated by financial advisors and supplemental compensation calculated on the basis of financial advisor productivity, firm tenure, assets and other variables. It also includes expenses related to compensation commitments with financial advisors entered into at the time of recruitment that are subject to vesting requirements. ² Changes to the Pension Fund of UBS in Switzerland in the first quarter of 2018 resulted in a reduction in the pension obligation recognized by UBS. As a consequence, a pre-tax gain of USD 241 million was recognized in the income statement in the first quarter of 2018, with no overall effect on total equity. Refer to "Note 5 Personnel expenses" in the "Consolidated financial statements" section of the first quarter 2018 report for more information.

Note 7 General and administrative expenses

USD million	For the quarter ended		
	31.3.19	31.12.18	31.3.18
Occupancy	97	228	233
Rent and maintenance of IT and other equipment	185	187	159
Communication and market data services	156	163	161
Administration	123	256	144
<i>of which: UK and German bank levy</i>	<i>15</i>	<i>87</i>	<i>0</i>
Marketing and public relations	65	114	85
Travel and entertainment	90	113	98
Professional fees	176	294	245
Outsourcing of IT and other services	271	368	361
Litigation, regulatory and similar matters ¹	(8)	533	(11)
Other	32	37	36
Total general and administrative expenses	1,187	2,293	1,510

¹ Reflects the net increase / (release) in provisions for litigation, regulatory and similar matters recognized in the income statement. Refer to Note 16 for more information. Also includes recoveries from third parties (first quarter of 2019: USD 7 million; fourth quarter of 2018: USD 1 million; first quarter of 2018: USD 17 million).

Note 8 Income taxes

The Group recognized income tax expenses of USD 407 million for the first quarter of 2019, compared with USD 533 million for the first quarter of 2018.

Current tax expenses were USD 170 million, compared with USD 215 million, and related to taxable profits of UBS Switzerland AG and other entities.

Deferred tax expenses were USD 237 million, compared with USD 318 million. These include expenses of USD 218 million relating to profits for the current quarter, which primarily reflect the amortization of deferred tax assets (DTAs) previously recognized in relation to tax losses carried forward and

deductible temporary differences to reflect their offset against profits for the quarter, including the amortization of US tax loss DTAs at the level of UBS Americas Inc. In addition, deferred tax expenses in the first quarter of 2019 included a net expense of USD 19 million, mainly relating to a decrease in temporary difference DTAs of USD 29 million, as the expected value of future tax deductions for deferred compensation awards decreased. This deferred tax expense was partially offset by a tax loss DTA increase of USD 10 million for locations affected by our UK business transfer activity during the quarter.

Note 9 Earnings per share (EPS) and shares outstanding

	As of or for the quarter ended		
	31.3.19	31.12.18	31.3.18
Basic earnings (USD million)			
Net profit / (loss) attributable to shareholders	1,141	315	1,566
Diluted earnings (USD million)			
Net profit / (loss) attributable to shareholders	1,141	315	1,566
Less: (profit) / loss on own equity derivative contracts	0	0	(1)
Net profit / (loss) attributable to shareholders for diluted EPS	1,141	315	1,565
Weighted average shares outstanding			
Weighted average shares outstanding for basic EPS ¹	3,694,398,974	3,712,860,295	3,728,701,542
Effect of dilutive potential shares resulting from notional shares, in-the-money options and warrants outstanding	106,745,967	107,685,855	128,521,488
Weighted average shares outstanding for diluted EPS	3,801,144,941	3,820,546,150	3,857,223,030
Earnings per share (USD)			
Basic	0.31	0.08	0.42
Diluted	0.30	0.08	0.41
Shares outstanding			
Shares issued	3,858,959,179	3,855,634,749	3,854,297,125
Treasury shares	145,878,663	166,467,802	93,077,090
Shares outstanding	3,713,080,516	3,689,166,947	3,761,220,035

¹ The weighted average shares outstanding for basic EPS are calculated by taking the number of shares at the beginning of the period, adjusted by the number of shares acquired or issued during the period, multiplied by a time-weighted factor for the period outstanding. As a result, balances are affected by the timing of acquisitions and issuances during the period.

The table below outlines the potential shares that could dilute basic earnings per share in the future, but were not dilutive for the periods presented.

	31.3.19	31.12.18	31.3.18
<i>Number of shares</i>			
Potentially dilutive instruments			
Employee share-based compensation awards	3,516,195	3,605,198	7,283,110
Other equity derivative contracts	22,528,782	15,501,021	7,757,622
Total	26,044,977	19,106,219	15,040,732

Note 10 Expected credit loss measurement

a) Expected credit losses in the period

Total net credit loss expenses were USD 20 million in the first quarter of 2019, reflecting expenses of USD 5 million in expected credit losses (ECL) from stage 1 and 2 positions and losses of USD 15 million from credit-impaired (stage 3) positions.

A USD 5 million increase in stage 1 and 2 ECL during the period was primarily the result of updates to macroeconomic and market data in the Investment Bank portfolio, partly offset by recoveries in Global Wealth Management and Personal & Corporate Banking, reflecting improvements in collateral and credit scores.

Stage 3 losses of USD 15 million were recognized, predominantly in the Investment Bank, as well as across a number of defaulted positions in Global Wealth Management and Personal & Corporate Banking.

There have not been any material changes to the models used to calculate ECL and to determine stage allocation in the quarter.

UBS uses four different economic scenarios in the ECL calculation: an upside, a baseline, a mild downside and a severe downside scenario. The scenario narratives and weights were reviewed and remain unchanged from those applied as of 31 December 2018. Macroeconomic data and market data was updated across all scenarios, as well as the baseline scenario shocks, as of 31 March 2019.

→ **Refer to "Note 1a Significant accounting policies item g" and "Note 23 Expected credit loss measurement" in the "Consolidated financial statements" section of the Annual Report 2018 for more information**

b) ECL-relevant balance sheet and off-balance sheet positions including ECL allowances and provisions

The tables on the following pages provide information on financial instruments and certain non-financial instruments that are subject to ECL. For amortized cost instruments, the net carrying value represents the maximum exposure to credit risk, taking into account the allowance for credit losses. Financial assets measured at fair value through other comprehensive income (FVOCI) are also subject to ECL; however, unlike amortized cost instruments, the allowance does not reduce the

carrying value of these financial assets. The carrying value of financial assets measured at FVOCI represents the maximum exposure to credit risk.

In addition to on-balance sheet financial assets, certain off-balance sheet and other credit lines are also subject to ECL. The maximum exposure to credit risk for off-balance sheet financial instruments is calculated based on notional amounts.

¹ The carrying value of financial assets measured at amortized cost represents the total gross exposure net of the respective ECL allowances.

Note 11 Fair value measurement

This Note provides fair value measurement information for both financial and non-financial instruments and should be read in conjunction with “Note 24 Fair value measurement” in the “Consolidated financial statements” section of the Annual Report 2018, which provides more information on valuation

principles, valuation governance, fair value hierarchy classification, valuation adjustments, valuation techniques and inputs, sensitivity of fair value measurements and methods applied to calculate fair values for financial instruments not measured at fair value.

a) Fair value hierarchy

The fair value hierarchy classification of financial and non-financial assets and liabilities measured at fair value is summarized in the table below.

Determination of fair values from quoted market prices or valuation techniques¹

USD million	31.3.19				31.12.18			
	Level 1	Level 2	Level 3	Total	Level 1	Level 2	Level 3	Total
Financial assets measured at fair value on a recurring basis								
Financial assets at fair value held for trading	94,777	12,490	2,319	109,586	88,452	13,956	1,962	104,370

Total liabilities measured at fair value	29,400	239,007	15,298	283,705	24,986	244,465	14,260	283,711

¹ Bifurcated embedded derivatives are presented on the same balance sheet lines as their host contracts and are not included in this table. The fair value of these derivatives was not material for the periods presented. ² Other non-financial assets primarily consist of properties and other non-current assets held for sale, which are measured at the lower of their net carrying amount or fair value less costs to sell.

All financial and non-financial assets and liabilities measured or disclosed at fair value are categorized into one of three fair value hierarchy levels. In certain cases, the inputs used to measure fair value may fall within different levels of the fair value hierarchy. For disclosure purposes, the level in the hierarchy within which the instrument is classified in its entirety is based on the lowest level input that is significant to the position's fair value measurement:

- Level 1 – quoted prices (unadjusted) in active markets for identical assets and liabilities;
- Level 2 – valuation techniques for which all significant inputs are, or are based on, observable market data; or
- Level 3 – valuation techniques for which significant inputs are not based on observable market data.

Note 11 Fair value measurement (continued)**b) Valuation adjustments****Deferred day-1 profit or loss reserves**

The table below summarizes the changes in deferred day-1 profit or loss reserves during the relevant period.

Deferred day-1 profit or loss is generally released into *Other net income from financial instruments measured at fair value through profit or loss* when pricing of equivalent products or the underlying parameters become observable or when the transaction is closed out.

In the first quarter of 2019, a deferred day-1 profit or loss reserve release of USD 126 million was recognized in the income statement, mainly related to loans which are reported within *Financial assets at fair value not held for trading* on the balance sheet, following an increase in observability.

Deferred day-1 profit or loss reserves

USD million	For the quarter ended		
	31.3.19	31.12.18	31.3.18
Reserve balance at the beginning of the period	255	250	338
Profit / (loss) deferred on new transactions	33	48	197
(Profit) / loss recognized in the income statement	(126)	(41)	(56)
Foreign currency translation	(1)	(2)	1
Reserve balance at the end of the period	161	255	479

c) Transfers between Level 1 and Level 2

The amounts disclosed in this section reflect transfers between Level 1 and Level 2 for instruments that were held for the entire reporting period.

Assets totaling approximately USD 1.8 billion, which were mainly comprised of investment fund units presented in the line *Financial assets at fair value held for trading* on the balance sheet, were transferred from Level 2 to Level 1 during the first

quarter of 2019, generally due to increased levels of trading activity observed within the market for these instruments. Liabilities transferred from Level 2 to Level 1 during the first quarter of 2019 were not material. Assets and liabilities transferred from Level 1 to Level 2 during the first quarter of 2019 were also not material.

Note 11 Fair value measurement (continued)**d) Level 3 instruments: valuation techniques and inputs**

The table below presents material Level 3 assets and liabilities together with the valuation techniques used to measure fair value, the significant inputs used in the valuation technique that are considered unobservable and a range of values for those unobservable inputs.

The range of values represents the highest- and lowest-level input used in the valuation techniques. Therefore, the range does not reflect the level of uncertainty regarding a particular input, but rather the different underlying characteristics of the relevant assets and liabilities. The ranges will therefore vary from period to period and parameter to parameter based on characteristics of the instruments held at each balance sheet date. Furthermore, the ranges and weighted averages of unobservable inputs may differ

across other financial institutions due to the diversity of the products in each firm's inventory.

The significant unobservable inputs disclosed in the table below are consistent with those included in "Note 24 Fair value measurement" in the "Consolidated financial statements" section of the Annual Report 2018. A description of the potential effect that a change in each unobservable input in isolation may have on a fair value measurement, including information to facilitate an understanding of factors that give rise to the input ranges shown, is also provided in "Note 24 Fair value measurement" in the "Consolidated financial statements" section of the Annual Report 2018.

Valuation techniques and inputs used in the fair value measurement of Level 3 assets and liabilities

USD billion	Fair value				Valuation technique(s)	Significant unobservable input(s) ¹	Range of inputs						
	Assets		Liabilities				31.3.19			31.12.18			unit ¹
	31.3.19	31.12.18	31.3.19	31.12.18			low	high	weighted average ²	low	high	weighted average ²	
Financial assets and liabilities at fair value held for trading and Financial assets at fair value not held for trading													
<i>Corporate and municipal bonds</i>	0.4	0.7	0.1	0.0	Relative value to market comparable	Bond price equivalent	0	134	92	0	134	89	points
<i>Traded loans, loans designated at fair value, loan commitments and guarantees</i>	2.8	2.7	0.0	0.0	Relative value to market comparable	Loan price equivalent	0	101	99	0	100	99	points
					Discounted expected cash flows	Credit spread	301	700		301	513		basis points
					Market comparable and securitization model	Discount margin	1	14	2	1	14	2	%
<i>Auction rate securities</i>	1.6	1.7	0.0	0.0	Relative value to market comparable	Bond price equivalent	79	99	89	79	99	89	points
<i>Investment fund units³</i>	0.4	0.6	0.0	0.0	Relative value to market comparable	Net asset value							
<i>Equity instruments³</i>	0.6	0.6	0.0	0.0	Relative value to market comparable	Price							
Debt issued designated at fair value⁴			12.4	11.0									
Other financial liabilities designated at fair value⁴			0.7	1.0									
Derivative financial instruments													
<i>Interest rate contracts</i>	0.4	0.4	0.2	0.2	Option model	Volatility of interest rates	46	69		50	81		basis points
					Discounted expected cash flows	Credit spreads	4	574		4	545		basis points
						Bond price equivalent	3	99		3	99		points
<i>Equity / index contracts</i>	0.4	0.5	1.3	1.4	Option model	Equity dividend yields	0	9		0	12		%
						Volatility of equity stocks, equity and other indices	0	109		4	93		%
						Equity-to-FX correlation	(45)	64		(39)	67		%
						Equity-to-equity correlation	(50)	98		(50)	97		%

¹ The ranges of significant unobservable inputs are represented in points, percentages and basis points. Points are a percentage of par (e.g., 100 points would be 100% of par). ² Weighted averages are provided for non-derivative financial instruments and were calculated by weighting inputs based on the fair values of the respective instruments. Weighted averages are not provided for inputs related to derivative contracts as this would not be meaningful. ³ The range of inputs is not disclosed as there is a dispersion of values given the diverse nature of the investments. ⁴ Valuation techniques, significant unobservable inputs and the respective input ranges for Debt issued designated at fair value and Other financial liabilities designated at fair value, which mainly include over-the-counter debt instruments, are the same as the equivalent derivative or structured financing instruments presented elsewhere in this table.

Note 11 Fair value measurement (continued)**e) Level 3 instruments: sensitivity to changes in unobservable input assumptions**

The table below summarizes those financial assets and liabilities classified as Level 3 for which a change in one or more of the unobservable inputs to reflect reasonably possible alternative assumptions would change fair value significantly, and the estimated effect thereof.

The table shown presents the favorable and unfavorable effects for each class of financial assets and liabilities for which the potential change in fair value is considered significant. The sensitivity of fair value measurements for debt issued designated at fair value and over-the-counter debt instruments designated at fair value is reported with the equivalent derivative or structured financing instrument within the table below.

The sensitivity data shown below presents an estimation of valuation uncertainty based on reasonably possible alternative values for Level 3 inputs at the balance sheet date and does not represent the estimated effect of stress scenarios. Typically, these financial assets and liabilities are sensitive to a combination of inputs from Levels 1–3. Although well-defined interdependencies may exist between Levels 1–2 and Level 3 parameters (e.g., between interest rates, which are generally Level 1 or Level 2, and prepayments, which are generally Level 3), these have not been incorporated in the table. Furthermore, direct interrelationships between the Level 3 parameters are not a significant element of the valuation uncertainty.

Sensitivity of fair value measurements to changes in unobservable input assumptions

<i>USD million</i>	31.3.19		31.12.18	
	Favorable changes	Unfavorable changes	Favorable changes	Unfavorable changes

Equity / index derivative contracts, net	188	(217)	213	(225)
Other	17	(17)	19	(19)
Total	667	(527)	661	(578)

Note 11 Fair value measurement (continued)

f) Level 3 instruments: movements during the period

Significant changes in Level 3 instruments

The table on the following pages presents additional information about Level 3 assets and liabilities measured at fair value on a recurring basis. Level 3 assets and liabilities may be hedged with instruments classified as Level 1 or Level 2 in the fair value hierarchy and, as a result, realized and unrealized gains and losses included in the table may not include the effect of related hedging activity. Furthermore, the realized and unrealized gains and losses presented within the table are not limited solely to those arising from Level 3 inputs, as valuations are generally derived from both observable and unobservable parameters.

Upon adoption of IFRS 9 on 1 January 2018, certain financial assets and liabilities were newly classified as measured at fair

value through profit or loss and designated as Level 3 in the fair value hierarchy. Certain assets were also reclassified from *Financial assets measured at fair value through other comprehensive income* to *Financial assets at fair value not held for trading*. Refer to "Note 24 Fair value measurement" in the "Consolidated financial statements" section of the Annual Report 2018 for more information.

In the first quarter of 2019, loans reported within *Financial assets at fair value not held for trading* on the balance sheet, were transferred from Level 3 to Level 2 in the fair value hierarchy, reflecting increased observability.

Note 11 Fair value measurement (continued)

Assets and liabilities transferred into or out of Level 3 are presented as if those assets or liabilities had been transferred at the beginning of the year.

Assets transferred into and out of Level 3 in the first quarter of 2019 totaled USD 0.3 billion and USD 1.1 billion, respectively. Transfers into Level 3 were primarily comprised of investment fund units reflecting decreased observability of the relevant net asset value inputs. Transfers out of Level 3 were

primarily comprised of loans due to increased observability of the relevant valuation inputs.

Liabilities transferred into and out of Level 3 in the first quarter of 2019 totaled USD 0.4 billion and USD 1.1 billion, respectively. Transfers into and out of Level 3 were primarily comprised of equity-linked issued debt instruments (presented within *Debt issued designated at fair value*) due to decreased or increased observability, respectively, of the embedded derivative inputs.

g) Financial instruments not measured at fair value

The table below reflects the estimated fair values of financial instruments not measured at fair value.

Financial instruments not measured at fair value

USD billion	31.3.19		31.12.18	
	Carrying value	Fair value	Carrying value	Fair value
Assets				
Cash and balances at central banks	110.6	110.6	108.4	108.4
Loans and advances to banks	17.0	17.0	16.9	16.9
Receivables from securities financing transactions	100.2	100.2	95.3	95.4
Cash collateral receivables on derivative instruments	25.2	25.2	23.6	23.6
Loans and advances to customers	318.6	320.7	320.4	320.9
Other financial assets measured at amortized cost	22.4	22.4	22.6	22.4
Liabilities				
Amounts due to banks	9.1	9.1	11.0	11.0
Payables from securities financing transactions	5.2	5.2	10.3	10.3
Cash collateral payables on derivative instruments	30.3	30.3	28.9	28.9
Customer deposits	425.9	426.0	419.8	419.9
Debt issued measured at amortized cost	128.1	130.4	132.3	135.0
Other financial liabilities measured at amortized cost	10.4	10.4	6.9	6.9

The fair values included in the table above have been calculated for disclosure purposes only. The fair value valuation techniques and assumptions relate only to the fair value of UBS's financial instruments not measured at fair value. Other institutions may

use different methods and assumptions for their fair value estimation, and therefore such fair value disclosures cannot necessarily be compared from one financial institution to another.

Note 12 Derivative instruments

a) Derivative instruments

<i>As of 31.3.19, USD billion</i>	Derivative financial assets	Notional values related to derivative financial assets ³	Derivative financial liabilities	Notional values related to derivative financial liabilities ³	Other notional values ⁴

Total derivative financial instruments, after consideration of further netting potential	11.4		14.0		

¹ Derivative financial liabilities as of 31 March 2019 include USD 18 million related to derivative loan commitments (31 December 2018: USD 17 million). No notional amounts related to these commitments are included in this table, but they are disclosed in Note 17 under Loan commitments. ² Includes certain forward starting repurchase and reverse repurchase agreements that are classified as measured at fair value through profit or loss and are recognized within derivative instruments. The fair value of these derivative instruments was not material as of 31 March 2019 or 31 December 2018. No notional amounts related to these instruments are included in this table, but they are disclosed within Note 17 under Forward starting transactions. ³ In cases where derivative financial instruments are presented on a net basis on the balance sheet, the respective notional values of the netted derivative financial instruments are still presented on a gross basis. ⁴ Other notional values relate to derivatives that are cleared through either a central counterparty or an exchange. The fair value of these derivatives is presented on the balance sheet net of the corresponding cash margin under Cash collateral receivables on derivative instruments and Cash collateral payables on derivative instruments and was not material for all periods presented. ⁵ Changes in the fair value of purchased and sold non-derivative financial instruments between trade date and settlement date are recognized as derivative financial instruments. ⁶ Financial assets and liabilities are presented net on the balance sheet if UBS has the unconditional and legally enforceable right to offset the recognized amounts, both in the normal course of business and in the event of default, bankruptcy or insolvency of the entity and all of the counterparties, and intends either to settle on a net basis or to realize the asset and settle the liability simultaneously. ⁷ Reflects the netting potential in accordance with enforceable master netting and similar arrangements where not all criteria for a net presentation on the balance sheet have been met. Refer to "Note 25 Offsetting financial assets and financial liabilities" in the "Consolidated financial statements" section of the Annual Report 2018 for more information.

Note 12 Derivative instruments (continued)**b) Cash collateral on derivative instruments**

<i>USD billion</i>	Receivables 31.3.19	Payables 31.3.19	Receivables 31.12.18	Payables 31.12.18
Cash collateral on derivative instruments, based on IFRS netting ¹	25.2	30.3	23.6	28.9
Further netting potential not recognized on the balance sheet ²	(14.1)	(15.0)	(14.5)	(15.4)
<i>of which: netting of recognized financial liabilities / assets</i>	(12.2)	(13.7)	(13.5)	(14.2)
<i>of which: netting with collateral received / pledged</i>	(1.9)	(1.4)	(1.0)	(1.2)
Cash collateral on derivative instruments, after consideration of further netting potential	11.1	15.3	9.1	13.5

¹ Financial assets and liabilities are presented net on the balance sheet if UBS has the unconditional and legally enforceable right to offset the recognized amounts, both in the normal course of business and in the event of default, bankruptcy or insolvency of UBS or its counterparties, and intends either to settle on a net basis or to realize the asset and settle the liability simultaneously. ² Reflects the netting potential in accordance with enforceable master netting and similar arrangements where not all criteria for a net presentation on the balance sheet have been met. Refer to "Note 25 Offsetting financial assets and financial liabilities" in the "Consolidated financial statements" section of the Annual Report 2018 for more information.

Note 13 Other assets and liabilities**a) Other financial assets measured at amortized cost**

<i>USD million</i>	31.3.19	31.12.18
Debt securities	12,938	13,562
<i>of which: government bills / bonds</i>	8,094	8,778
Loans to financial advisors ¹	3,158	3,291

<i>of which: non-Basel III-compliant tier 2 capital instruments</i>	700	703
Debt issued through the Swiss central mortgage institutions	8,505	8,569
Other long-term debt	55	58
Long-term debt²	96,072	93,246
Total debt issued measured at amortized cost³	128,105	132,271

¹ Debt with an original maturity of less than one year. ² Debt with original maturity greater than or equal to one year. The classification of debt issued into short-term and long-term does not consider any early redemption features. ³ Net of bifurcated embedded derivatives, the fair value of which was not material for the periods presented.

Note 16 Provisions and contingent liabilities

a) Provisions

The table below presents an overview of total provisions recognized under both IAS 37 and IFRS 9.

<i>USD million</i>	31.3.19	31.12.18
Provisions recognized under IAS 37	3,063	3,377
Provisions for off-balance sheet financial instruments	91	79
Provisions for other credit lines	43	37
Total provisions	3,197	3,494

The following table presents additional information for provisions recognized under IAS 37.

<i>USD million</i>	Operational risks ²	Litigation, regulatory and similar matters ³	Restructuring	Real estate	Employee benefits ⁶	Other	Total
Balance as of 31 December 2018	46	2,827	224	131	70	78	3,377
Adjustment from adoption of IFRS 16 ¹	0	0	(103)	(29)	0	0	(132)
Balance as of 1 January 2019	46	2,827	121	102	70	78	3,245
Increase in provisions recognized in the income statement	4	16	6	0	1	2	29
Release of provisions recognized in the income statement	0	(17)	(5)	0	(2)	0	(24)
Provisions used in conformity with designated purpose	(4)	(134)	(23)	(4)	0	(6)	(171)
Foreign currency translation / unwind of discount	(2)	(15)	0	(1)	0	(1)	(18)
Balance as of 31 March 2019	45	2,677	101⁴	98⁵	69	73	3,063

¹ Refer to Note 1 for more information. ² Comprises provisions for losses resulting from security risks and transaction processing risks. ³ Comprises provisions for losses resulting from legal, liability and compliance risks. ⁴ Primarily consists of personnel-related restructuring provisions of USD 31 million as of 31 March 2019 (31 December 2018: USD 50 million) and provisions for onerous contracts of USD 64 million as of 31 March 2019 (31 December 2018: USD 170 million). ⁵ Consists of reinstatement costs for leasehold improvements of USD 88 million as of 31 March 2019 (31 December 2018: USD 89 million) and provisions for onerous contracts of USD 10 million as of 31 March 2019 (31 December 2018: USD 42 million). ⁶ Includes provisions for sabbatical and anniversary awards.

Restructuring provisions primarily relate to onerous contracts and severance payments. Onerous contracts for property are recognized when UBS is committed to pay for non-lease components, such as utilities, when a property is vacated or not fully recovered from subtenants. Severance-related provisions are used within a short time period, usually within six months, but potential changes in amount may be triggered when natural

staff attrition reduces the number of people affected by a restructuring event and therefore the estimated costs.

Information on provisions and contingent liabilities in respect of litigation, regulatory and similar matters, as a class, is included in Note 16b. There are no material contingent liabilities associated with the other classes of provisions.

b) Litigation, regulatory and similar matters

The Group operates in a legal and regulatory environment that exposes it to significant litigation and similar risks arising from disputes and regulatory proceedings. As a result, UBS (which for purposes of this Note may refer to UBS Group AG and / or one or more of its subsidiaries, as applicable) is involved in various disputes and legal proceedings, including litigation, arbitration, and regulatory and criminal investigations.

Such matters are subject to many uncertainties, and the outcome and the timing of resolution are often difficult to predict, particularly in the earlier stages of a case. There are also situations where the Group may enter into a settlement agreement. This may occur in order to avoid the expense, management distraction or reputational implications of continuing to contest liability, even for those matters for which the Group believes it should be exonerated. The uncertainties inherent in all such matters affect the amount and timing of any potential outflows for both matters with respect to which provisions have been established and other contingent liabilities. The Group makes provisions for such matters brought against it when, in the opinion of management after seeking legal advice, it is more likely than not that the Group has a present legal or

constructive obligation as a result of past events, it is probable that an outflow of resources will be required, and the amount can be reliably estimated. Where these factors are otherwise satisfied, a provision may be established for claims that have not yet been asserted against the Group, but are nevertheless expected to be, based on the Group's experience with similar asserted claims. If any of those conditions is not met, such matters result in contingent liabilities. If the amount of an obligation cannot be reliably estimated, a liability exists that is not recognized even if an outflow of resources is probable. Accordingly, no provision is established even if the potential outflow of resources with respect to such matters could be significant. Developments relating to a matter that occur after the relevant reporting period, but prior to the issuance of financial statements, which affect management's assessment of the provision for such matter (because, for example, the developments provide evidence of conditions that existed at the end of the reporting period), are adjusting events after the reporting period under IAS 10 and must be recognized in the financial statements for the reporting period.

Note 16 Provisions and contingent liabilities (continued)

Specific litigation, regulatory and other matters are described below, including all such matters that management considers to be material and others that management believes to be of significance due to potential financial, reputational and other effects. The amount of damages claimed, the size of a transaction or other information is provided where available and appropriate in order to assist users in considering the magnitude of potential exposures.

In the case of certain matters below, we state that we have established a provision, and for the other matters, we make no such statement. When we make this statement and we expect disclosure of the amount of a provision to prejudice seriously our position with other parties in the matter because it would reveal what UBS believes to be the probable and reliably estimable outflow, we do not disclose that amount. In some cases we are subject to confidentiality obligations that preclude such disclosure. With respect to the matters for which we do not state whether we have established a provision, either (a) we have not established a provision, in which case the matter is treated as a contingent liability under the applicable accounting standard; or (b) we have established a provision but expect disclosure of that fact to prejudice seriously our position with other parties in the matter because it would reveal the fact that UBS believes an outflow of resources to be probable and reliably estimable.

With respect to certain litigation, regulatory and similar matters for which we have established provisions, we are able to estimate the expected timing of outflows. However, the aggregate amount of the expected outflows for those matters for which we are able to estimate expected timing is immaterial relative to our current and expected levels of liquidity over the relevant time periods.

The aggregate amount provisioned for litigation, regulatory and similar matters as a class is disclosed in the "Provisions" table in Note 16a above. It is not practicable to provide an aggregate estimate of liability for our litigation, regulatory and similar matters as a class of contingent liabilities. Doing so would require us to provide speculative legal assessments as to claims

and proceedings that involve unique fact patterns or novel legal theories, that have not yet been initiated or are at early stages of adjudication, or as to which alleged damages have not been quantified by the claimants. Although we therefore cannot provide a numerical estimate of the future losses that could arise from litigation, regulatory and similar matters, we believe that the aggregate amount of possible future losses from this class that are more than remote substantially exceeds the level of current provisions.

Litigation, regulatory and similar matters may also result in non-monetary penalties and consequences. For example, the non-prosecution agreement described in item 5 of this Note, which we entered into with the US Department of Justice (DOJ), Criminal Division, Fraud Section in connection with our submissions of benchmark interest rates, including, among others, the British Bankers' Association London Interbank Offered Rate (LIBOR), was terminated by the DOJ based on its determination that we had committed a US crime in relation to foreign exchange matters. As a consequence, UBS AG pleaded guilty to one count of wire fraud for conduct in the LIBOR matter, paid a fine and is subject to probation through January 2020.

A guilty plea to, or conviction of, a crime could have material consequences for UBS. Resolution of regulatory proceedings may require us to obtain waivers of regulatory disqualifications to maintain certain operations, may entitle regulatory authorities to limit, suspend or terminate licenses and regulatory authorizations, and may permit financial market utilities to limit, suspend or terminate our participation in such utilities. Failure to obtain such waivers, or any limitation, suspension or termination of licenses, authorizations or participations, could have material consequences for UBS.

The risk of loss associated with litigation, regulatory and similar matters is a component of operational risk for purposes of determining our capital requirements. Information concerning our capital requirements and the calculation of operational risk for this purpose is included in the "Capital management" section of this report.

Provisions for litigation, regulatory and similar matters by business division and in Corporate Center¹

<i>USD million</i>	Global Wealth Manage- ment	Personal & Corporate Banking	Asset Manage- ment	Investment Bank	Corporate Center	UBS
Balance as of 31 December 2018	1,003	117	0	269	1,438	2,827

Foreign currency translation / unwind of discount	(12)	(2)	0	(2)	1	(15)
Balance as of 31 March 2019	943	114	0	201	1,419	2,677

¹ Provisions, if any, for the matters described in this disclosure are recorded in Global Wealth Management (item 3 and item 4) and Corporate Center (item 2). Provisions, if any, for the matters described in items 1 and 6 of this disclosure are allocated between Global Wealth Management and Personal & Corporate Banking, and provisions, if any, for the matters described in this disclosure in item 5 are allocated between the Investment Bank and Corporate Center.

Note 16 Provisions and contingent liabilities (continued)

1. Inquiries regarding cross-border wealth management businesses

Tax and regulatory authorities in a number of countries have made inquiries, served requests for information or examined employees located in their respective jurisdictions relating to the cross-border wealth management services provided by UBS and other financial institutions. It is possible that the implementation of automatic tax information exchange and other measures relating to cross-border provision of financial services could give rise to further inquiries in the future. UBS has received disclosure orders from the Swiss Federal Tax Administration (FTA) to transfer information based on requests for international administrative assistance in tax matters. The requests concern a number of UBS account numbers pertaining to current and former clients and are based on data from 2006 and 2008. UBS has taken steps to inform affected clients about the administrative assistance proceedings and their procedural rights, including the right to appeal. The requests are based on data received from the German authorities, who seized certain data related to UBS clients booked in Switzerland during their investigations and have apparently shared this data with other European countries. UBS expects additional countries to file similar requests.

The Swiss Federal Administrative Court ruled in 2016 that, in the administrative assistance proceedings related to a French bulk request, UBS has the right to appeal all final FTA client data disclosure orders. On 30 July 2018, the Swiss Federal Administrative Court granted UBS's appeal by holding the French administrative assistance request inadmissible. The FTA filed a final appeal with the Swiss Federal Supreme Court.

Since 2013, UBS (France) S.A., UBS AG and certain former employees have been under investigation in France for alleged complicity in having illicitly solicited clients on French territory, regarding the laundering of proceeds of tax fraud, and banking and financial solicitation by unauthorized persons. In connection with this investigation, the investigating judges ordered UBS AG to provide bail ("caution") of EUR 1.1 billion and UBS (France) S.A. to post bail of EUR 40 million, which was reduced on appeal to EUR 10 million.

A trial in the court of first instance took place from 8 October 2018 until 15 November 2018. On 20 February 2019, the court announced a verdict finding UBS AG guilty of illicitly soliciting clients on French territory and aggravated laundering of the proceeds of tax fraud, and UBS France S.A. guilty of aiding and abetting unlawful solicitation and laundering the proceeds of tax fraud. The court imposed fines aggregating EUR 3.7 billion on UBS AG and UBS France S.A. and awarded EUR 800 million of civil damages to the French state. UBS has appealed the decision. Under French law, the judgment is

suspended while the appeal is pending. The Court of Appeal will retry the case de novo as to both the law and the facts, and the fines and penalties can be greater than or less than those imposed by the court of first instance. A subsequent appeal to the Cour de Cassation, France's highest court, is possible with respect to questions of law.

UBS believes that based on both the law and the facts the judgment of the court of first instance should be reversed. UBS believes it followed its obligations under Swiss and French law as well as the European Savings Tax Directive. Even assuming liability, which it contests, UBS believes the penalties and damage amounts awarded greatly exceed the amounts that could be supported by the law and the facts. In particular, UBS believes the court incorrectly based the penalty on the total regularized assets rather than on any unpaid taxes on those assets for which a fraud has been characterized and further incorrectly awarded damages based on costs that were not proven by the civil party. Notwithstanding that UBS believes it should be acquitted, our balance sheet at 31 March 2019 reflected provisions with respect to this matter in an amount of USD 516 million. The wide range of possible outcomes in this case contributes to a high degree of estimation uncertainty. The provision reflected on our balance sheet at 31 March 2019 reflects our best estimate of possible financial implications, although it is reasonably possible that actual penalties and civil damages could exceed the provision amount.

In 2016, UBS was notified by the Belgian investigating judge that it is under formal investigation ("inculpé") regarding the laundering of proceeds of tax fraud, of banking and financial solicitation by unauthorized persons, and of serious tax fraud. In 2018, tax authorities and a prosecutor's office in Italy asserted that UBS is potentially liable for taxes and penalties as a result of its activities in Italy from 2012 to 2017.

UBS has, and reportedly numerous other financial institutions have, received inquiries from authorities concerning accounts relating to the Fédération Internationale de Football Association (FIFA) and other constituent soccer associations and related persons and entities. UBS is cooperating with authorities in these inquiries.

Our balance sheet at 31 March 2019 reflected provisions with respect to matters described in this item 1 in an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

Note 16 Provisions and contingent liabilities (continued)**2. Claims related to sales of residential mortgage-backed securities and mortgages**

From 2002 through 2007, prior to the crisis in the US residential loan market, UBS was a substantial issuer and underwriter of US residential mortgage-backed securities (RMBS) and was a purchaser and seller of US residential mortgages. A subsidiary of UBS, UBS Real Estate Securities Inc. (UBS RESI), acquired pools of residential mortgage loans from originators and (through an affiliate) deposited them into securitization trusts. In this manner, from 2004 through 2007, UBS RESI sponsored approximately USD 80 billion in RMBS, based on the original principal balances of the securities issued.

UBS RESI also sold pools of loans acquired from originators to third-party purchasers. These whole loan sales during the period 2004 through 2007 totaled approximately USD 19 billion in original principal balance.

UBS was not a significant originator of US residential loans. A branch of UBS originated approximately USD 1.5 billion in US residential mortgage loans during the period in which it was active from 2006 to 2008 and securitized less than half of these loans.

Lawsuits related to contractual representations and warranties concerning mortgages and RMBS: When UBS acted as an RMBS sponsor or mortgage seller, it generally made certain representations relating to the characteristics of the underlying loans. In the event of a material breach of these representations, UBS was in certain circumstances contractually obligated to repurchase the loans to which the representations related or to indemnify certain parties against losses. In 2012, certain RMBS trusts filed an action in the US District Court for the Southern District of New York seeking to enforce UBS RESI's obligation to repurchase loans in the collateral pools for three RMBS securitizations issued and underwritten by UBS with an original principal balance of approximately USD 2 billion. In July 2018, UBS and the trustee entered into an agreement under which UBS will pay USD 850 million to resolve this matter. A significant portion of this amount will be borne by other parties that indemnified UBS. The settlement remains subject to court approval and proceedings to determine how the settlement funds will be distributed to RMBS holders. After giving effect to this settlement, UBS considers claims relating to substantially all loan repurchase demands to be resolved and believes that new demands to repurchase US residential mortgage loans are time-barred under a decision rendered by the New York Court of Appeals.

Mortgage-related regulatory matters: Since 2014, the US Attorney's Office for the Eastern District of New York has sought information from UBS pursuant to the Financial Institutions Reform, Recovery and Enforcement Act of 1989 (FIRREA), related to UBS's RMBS business from 2005 through 2007. On 8 November 2018, the DOJ filed a civil complaint in the District Court for the Eastern District of New York. The complaint seeks unspecified civil monetary penalties under FIRREA related to UBS's issuance, underwriting and sale of 40 RMBS transactions in 2006 and 2007. UBS moved to dismiss the civil complaint on 6 February 2019.

Our balance sheet at 31 March 2019 reflected a provision with respect to matters described in this item 2 in an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of this matter cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

3. Madoff

In relation to the Bernard L. Madoff Investment Securities LLC (BMIS) investment fraud, UBS AG, UBS (Luxembourg) S.A. (now UBS Europe SE, Luxembourg branch) and certain other UBS subsidiaries have been subject to inquiries by a number of regulators, including the Swiss Financial Market Supervisory Authority (FINMA) and the Luxembourg Commission de Surveillance du Secteur Financier. Those inquiries concerned two third-party funds established under Luxembourg law, substantially all assets of which were with BMIS, as well as certain funds established in offshore jurisdictions with either direct or indirect exposure to BMIS. These funds faced severe losses, and the Luxembourg funds are in liquidation. The documentation establishing both funds identifies UBS entities in various roles, including custodian, administrator, manager, distributor and promoter, and indicates that UBS employees serve as board members.

In 2009 and 2010, the liquidators of the two Luxembourg funds filed claims against UBS entities, non-UBS entities and certain individuals, including current and former UBS employees, seeking amounts totaling approximately EUR 2.1 billion, which includes amounts that the funds may be held liable to pay the trustee for the liquidation of BMIS (BMIS Trustee).

Note 16 Provisions and contingent liabilities (continued)

A large number of alleged beneficiaries have filed claims against UBS entities (and non-UBS entities) for purported losses relating to the Madoff fraud. The majority of these cases have been filed in Luxembourg, where decisions that the claims in eight test cases were inadmissible have been affirmed by the Luxembourg Court of Appeal, and the Luxembourg Supreme Court has dismissed a further appeal in one of the test cases.

In the US, the BMIS Trustee filed claims against UBS entities, among others, in relation to the two Luxembourg funds and one of the offshore funds. The total amount claimed against all defendants in these actions was not less than USD 2 billion. In 2014, the US Supreme Court rejected the BMIS Trustee's motion for leave to appeal decisions dismissing all claims except those for the recovery of approximately USD 125 million of payments alleged to be fraudulent conveyances and preference payments. In 2016, the bankruptcy court dismissed these claims against the UBS entities. The BMIS Trustee appealed. In February 2019, the Court of Appeals reversed the dismissal of the BMIS Trustee's remaining claims and remanded the case to the bankruptcy court for further proceedings. The defendants, including UBS, filed a petition for rehearing in March 2019.

4. Puerto Rico

Declines since 2013 in the market prices of Puerto Rico municipal bonds and of closed-end funds (funds) that are sole-managed and co-managed by UBS Trust Company of Puerto Rico and distributed by UBS Financial Services Incorporated of Puerto Rico (UBS PR) have led to multiple regulatory inquiries, as well as customer complaints and arbitrations with aggregate claimed damages of USD 2.9 billion, of which claims with aggregate claimed damages of USD 1.9 billion have been resolved through settlements, arbitration or withdrawal of the claim. The claims have been filed by clients in Puerto Rico who own the funds or Puerto Rico municipal bonds and / or who used their UBS account assets as collateral for UBS non-purpose loans; customer complaint and arbitration allegations include fraud, misrepresentation and unsuitability of the funds and of the loans.

A shareholder derivative action was filed in 2014 against various UBS entities and current and certain former directors of the funds, alleging hundreds of millions of US dollars in losses in the funds. In 2015, defendants' motion to dismiss was denied and a request for permission to appeal that ruling was denied by the Puerto Rico Supreme Court. In 2014, a federal class action complaint also was filed against various UBS entities, certain members of UBS PR senior management and the co-manager of

certain of the funds, seeking damages for investor losses in the funds during the period from May 2008 through May 2014. Following denial of the plaintiffs' motion for class certification, the case was dismissed in October 2018.

In 2014 and 2015, UBS entered into settlements with the Office of the Commissioner of Financial Institutions for the Commonwealth of Puerto Rico, the US Securities and Exchange Commission (SEC) and the Financial Industry Regulatory Authority in relation to their examinations of UBS's operations.

In 2011, a purported derivative action was filed on behalf of the Employee Retirement System of the Commonwealth of Puerto Rico (System) against over 40 defendants, including UBS PR, which was named in connection with its underwriting and consulting services. Plaintiffs alleged that defendants violated their purported fiduciary duties and contractual obligations in connection with the issuance and underwriting of USD 3 billion of bonds by the System in 2008 and sought damages of over USD 800 million. In 2016, the court granted the System's request to join the action as a plaintiff, but ordered that plaintiffs must file an amended complaint. In 2017, the court denied defendants' motion to dismiss the amended complaint.

Beginning in 2015, and continuing through 2017, certain agencies and public corporations of the Commonwealth of Puerto Rico (Commonwealth) defaulted on certain interest payments on Puerto Rico bonds. In 2016, US federal legislation created an oversight board with power to oversee Puerto Rico's finances and to restructure its debt. The oversight board has imposed a stay on the exercise of certain creditors' rights. In 2017, the oversight board placed certain of the bonds into a bankruptcy-like proceeding under the supervision of a Federal District Judge. These events, further defaults or any further legislative action to create a legal means of restructuring Commonwealth obligations or to impose additional oversight on the Commonwealth's finances, or any restructuring of the Commonwealth's obligations, may increase the number of claims against UBS concerning Puerto Rico securities, as well as potential damages sought.

Our balance sheet at 31 March 2019 reflected provisions with respect to matters described in this item 4 in amounts that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provisions that we have recognized.

Note 16 Provisions and contingent liabilities (continued)**5. Foreign exchange, LIBOR and benchmark rates, and other trading practices**

Foreign exchange-related regulatory matters: Beginning in 2013, numerous authorities commenced investigations concerning possible manipulation of foreign exchange markets and precious metals prices. In 2014 and 2015, UBS reached settlements with the UK Financial Conduct Authority (FCA) and the US Commodity Futures Trading Commission (CFTC) in connection with their foreign exchange investigations, FINMA issued an order concluding its formal proceedings relating to UBS's foreign exchange and precious metals businesses, and the Board of Governors of the Federal Reserve System (Federal Reserve Board) and the Connecticut Department of Banking issued a Cease and Desist Order and assessed monetary penalties against UBS AG. In 2015, the DOJ's Criminal Division terminated the 2012 non-prosecution agreement with UBS AG related to UBS's submissions of benchmark interest rates, and UBS AG pleaded guilty to one count of wire fraud, paid a fine and is subject to probation through January 2020. UBS has ongoing obligations to cooperate with these authorities and to undertake certain remediation measures. UBS has also been granted conditional immunity by the Antitrust Division of the DOJ and by authorities in other jurisdictions in connection with potential competition law violations relating to foreign exchange and precious metals businesses. Investigations relating to foreign exchange matters by certain authorities remain ongoing notwithstanding these resolutions.

Foreign exchange-related civil litigation: Putative class actions have been filed since 2013 in US federal courts and in other jurisdictions against UBS and other banks on behalf of putative classes of persons who engaged in foreign currency transactions with any of the defendant banks. UBS has resolved US federal court class actions relating to foreign currency transactions with the defendant banks and persons who transacted in foreign exchange futures contracts and options on such futures under a settlement agreement that provides for UBS to pay an aggregate of USD 141 million and provide cooperation to the settlement classes. Certain class members have excluded themselves from that settlement and have filed individual actions in US and English courts against UBS and other banks, alleging violations of US and European competition laws and unjust enrichment.

In 2015, a putative class action was filed in federal court against UBS and numerous other banks on behalf of persons and businesses in the US who directly purchased foreign

currency from the defendants and alleged co-conspirators for their own end use. In March 2017, the court granted UBS's (and the other banks') motions to dismiss the complaint. The plaintiffs filed an amended complaint in August 2017. In March 2018, the court denied the defendants' motions to dismiss the amended complaint.

In 2017, two putative class actions were filed in federal court in New York against UBS and numerous other banks on behalf of persons and entities who had indirectly purchased foreign exchange instruments from a defendant or co-conspirator in the US, and a consolidated complaint was filed in June 2017. In March 2018, the court dismissed the consolidated complaint. In October 2018, the court granted plaintiffs' motion seeking leave to file an amended complaint.

LIBOR and other benchmark-related regulatory matters: Numerous government agencies, including the SEC, the CFTC, the DOJ, the FCA, the UK Serious Fraud Office, the Monetary Authority of Singapore, the Hong Kong Monetary Authority, FINMA, various state attorneys general in the US and competition authorities in various jurisdictions have conducted or are continuing to conduct investigations regarding potential improper attempts by UBS, among others, to manipulate LIBOR and other benchmark rates at certain times. In 2012, UBS reached settlements relating to benchmark interest rates with the UK Financial Services Authority, the CFTC and the Criminal Division of the DOJ, and FINMA issued an order in its proceedings with respect to UBS relating to benchmark interest rates. In addition, UBS entered into settlements with the European Commission and with the Swiss Competition Commission (WEKO) regarding its investigation of bid-ask spreads in connection with Swiss franc interest rate derivatives. UBS has ongoing obligations to cooperate with the authorities with whom we have reached resolutions and to undertake certain remediation measures with respect to benchmark interest rate submissions. In December 2018, UBS entered into a settlement agreement with the New York and other state attorneys general under which it will pay USD 68 million to resolve claims by the attorneys general related to LIBOR. UBS has been granted conditional leniency or conditional immunity from authorities in certain jurisdictions, including the Antitrust Division of the DOJ and WEKO, in connection with potential antitrust or competition law violations related to certain rates. However, UBS has not reached a final settlement with WEKO, as the Secretariat of WEKO has asserted that UBS does not qualify for full immunity.

Note 16 Provisions and contingent liabilities (continued)

LIBOR and other benchmark-related civil litigation: A number of putative class actions and other actions are pending in the federal courts in New York against UBS and numerous other banks on behalf of parties who transacted in certain interest rate benchmark-based derivatives. Also pending in the US and in other jurisdictions are a number of other actions asserting losses related to various products whose interest rates were linked to LIBOR and other benchmarks, including adjustable rate mortgages, preferred and debt securities, bonds pledged as collateral, loans, depository accounts, investments and other interest-bearing instruments. The complaints allege manipulation, through various means, of certain benchmark interest rates, including USD LIBOR, Euroyen TIBOR, Yen LIBOR, EURIBOR, CHF LIBOR, GBP LIBOR, USD and SGD SIBOR and SOR and Australian BBSW, and seek unspecified compensatory and other damages under varying legal theories.

USD LIBOR class and individual actions in the US: In 2013 and 2015, the district court in the USD LIBOR actions dismissed, in whole or in part, certain plaintiffs' antitrust claims, federal racketeering claims, CEA claims, and state common law claims. Although the Second Circuit vacated the district court's judgment dismissing antitrust claims, the district court again dismissed antitrust claims against UBS in 2016. Certain plaintiffs have appealed that decision to the Second Circuit. Separately, in 2018, the Second Circuit reversed in part the district court's 2015 decision dismissing certain individual plaintiffs' claims. UBS entered into an agreement in 2016 with representatives of a class of bondholders to settle their USD LIBOR class action. The agreement has received preliminary court approval and remains subject to final approval. In 2018, the district court denied plaintiffs' motions for class certification in the USD class actions for claims pending against UBS, and plaintiffs sought permission to appeal that ruling to the Second Circuit. In July 2018, the Second Circuit denied the petition to appeal of the class of USD lenders and in November 2018 denied the petition of the USD exchange class. In January 2019, a putative class action was filed in the District Court for the Southern District of New York against UBS and numerous other banks on behalf of US residents who, since 1 February 2014, directly transacted with a defendant bank in USD LIBOR instruments. The complaint asserts antitrust and unjust enrichment claims.

Other benchmark class actions in the US: In 2014, the court in one of the Euroyen TIBOR lawsuits dismissed certain of the plaintiffs' claims, including a federal antitrust claim, for lack of standing. In 2015, this court dismissed the plaintiffs' federal racketeering claims on the same basis and affirmed its previous

dismissal of the plaintiffs' antitrust claims against UBS. In 2017, this court also dismissed the other Yen LIBOR / Euroyen TIBOR action in its entirety on standing grounds, as did the court in the CHF LIBOR action. Also in 2017, the courts in the EURIBOR lawsuit dismissed the cases as to UBS and certain other foreign defendants for lack of personal jurisdiction. In October 2018, the court in the SIBOR / SOR action dismissed all but one of plaintiffs' claims against UBS. Plaintiffs in the CHF LIBOR and SIBOR / SOR actions have filed amended complaints following the dismissals, which UBS and other defendants have moved to dismiss. In November 2018, the court in the BBSW lawsuit dismissed the case as to UBS and certain other foreign defendants for lack of personal jurisdiction. Following that dismissal, plaintiffs in the BBSW action moved in January 2019 to file an amended complaint seeking to re-name UBS and certain other banks as defendants. UBS and other defendants also moved to dismiss the GBP LIBOR action in December 2016, but that motion was denied as to UBS in December 2018. UBS moved for reconsideration of that decision in January 2019.

Government bonds: Putative class actions have been filed since 2015 in US federal courts against UBS and other banks on behalf of persons who participated in markets for US Treasury securities since 2007. A consolidated complaint was filed in 2017 in the US District Court for the Southern District of New York alleging that the banks colluded with respect to, and manipulated prices of, US Treasury securities sold at auction and in the secondary market and asserting claims under the antitrust laws and for unjust enrichment. Defendants' motions to dismiss the consolidated complaint are pending.

UBS and reportedly other banks are responding to investigations and requests for information from various authorities regarding US Treasury securities and other government bond trading practices. As a result of its review to date, UBS has taken appropriate action.

With respect to additional matters and jurisdictions not encompassed by the settlements and orders referred to above, our balance sheet at 31 March 2019 reflected a provision in an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

Note 16 Provisions and contingent liabilities (continued)**6. Swiss retrocessions**

The Federal Supreme Court of Switzerland ruled in 2012, in a test case against UBS, that distribution fees paid to a firm for distributing third-party and intra-group investment funds and structured products must be disclosed and surrendered to clients who have entered into a discretionary mandate agreement with the firm, absent a valid waiver.

FINMA has issued a supervisory note to all Swiss banks in response to the Supreme Court decision. UBS has met the FINMA requirements and has notified all potentially affected clients.

The Supreme Court decision has resulted, and may continue to result, in a number of client requests for UBS to disclose and potentially surrender retrocessions. Client requests are assessed on a case-by-case basis. Considerations taken into account when assessing these cases include, among other things, the existence

of a discretionary mandate and whether or not the client documentation contained a valid waiver with respect to distribution fees.

Our balance sheet at 31 March 2019 reflected a provision with respect to matters described in this item 6 in an amount that UBS believes to be appropriate under the applicable accounting standard. The ultimate exposure will depend on client requests and the resolution thereof, factors that are difficult to predict and assess. Hence, as in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

Note 17 Guarantees, commitments and forward starting transactions

The table below presents the maximum irrevocable amount of guarantees, commitments and forward starting transactions.

USD million	31.3.19				31.12.18			
	Gross		Sub-participations	Net	Gross		Sub-participations	Net
	Measured at fair value	Not measured at fair value			Measured at fair value	Not measured at fair value		
Total guarantees	1,840	17,434	(2,760)	16,514	1,639	18,146	(2,803)	16,982
Loan commitments	6,401	27,919	(690)	33,630	3,535	31,212	(647)	34,099
Forward starting transactions¹								
Reverse repurchase agreements	29,284	2,038			8,117	925		
Securities borrowing agreements		20				12		
Repurchase agreements	15,321	629			7,926	400		

¹ Cash to be paid in the future by either UBS or the counterparty.

Note 18 Currency translation rates

The following table shows the rates of the main currencies used to translate the financial information of UBS's operations with a functional currency other than the US dollar into US dollars.

	Closing exchange rate			Average rate ¹		
	As of			For the quarter ended		
	31.3.19	31.12.18	31.3.18	31.3.19	31.12.18	31.3.18
1 CHF	1.00	1.02	1.05	1.00	1.00	1.06
1 EUR	1.12	1.15	1.23	1.14	1.14	1.23
1 GBP	1.30	1.28	1.40	1.31	1.28	1.40
100 JPY	0.90	0.91	0.94	0.91	0.89	0.93

¹ Monthly income statement items of operations with a functional currency other than the US dollar are translated with month-end rates into US dollars. Disclosed average rates for a quarter represent an average of three month-end rates, weighted according to the income and expense volumes of all operations of the Group with the same functional currency for each month. Weighted average rates for individual business divisions may deviate from the weighted average rates for the Group.

UBS AG interim consolidated financial information (unaudited)

This section contains a comparison of selected financial and capital information between UBS Group AG consolidated and UBS AG consolidated. Refer to the UBS AG first quarter 2019 report, which will be available as of 30 April 2019 under "Quarterly reporting" at www.ubs.com/investors, for the interim consolidated financial statements of UBS AG.

Comparison between UBS Group AG consolidated and UBS AG consolidated

The accounting policies applied under International Financial Reporting Standards (IFRS) to both UBS Group AG and UBS AG consolidated financial statements are identical. However, there are certain scope and presentation differences as noted below:

- Assets, liabilities, operating income, operating expenses and operating profit before tax relating to UBS Group AG and its directly held subsidiaries, including UBS Business Solutions AG, are reflected in the consolidated financial statements of UBS Group AG but not of UBS AG. UBS AG's assets, liabilities, operating income and operating expenses related to transactions with UBS Group AG and its directly held subsidiaries, including UBS Business Solutions AG and other shared services subsidiaries, are not subject to elimination in the UBS AG consolidated financial statements, but are eliminated in the UBS Group AG consolidated financial statements. UBS Business Solutions AG and other shared services subsidiaries of UBS Group AG charge other legal entities within the UBS AG consolidation scope for services provided, including a markup on costs incurred.
- UBS Group AG consolidated equity was USD 0.5 billion higher compared to the equity of UBS AG consolidated as of 31 March 2019, mainly driven by higher dividends paid by UBS AG to UBS Group AG compared with the dividend distributions of UBS Group AG, as well as higher retained

earnings in the UBS Group AG consolidated financial statements, largely related to the aforementioned markup charged by shared services subsidiaries of UBS Group AG to other legal entities in the UBS AG scope of consolidation. UBS Group AG is also the grantor of the majority of the compensation plans of the Group and recognizes share premium for equity-settled awards granted, largely offset by the treasury shares held to hedge the related share delivery obligation and those acquired as part of our share repurchase program. These effects were partly offset by additional share premium recognized at the UBS AG consolidated level related to the establishment of UBS Group AG and UBS Business Solutions AG, a wholly owned subsidiary of UBS Group AG.

- Going concern capital of UBS AG consolidated was USD 4.1 billion lower than going concern capital of UBS Group AG consolidated as of 31 March 2019, reflecting additional tier 1 (AT1) capital of USD 4.3 billion partly offset by higher common equity tier 1 (CET1) capital of USD 0.3 billion.
- CET1 capital of UBS AG consolidated was USD 0.3 billion higher than that of UBS Group AG consolidated as of 31 March 2019. The main drivers are differences in equity, in deductions for compensation-related regulatory capital components and in dividend accruals.
- Going concern loss-absorbing AT1 capital of UBS AG consolidated was USD 4.3 billion lower than that of UBS Group AG consolidated as of 31 March 2019, reflecting Deferred Contingent Capital Plan awards and AT1 capital notes. These AT1 capital notes were issued by UBS Group Funding (Switzerland) AG, a direct subsidiary of UBS Group AG, after the implementation of the new Swiss SRB framework, and only qualify as gone concern loss-absorbing capacity at the UBS AG consolidated level.

¹ As a result of the cross-border merger of UBS Limited into UBS Europe SE effective 1 March 2019, UBS Europe SE has become a significant regulated subsidiary of UBS Group AG. The size, scope and business model of the merged entity is now materially different. Comparatives for December 2018 have not been provided in the table because data produced on the same basis is not available. For more information on the cross-border merger of UBS Limited into UBS Europe SE, refer to the "Recent developments" section of this report. ² Figures as of or for the quarter ended 31 December 2018 have been adjusted for consistency with the full-year audited financial statements and / or local regulatory reporting, which were finalized after the publication of the UBS Group AG Annual Report 2018 and the 31 December 2018 Pillar 3 report on 15 March 2019. ³ UBS AG and UBS Switzerland AG financial information is prepared in accordance with Swiss GAAP (FINMA Circular 2015/1 and Banking Ordinance), but does not represent interim financial statements under Swiss GAAP. ⁴ UBS Europe SE financial information is prepared in accordance with International Financial Reporting Standards (IFRS), but does not represent interim financial statements under IFRS. ⁵ UBS Americas Holding LLC financial information is prepared in accordance with accounting principles generally accepted in the US (US GAAP), but does not represent interim financial statements under US GAAP. ⁶ For UBS AG and UBS Switzerland AG, based on applicable transitional arrangements for Swiss systemically relevant banks (SRBs). For UBS Europe SE, based on applicable EU Basel III rules. ⁷ Refer to the 31 March 2019 Pillar 3 report under "Pillar 3 disclosures" at www.ubs.com/investors for more information. ⁸ For UBS AG, on the basis of going concern capital. On the basis of tier 1 capital for UBS Europe SE and UBS Americas Holding LLC. ⁹ There was no local disclosure requirement for UBS Americas Holding LLC as of 31 March 2019 and 31 December 2018. ¹⁰ For UBS Europe SE, March month-end reporting date values rather than an average calculation are disclosed as the size, scope and business model of UBS Europe SE have significantly changed as a result of the cross-border merger with UBS Limited. ¹¹ UBS AG is required to maintain a minimum liquidity coverage ratio of 105% as communicated by FINMA. ¹² UBS Switzerland AG, as a Swiss SRB, is required to maintain a minimum liquidity coverage ratio of 100%. ¹³ Refer to the "Capital management" section of our Annual Report 2018 for more information on the joint and several liability. Under certain circumstances, the Swiss Banking Act and FINMA's Banking Insolvency Ordinance authorize FINMA to modify, extinguish or convert to common equity liabilities of a bank in connection with a resolution or insolvency of such bank.

UBS Group AG is a holding company and conducts substantially all of its operations through UBS AG and its subsidiaries. UBS Group AG and UBS AG have contributed a significant portion of their respective capital and provide substantial liquidity to subsidiaries. Many of these subsidiaries are subject to regulations requiring compliance with minimum capital, liquidity and similar requirements. The tables in this section summarize the regulatory capital components and capital ratios of our significant regulated subsidiaries and sub-groups determined under the regulatory framework of each subsidiary's or sub-group's home jurisdiction.

Supervisory authorities generally have discretion to impose higher requirements or to otherwise limit the activities of subsidiaries. Supervisory authorities also may require entities to

measure capital and leverage ratios on a stressed basis and may limit the ability of the entity to engage in new activities or take capital actions based on the results of those tests.

Standalone regulatory information for UBS AG and UBS Switzerland AG as well as consolidated regulatory information for UBS Europe SE and UBS Americas Holding LLC is provided in the 31 March 2019 Pillar 3 report, which is available under "Pillar 3 disclosures" at www.ubs.com/investors.

Selected financial and regulatory information for UBS AG consolidated is included in the key figures table below. Refer also to the UBS AG first quarter 2019 report, which will be available as of 30 April 2019 under "Quarterly reporting" at www.ubs.com/investors.

¹ Refer to the "Performance targets and measurement" section of our Annual Report 2018 for more information on our performance targets. ² Calculated as net profit attributable to shareholders (annualized as applicable) / average equity attributable to shareholders. ³ Calculated as net profit attributable to shareholders (annualized as applicable) / average equity attributable to shareholders less average goodwill and intangible assets. The definition of the numerator for return on tangible equity has been revised to align with numerators for return on equity and return on CET1 capital; i.e., we no longer adjust for amortization and impairment of goodwill and intangible assets. Prior periods have been restated. ⁴ Calculated as net profit attributable to shareholders (annualized as applicable) / average common equity tier 1 capital. ⁵ Calculated as operating income before credit loss expense or recovery (annualized as applicable) / average risk-weighted assets and average leverage ratio denominator, respectively. ⁶ Calculated as operating expenses / operating income before credit loss expense or recovery. ⁷ Calculated as change in net profit attributable to shareholders from continuing operations between current and comparison periods / net profit attributable to shareholders from continuing operations of comparison period. ⁸ Based on the Swiss systemically relevant bank framework as of 1 January 2020. Refer to the "Capital management" section of this report for more information. ⁹ Includes invested assets for Global Wealth Management, Asset Management and Personal & Corporate Banking. ¹⁰ As of 31 March 2019, the breakdown of personnel by business division and Corporate Center was: Global Wealth Management: 23,397; Personal & Corporate Banking: 5,133; Asset Management: 2,250; Investment Bank: 5,008; Corporate Center: 11,986.

Information sources

Reporting publications

Annual publications: *Annual Report (SAP no. 80531)*: Published in English, this single-volume report provides descriptions of: our Group strategy and performance; the strategy and performance of the business divisions and Corporate Center; risk, treasury and capital management; corporate governance, corporate responsibility and our compensation framework, including information on compensation for the Board of Directors and the Group Executive Board members; and financial information, including the financial statements. *Auszug aus dem Geschäftsbericht (SAP no. 80531)*: This publication provides the translation into German of selected sections of the Annual Report. *Annual Review (SAP no. 80530)*: This booklet contains key information on our strategy and performance, with a focus on corporate responsibility at UBS. It is published in English, German, French and Italian. *Compensation Report (SAP no. 82307)*: The report discusses our compensation framework and provides information on compensation for the Board of Directors and the Group Executive Board members. It is available in English and German.

Quarterly publications: The quarterly financial report provides an update on our strategy and performance for the respective quarter. It is available in English.

How to order publications: The annual and quarterly publications are available in PDF at www.ubs.com/investors in the "UBS Group AG and UBS AG consolidated financial information" section, and printed copies can be requested from UBS free of charge. For annual publications refer to www.ubs.com/investors in the "Investor services" section, which can be accessed via the link on the left-hand side of the screen. Alternatively, they can be ordered by quoting the SAP number and the language preference, where applicable, from UBS AG, F4UK-AUL, P.O. Box, CH-8098 Zurich, Switzerland.

Other information

Website: The "Investor Relations" website at www.ubs.com/investors provides the following information on UBS: news releases; financial information, including results-related filings with the US Securities and Exchange Commission; information for shareholders, including UBS share price charts as well as data and dividend information, and for bondholders; the UBS corporate calendar; and presentations by management for investors and financial analysts. Information on the internet is available in English, with some information also available in German.

Results presentations: Our quarterly results presentations are webcast live. A playback of most presentations is downloadable at www.ubs.com/presentations.

Messaging service: Email alerts to news about UBS can be subscribed to under "UBS news alert" at www.ubs.com/investors. Messages are sent in English, German, French or Italian, with an option to select theme preferences for such alerts.

Form 20-F and other submissions to the US Securities and Exchange Commission: We file periodic reports and submit other information about UBS to the US Securities and Exchange Commission (SEC). Principal among these filings is the annual report on Form 20-F, filed pursuant to the US Securities Exchange Act of 1934. The filing of Form 20-F is structured as a wrap-around document. Most sections of the filing can be satisfied by referring to the combined UBS Group AG and UBS AG annual report. However, there is a small amount of additional information in Form 20-F that is not presented elsewhere and is particularly targeted at readers in the US. Readers are encouraged to refer to this additional disclosure. Any document that we file with the SEC is available on the SEC's website www.sec.gov. Refer to www.ubs.com/investors for more information.

Cautionary Statement Regarding Forward-Looking Statements | This report contains statements that constitute "forward-looking statements," including but not limited to management's outlook for UBS's financial performance and statements relating to the anticipated effect of transactions and strategic initiatives on UBS's business and future development. While these forward-looking statements represent UBS's judgments and expectations concerning the matters described, a number of risks, uncertainties and other important factors could cause actual developments and results to differ materially from UBS's expectations. These factors include, but are not limited to: (i) the degree to which UBS is successful in the ongoing execution of its strategic plans, including its cost reduction and efficiency initiatives and its ability to manage its levels of risk-weighted assets (RWA) and leverage ratio denominator (LRD), including to counteract regulatory-driven increases, liquidity coverage ratio and other financial resources, and the degree to which UBS is successful in implementing changes to its businesses to meet changing market, regulatory and other conditions; (ii) the continuing low or negative interest rate environment in Switzerland and other jurisdictions, developments in the macroeconomic climate and in the markets in which UBS operates or to which it is exposed, including movements in securities prices or liquidity, credit spreads, and currency exchange rates, and the effects of economic conditions, market developments, and geopolitical tensions on the financial position or creditworthiness of UBS's clients and counterparties as well as on client sentiment and levels of activity; (iii) changes in the availability of capital and funding, including any changes in UBS's credit spreads and ratings, as well as availability and cost of funding to meet requirements for debt eligible for total loss-absorbing capacity (TLAC); (iv) changes in or the implementation of financial legislation and regulation in Switzerland, the US, the UK, the European Union and other financial centers that have imposed, or resulted in, or may do so in the future, more stringent or entity-specific capital, TLAC, leverage ratio, liquidity and funding requirements, incremental tax requirements, additional levies, limitations on permitted activities, constraints on remuneration, constraints on transfers of capital and liquidity and sharing of operational costs across the Group or other measures, and the effect these will or would have on UBS's business activities; (v) the degree to which UBS is successful in implementing further changes to its legal structure to improve its resolvability and meet related regulatory requirements and the potential need to make further changes to the legal structure or booking model of UBS Group in response to legal and regulatory requirements, proposals in Switzerland and other jurisdictions for mandatory structural reform of banks or systemically important institutions or to other external developments, and the extent to which such changes will have the intended effects; (vi) UBS's ability to maintain and improve its systems and controls for the detection and prevention of money laundering and compliance with sanctions to meet evolving regulatory requirements and expectations, in particular in the US; (vii) the uncertainty arising from the timing and nature of the UK exit from the EU; (viii) changes in UBS's competitive position, including whether differences in regulatory capital and other requirements among the major financial centers will adversely affect UBS's ability to compete in certain lines of business; (ix) changes in the standards of conduct applicable to our businesses that may result from new regulation or new enforcement of existing standards, including recently enacted and proposed measures to impose new and enhanced duties when interacting with customers and in the execution and handling of customer transactions; (x) the liability to which UBS may be exposed, or possible constraints or sanctions that regulatory authorities might impose on UBS, due to litigation, contractual claims and regulatory investigations, including the potential for disqualification from certain businesses, potentially large fines or monetary penalties, or the loss of licenses or privileges as a result of regulatory or other governmental sanctions, as well as the effect that litigation, regulatory and similar matters have on the operational risk component of our RWA as well as the amount of capital available for return to shareholders; (xi) the effects on UBS's cross-border banking business of tax or regulatory developments and of possible changes in UBS's policies and practices relating to this business; (xii) UBS's ability to retain and attract the employees necessary to generate revenues and to manage, support and control its businesses, which may be affected by competitive factors; (xiii) changes in accounting or tax standards or policies, and determinations or interpretations affecting the recognition of gain or loss, the valuation of goodwill, the recognition of deferred tax assets and other matters; (xiv) UBS's ability to implement new technologies and business methods, including digital services and technologies and ability to successfully compete with both existing and new financial service providers, some of which may not be regulated to the same extent; (xv) limitations on the effectiveness of UBS's internal processes for risk management, risk control, measurement and modeling, and of financial models generally; (xvi) the occurrence of operational failures, such as fraud, misconduct, unauthorized trading, financial crime, cyberattacks, and systems failures; (xvii) restrictions on the ability of UBS Group AG to make payments or distributions, including due to restrictions on the ability of its subsidiaries to make loans or distributions, directly or indirectly, or, in the case of financial difficulties, due to the exercise by FINMA or the regulators of UBS's operations in other countries of their broad statutory powers in relation to protective measures, restructuring and liquidation proceedings; (xviii) the degree to which changes in regulation, capital or legal structure, financial results or other factors may affect UBS's ability to maintain its stated capital return objective; and (xix) the effect that these or other factors or unanticipated events may have on our reputation and the additional consequences that this may have on our business and performance. The sequence in which the factors above are presented is not indicative of their likelihood of occurrence or the potential magnitude of their consequences. Our business and financial performance could be affected by other factors identified in our past and future filings and reports, including those filed with the SEC. More detailed information about those factors is set forth in documents furnished by UBS and filings made by UBS with the SEC, including UBS's Annual Report on Form 20-F for the year ended 31 December 2018. UBS is not under any obligation to (and expressly disclaims any obligation to) update or alter its forward-looking statements, whether as a result of new information, future events, or otherwise.

Rounding | Numbers presented throughout this report may not add up precisely to the totals provided in the tables and text. Percentages, percent changes, and adjusted results are calculated on the basis of unrounded figures. Information on absolute changes between reporting periods, which is provided in text and that can be derived from figures displayed in the tables, is calculated on a rounded basis.

Tables | Within tables, blank fields generally indicate that the field is not applicable or not meaningful, or that information is not available as of the relevant date or for the relevant period. Zero values generally indicate that the respective figure is zero on an actual or rounded basis. Percentage changes are presented as a mathematical calculation of the change between periods.

¹ Refer to the "Performance targets and measurement" section of our Annual Report 2018 for more information on our performance targets. ² Calculated as net profit attributable to shareholders (annualized as applicable) / average equity attributable to shareholders. ³ Calculated as net profit attributable to shareholders (annualized as applicable) / average equity attributable to shareholders less average goodwill and intangible assets. The definition of the numerator for return on tangible equity has been revised to align with numerators for return on equity and return on CET1 capital; i.e., we no longer adjust for amortization and impairment of goodwill and intangible assets. Prior periods have been restated. ⁴ Calculated as net profit attributable to shareholders (annualized as applicable) / average common equity tier 1 capital. ⁵ Calculated as operating income before credit loss expense or recovery (annualized as applicable) / average risk-weighted assets and average leverage ratio denominator, respectively. ⁶ Calculated as operating expenses / operating income before credit loss expense or recovery. ⁷ Calculated as change in net profit attributable to shareholders from continuing operations between current and comparison periods / net profit attributable to shareholders from continuing operations of comparison period. ⁸ Based on the Swiss systemically relevant bank framework as of 1 January 2020. Refer to the "Capital management" section of the UBS Group first quarter 2019 report for more information. ⁹ Includes invested assets for Global Wealth Management, Asset Management and Personal & Corporate Banking. ¹⁰ As of 31 March 2019, the breakdown of personnel by business division and Corporate Center was: Global Wealth Management: 23,397; Personal & Corporate Banking: 5,133; Asset Management: 2,250; Investment Bank: 5,008; Corporate Center: 11,986.

Changes to our presentation currency

Effective from 1 October 2018, the presentation currency of UBS AG's consolidated financial statements has changed from Swiss francs to US dollars. Comparative information in this report for periods prior to the fourth quarter of 2018 has been restated. Assets, liabilities and total equity were translated to US dollars at closing exchange rates prevailing on the respective balance sheet dates, and income and expenses were translated at the respective average rates prevailing for the relevant periods.

Introduction

Structure of this report

UBS Group AG is the holding company for the UBS Group and the parent company of UBS AG. 100% of the issued shares of UBS AG are held by UBS Group AG. Financial information for UBS AG consolidated does not differ materially from that for UBS Group AG consolidated.

This report includes risk and capital management information for UBS AG consolidated and the interim consolidated financial statements for the quarter ended 31 March 2019. Regulatory information for UBS AG standalone is provided in the 31 March 2019 Pillar 3 report, which is available under "Pillar 3 disclosures" at www.ubs.com/investors.

→ **Refer to the UBS Group first quarter 2019 report under "Quarterly reporting" at www.ubs.com/investors for more information**

Comparison between UBS Group AG consolidated and UBS AG consolidated

The table on the following page contains a comparison of selected financial and capital information between UBS Group AG consolidated and UBS AG consolidated.

The accounting policies applied under International Financial Reporting Standards (IFRS) to both UBS Group AG and UBS AG consolidated financial statements are identical. However, there are certain scope and presentation differences as noted below:

– Assets, liabilities, operating income, operating expenses and operating profit before tax relating to UBS Group AG and its directly held subsidiaries, including UBS Business Solutions AG, are reflected in the consolidated financial statements of UBS Group AG but not of UBS AG. UBS AG's assets, liabilities, operating income and operating expenses related to transactions with UBS Group AG and its directly held subsidiaries, including UBS Business Solutions AG and other shared services subsidiaries, are not subject to elimination in the UBS AG consolidated financial statements, but are eliminated in the UBS Group AG consolidated financial statements. UBS Business Solutions AG and other shared services subsidiaries of UBS Group AG charge other legal entities within the Group for services provided, including a markup on costs incurred.

- UBS Group AG consolidated equity was USD 0.5 billion higher compared to the equity of UBS AG consolidated as of 31 March 2019, mainly driven by higher dividends paid by UBS AG to UBS Group AG compared with the dividend distributions of UBS Group AG, as well as higher retained earnings in the UBS Group AG consolidated financial statements, largely related to the aforementioned markup charged by shared services subsidiaries of UBS Group AG to other legal entities in the UBS AG scope of consolidation. UBS Group AG is also the grantor of the majority of the compensation plans of the Group and recognizes share premium for equity-settled awards granted, largely offset by the treasury shares held to hedge the related share delivery obligation and those acquired as part of our share repurchase program. These effects were partly offset by additional share premium recognized at the UBS AG consolidated level related to the establishment of UBS Group AG and UBS Business Solutions AG, a wholly owned subsidiary of UBS Group AG.
- Going concern capital of UBS AG consolidated was USD 4.1 billion lower than going concern capital of UBS Group AG consolidated as of 31 March 2019, reflecting USD 4.3 billion less additional tier 1 (AT1) capital, partly offset by USD 0.3 billion higher common equity tier 1 (CET1) capital.
- CET1 capital of UBS AG consolidated was USD 0.3 billion higher than that of UBS Group AG consolidated as of 31 March 2019. The main drivers are differences in equity, in deductions for compensation-related regulatory capital components and in dividend accruals.
- Going concern loss-absorbing AT1 capital of UBS AG consolidated was USD 4.3 billion lower than that of UBS Group AG consolidated as of 31 March 2019, reflecting Deferred Contingent Capital Plan awards and AT1 capital notes. These AT1 capital notes were issued by UBS Group Funding (Switzerland) AG, a direct subsidiary of UBS Group AG, after the implementation of the new Swiss SRB framework, and only qualify as going concern loss-absorbing capacity at the UBS AG consolidated level.
 - **Refer to "Holding company and significant regulated subsidiaries and sub-groups" at www.ubs.com/investors for an illustration of the consolidation scope differences between UBS AG and UBS Group AG**
 - **Refer to the "Capital management" section of this report for more information on differences in the loss-absorbing capacity between UBS Group AG consolidated and UBS AG consolidated**

Risk and capital management

Management report

Risk management and control

UBS AG consolidated risk profile

The risk profile of UBS AG consolidated does not differ materially from that of UBS Group AG consolidated and risk information provided in the UBS Group first quarter 2019 report is equally applicable to UBS AG consolidated.

The credit risk profile of UBS AG consolidated differs from that of UBS Group AG consolidated primarily in relation to

receivables of UBS AG and UBS Switzerland AG from UBS Group AG. As a result of these receivables, total banking products exposure of UBS AG consolidated as of 31 March 2019 was USD 1.7 billion, or 0.3%, higher than the exposure of UBS Group, compared with USD 1.8 billion or 0.3% as of 31 December 2018.

→ **Refer to the “Risk management and control” section of the UBS Group first quarter 2019 report for more information**

Capital management

Going and gone concern requirements and information

UBS AG is considered a systemically relevant bank (SRB) under Swiss banking law and, on a consolidated basis, both UBS Group AG and UBS AG are required to comply with regulations based on the Basel III framework as applicable for Swiss SRBs.

The Swiss SRB framework and requirements applicable to UBS AG consolidated are consistent with those applicable to UBS Group AG consolidated and are described in the "Capital management" section of our Annual Report 2018, available under "Annual reporting" at www.ubs.com/investors.

UBS AG is subject to going concern requirements on a standalone basis. Capital and other regulatory information for UBS AG standalone and consolidated is provided in the 31 March 2019 Pillar 3 report – UBS Group and significant regulated subsidiaries and sub-groups, which is available under "Pillar 3 disclosures" at www.ubs.com/investors.

The table below provides the risk-weighted assets (RWA)- and leverage ratio denominator (LRD)-based requirements and information as of 31 March 2019 for UBS AG consolidated.

¹ Includes accruals for dividends to shareholders for the current year and other items.**Total loss-absorbing capacity and leverage ratio information under Swiss SRB rules applicable as of 1 January 2020**

Going concern capital of UBS AG consolidated was USD 4.1 billion lower than going concern capital of UBS Group AG consolidated as of 31 March 2019, primarily reflecting additional tier 1 (AT1) capital of USD 4.3 billion, partly offset by higher common equity tier 1 (CET1) capital of USD 0.3 billion. The gone concern loss-absorbing capacity was USD 2.4 billion higher, due to low-trigger loss-absorbing AT1 capital.

CET1 capital of UBS AG consolidated was USD 0.3 billion higher than that of UBS Group AG consolidated, primarily due to the deductions for compensation-related regulatory capital components that are only reflected at the level of UBS Group AG consolidated. This effect was largely offset by lower equity of UBS AG consolidated, as well as a higher dividend accrual at the UBS AG level.

Going concern loss-absorbing AT1 capital of UBS AG consolidated was USD 4.3 billion lower than that of UBS Group AG consolidated and relates to AT1 capital notes issued by UBS Group Funding (Switzerland) AG, a direct subsidiary of UBS Group AG, as well as Deferred Contingent Capital Plan awards granted to eligible employees for the performance years 2014 to 2018.

The difference of USD 2.4 billion in gone concern low-trigger AT1 capital relates to capital instruments that were issued by UBS AG after the new Swiss SRB framework had been implemented and are therefore not recognized within going

concern capital but qualify as gone concern loss-absorbing capacity. Issuances of low-trigger AT1 capital from UBS Group AG were all made prior to implementation of the new Swiss SRB framework and therefore qualify as going concern capital.

Differences in capital between UBS Group AG consolidated and UBS AG consolidated related to employee compensation plans will reverse to the extent underlying services are performed by employees of, and are consequently charged to, UBS AG and its subsidiaries. Such reversal generally occurs over the service period of the employee compensation plans.

The leverage ratio framework for UBS AG consolidated is consistent with that of UBS Group AG consolidated. As of 31 March 2019, the going concern leverage ratio of UBS AG consolidated was 0.4 percentage points lower than that of UBS Group AG consolidated, mainly as the going concern capital of UBS AG consolidated was USD 4.1 billion lower.

- Refer to the "Capital management" section of the UBS Group first quarter 2019 report under "Quarterly reporting" at www.ubs.com/investors for information on the developments of loss-absorbing capacity, risk-weighted assets and leverage ratio denominator for UBS Group AG consolidated
- Refer to the "Introduction" section of this report for more information on the differences in equity between UBS AG consolidated and UBS Group AG

Refer to "Note 26 Restricted and transferred financial assets" in the "Consolidated financial statements" section in the Annual Report 2018 for more information. ³ Money market paper is included in the balance sheet under Financial assets at fair value held for trading, Financial assets measured at fair value through other comprehensive income, Financial assets at fair value not held for trading and Other financial assets measured at amortized cost. ⁴ Includes dividends received from associates reported within Net cash flow from / (used in) investing activities.

Notes to the UBS AG interim consolidated financial statements (unaudited)

Note 1 Basis of accounting

Basis of preparation

The consolidated financial statements (the financial statements) of UBS AG and its subsidiaries (together "UBS AG") are prepared in accordance with International Financial Reporting Standards (IFRS), as issued by the International Accounting Standards Board (IASB), and are presented in US dollars (USD), which is also the functional currency of UBS AG, UBS AG's Head Office, UBS AG's London Branch and UBS AG's US-based operations. These interim financial statements are prepared in accordance with IAS 34, *Interim Financial Reporting*.

In preparing these interim financial statements, the same accounting policies and methods of computation have been applied as in the UBS AG consolidated annual financial statements for the period ended 31 December 2018, except for the changes described in this note. These interim financial statements are unaudited and should be read in conjunction with UBS AG's audited consolidated financial statements included in the Annual Report 2018. In the opinion of management, all necessary adjustments were made for a fair presentation of UBS AG's financial position, results of operations and cash flows.

Preparation of these interim financial statements requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, income, expenses and disclosures of contingent assets and liabilities. These estimates and assumptions are based on the best available information. Actual results in the future could differ from such estimates and such differences may be material to the financial statements. Revisions to estimates, based on regular reviews, are recognized in the period in which they occur. For more information on areas of estimation uncertainty that are considered to require critical judgment, refer to "Note 1a Significant accounting policies" in the "Consolidated financial statements" section of the Annual Report 2018.

Adoption of IFRS 16, Leases

Application and transition effect

Effective from 1 January 2019, UBS AG adopted IFRS 16, *Leases*, which replaced IAS 17, *Leases*, and sets out the principles for the recognition, measurement, presentation and disclosure of leases.

IFRS 16 introduces a single lessee accounting model and fundamentally changes how UBS AG accounts for operating leases when acting as a lessee, with a requirement to record a right-of-use asset and lease liability on the balance sheet. UBS AG is a lessee in a number of leases, primarily of real estate, including offices, retail branches and sales offices, with a smaller number of IT hardware leases. As permitted by the transitional provisions of IFRS 16, UBS AG elected to apply the modified retrospective approach and has not restated comparative figures. Overall, adoption of IFRS 16 resulted in a USD 3.4 billion increase in both total assets and total liabilities in UBS AG's consolidated financial statements. There was no effect on equity.

→ Refer to the table below for more information

UBS AG applied the following practical expedients that are permitted on transition to IFRS 16 where UBS AG is the lessee in a lease previously classified as an operating lease:

- to not reassess whether or not a contract contained a lease;
- to rely on previous assessments of whether such contracts were considered onerous;
- to rely on previous sale-and-leaseback assessments;
- adjust lease terms with the benefit of hindsight with respect to whether extension or termination options are reasonably certain of being exercised;
- to discount lease liabilities using UBS AG's incremental borrowing rate in each currency as at 1 January 2019;
- to initially measure the right-of-use asset at an amount equal to the lease liability for leases previously classified as operating leases, adjusted for existing lease balances such as rent prepayments, rent accruals, lease incentives and onerous lease provisions, but excluding initial direct costs; and
- to not apply IFRS 16 to leases whose remaining term will end within 12 months from the transition date.

Note 1 Basis of accounting (continued)

The measurement of leases previously classified as finance leases, where UBS AG acts as lessee, has not changed on transition to IFRS 16. Similarly UBS AG has made no adjustments where UBS AG acts as lessor, in either a finance or operating lease, of physical assets it owns. Where UBS AG acts as an intermediate lessor, i.e., enters into a head lease and subleases the asset to a third party, the sublease has been classified as either a

finance or operating lease based primarily on whether the sublease term consumes the majority of the remaining useful life of the right-of-use asset arising from the head lease as at the transition date.

The following table reconciles the obligations in respect of operating leases as at 31 December 2018 to the opening lease liabilities recognized on 1 January 2019:

Reconciliation between operating lease commitments disclosed under IAS 17 and lease liabilities recognized under IFRS 16

<i>USD million</i>	
Total undiscounted operating lease commitments as of 31 December 2018	4,546
Leases with a remaining term of less than one year as of 1 January 2019	(18)
Excluded service components	(296)
Reassessment of lease term for extension or termination options	424
Total undiscounted lease payments	4,657
Discounted at a weighted average incremental borrowing rate of 3.07%	(720)
IFRS 16 transition adjustment	3,937
Finance lease liabilities as of 31 December 2018	19
Carrying amount of total lease liabilities as of 1 January 2019	3,956

The following table provides details on the determination of right-of-use assets on transition:

Determination of right-of-use assets on transition

<i>USD million</i>	<i>Carrying amount</i>
Other financial assets measured at amortized cost (finance lease assets recognized under IAS 17 as of 31 December 2018)	19
IFRS 16 transition adjustment	3,937

Other non-financial liabilities (lease incentives)	(204)
Other financial liabilities at amortized cost (rent accruals)	(180)
Provisions (onerous lease provisions)	(131)
Other financial assets at amortized cost (finance lease receivables from subleases as intermediate lessor)	(176)
Property, equipment and software (total right-of-use assets as of 1 January 2019)¹	3,284

¹ Upon adoption of IFRS 16 on 1 January 2019, total liabilities for UBS AG increased by USD 3,422 million, representing USD 3,937 million in newly recognized lease liabilities, less USD 515 million liabilities from lease incentives, rent accruals and onerous lease provisions which were reclassified and presented as part of the right-of-use assets carrying amount. Total assets for UBS AG increased by USD 3,422 million, representing USD 3,246 million in right-of-use assets and USD 176 million in additional finance lease receivables from subleases.

Lease liabilities are presented within *Other financial liabilities measured at amortized cost* and right-of-use assets within *Property, equipment and software*. Finance lease receivables are included within *Other financial assets measured at amortized cost*. Due to the practical expedients taken on transition there was no effect on equity.

During the first quarter of 2019, the weighted average lease term was approximately 9 years and the depreciation charge for right-of-use assets presented within *Depreciation and impairment of property, equipment and software* was USD 113

million. The interest charge on lease liabilities presented within *Interest expense from financial instruments measured at amortized cost* was USD 30 million and other rental expenses (including non-lease components paid to landlords) presented within *General and administrative expenses* were USD 16 million during the first quarter of 2019. This compares with a total rental expense presented in *General and administrative expenses* of USD 147 million and USD 135 million for the quarters ended 31 March 2018 and 31 December 2018, respectively.

Note 1 Basis of accounting (continued)**Update to significant accounting policy – Leasing (disclosed in Note 1a, item 15, *Leasing in the financial statements 2018*)**

UBS AG predominantly enters into lease contracts, or contracts that include lease components, as a lessee of real estate, including offices, retail branches and sales offices, with a small number of IT hardware leases. UBS AG identifies non-lease components of a contract and accounts for them separately from lease components.

When UBS AG is lessee in a lease arrangement, UBS AG recognizes a lease liability and corresponding right-of-use (RoU) asset at the commencement of the lease term when UBS AG acquires control of the physical use of the asset. Lease liabilities are presented within *Other financial liabilities measured at amortized cost* and RoU assets within *Property, equipment and software*. The lease liability is measured based on the present value of the lease payments over the lease term, discounted using UBS AG's unsecured borrowing rate given the rate implicit in a lease is generally not observable to the lessee. Interest expense on the lease liability is presented within *Interest expense from financial instruments measured at amortized cost*. The RoU asset is recorded at an amount equal to the lease liability but is adjusted for rent prepayments, initial direct costs, any costs to refurbish the leased asset or lease incentives received. The RoU asset is depreciated over the shorter of the lease term or the useful life of the underlying asset, with the depreciation presented within *Depreciation and impairment of property, equipment and software*.

Lease payments generally include fixed payments and variable payments that depend on an index (such as an inflation index). When the lease contains an extension or termination option that UBS AG considers reasonably certain to be exercised, the expected rental payments or costs of termination are included within the lease payments used to generate the lease liability. UBS AG does not typically enter into leases with purchase options or residual value guarantees.

Where UBS AG acts as lessor or sublessor under a finance lease, a receivable is recognized in *Other financial assets measured at amortized cost* at an amount equal to the present value of the aggregate of the lease payments plus any unguaranteed residual value that UBS AG expects to recover at the end of the lease term. Initial direct costs are also included in the initial measurement of the lease receivable. Lease payments received during the lease term are allocated as repayments of the outstanding receivable. Interest income reflects a constant periodic rate of return on UBS AG's net investment using the interest rate implicit in the lease (or for subleases, the rate for the head lease). UBS AG reviews the estimated unguaranteed

residual value annually, and if the estimated residual value to be realized is less than the amount assumed at lease inception, a loss is recognized for the expected shortfall. Where UBS AG acts as a lessor or sublessor in an operating lease of owned real estate, UBS AG recognizes the operating lease income on a straight-line basis over the lease term.

Lease receivables are subject to impairment requirements as set out in point g. in "Note 1a item 3, *Financial instruments*". Expected credit losses (ECL) on lease receivables are determined following the general impairment model within IFRS 9, *Financial Instruments*, without utilizing the simplified approach of always measuring impairment at the amount of lifetime ECL.

Other changes to accounting policies**Changes in Corporate Center cost allocations and equity attribution to business divisions**

In order to further align UBS AG and divisional performance, UBS AG adjusted the methodology for the allocation of Corporate Center – Group Asset and Liability Management (Group ALM) and Corporate Center – Services funding costs and expenses to the business divisions. At the same time, UBS AG updated its funds transfer pricing framework to better reflect the sources and usage of funding. All of these changes are effective as of 1 January 2019 and prior-period segment information has been restated. Together, these changes have decreased the business divisions' operating results and thereby increased their adjusted cost / income ratios by 1–2 percentage points, with an offsetting effect of USD 0.7 billion in Corporate Center's operating profit / (loss) before tax.

Corporate Center has retained funding costs for deferred tax assets, costs relating to UBS AG's legal entity transformation program and other costs not attributable to or representative of the performance of the business divisions.

Alongside the update to allocations and UBS AG's funds transfer pricing framework, UBS AG has increased the allocation of balance sheet resources from Corporate Center to the business divisions, resulting in USD 223 billion of assets allocated from Corporate Center to the business divisions in restated 2018 numbers, predominantly from high-quality liquid assets and certain other assets centrally managed on behalf of the business divisions.

Upon adoption of IFRS 16, *Leases*, as of 1 January 2019, UBS AG additionally allocated approximately USD 3.4 billion of newly recognized right-of-use assets and finance lease receivables to the business divisions.

→ Refer to "Note 2 Segment reporting" for more information

Note 1 Basis of accounting (continued)**Changes to Corporate Center segment reporting**

As announced in the Annual Report 2018, there has been a substantial reduction in the size and resource consumption of the Non-core and Legacy Portfolio. In addition, following the aforementioned changes to UBS AG's methodology for allocating funding costs and expenses from Corporate Center – Services and Corporate Center – Group Asset and Liability Management (Group ALM) to the business divisions, the operating loss retained in Corporate Center – Services and Corporate Center – Group ALM has been significantly reduced. As a consequence and in compliance with IFRS 8, *Operating Segments*, beginning with the first quarter 2019 report, UBS AG provides results for total Corporate Center only and does not separately report Corporate Center – Services, Group ALM and Non-core and Legacy Portfolio. Furthermore, UBS AG has operationally combined Group Treasury with Group ALM and calls this combined unit Group Treasury. Prior-period information has been restated.

→ Refer to “Note 2 Segment reporting” for more information

Presentation of dividend income and expense from financial instruments measured at fair value through profit or loss

Effective from the first quarter of 2019, UBS AG refined the presentation of dividend income and expense. This resulted in a reclassification of dividends from *Interest income (expense) from financial instruments measured at fair value through profit or loss* into *Other net income from financial instruments measured at fair value through profit or loss* (prior to 1 January 2019: *Other net income from fair value changes on financial instruments*). The change aligns the presentation of dividends with related fair value changes from the equity instruments and economic hedges removing volatility that has historically arisen within both *Net interest income* and *Other net income from fair value changes on financial instruments*. There is no effect on *Total operating income* or *Net profit / (loss)*. Prior periods have been restated for this presentational change and the effect on the respective reporting lines is outlined in the table below.

Changes to the presentation of dividend income and expense from financial instruments measured at fair value through profit or loss

USD million	For the quarter ended				Year-to-date
	31.3.18	30.6.18	30.9.18	31.12.18	31.12.18

Interest expense from financial instruments measured at fair value through profit or loss	160	846	175	151	1,331
Net interest income	(412)	210	(524)	(250)	(976)
Other net income from financial instruments measured at fair value through profit or loss	412	(210)	524	250	976

IFRIC 23, Uncertainty over Income Tax Treatments

Effective 1 January 2019, UBS AG adopted IFRIC Interpretation 23, *Uncertainty over Income Tax Treatments* (IFRIC 23), which addresses how uncertain tax positions should be accounted for under IFRS. IFRIC 23 requires that, where acceptance of the tax treatment by the relevant tax authority is considered probable, it should be assumed as an accounting recognition matter that treatment of the item will ultimately be accepted. Therefore, no tax provision would be required in such cases. However, if acceptance of the tax treatment is not considered probable, the entity is required to reflect that uncertainty using an expected value (i.e., a probability-weighted approach) or the single most likely amount.

Upon adoption of IFRIC 23, on 1 January 2019 UBS AG recognized a net tax expense of USD 11 million in retained earnings.

Amendments to IAS 19, Employee Benefits

Effective 1 January 2019, UBS AG adopted amendments to IAS 19, *Employee Benefits*, which address the accounting when a

plan amendment, curtailment or settlement occurs during the reporting period. The amendments require entities to use the updated actuarial assumption to determine current service cost and net interest for the remainder of the annual reporting period after such an event. The amendments also clarify how the requirements for accounting for a plan amendment, curtailment or settlement affect the asset ceiling requirements. The amendments are effective prospectively for plan amendments, curtailments or settlements that occur on or after 1 January 2019. Adoption on 1 January 2019 had no effect on UBS AG's financial statements.

Annual Improvements to IFRS Standards 2015–2017 Cycle

Effective 1 January 2019, UBS AG adopted *Annual Improvements to IFRS Standards 2015–2017 Cycle*, which resulted in amendments to IFRS 3, *Business Combinations*, IFRS 11, *Joint Arrangements*, IAS 12, *Income Taxes*, and IAS 23, *Borrowing Costs*. Adoption of these amendments on 1 January 2019 had no material effect on UBS AG's financial statements.

Note 2 Segment reporting

Overview and changes in Corporate Center segment reporting

UBS AG's businesses are organized globally into four business divisions: Global Wealth Management, Personal & Corporate Banking, Asset Management and the Investment Bank, all of which are supported by Corporate Center. The four business divisions qualify as reportable segments for the purpose of segment reporting and, together with Corporate Center, reflect the management structure of UBS AG.

→ Refer to "Note 1a Significant accounting policies item 2" and "Note 2 Segment reporting" in the "Consolidated financial statements" section of the Annual Report 2018 for more information on UBS AG's reporting segments

As outlined in Note 1, beginning with the first quarter 2019 report, UBS AG provides results for total Corporate Center only and does not separately report Corporate Center – Services, Group Asset and Liability Management and Non-core and Legacy Portfolio.

→ Refer to Note 1 for more information

Changes in Corporate Center cost and resource allocation to business divisions

In order to further align UBS AG and divisional performance, UBS AG has adjusted its methodology for the allocation of Corporate Center funding costs and expenses to the business divisions. At the same time, it has updated its funds transfer pricing framework to better reflect the sources and usage of funding. Prior-period information for the first quarter of 2018 has been restated, resulting in a decrease in *Operating profit / (loss) before tax* for Global Wealth Management of USD 97 million, for Personal & Corporate Banking of USD 37 million, for Asset Management of USD 8 million and for the Investment Bank of USD 51 million, with a corresponding increase in Corporate Center of USD 193 million.

Additionally, UBS AG has increased the allocation of balance sheet resources from Corporate Center to the business divisions. Prior-period information for the fourth quarter of 2018 has been restated, resulting in an increase of *Total assets* in Global Wealth Management of USD 114 billion, in Personal & Corporate Banking of USD 62 billion, in Asset Management of USD 4 billion and in the Investment Bank of USD 44 billion, with a corresponding decrease of assets in Corporate Center of USD 223 million.

These changes had no effect on the reported results or financial position of UBS AG.

Social security	170	122	201
Pension and other post-employment benefit plans	170	122	21 ²
Other personnel expenses	105	168	127
Total personnel expenses	3,468	3,262	3,771

¹ Financial advisor variable compensation consists of grid-based compensation based directly on compensable revenues generated by financial advisors and supplemental compensation calculated on the basis of financial advisor productivity, firm tenure, assets and other variables. It also includes expenses related to compensation commitments with financial advisors entered into at the time of recruitment that are subject to vesting requirements. ² Changes to the Pension Fund of UBS in Switzerland in the first quarter of 2018 resulted in a reduction in the pension obligation recognized by UBS. As a consequence, a pre-tax gain of USD 132 million was recognized in the income statement in the first quarter of 2018, with no overall effect on total equity. Refer to "Note 5 Personnel expenses" in the "Consolidated financial statements" section of the first quarter 2018 report for more information.

Note 7 General and administrative expenses

USD million	For the quarter ended		
	31.3.19	31.12.18	31.3.18

Outsourcing of IT and other services	146	181	187
Litigation, regulatory and similar matters ¹	(8)	533	(11)
Other	29	33	31
Total general and administrative expenses	2,026	3,094	2,371

¹ Reflects the net increase / (release) in provisions for litigation, regulatory and similar matters recognized in the income statement. Refer to Note 15 for more information. Also includes recoveries from third parties (first quarter of 2019: USD 7 million; fourth quarter of 2018: USD 1 million; first quarter of 2018: USD 17 million).

Note 8 Income taxes

UBS AG recognized income tax expenses of USD 387 million for the first quarter of 2019, compared with USD 484 million for the first quarter of 2018.

Current tax expenses were USD 159 million, compared with USD 197 million, and related to taxable profits of UBS Switzerland AG and other entities.

Deferred tax expenses were USD 228 million, compared with USD 287 million. These include expenses of USD 209 million relating to profits for the current quarter, which primarily reflect the amortization of deferred tax assets (DTAs) previously recognized in relation to tax losses carried forward and

deductible temporary differences to reflect their offset against profits for the quarter, including the amortization of US tax loss DTAs at the level of UBS Americas Inc. In addition, deferred tax expenses in the first quarter of 2019 included a net expense of USD 19 million mainly relating to a decrease in temporary difference DTAs of USD 29 million as the expected value of future tax deductions for deferred compensation awards decreased. This deferred tax expense was partially offset by a tax loss DTA increase of USD 10 million for locations affected by our UK business transfer activity during the quarter.

Note 9 Expected credit loss measurement

a) Expected credit losses in the period

Total net credit loss expenses were USD 20 million in the first quarter of 2019, reflecting expenses of USD 5 million in expected credit losses (ECL) from stage 1 and 2 positions and losses of USD 15 million from credit-impaired (stage 3) positions.

A USD 5 million increase in stage 1 and 2 ECL during the period was primarily the result of updates to macroeconomic and market data in the Investment Bank portfolio, partly offset by recoveries in Global Wealth Management and Personal & Corporate Banking, reflecting improvements in collateral and credit scores.

Stage 3 losses of USD 15 million were recognized, predominantly in the Investment Bank, as well as across a number of defaulted positions in Global Wealth Management and Personal & Corporate Banking.

There have not been any material changes to the models used to calculate ECL and to determine stage allocation in the quarter.

UBS AG uses four different economic scenarios in the ECL calculation: an upside, a baseline, a mild downside and a severe downside scenario. The scenario narratives and weights were reviewed and remain unchanged from those applied as of 31 December 2018. Macroeconomic data and market data was updated across all scenarios, as well as the baseline scenario shocks, as of 31 March 2019.

→ Refer to **"Note 1a Significant accounting policies item g"** and **"Note 23 Expected credit loss measurement"** in the **"Consolidated financial statements"** section of the **Annual Report 2018 for more information**

b) ECL-relevant balance sheet and off-balance sheet positions including ECL allowances and provisions

The tables on the following pages provide information on financial instruments and certain non-financial instruments that are subject to ECL. For amortized cost instruments, the net carrying value represents the maximum exposure to credit risk, taking into account the allowance for credit losses. Financial assets measured at fair value through other comprehensive income (FVOCI) are also subject to ECL; however, unlike amortized cost instruments, the allowance does not reduce the

carrying value of these financial assets. The carrying value of financial assets measured at FVOCI represents the maximum exposure to credit risk.

In addition to on-balance sheet financial assets, certain off-balance sheet and other credit lines are also subject to ECL. The maximum exposure to credit risk for off-balance sheet financial instruments is calculated based on notional amounts.

Note 10 Fair value measurement

This Note provides fair value measurement information for both financial and non-financial instruments and should be read in conjunction with "Note 24 Fair value measurement" in the "Consolidated financial statements" section of the Annual Report 2018, which provides more information on valuation

principles, valuation governance, fair value hierarchy classification, valuation adjustments, valuation techniques and inputs, sensitivity of fair value measurements and methods applied to calculate fair values for financial instruments not measured at fair value.

a) Fair value hierarchy

The fair value hierarchy classification of financial and non-financial assets and liabilities measured at fair value is summarized in the table below.

Determination of fair values from quoted market prices or valuation techniques¹

USD million	31.3.19				31.12.18			
	Level 1	Level 2	Level 3	Total	Level 1	Level 2	Level 3	Total
Financial assets measured at fair value on a recurring basis

¹ Bifurcated embedded derivatives are presented on the same balance sheet lines as their host contracts and are not included in this table. The fair value of these derivatives was not material for the periods presented. ² Other non-financial assets primarily consist of properties and other non-current assets held for sale, which are measured at the lower of their net carrying amount or fair value less costs to sell.

All financial and non-financial assets and liabilities measured or disclosed at fair value are categorized into one of three fair value hierarchy levels. In certain cases, the inputs used to measure fair value may fall within different levels of the fair value hierarchy. For disclosure purposes, the level in the hierarchy within which the instrument is classified in its entirety is based on the lowest level input that is significant to the position's fair value measurement:

- Level 1 – quoted prices (unadjusted) in active markets for identical assets and liabilities;
- Level 2 – valuation techniques for which all significant inputs are, or are based on, observable market data; or
- Level 3 – valuation techniques for which significant inputs are not based on observable market data.

Note 10 Fair value measurement (continued)**b) Valuation adjustments****Deferred day-1 profit or loss reserves**

The table below summarizes the changes in deferred day-1 profit or loss reserves during the relevant period.

Deferred day-1 profit or loss is generally released into *Other net income from financial instruments measured at fair value through profit or loss* when pricing of equivalent products or the underlying parameters become observable or when the transaction is closed out.

In the first quarter of 2019, a deferred day-1 profit or loss reserve release of USD 126 million was recognized in the income statement, mainly related to loans which are reported within *Financial assets at fair value not held for trading* on the balance sheet, following an increase in observability.

Deferred day-1 profit or loss reserves

<i>USD million</i>	For the quarter ended		
	31.3.19	31.12.18	31.3.18
Reserve balance at the beginning of the period	255	250	338
Profit / (loss) deferred on new transactions	33	48	197
(Profit) / loss recognized in the income statement	(126)	(41)	(56)
Foreign currency translation	(1)	(2)	1
Reserve balance at the end of the period	161	255	479

c) Transfers between Level 1 and Level 2

The amounts disclosed in this section reflect transfers between Level 1 and Level 2 for instruments that were held for the entire reporting period.

Assets totaling approximately USD 1.8 billion, which were mainly comprised of investment fund units presented in the line *Financial assets at fair value held for trading* on the balance sheet, were transferred from Level 2 to Level 1 during the first

quarter of 2019, generally due to increased levels of trading activity observed within the market for these instruments. Liabilities transferred from Level 2 to Level 1 during the first quarter of 2019 were not material. Assets and liabilities transferred from Level 1 to Level 2 during the first quarter of 2019 were also not material.

Note 10 Fair value measurement (continued)**d) Level 3 instruments: valuation techniques and inputs**

The table below presents material Level 3 assets and liabilities together with the valuation techniques used to measure fair value, the significant inputs used in the valuation technique that are considered unobservable and a range of values for those unobservable inputs.

The range of values represents the highest- and lowest-level input used in the valuation techniques. Therefore, the range does not reflect the level of uncertainty regarding a particular input, but rather the different underlying characteristics of the relevant assets and liabilities. The ranges will therefore vary from period to period and parameter to parameter based on characteristics of the instruments held at each balance sheet date. Furthermore, the ranges and weighted averages of unobservable inputs may differ

across other financial institutions due to the diversity of the products in each firm's inventory.

The significant unobservable inputs disclosed in the table below are consistent with those included in "Note 24 Fair value measurement" in the "Consolidated financial statements" section of the Annual Report 2018. A description of the potential effect that a change in each unobservable input in isolation may have on a fair value measurement, including information to facilitate an understanding of factors that give rise to the input ranges shown, is also provided in "Note 24 Fair value measurement" in the "Consolidated financial statements" section of the Annual Report 2018.

Valuation techniques and inputs used in the fair value measurement of Level 3 assets and liabilities

USD billion	Fair value				Valuation technique(s)	Significant unobservable input(s) ¹	Range of inputs						unit ¹

						Bond price equivalent	3	99		3	99		points
<i>Equity / index contracts</i>	0.4	0.5	1.3	1.4	Option model	Equity dividend yields	0	9		0	12		%
						Volatility of equity stocks, equity and other indices	0	109		4	93		%
						Equity-to-FX correlation	(45)	64		(39)	67		%
						Equity-to-equity correlation	(50)	98		(50)	97		%

¹ The ranges of significant unobservable inputs are represented in points, percentages and basis points. Points are a percentage of par (e.g., 100 points would be 100% of par). ² Weighted averages are provided for non-derivative financial instruments and were calculated by weighting inputs based on the fair values of the respective instruments. Weighted averages are not provided for inputs related to derivative contracts as this would not be meaningful. ³ The range of inputs is not disclosed as there is a dispersion of values given the diverse nature of the investments. ⁴ Valuation techniques, significant unobservable inputs and the respective input ranges for Debt issued designated at fair value and Other financial liabilities designated at fair value, which mainly include over-the-counter debt instruments, are the same as the equivalent derivative or structured financing instruments presented elsewhere in this table.

Note 10 Fair value measurement (continued)**e) Level 3 instruments: sensitivity to changes in unobservable input assumptions**

The table below summarizes those financial assets and liabilities classified as Level 3 for which a change in one or more of the unobservable inputs to reflect reasonably possible alternative assumptions would change fair value significantly, and the estimated effect thereof.

The table shown presents the favorable and unfavorable effects for each class of financial assets and liabilities for which the potential change in fair value is considered significant. The sensitivity of fair value measurements for debt issued designated at fair value and over-the-counter debt instruments designated at fair value is reported with the equivalent derivative or structured financing instrument within the table below.

The sensitivity data shown below presents an estimation of valuation uncertainty based on reasonably possible alternative values for Level 3 inputs at the balance sheet date and does not represent the estimated effect of stress scenarios. Typically, these financial assets and liabilities are sensitive to a combination of inputs from Levels 1–3. Although well-defined interdependencies may exist between Levels 1–2 and Level 3 parameters (e.g., between interest rates, which are generally Level 1 or Level 2, and prepayments, which are generally Level 3), these have not been incorporated in the table. Furthermore, direct interrelationships between the Level 3 parameters are not a significant element of the valuation uncertainty.

Sensitivity of fair value measurements to changes in unobservable input assumptions

f) Level 3 instruments: movements during the period**Significant changes in Level 3 instruments**

The table on the following pages presents additional information about Level 3 assets and liabilities measured at fair value on a recurring basis. Level 3 assets and liabilities may be hedged with instruments classified as Level 1 or Level 2 in the fair value hierarchy and, as a result, realized and unrealized gains and losses included in the table may not include the effect of related hedging activity. Furthermore, the realized and unrealized gains and losses presented within the table are not limited solely to those arising from Level 3 inputs, as valuations are generally derived from both observable and unobservable parameters.

Upon adoption of IFRS 9 on 1 January 2018, certain financial assets and liabilities were newly classified as measured at fair

value through profit or loss and designated as Level 3 in the fair value hierarchy. Certain assets were also reclassified from *Financial assets measured at fair value through other comprehensive income* to *Financial assets at fair value not held for trading*. Refer to "Note 24 Fair value measurement" in the "Consolidated financial statements" section of the Annual Report 2018 for more information.

In the first quarter of 2019, loans reported within *Financial assets at fair value not held for trading* on the balance sheet, were transferred from Level 3 to Level 2 in the fair value hierarchy, reflecting increased observability.

Note 10 Fair value measurement (continued)

Assets and liabilities transferred into or out of Level 3 are presented as if those assets or liabilities had been transferred at the beginning of the year.

Assets transferred into and out of Level 3 in the first quarter of 2019 totaled USD 0.3 billion and USD 1.1 billion, respectively. Transfers into Level 3 were primarily comprised of investment fund units reflecting decreased observability of the relevant net asset value inputs. Transfers out of Level 3 were

primarily comprised of loans due to increased observability of the relevant valuation inputs.

Liabilities transferred into and out of Level 3 in the first quarter of 2019 totaled USD 0.4 billion and USD 1.1 billion, respectively. Transfers into and out of Level 3 were primarily comprised of equity-linked issued debt instruments (presented within *Debt issued designated at fair value*) due to decreased or increased observability, respectively, of the embedded derivative inputs.

g) Financial instruments not measured at fair value

The table below reflects the estimated fair values of financial instruments not measured at fair value.

Financial instruments not measured at fair value

<i>USD billion</i>	31.3.19		31.12.18	
	Carrying value	Fair value	Carrying value	Fair value
Assets				
Cash and balances at central banks	110.6	110.6	108.4	108.4
Loans and advances to banks	16.8	16.8	16.6	16.6
Receivables from securities financing transactions	100.2	100.2	95.3	95.4
Cash collateral receivables on derivative instruments	25.2	25.2	23.6	23.6
Loans and advances to customers	320.5	322.6	321.5	322.0
Other financial assets measured at amortized cost	22.5	22.5	22.6	22.5
Liabilities				
Amounts due to banks	9.1	9.1	11.0	11.0
Payables from securities financing transactions	5.2	5.2	10.3	10.3
Cash collateral payables on derivative instruments	30.3	30.3	28.9	28.9
Customer deposits	428.1	428.2	422.0	422.0
Funding from UBS Group AG and its subsidiaries	44.4	45.1	41.2	41.7
Debt issued measured at amortized cost	83.9	85.4	91.2	93.5
Other financial liabilities measured at amortized cost	10.8	10.8	7.6	7.6

The fair values included in the table above have been calculated for disclosure purposes only. The fair value valuation techniques and assumptions relate only to the fair value of UBS AG's financial instruments not measured at fair value. Other

institutions may use different methods and assumptions for their fair value estimation, and therefore such fair value disclosures cannot necessarily be compared from one financial institution to another.

Note 11 Derivative instruments

Total derivative financial instruments, after consideration of further netting potential	11.4		14.0		

¹ Derivative financial liabilities as of 31 March 2019 include USD 18 million related to derivative loan commitments (31 December 2018: USD 17 million). No notional amounts related to these commitments are included in this table, but they are disclosed in Note 16 under Loan commitments. ² Includes certain forward starting repurchase and reverse repurchase agreements that are classified as measured at fair value through profit or loss and are recognized within derivative instruments. The fair value of these derivative instruments was not material as of 31 March 2019 or 31 December 2018. No notional amounts related to these instruments are included in this table, but they are disclosed within Note 16 under Forward starting transactions. ³ In cases where derivative financial instruments are presented on a net basis on the balance sheet, the respective notional values of the netted derivative financial instruments are still presented on a gross basis. ⁴ Other notional values relate to derivatives that are cleared through either a central counterparty or an exchange. The fair value of these derivatives is presented on the balance sheet net of the corresponding cash margin under Cash collateral receivables on derivative instruments and Cash collateral payables on derivative instruments and was not material for all periods presented. ⁵ Changes in the fair value of purchased and sold non-derivative financial instruments between trade date and settlement date are recognized as derivative financial instruments. ⁶ Financial assets and liabilities are presented net on the balance sheet if UBS AG has the unconditional and legally enforceable right to offset the recognized amounts, both in the normal course of business and in the event of default, bankruptcy or insolvency of the entity and all of the counterparties, and intends either to settle on a net basis or to realize the asset and settle the liability simultaneously. ⁷ Reflects the netting potential in accordance with enforceable master netting and similar arrangements where not all criteria for a net presentation on the balance sheet have been met. Refer to "Note 25 Offsetting financial assets and financial liabilities" in the "Consolidated financial statements" section of the Annual Report 2018 for more information.

Note 11 Derivative instruments (continued)**b) Cash collateral on derivative instruments**

<i>USD billion</i>	Receivables 31.3.19	Payables 31.3.19	Receivables 31.12.18	Payables 31.12.18
Cash collateral on derivative instruments, based on IFRS netting ¹	25.2	30.3	23.6	28.9
Further netting potential not recognized on the balance sheet ²	(14.1)	(15.0)	(14.5)	(15.4)
<i>of which: netting of recognized financial liabilities / assets</i>	(12.2)	(13.7)	(13.5)	(14.2)
<i>of which: netting with collateral received / pledged</i>	(1.9)	(1.4)	(1.0)	(1.2)
Cash collateral on derivative instruments, after consideration of further netting potential	11.1	15.3	9.1	13.5

¹ Financial assets and liabilities are presented net on the balance sheet if UBS has the unconditional and legally enforceable right to offset the recognized amounts, both in the normal course of business and in the event of default, bankruptcy or insolvency of UBS or its counterparties, and intends either to settle on a net basis or to realize the asset and settle the liability simultaneously. ² Reflects the netting potential in accordance with enforceable master netting and similar arrangements where not all criteria for a net presentation on the balance sheet have been met. Refer to "Note 25 Offsetting financial assets and financial liabilities" in the "Consolidated financial statements" section of the Annual Report 2018 for more information.

Note 12 Other assets and liabilities**a) Other financial assets measured at amortized cost**

<i>USD million</i>	31.3.19	31.12.18
Debt securities	12,938	13,562
<i>of which: government bills / bonds</i>	8,094	8,778
Loans to financial advisors ¹	3,158	3,291

VAT and other tax receivables	232	282
Properties and other non-current assets held for sale	58	82
Other	413	358
Total other non-financial assets	6,577	7,062

¹ Refer to item 1 in Note 15b for more information.

Note 12 Other assets and liabilities (continued)**c) Other financial liabilities measured at amortized cost**

<i>USD million</i>	31.3.19	31.12.18
Other accrued expenses	1,670	1,911
Accrued interest expenses	1,326	1,501
Settlement and clearing accounts	1,160	1,477
Lease liabilities ¹	3,873	
Other	2,741	2,688
Total other financial liabilities measured at amortized cost	10,770	7,576

¹ Relates to lease liabilities of USD 3,956 million recognized upon adoption of IFRS 16 on 1 January 2019. Refer to Note 1 for more information.

d) Other financial liabilities designated at fair value

<i>USD million</i>	31.3.19	31.12.18
Amounts due under unit-linked investment contracts	24,317	21,679
Securities financing transactions	6,190	9,461
Over-the-counter debt instruments	1,882	2,450
<i>of which: life-to-date own credit (gain) / loss</i>	<i>(27)</i>	<i>(51)</i>
Other	5	5
Total other financial liabilities designated at fair value	32,394	33,594

e) Other non-financial liabilities

<i>USD million</i>	31.3.19	31.12.18
Compensation-related liabilities	2,998	4,645
<i>of which: accrued expenses</i>	<i>878</i>	<i>2,400</i>
<i>of which: deferred compensation plans</i>	<i>1,213</i>	<i>1,473</i>
<i>of which: net defined benefit pension and post-employment liabilities</i>	<i>907</i>	<i>773</i>
Current and deferred tax liabilities	953	915
VAT and other tax payables	458	403
Deferred income	170	215
Other	103	98
Total other non-financial liabilities	4,682	6,275

Note 13 Debt issued designated at fair value

<i>USD million</i>	31.3.19	31.12.18
Issued debt instruments		
Equity-linked ¹	41,033	34,392
Rates-linked	14,430	12,073
Credit-linked	3,389	3,282
Fixed-rate	5,681	5,099
Other	2,386	2,185
Total debt issued designated at fair value	66,919	57,031
<i>of which: life-to-date own credit (gain) / loss</i>	33	(270)

¹ Includes investment fund unit-linked instruments issued.

Note 14 Debt issued measured at amortized cost

<i>USD million</i>	31.3.19	31.12.18
Certificates of deposit	6,869	7,980
Commercial paper	21,711	27,514
Other short-term debt	3,453	3,531
Short-term debt¹	32,033	39,025
Senior unsecured debt	31,964	32,135
Covered bonds	3,815	3,947
Subordinated debt	7,521	7,511
<i>of which: low-trigger loss-absorbing tier 2 capital instruments</i>	6,821	6,808
<i>of which: non-Basel III-compliant tier 2 capital instruments</i>	700	703
Debt issued through the Swiss central mortgage institutions	8,505	8,569
Other long-term debt	55	58
Long-term debt²	51,861	52,220
Total debt issued measured at amortized cost³	83,894	91,245

¹ Debt with an original maturity of less than one year. ² Debt with original maturity greater than or equal to one year. The classification of debt issued into short-term and long-term does not consider any early redemption features. ³ Net of bifurcated embedded derivatives, the fair value of which was not material for the periods presented.

Note 15 Provisions and contingent liabilities

a) Provisions

The table below presents an overview of total provisions recognized under both IAS 37 and IFRS 9.

<i>USD million</i>	31.3.19	31.12.18
Provisions recognized under IAS 37	3,030	3,341
Provisions for off-balance sheet financial instruments	91	79
Provisions for other credit lines	43	37
Total provisions	3,165	3,457

The following table presents additional information for provisions recognized under IAS 37.

<i>USD million</i>	Operational risks ²	Litigation, regulatory and similar matters ³	Restructuring	Real estate	Employee benefits ⁶	Other	Total
Balance as of 31 December 2018	45	2,827	215	122	55	77	3,341
Adjustment from adoption of IFRS 16 ¹	0	0	(103)	(28)	0	0	(131)
Balance as of 1 January 2019	45	2,827	112	94	55	77	3,210
Increase in provisions recognized in the income statement	4	16	5	0	1	2	28
Release of provisions recognized in the income statement	0	(17)	(4)	0	(2)	0	(23)
Provisions used in conformity with designated purpose	(4)	(134)	(19)	(4)	0	(6)	(167)
Foreign currency translation / unwind of discount	(2)	(15)	1	(1)	0	(1)	(17)
Balance as of 31 March 2019	43	2,677	95⁴	90⁵	54	72	3,030

¹ Refer to Note 1 for more information. ² Comprises provisions for losses resulting from security risks and transaction processing risks. ³ Comprises provisions for losses resulting from legal, liability and compliance risks. ⁴ Primarily consists of personnel-related restructuring provisions of USD 25 million as of 31 March 2019 (31 December 2018: USD 40 million) and provisions for onerous contracts of USD 64 million as of 31 March 2019 (31 December 2018: USD 170 million). ⁵ Consists of reinstatement costs for leasehold improvements of USD 81 million as of 31 March 2019 (31 December 2018: USD 83 million) and provisions for onerous contracts of USD 9 million as of 31 March 2019 (31 December 2018: USD 40 million). ⁶ Includes provisions for sabbatical and anniversary awards.

Restructuring provisions primarily relate to onerous contracts and severance payments. Onerous contracts for property are recognized when UBS AG is committed to pay for non-lease components, such as utilities, when a property is vacated or not fully recovered from subtenants. Severance-related provisions are used within a short time period, usually within six months, but potential changes in amount may be triggered when natural

staff attrition reduces the number of people affected by a restructuring event and therefore the estimated costs.

Information on provisions and contingent liabilities in respect of litigation, regulatory and similar matters, as a class, is included in Note 15b. There are no material contingent liabilities associated with the other classes of provisions.

b) Litigation, regulatory and similar matters

UBS operates in a legal and regulatory environment that exposes it to significant litigation and similar risks arising from disputes and regulatory proceedings. As a result, UBS (which for purposes of this Note may refer to UBS AG and / or one or more of its subsidiaries, as applicable) is involved in various disputes and legal proceedings, including litigation, arbitration, and regulatory and criminal investigations.

Such matters are subject to many uncertainties, and the outcome and the timing of resolution are often difficult to predict, particularly in the earlier stages of a case. There are also situations where UBS may enter into a settlement agreement. This may occur in order to avoid the expense, management distraction or reputational implications of continuing to contest liability, even for those matters for which UBS believes it should be exonerated. The uncertainties inherent in all such matters affect the amount and timing of any potential outflows for both matters with respect to which provisions have been established and other contingent liabilities. UBS makes provisions for such matters brought against it when, in the opinion of management after seeking legal advice, it is more likely than not that UBS has a present legal or constructive obligation as a result of past

events, it is probable that an outflow of resources will be required, and the amount can be reliably estimated. Where these factors are otherwise satisfied, a provision may be established for claims that have not yet been asserted against UBS, but are nevertheless expected to be, based on UBS's experience with similar asserted claims. If any of those conditions is not met, such matters result in contingent liabilities. If the amount of an obligation cannot be reliably estimated, a liability exists that is not recognized even if an outflow of resources is probable. Accordingly, no provision is established even if the potential outflow of resources with respect to such matters could be significant. Developments relating to a matter that occur after the relevant reporting period, but prior to the issuance of financial statements, which affect management's assessment of the provision for such matter (because, for example, the developments provide evidence of conditions that existed at the end of the reporting period), are adjusting events after the reporting period under IAS 10 and must be recognized in the financial statements for the reporting period.

Note 15 Provisions and contingent liabilities (continued)

Specific litigation, regulatory and other matters are described below, including all such matters that management considers to be material and others that management believes to be of significance due to potential financial, reputational and other effects. The amount of damages claimed, the size of a transaction or other information is provided where available and appropriate in order to assist users in considering the magnitude of potential exposures.

In the case of certain matters below, we state that we have established a provision, and for the other matters, we make no such statement. When we make this statement and we expect disclosure of the amount of a provision to prejudice seriously our position with other parties in the matter because it would reveal what UBS believes to be the probable and reliably estimable outflow, we do not disclose that amount. In some cases we are subject to confidentiality obligations that preclude such disclosure. With respect to the matters for which we do not state whether we have established a provision, either (a) we have not established a provision, in which case the matter is treated as a contingent liability under the applicable accounting standard; or (b) we have established a provision but expect disclosure of that fact to prejudice seriously our position with other parties in the matter because it would reveal the fact that UBS believes an outflow of resources to be probable and reliably estimable.

With respect to certain litigation, regulatory and similar matters for which we have established provisions, we are able to estimate the expected timing of outflows. However, the aggregate amount of the expected outflows for those matters for which we are able to estimate expected timing is immaterial relative to our current and expected levels of liquidity over the relevant time periods.

The aggregate amount provisioned for litigation, regulatory and similar matters as a class is disclosed in the "Provisions" table in Note 15a above. It is not practicable to provide an aggregate estimate of liability for our litigation, regulatory and similar matters as a class of contingent liabilities. Doing so would require us to provide speculative legal assessments as to claims

and proceedings that involve unique fact patterns or novel legal theories, that have not yet been initiated or are at early stages of adjudication, or as to which alleged damages have not been quantified by the claimants. Although we therefore cannot provide a numerical estimate of the future losses that could arise from litigation, regulatory and similar matters, we believe that the aggregate amount of possible future losses from this class that are more than remote substantially exceeds the level of current provisions.

Litigation, regulatory and similar matters may also result in non-monetary penalties and consequences. For example, the non-prosecution agreement described in item 5 of this Note, which we entered into with the US Department of Justice (DOJ), Criminal Division, Fraud Section in connection with our submissions of benchmark interest rates, including, among others, the British Bankers' Association London Interbank Offered Rate (LIBOR), was terminated by the DOJ based on its determination that we had committed a US crime in relation to foreign exchange matters. As a consequence, UBS AG pleaded guilty to one count of wire fraud for conduct in the LIBOR matter, paid a fine and is subject to probation through January 2020.

A guilty plea to, or conviction of, a crime could have material consequences for UBS. Resolution of regulatory proceedings may require us to obtain waivers of regulatory disqualifications to maintain certain operations, may entitle regulatory authorities to limit, suspend or terminate licenses and regulatory authorizations, and may permit financial market utilities to limit, suspend or terminate our participation in such utilities. Failure to obtain such waivers, or any limitation, suspension or termination of licenses, authorizations or participations, could have material consequences for UBS.

The risk of loss associated with litigation, regulatory and similar matters is a component of operational risk for purposes of determining our capital requirements. Information concerning our capital requirements and the calculation of operational risk for this purpose is included in the "Capital management" section of the UBS Group first quarter 2019 report.

Provisions for litigation, regulatory and similar matters by business division and in Corporate Center¹

<i>USD million</i>	Global Wealth Management	Personal & Corporate Banking	Asset Management	Investment Bank	Corporate Center	UBS
Balance as of 31 December 2018	1,003	117	0	269	1,438	2,827
Increase in provisions recognized in the income statement	14	0	0	2	0	16
Release of provisions recognized in the income statement	(13)	0	0	(2)	(2)	(17)
Provisions used in conformity with designated purpose	(49)	(1)	0	(66)	(18)	(134)
Foreign currency translation / unwind of discount	(12)	(2)	0	(2)	1	(15)
Balance as of 31 March 2019	943	114	0	201	1,419	2,677

¹ Provisions, if any, for the matters described in this disclosure are recorded in Global Wealth Management (item 3 and item 4) and Corporate Center (item 2). Provisions, if any, for the matters described in items 1 and 6 of this disclosure are allocated between Global Wealth Management and Personal & Corporate Banking, and provisions, if any, for the matters described in this disclosure in item 5 are allocated between the Investment Bank and Corporate Center.

Note 15 Provisions and contingent liabilities (continued)

1. Inquiries regarding cross-border wealth management businesses

Tax and regulatory authorities in a number of countries have made inquiries, served requests for information or examined employees located in their respective jurisdictions relating to the cross-border wealth management services provided by UBS and other financial institutions. It is possible that the implementation of automatic tax information exchange and other measures relating to cross-border provision of financial services could give rise to further inquiries in the future. UBS has received disclosure orders from the Swiss Federal Tax Administration (FTA) to transfer information based on requests for international administrative assistance in tax matters. The requests concern a number of UBS account numbers pertaining to current and former clients and are based on data from 2006 and 2008. UBS has taken steps to inform affected clients about the administrative assistance proceedings and their procedural rights, including the right to appeal. The requests are based on data received from the German authorities, who seized certain data related to UBS clients booked in Switzerland during their investigations and have apparently shared this data with other European countries. UBS expects additional countries to file similar requests.

The Swiss Federal Administrative Court ruled in 2016 that, in the administrative assistance proceedings related to a French bulk request, UBS has the right to appeal all final FTA client data disclosure orders. On 30 July 2018, the Swiss Federal Administrative Court granted UBS's appeal by holding the French administrative assistance request inadmissible. The FTA filed a final appeal with the Swiss Federal Supreme Court.

Since 2013, UBS (France) S.A., UBS AG and certain former employees have been under investigation in France for alleged complicity in having illicitly solicited clients on French territory, regarding the laundering of proceeds of tax fraud, and banking and financial solicitation by unauthorized persons. In connection with this investigation, the investigating judges ordered UBS AG to provide bail ("caution") of EUR 1.1 billion and UBS (France) S.A. to post bail of EUR 40 million, which was reduced on appeal to EUR 10 million.

A trial in the court of first instance took place from 8 October 2018 until 15 November 2018. On 20 February 2019, the court announced a verdict finding UBS AG guilty of illicitly soliciting clients on French territory and aggravated laundering of the proceeds of tax fraud, and UBS France S.A. guilty of aiding and abetting unlawful solicitation and laundering the proceeds of tax fraud. The court imposed fines aggregating EUR 3.7 billion on UBS AG and UBS France S.A. and awarded EUR 800 million of civil damages to the French state. UBS has appealed the decision. Under French law, the judgment is

suspended while the appeal is pending. The Court of Appeal will retry the case de novo as to both the law and the facts, and the fines and penalties can be greater than or less than those imposed by the court of first instance. A subsequent appeal to the Cour de Cassation, France's highest court, is possible with respect to questions of law.

UBS believes that based on both the law and the facts the judgment of the court of first instance should be reversed. UBS believes it followed its obligations under Swiss and French law as well as the European Savings Tax Directive. Even assuming liability, which it contests, UBS believes the penalties and damage amounts awarded greatly exceed the amounts that could be supported by the law and the facts. In particular, UBS believes the court incorrectly based the penalty on the total regularized assets rather than on any unpaid taxes on those assets for which a fraud has been characterized and further incorrectly awarded damages based on costs that were not proven by the civil party. Notwithstanding that UBS believes it should be acquitted, our balance sheet at 31 March 2019 reflected provisions with respect to this matter in an amount of USD 516 million. The wide range of possible outcomes in this case contributes to a high degree of estimation uncertainty. The provision reflected on our balance sheet at 31 March 2019 reflects our best estimate of possible financial implications, although it is reasonably possible that actual penalties and civil damages could exceed the provision amount.

In 2016, UBS was notified by the Belgian investigating judge that it is under formal investigation ("inculpé") regarding the laundering of proceeds of tax fraud, of banking and financial solicitation by unauthorized persons, and of serious tax fraud. In 2018, tax authorities and a prosecutor's office in Italy asserted that UBS is potentially liable for taxes and penalties as a result of its activities in Italy from 2012 to 2017.

UBS has, and reportedly numerous other financial institutions have, received inquiries from authorities concerning accounts relating to the Fédération Internationale de Football Association (FIFA) and other constituent soccer associations and related persons and entities. UBS is cooperating with authorities in these inquiries.

Our balance sheet at 31 March 2019 reflected provisions with respect to matters described in this item 1 in an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

Note 15 Provisions and contingent liabilities (continued)**2. Claims related to sales of residential mortgage-backed securities and mortgages**

From 2002 through 2007, prior to the crisis in the US residential loan market, UBS was a substantial issuer and underwriter of US residential mortgage-backed securities (RMBS) and was a purchaser and seller of US residential mortgages. A subsidiary of UBS, UBS Real Estate Securities Inc. (UBS RESI), acquired pools of residential mortgage loans from originators and (through an affiliate) deposited them into securitization trusts. In this manner, from 2004 through 2007, UBS RESI sponsored approximately USD 80 billion in RMBS, based on the original principal balances of the securities issued.

UBS RESI also sold pools of loans acquired from originators to third-party purchasers. These whole loan sales during the period 2004 through 2007 totaled approximately USD 19 billion in original principal balance.

UBS was not a significant originator of US residential loans. A branch of UBS originated approximately USD 1.5 billion in US residential mortgage loans during the period in which it was active from 2006 to 2008 and securitized less than half of these loans.

Lawsuits related to contractual representations and warranties concerning mortgages and RMBS: When UBS acted as an RMBS sponsor or mortgage seller, it generally made certain representations relating to the characteristics of the underlying loans. In the event of a material breach of these representations, UBS was in certain circumstances contractually obligated to repurchase the loans to which the representations related or to indemnify certain parties against losses. In 2012, certain RMBS trusts filed an action in the US District Court for the Southern District of New York seeking to enforce UBS RESI's obligation to repurchase loans in the collateral pools for three RMBS securitizations issued and underwritten by UBS with an original principal balance of approximately USD 2 billion. In July 2018, UBS and the trustee entered into an agreement under which UBS will pay USD 850 million to resolve this matter. A significant portion of this amount will be borne by other parties that indemnified UBS. The settlement remains subject to court approval and proceedings to determine how the settlement funds will be distributed to RMBS holders. After giving effect to this settlement, UBS considers claims relating to substantially all loan repurchase demands to be resolved and believes that new demands to repurchase US residential mortgage loans are time-barred under a decision rendered by the New York Court of Appeals.

Mortgage-related regulatory matters: Since 2014, the US Attorney's Office for the Eastern District of New York has sought information from UBS pursuant to the Financial Institutions Reform, Recovery and Enforcement Act of 1989 (FIRREA), related to UBS's RMBS business from 2005 through 2007. On 8 November 2018, the DOJ filed a civil complaint in the District Court for the Eastern District of New York. The complaint seeks unspecified civil monetary penalties under FIRREA related to UBS's issuance, underwriting and sale of 40 RMBS transactions in 2006 and 2007. UBS moved to dismiss the civil complaint on 6 February 2019.

Our balance sheet at 31 March 2019 reflected a provision with respect to matters described in this item 2 in an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of this matter cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

3. Madoff

In relation to the Bernard L. Madoff Investment Securities LLC (BMIS) investment fraud, UBS AG, UBS (Luxembourg) S.A. (now UBS Europe SE, Luxembourg branch) and certain other UBS subsidiaries have been subject to inquiries by a number of regulators, including the Swiss Financial Market Supervisory Authority (FINMA) and the Luxembourg Commission de Surveillance du Secteur Financier. Those inquiries concerned two third-party funds established under Luxembourg law, substantially all assets of which were with BMIS, as well as certain funds established in offshore jurisdictions with either direct or indirect exposure to BMIS. These funds faced severe losses, and the Luxembourg funds are in liquidation. The documentation establishing both funds identifies UBS entities in various roles, including custodian, administrator, manager, distributor and promoter, and indicates that UBS employees serve as board members.

In 2009 and 2010, the liquidators of the two Luxembourg funds filed claims against UBS entities, non-UBS entities and certain individuals, including current and former UBS employees, seeking amounts totaling approximately EUR 2.1 billion, which includes amounts that the funds may be held liable to pay the trustee for the liquidation of BMIS (BMIS Trustee).

Note 15 Provisions and contingent liabilities (continued)

A large number of alleged beneficiaries have filed claims against UBS entities (and non-UBS entities) for purported losses relating to the Madoff fraud. The majority of these cases have been filed in Luxembourg, where decisions that the claims in eight test cases were inadmissible have been affirmed by the Luxembourg Court of Appeal, and the Luxembourg Supreme Court has dismissed a further appeal in one of the test cases.

In the US, the BMIS Trustee filed claims against UBS entities, among others, in relation to the two Luxembourg funds and one of the offshore funds. The total amount claimed against all defendants in these actions was not less than USD 2 billion. In 2014, the US Supreme Court rejected the BMIS Trustee's motion for leave to appeal decisions dismissing all claims except those for the recovery of approximately USD 125 million of payments alleged to be fraudulent conveyances and preference payments. In 2016, the bankruptcy court dismissed these claims against the UBS entities. The BMIS Trustee appealed. In February 2019, the Court of Appeals reversed the dismissal of the BMIS Trustee's remaining claims and remanded the case to the bankruptcy court for further proceedings. The defendants, including UBS, filed a petition for rehearing in March 2019.

4. Puerto Rico

Declines since 2013 in the market prices of Puerto Rico municipal bonds and of closed-end funds (funds) that are sole-managed and co-managed by UBS Trust Company of Puerto Rico and distributed by UBS Financial Services Incorporated of Puerto Rico (UBS PR) have led to multiple regulatory inquiries, as well as customer complaints and arbitrations with aggregate claimed damages of USD 2.9 billion, of which claims with aggregate claimed damages of USD 1.9 billion have been resolved through settlements, arbitration or withdrawal of the claim. The claims have been filed by clients in Puerto Rico who own the funds or Puerto Rico municipal bonds and / or who used their UBS account assets as collateral for UBS non-purpose loans; customer complaint and arbitration allegations include fraud, misrepresentation and unsuitability of the funds and of the loans.

A shareholder derivative action was filed in 2014 against various UBS entities and current and certain former directors of the funds, alleging hundreds of millions of US dollars in losses in the funds. In 2015, defendants' motion to dismiss was denied and a request for permission to appeal that ruling was denied by the Puerto Rico Supreme Court. In 2014, a federal class action complaint also was filed against various UBS entities, certain members of UBS PR senior management and the co-manager of

certain of the funds, seeking damages for investor losses in the funds during the period from May 2008 through May 2014. Following denial of the plaintiffs' motion for class certification, the case was dismissed in October 2018.

In 2014 and 2015, UBS entered into settlements with the Office of the Commissioner of Financial Institutions for the Commonwealth of Puerto Rico, the US Securities and Exchange Commission (SEC) and the Financial Industry Regulatory Authority in relation to their examinations of UBS's operations.

In 2011, a purported derivative action was filed on behalf of the Employee Retirement System of the Commonwealth of Puerto Rico (System) against over 40 defendants, including UBS PR, which was named in connection with its underwriting and consulting services. Plaintiffs alleged that defendants violated their purported fiduciary duties and contractual obligations in connection with the issuance and underwriting of USD 3 billion of bonds by the System in 2008 and sought damages of over USD 800 million. In 2016, the court granted the System's request to join the action as a plaintiff, but ordered that plaintiffs must file an amended complaint. In 2017, the court denied defendants' motion to dismiss the amended complaint.

Beginning in 2015, and continuing through 2017, certain agencies and public corporations of the Commonwealth of Puerto Rico (Commonwealth) defaulted on certain interest payments on Puerto Rico bonds. In 2016, US federal legislation created an oversight board with power to oversee Puerto Rico's finances and to restructure its debt. The oversight board has imposed a stay on the exercise of certain creditors' rights. In 2017, the oversight board placed certain of the bonds into a bankruptcy-like proceeding under the supervision of a Federal District Judge. These events, further defaults or any further legislative action to create a legal means of restructuring Commonwealth obligations or to impose additional oversight on the Commonwealth's finances, or any restructuring of the Commonwealth's obligations, may increase the number of claims against UBS concerning Puerto Rico securities, as well as potential damages sought.

Our balance sheet at 31 March 2019 reflected provisions with respect to matters described in this item 4 in amounts that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provisions that we have recognized.

Note 15 Provisions and contingent liabilities (continued)**5. Foreign exchange, LIBOR and benchmark rates, and other trading practices**

Foreign exchange-related regulatory matters: Beginning in 2013, numerous authorities commenced investigations concerning possible manipulation of foreign exchange markets and precious metals prices. In 2014 and 2015, UBS reached settlements with the UK Financial Conduct Authority (FCA) and the US Commodity Futures Trading Commission (CFTC) in connection with their foreign exchange investigations, FINMA issued an order concluding its formal proceedings relating to UBS's foreign exchange and precious metals businesses, and the Board of Governors of the Federal Reserve System (Federal Reserve Board) and the Connecticut Department of Banking issued a Cease and Desist Order and assessed monetary penalties against UBS AG. In 2015, the DOJ's Criminal Division terminated the 2012 non-prosecution agreement with UBS AG related to UBS's submissions of benchmark interest rates, and UBS AG pleaded guilty to one count of wire fraud, paid a fine and is subject to probation through January 2020. UBS has ongoing obligations to cooperate with these authorities and to undertake certain remediation measures. UBS has also been granted conditional immunity by the Antitrust Division of the DOJ and by authorities in other jurisdictions in connection with potential competition law violations relating to foreign exchange and precious metals businesses. Investigations relating to foreign exchange matters by certain authorities remain ongoing notwithstanding these resolutions.

Foreign exchange-related civil litigation: Putative class actions have been filed since 2013 in US federal courts and in other jurisdictions against UBS and other banks on behalf of putative classes of persons who engaged in foreign currency transactions with any of the defendant banks. UBS has resolved US federal court class actions relating to foreign currency transactions with the defendant banks and persons who transacted in foreign exchange futures contracts and options on such futures under a settlement agreement that provides for UBS to pay an aggregate of USD 141 million and provide cooperation to the settlement classes. Certain class members have excluded themselves from that settlement and have filed individual actions in US and English courts against UBS and other banks, alleging violations of US and European competition laws and unjust enrichment.

In 2015, a putative class action was filed in federal court against UBS and numerous other banks on behalf of persons and businesses in the US who directly purchased foreign

currency from the defendants and alleged co-conspirators for their own end use. In March 2017, the court granted UBS's (and the other banks') motions to dismiss the complaint. The plaintiffs filed an amended complaint in August 2017. In March 2018, the court denied the defendants' motions to dismiss the amended complaint.

In 2017, two putative class actions were filed in federal court in New York against UBS and numerous other banks on behalf of persons and entities who had indirectly purchased foreign exchange instruments from a defendant or co-conspirator in the US, and a consolidated complaint was filed in June 2017. In March 2018, the court dismissed the consolidated complaint. In October 2018, the court granted plaintiffs' motion seeking leave to file an amended complaint.

LIBOR and other benchmark-related regulatory matters: Numerous government agencies, including the SEC, the CFTC, the DOJ, the FCA, the UK Serious Fraud Office, the Monetary Authority of Singapore, the Hong Kong Monetary Authority, FINMA, various state attorneys general in the US and competition authorities in various jurisdictions have conducted or are continuing to conduct investigations regarding potential improper attempts by UBS, among others, to manipulate LIBOR and other benchmark rates at certain times. In 2012, UBS reached settlements relating to benchmark interest rates with the UK Financial Services Authority, the CFTC and the Criminal Division of the DOJ, and FINMA issued an order in its proceedings with respect to UBS relating to benchmark interest rates. In addition, UBS entered into settlements with the European Commission and with the Swiss Competition Commission (WEKO) regarding its investigation of bid-ask spreads in connection with Swiss franc interest rate derivatives. UBS has ongoing obligations to cooperate with the authorities with whom we have reached resolutions and to undertake certain remediation measures with respect to benchmark interest rate submissions. In December 2018, UBS entered into a settlement agreement with the New York and other state attorneys general under which it will pay USD 68 million to resolve claims by the attorneys general related to LIBOR. UBS has been granted conditional leniency or conditional immunity from authorities in certain jurisdictions, including the Antitrust Division of the DOJ and WEKO, in connection with potential antitrust or competition law violations related to certain rates. However, UBS has not reached a final settlement with WEKO, as the Secretariat of WEKO has asserted that UBS does not qualify for full immunity.

Note 15 Provisions and contingent liabilities (continued)

LIBOR and other benchmark-related civil litigation: A number of putative class actions and other actions are pending in the federal courts in New York against UBS and numerous other banks on behalf of parties who transacted in certain interest rate benchmark-based derivatives. Also pending in the US and in other jurisdictions are a number of other actions asserting losses related to various products whose interest rates were linked to LIBOR and other benchmarks, including adjustable rate mortgages, preferred and debt securities, bonds pledged as collateral, loans, depository accounts, investments and other interest-bearing instruments. The complaints allege manipulation, through various means, of certain benchmark interest rates, including USD LIBOR, Euroyen TIBOR, Yen LIBOR, EURIBOR, CHF LIBOR, GBP LIBOR, USD and SGD SIBOR and SOR and Australian BBSW, and seek unspecified compensatory and other damages under varying legal theories.

USD LIBOR class and individual actions in the US: In 2013 and 2015, the district court in the USD LIBOR actions dismissed, in whole or in part, certain plaintiffs' antitrust claims, federal racketeering claims, CEA claims, and state common law claims. Although the Second Circuit vacated the district court's judgment dismissing antitrust claims, the district court again dismissed antitrust claims against UBS in 2016. Certain plaintiffs have appealed that decision to the Second Circuit. Separately, in 2018, the Second Circuit reversed in part the district court's 2015 decision dismissing certain individual plaintiffs' claims. UBS entered into an agreement in 2016 with representatives of a class of bondholders to settle their USD LIBOR class action. The agreement has received preliminary court approval and remains subject to final approval. In 2018, the district court denied plaintiffs' motions for class certification in the USD class actions for claims pending against UBS, and plaintiffs sought permission to appeal that ruling to the Second Circuit. In July 2018, the Second Circuit denied the petition to appeal of the class of USD lenders and in November 2018 denied the petition of the USD exchange class. In January 2019, a putative class action was filed in the District Court for the Southern District of New York against UBS and numerous other banks on behalf of US residents who, since 1 February 2014, directly transacted with a defendant bank in USD LIBOR instruments. The complaint asserts antitrust and unjust enrichment claims.

Other benchmark class actions in the US: In 2014, the court in one of the Euroyen TIBOR lawsuits dismissed certain of the plaintiffs' claims, including a federal antitrust claim, for lack of standing. In 2015, this court dismissed the plaintiffs' federal racketeering claims on the same basis and affirmed its previous

dismissal of the plaintiffs' antitrust claims against UBS. In 2017, this court also dismissed the other Yen LIBOR / Euroyen TIBOR action in its entirety on standing grounds, as did the court in the CHF LIBOR action. Also in 2017, the courts in the EURIBOR lawsuit dismissed the cases as to UBS and certain other foreign defendants for lack of personal jurisdiction. In October 2018, the court in the SIBOR / SOR action dismissed all but one of plaintiffs' claims against UBS. Plaintiffs in the CHF LIBOR and SIBOR / SOR actions have filed amended complaints following the dismissals, which UBS and other defendants have moved to dismiss. In November 2018, the court in the BBSW lawsuit dismissed the case as to UBS and certain other foreign defendants for lack of personal jurisdiction. Following that dismissal, plaintiffs in the BBSW action moved in January 2019 to file an amended complaint seeking to re-name UBS and certain other banks as defendants. UBS and other defendants also moved to dismiss the GBP LIBOR action in December 2016, but that motion was denied as to UBS in December 2018. UBS moved for reconsideration of that decision in January 2019.

Government bonds: Putative class actions have been filed since 2015 in US federal courts against UBS and other banks on behalf of persons who participated in markets for US Treasury securities since 2007. A consolidated complaint was filed in 2017 in the US District Court for the Southern District of New York alleging that the banks colluded with respect to, and manipulated prices of, US Treasury securities sold at auction and in the secondary market and asserting claims under the antitrust laws and for unjust enrichment. Defendants' motions to dismiss the consolidated complaint are pending.

UBS and reportedly other banks are responding to investigations and requests for information from various authorities regarding US Treasury securities and other government bond trading practices. As a result of its review to date, UBS has taken appropriate action.

With respect to additional matters and jurisdictions not encompassed by the settlements and orders referred to above, our balance sheet at 31 March 2019 reflected a provision in an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

Note 15 Provisions and contingent liabilities (continued)**6. Swiss retrocessions**

The Federal Supreme Court of Switzerland ruled in 2012, in a test case against UBS, that distribution fees paid to a firm for distributing third-party and intra-group investment funds and structured products must be disclosed and surrendered to clients who have entered into a discretionary mandate agreement with the firm, absent a valid waiver.

FINMA has issued a supervisory note to all Swiss banks in response to the Supreme Court decision. UBS has met the FINMA requirements and has notified all potentially affected clients.

The Supreme Court decision has resulted, and may continue to result, in a number of client requests for UBS to disclose and potentially surrender retrocessions. Client requests are assessed on a case-by-case basis. Considerations taken into account when assessing these cases include, among other things, the existence

of a discretionary mandate and whether or not the client documentation contained a valid waiver with respect to distribution fees.

Our balance sheet at 31 March 2019 reflected a provision with respect to matters described in this item 6 in an amount that UBS believes to be appropriate under the applicable accounting standard. The ultimate exposure will depend on client requests and the resolution thereof, factors that are difficult to predict and assess. Hence, as in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

Note 16 Guarantees, commitments and forward starting transactions

The table below presents the maximum irrevocable amount of guarantees, commitments and forward starting transactions.

USD million	31.3.19				31.12.18			
	Gross		Sub-participations	Net	Gross		Sub-participations	Net
	Measured at fair value	Not measured at fair value			Measured at fair value	Not measured at fair value		
Total guarantees	1,840	17,434	(2,760)	16,514	1,639	18,146	(2,803)	16,982
Loan commitments	6,401	27,919	(690)	33,630	3,535	31,212	(647)	34,099
Forward starting transactions¹								
Reverse repurchase agreements	29,284	2,038			8,117	925		
Securities borrowing agreements		20				12		
Repurchase agreements	15,321	629			7,926	400		

¹ Cash to be paid in the future by either UBS or the counterparty.

Note 17 Currency translation rates

The following table shows the rates of the main currencies used to translate the financial information of UBS AG's operations with a functional currency other than the US dollar into US dollars.

	Closing exchange rate			Average rate ¹		
	As of			For the quarter ended		
	31.3.19	31.12.18	31.12.18	31.3.19	31.12.18	31.3.18
1 CHF	1.00	1.02	1.05	1.00	1.00	1.06
1 EUR	1.12	1.15	1.23	1.14	1.14	1.23
1 GBP	1.30	1.28	1.40	1.31	1.28	1.40
100 JPY	0.90	0.91	0.94	0.91	0.89	0.93

¹ Monthly income statement items of operations with a functional currency other than the US dollar are translated with month-end rates into US dollars. Disclosed average rates for a quarter represent an average of three month-end rates, weighted according to the income and expense volumes of all operations of UBS AG with the same functional currency for each month. Weighted average rates for individual business divisions may deviate from the weighted average rates for UBS AG.

Cautionary Statement Regarding Forward-Looking Statements | This report contains statements that constitute “forward-looking statements,” including but not limited to management’s outlook for UBS’s financial performance and statements relating to the anticipated effect of transactions and strategic initiatives on UBS’s business and future development. While these forward-looking statements represent UBS’s judgments and expectations concerning the matters described, a number of risks, uncertainties and other important factors could cause actual developments and results to differ materially from UBS’s expectations. These factors include, but are not limited to: (i) the degree to which UBS is successful in the ongoing execution of its strategic plans, including its cost reduction and efficiency initiatives and its ability to manage its levels of risk-weighted assets (RWA) and leverage ratio denominator (LRD), including to counteract regulatory-driven increases, liquidity coverage ratio and other financial resources, and the degree to which UBS is successful in implementing changes to its businesses to meet changing market, regulatory and other conditions; (ii) the continuing low or negative interest rate environment in Switzerland and other jurisdictions, developments in the macroeconomic climate and in the markets in which UBS operates or to which it is exposed, including movements in securities prices or liquidity, credit spreads, and currency exchange rates, and the effects of economic conditions, market developments, and geopolitical tensions on the financial position or creditworthiness of UBS’s clients and counterparties as well as on client sentiment and levels of activity; (iii) changes in the availability of capital and funding, including any changes in UBS’s credit spreads and ratings, as well as availability and cost of funding to meet requirements for debt eligible for total loss-absorbing capacity (TLAC); (iv) changes in or the implementation of financial legislation and regulation in Switzerland, the US, the UK, the European Union and other financial centers that have imposed, or resulted in, or may do so in the future, more stringent or entity-specific capital, TLAC, leverage ratio, liquidity and funding requirements, incremental tax requirements, additional levies, limitations on permitted activities, constraints on remuneration, constraints on transfers of capital and liquidity and sharing of operational costs across UBS’s affiliated entities or other measures, and the effect these will or would have on UBS’s business activities; (v) the degree to which UBS is successful in implementing further changes to its legal structure to improve its resolvability and meet related regulatory requirements and the potential need to make further changes to the legal structure or booking model of UBS in response to legal and regulatory requirements, proposals in Switzerland and other jurisdictions for mandatory structural reform of banks or systemically important institutions or to other external developments, and the extent to which such changes will have the intended effects; (vi) UBS’s ability to maintain and improve its systems and controls for the detection and prevention of money laundering and compliance with sanctions to meet evolving regulatory requirements and expectations, in particular in the US; (vii) the uncertainty arising from the timing and nature of the UK exit from the EU; (viii) changes in UBS’s competitive position, including whether differences in regulatory capital and other requirements among the major financial centers will adversely affect UBS’s ability to compete in certain lines of business; (ix) changes in the standards of conduct applicable to our businesses that may result from new regulation or new enforcement of existing standards, including recently enacted and proposed measures to impose new and enhanced duties when interacting with customers and in the execution and handling of customer transactions; (x) the liability to which UBS may be exposed, or possible constraints or sanctions that regulatory authorities might impose on UBS, due to litigation, contractual claims and regulatory investigations, including the potential for disqualification from certain businesses, potentially large fines or monetary penalties, or the loss of licenses or privileges as a result of regulatory or other governmental sanctions, as well as the effect that litigation, regulatory and similar matters have on the operational risk component of our RWA as well as the amount of capital available for return to shareholders; (xi) the effects on UBS’s cross-border banking business of tax or regulatory developments and of possible changes in UBS’s policies and practices relating to this business; (xii) UBS’s ability to retain and attract the employees necessary to generate revenues and to manage, support and control its businesses, which may be affected by competitive factors; (xiii) changes in accounting or tax standards or policies, and determinations or interpretations affecting the recognition of gain or loss, the valuation of goodwill, the recognition of deferred tax assets and other matters; (xiv) UBS’s ability to implement new technologies and business methods, including digital services and technologies and ability to successfully compete with both existing and new financial service providers, some of which may not be regulated to the same extent; (xv) limitations on the effectiveness of UBS’s internal processes for risk management, risk control, measurement and modeling, and of financial models generally; (xvi) the occurrence of operational failures, such as fraud, misconduct, unauthorized trading, financial crime, cyberattacks, and systems failures; (xvii) restrictions on the ability of UBS AG to make payments or distributions, including due to restrictions on the ability of its subsidiaries to make loans or distributions, directly or indirectly, or, in the case of financial difficulties, due to the exercise by FINMA or the regulators of UBS’s operations in other countries of their broad statutory powers in relation to protective measures, restructuring and liquidation proceedings; (xviii) the degree to which changes in regulation, capital or legal structure, financial results or other factors may affect UBS’s ability to maintain its stated capital return objective; and (xix) the effect that these or other factors or unanticipated events may have on our reputation and the additional consequences that this may have on our business and performance. The sequence in which the factors above are presented is not indicative of their likelihood of occurrence or the potential magnitude of their consequences. Our business and financial performance could be affected by other factors identified in our past and future filings and reports, including those filed with the SEC. More detailed information about those factors is set forth in documents furnished by UBS and filings made by UBS with the SEC, including UBS’s Annual Report on Form 20-F for the year ended 31 December 2018. UBS is not under any obligation to (and expressly disclaims any obligation to) update or alter its forward-looking statements, whether as a result of new information, future events, or otherwise.

Rounding | Numbers presented throughout this report may not add up precisely to the totals provided in the tables and text. Percentages, percent changes, and adjusted results are calculated on the basis of unrounded figures. Information on absolute changes between reporting periods, which is provided in text and that can be derived from figures displayed in the tables, is calculated on a rounded basis. For prior periods, these values are calculated on the basis of rounded figures displayed in the tables and text.

Tables | Within tables, blank fields generally indicate that the field is not applicable or not meaningful, or that information is not available as of the relevant date or for the relevant period. Zero values generally indicate that the respective figure is zero on an actual or rounded basis. Percentage changes are presented as a mathematical calculation of the change between periods.

¹ Refer to "Note 9 Earnings per share (EPS) and shares outstanding" in the "Consolidated financial statements" section of this report for more information. ² Refer to the "Performance targets and measurement" section of our Annual Report 2018 for more information on our performance targets. ³ Calculated as net profit attributable to shareholders (annualized as applicable) / average equity attributable to shareholders. ⁴ Calculated as net profit attributable to shareholders (annualized as applicable) / average equity attributable to shareholders less average goodwill and intangible assets. Effective 1 January 2019, the definition of the numerator for return on tangible equity has been revised to align with numerators for return on equity and return on CET1 capital; i.e., we no longer adjust for amortization and impairment of goodwill and intangible assets. Prior periods have been restated. ⁵ Calculated as net profit attributable to shareholders (annualized as applicable) / average common equity tier 1 capital. ⁶ Calculated as operating income before credit loss expense or recovery (annualized as applicable) / average risk-weighted assets and average leverage ratio denominator, respectively. ⁷ Calculated as operating expenses / operating income before credit loss expense or recovery. ⁸ Calculated as adjusted operating expenses / adjusted operating income before credit loss expense or recovery. ⁹ Calculated as change in net profit attributable to shareholders from continuing operations between current and comparison periods / net profit attributable to shareholders from continuing operations of comparison period. ¹⁰ Based on the Swiss systemically relevant bank framework as of 1 January 2020. Refer to the "Capital management" section of this report for more information. ¹¹ Refer to the "Balance sheet, liquidity and funding management" section of this report for more information. ¹² Includes invested assets for Global Wealth Management, Asset Management and Personal & Corporate Banking. ¹³ Refer to "UBS shares" in the "Capital management" section of this report for more information. ¹⁴ Beginning with our Annual Report 2018, the calculation of market capitalization has been amended to reflect total shares outstanding multiplied by the share price at the end of the period. The calculation was previously based on total shares issued multiplied by the share price at the end of the period. Market capitalization has been reduced by USD 2.1 billion as of 31 December 2018 and by USD 1.9 billion as of 30 June 2018 as a result. ¹⁵ Total book value per share and tangible book value per share in Swiss francs are calculated based on a translation of equity under our US dollar presentation currency. As a consequence of the restatement to a US dollar presentation currency, amounts may differ from those originally published in our quarterly and annual reports.

Performance measures: reasons for use

Return on equity	This measure provides information on the profitability of the business in relation to equity.
Return on tangible equity	This measure provides information on the profitability of the business in relation to tangible equity.
Return on common equity tier 1 capital	This measure provides information on the profitability of the business in relation to common equity tier 1 capital.
Return on risk-weighted assets, gross	This measure provides information on the revenues of the business in relation to risk-weighted assets.
Return on leverage ratio denominator, gross	This measure provides information on the revenues of the business in relation to leverage ratio denominator.
Cost / income ratio	This measure provides information on the efficiency of the business by comparing operating expenses with gross income.
Adjusted cost / income ratio	This measure provides information on the efficiency of the business by comparing operating expenses with gross income, while excluding items that management believes are not representative of the underlying performance of the businesses.
Net profit growth	This measure provides information on profit growth in comparison with the prior-year period.

UBS Group

Management report

Changes to our presentation currency

Effective from 1 October 2018, the presentation currency of UBS Group AG's consolidated financial statements has changed from Swiss francs to US dollars. Comparative information in this report for periods prior to the fourth quarter of 2018 has been restated. Assets, liabilities and total equity were translated to US dollars at closing exchange rates prevailing on the respective balance sheet dates, and income and expenses were translated at the respective average rates prevailing for the relevant periods.

Terms used in this report, unless the context requires otherwise

Recent developments

Regulatory and legal developments

Swiss Corporate Tax Reform

In May 2019, the Swiss electorate approved corporate tax reform measures that abolish preferential corporate tax regimes and introduce a series of tax measures aligned with Organisation for Economic Co-operation and Development (OECD) standards, while seeking to maintain Switzerland's competitiveness as a business location. The federal changes resulting from this tax reform are not expected to have a significant effect on the tax expenses for the Group, as increases resulting from the reform are expected to be largely offset by tax rate reductions and other changes currently under consideration at the cantonal level. The federal reform will become effective on 1 January 2020.

The reform measures also provide that for Swiss domiciled companies with shares listed on a stock exchange no more than 50% of dividends may be, and at least 50% of share repurchases for redemption must be, paid out of capital contribution reserves, with the remainder required to be paid from retained earnings.

As a result, at least 50% of all dividends paid after 1 January 2020, including dividends in respect of the financial year 2019, will be paid from retained earnings, and will be subject to a 35% Swiss withholding tax. As of 30 June 2019, UBS held USD 13 billion in approved capital contribution reserves for potential future distributions to shareholders, either in the form of dividends or share buybacks.

Separately, following a change in Swiss tax law as of 1 January 2019 that applies to holding companies of systemically relevant banks issuing loss-absorbing additional tier 1 or total loss-absorbing capacity (TLAC)-eligible senior unsecured debt instruments, UBS will no longer issue such instruments out of UBS Group Funding (Switzerland) AG and existing instruments will be migrated to UBS Group AG during the second half of 2019.

EU equivalence for Swiss trading venues

On 18 June 2019, the European Commission decided not to extend its equivalence decision for Swiss trading venues beyond the end of June 2019, citing a perceived lack of progress toward the conclusion of an institutional framework agreement between Switzerland and the EU as the reason for this decision. In reaction, the Swiss Federal Council activated a contingency measure to protect the Swiss stock exchange infrastructure, effective as of 1 July 2019. The Swiss measure introduced a recognition requirement for foreign trading venues that admit shares issued by Swiss incorporated companies to trading, with all EU trading venues having their recognition revoked due to the lack of reciprocity.

To comply with this measure, trading in Swiss shares on EU trading venues ceased on and was redirected from EU to Swiss trading venues as of 1 July 2019 as permitted under EU law in the absence of an EU trading venue.

We have prepared for this scenario and have, as of 1 July 2019, routed relevant trade flows in Swiss shares from EU to Swiss trading venues, with limited adjustment costs for UBS.

BCBS initial margin offset in the leverage ratio and new disclosure requirements

The Basel Committee on Banking Supervision (BCBS) agreed to align the leverage ratio measurement of client-cleared derivatives with the standardized approach to measuring counterparty credit risk exposures (SA-CCR). We expect these provisions will become effective as of 1 January 2022. This treatment permits both cash and non-cash forms of segregated initial margin, as well as cash and non-cash variation margin, received from a client to offset the replacement cost and potential future exposure for client-cleared derivatives only. This will help to mitigate any potential effect on the leverage ratio denominator from the finalization of the Basel III capital framework, which takes effect from 1 January 2022.

The BCBS also introduced a new disclosure standard, effective as of 1 January 2022, which sets out additional requirements for banks to disclose their leverage ratios based on quarter-end and daily average values of securities financing transactions.

Consultation regarding revision of the Swiss Banking Act

In March 2019, the Swiss Federal Council commenced a consultation process with regard to a partial revision of the Swiss Banking Act. The consultation process ended in June 2019.

Among the proposed measures to strengthen the depositor protection scheme is a requirement that banks deposit half of their contribution obligations for the deposit protection scheme in securities or cash with a custodian.

An adjustment to the Intermediated Securities Act would introduce a requirement that all custodians of intermediated securities separate their own portfolios from the portfolios of their clients.

We expect the final rules to enter into effect no earlier than 2021 and to result in moderate additional costs for all Switzerland-based Group entities in scope.

US Regulation Best Interest

The US Securities and Exchange Commission (SEC) has adopted rules and interpretations to enhance customer protection of retail investors. The effective date of these new provisions will be 30 June 2020. The new rules are intended to align the legal requirements and mandated disclosures for broker-dealers and investment advisers with reasonable investor expectations, while preserving access, in terms of choice and cost, to a variety of investment services and products.

Regulation Best Interest elevates the standard of care for broker-dealers from the current "suitability" requirement to a newly defined "best interest" standard, which applies to any securities transaction or investment strategy involving securities offered to a retail customer and makes clear that a broker-dealer may not put its financial interests ahead of the interests of a retail customer when making recommendations. The regulation also creates new disclosure requirements and additional compliance program requirements. Implementation of these changes will require operational and supervisory changes for UBS's US broker-dealers.

SEC amendments to cross-border application of US security-based swap regulations / Capital, margin and segregation requirements for security-based swap dealers

The SEC recently proposed amendments to previously proposed measures on the cross-border application of US security-based swap regulations, as well as adopting capital, margin and segregation requirements for security-based swap dealers.

The amendments to the cross-border application of US security-based swap regulations would allow greater involvement by US-based personnel in transactions by non-US security-based swap dealers with non-US persons without requiring the non-US dealer to register with the SEC. The SEC also proposed interpretative guidance on its registration requirements, including the requirements for representations and legal opinions on access to books and records of a non-US dealer and requests for substituted compliance. We continue to expect that UBS AG will be required to register with the SEC as a security-based swap dealer, most likely not before 2021.

Developments related to the transition away from IBORs

Liquidity and activity in Alternative Reference Rates (ARR) continue to develop in markets globally, with work progressing to resolve the remaining issues associated with transitioning away from interbank offered rates (IBORs). Regulatory authorities continue to focus on transitioning to ARR by the end of 2021.

In May 2019, the International Accounting Standards Board (IASB) issued an exposure draft *Interest Rate Benchmark Reform* addressing hedge accounting issues that arise before the IBORs are replaced to provide some relief during this period of uncertainty, with work continuing on those issues that are expected to arise after replacement.

We have a substantial number of contracts linked to IBORs. The new risk-free ARRs do not currently provide a term structure, which will require a change in the contractual terms of products currently indexed on terms other than overnight. We have established a cross-divisional, cross-regional governance structure and change program to address the scale and complexity of the transition.

Strategic optimization initiatives

In June 2019, we announced a strategic wealth management partnership in Japan with Sumitomo Mitsui Trust Holdings, Inc. (SuMi Trust Holdings). Subject to receiving all necessary regulatory and other approvals, UBS and SuMi Trust Holdings plan to offer each other's products and services to their respective current and future clients from the end of 2019 through the establishment of a marketing joint venture. Subject to the same approvals, an operational joint venture entity will be established in 2021, which will be 51% owned and controlled by UBS, requiring UBS to consolidate the new company for accounting and regulatory reporting. UBS and SuMi Trust Holdings will, through the overall joint venture arrangement, be able to offer a more extensive range of products and services than either partner is currently able to offer on its own.

Effective 1 April 2019, as part of UBS's efforts to improve the resolvability of the Group, the portion of the Asset Management business in Switzerland conducted by UBS AG was transferred from UBS AG to its indirect subsidiary, UBS Asset Management Switzerland AG. With this transfer, we have completed the transfer of our Swiss Asset Management business and all Asset Management subsidiaries outside the US into a separate Asset Management sub-group structure.

We are continuing to execute on our strategic initiatives and are considering other strategic optimization opportunities that would leverage our technology capabilities, build on our strengths and focus resources on growth areas. These opportunities may include strategic partnerships, additional collaboration across business divisions, evolution of our business models and optimization of our legal entities.

Comparatives may additionally differ as a result of adjustments following organizational changes, restatements due to the retrospective adoption of new accounting standards or changes in accounting policies, and events after the reporting period. ³ Corporate Center operating expenses presented in this table are after service allocations to business divisions. ⁴ Related to the disposal of foreign branches and subsidiaries. ⁵ Reflects restructuring expenses related to legacy cost programs as well as expenses for new restructuring initiatives. ⁶ Reflects the net increase in / (release of) provisions for litigation, regulatory and similar matters recognized in the income statement. Refer to "Note 16 Provisions and contingent liabilities" in the "Consolidated financial statements" section of this report for more information. Also includes recoveries from third parties of USD 8 million and USD 28 million for the first six months of 2019 and 2018, respectively. ⁷ Changes to the Pension Fund of UBS in Switzerland in the first quarter of 2018 resulted in a reduction in the pension obligation recognized by UBS. As a consequence, a pre-tax gain of USD 241 million was recognized in the income statement in the first quarter of 2018, with no overall effect on total equity. Refer to "Note 29 Pension and other post-employment benefit plans" in the "Consolidated financial statements" section of our Annual Report 2018 for more information.

Group performance

Results: 2Q19 vs 2Q18

Profit before tax increased by USD 53 million, or 3%, to USD 1,759 million, reflecting a decrease in operating expenses, partly offset by lower operating income. Operating income decreased by USD 112 million, or 1%, to USD 7,532 million, mainly reflecting USD 241 million lower net interest income and other net income from financial instruments measured at fair value through profit or loss, partly offset by a USD 61 million increase in other income and a USD 51 million increase in net fee and commission income. Operating expenses decreased by USD 165 million, or 3%, to USD 5,773 million, primarily due to a USD 358 million decrease in general and administrative expenses, partly offset by a USD 142 million increase in depreciation, amortization and impairment of property, equipment and software, as well as a USD 51 million increase in personnel expenses.

In addition to reporting our results in accordance with International Financial Reporting Standards (IFRS), we report adjusted results that exclude items that management believes are not representative of the underlying performance of our businesses. Such adjusted results are non-GAAP financial measures as defined by US Securities and Exchange Commission (SEC) regulations. These adjustments include restructuring expenses related to our CHF 2.1 billion cost reduction program

completed at the end of 2017 (referred to as our “legacy cost programs” in this report) as well as expenses relating to new restructuring initiatives. For the full year 2019, we expect restructuring expenses associated with our legacy cost programs to be approximately USD 0.2 billion.

For the purpose of determining adjusted results for the second quarter of 2019, we excluded net foreign currency translation gains of USD 10 million and net restructuring expenses of USD 39 million. For the second quarter of 2018, we excluded net restructuring expenses of USD 115 million.

On this adjusted basis, profit before tax for the second quarter of 2019 decreased by USD 34 million, or 2%, to USD 1,787 million, driven by a USD 122 million, or 2%, decrease in operating income, partly offset by a USD 88 million, or 2%, decrease in operating expenses.

Operating income: 2Q19 vs 2Q18

Total operating income decreased by USD 112 million, or 1%, to USD 7,532 million, mainly reflecting USD 241 million lower net interest income and other net income from financial instruments measured at fair value through profit or loss, partly offset by a USD 61 million increase in other income and a USD 51 million increase in net fee and commission income.

¹ Effective as of 1 January 2019, UBS refined the presentation of dividend income and expense by reclassifying dividends from Net interest income from financial instruments measured at fair value through profit or loss to Other net income from financial instruments measured at fair value through profit or loss. Prior-period information was restated accordingly and the total effect to the Group was as follows: USD 210 million of net dividend expense and USD 202 million of net dividend income were reclassified for the quarter ended 30 June 2018 and the first six months of 2018, respectively. Refer to "Note 1 Basis of accounting" in the "Consolidated financial statements" section of this report for more information. ² Comparative figures have been restated for changes in Corporate Center cost allocations to the business divisions. Refer to "Note 2 Segment reporting" in the "Consolidated financial statements" section of this report for more information. ³ Mainly includes spread-related income in connection with client-driven transactions, foreign currency translation effects and income and expenses from precious metals, which are included in the income statement line Other net income from financial instruments measured at fair value through profit or loss. The amounts reported on this line are one component of Transaction-based income in the management discussion and analysis of Global Wealth Management and Personal & Corporate Banking in the "Global Wealth Management" and "Personal & Corporate Banking" sections of this report. ⁴ Investment Bank information is provided at the business line level rather than by financial statement reporting line in order to reflect the underlying business activities, which is consistent with the structure of the management discussion and analysis in the "Investment Bank" section of this report.

Net interest income and other net income from financial instruments measured at fair value through profit or loss

Total combined net interest income and other net income from financial instruments measured at fair value through profit or loss decreased by USD 241 million to USD 2,965 million. This was mainly driven by our Foreign Exchange, Rates and Credit business in the Investment Bank and in Global Wealth Management.

Global Wealth Management

In Global Wealth Management, net interest income decreased by USD 75 million to USD 966 million, mainly reflecting lower deposit and loan margins, partly offset by higher investment of equity income.

Transaction-based income from foreign exchange and other intermediary activity was broadly stable at USD 240 million.

Personal & Corporate Banking

In Personal & Corporate Banking, net interest income remained stable at USD 501 million as a result of higher deposit and loan revenues, largely offset by higher funding costs for total loss-absorbing capacity.

Transaction-based income from foreign exchange and other intermediary activity increased by USD 12 million to USD 110 million, mainly driven by foreign exchange transactions.

Investment Bank

In the Investment Bank, net interest income and other net income from financial instruments measured at fair value through profit or loss decreased by USD 174 million to USD 1,185 million. This was mainly driven by a USD 109 million decrease in Foreign Exchange, Rates and Credit, primarily as the second quarter of 2018 included net income of around USD 100 million, consisting mainly of previously deferred day-1 profits that were subsequently recognized due to enhanced observability and revised valuations in the funding curve used to value UBS interest rate-linked notes. In addition, a decrease of USD 52 million in Equities reflected lower client balances and reduced client activity levels.

Group performance

Corporate Center

In Corporate Center, net interest income and other net income from fair value changes on financial instruments decreased by USD 11 million to negative USD 37 million, reflecting a USD 86 million decrease in Non-core and Legacy Portfolio, mainly as the second quarter of 2018 included valuation gains of USD 89 million on financial assets measured at fair value through profit and loss, as well as a USD 61 million decrease in other Corporate Center income, reflecting higher funding costs relating to Corporate Center balance sheet assets and USD 31 million of additional interest expense related to lease liabilities recognized as a result of the adoption of IFRS 16, *Leases*, effective from 1 January 2019. These effects were largely offset by an increase in net treasury income of USD 137 million, mainly reflecting income from hedge accounting ineffectiveness, revenues from accounting asymmetries, as well as higher net interest income.

- Refer to “Note 1 Basis of accounting” in the “Consolidated financial statements” section of this report for more information on the adoption of IFRS 16
- Refer to “Note 2 Segment reporting” in the “Consolidated financial statements” section of this report for more information on Corporate Center allocations
- Refer to “Note 3 Net interest income” in the “Consolidated financial statements” section of this report for more information on net interest income

Net fee and commission income

Net fee and commission income was USD 4,474 million compared with USD 4,423 million.

M&A and corporate finance fees increased by USD 116 million to USD 296 million, primarily reflecting higher revenues from merger and acquisition transactions, despite a 26% decline in the global fee pool.

Underwriting fees increased by USD 39 million to USD 224 million, predominantly driven by higher equity underwriting revenues from public offerings despite a 5% decline in the global fee pool.

Net brokerage fees decreased by USD 73 million to USD 738 million, mainly in our Equities business in the Investment Bank, reflecting lower client activity levels.

Investment fund fees decreased by USD 30 million to USD 1,196 million, primarily in Global Wealth Management, reflecting margin compression, mainly driven by shifts into lower-margin mandate products, partly offset by an increase in overall mandate penetration.

- Refer to “Note 4 Net fee and commission income” in the “Consolidated financial statements” section of this report for more information

Other income

Other income was USD 105 million compared with USD 44 million. The second quarter of 2019 included net foreign currency translation gains of USD 10 million related to the disposal of a branch. Excluding this item, adjusted other income increased by USD 51 million, mainly in Corporate Center, as the second quarter of 2019 included a gain of USD 38 million related to the settlement of a litigation claim and income of USD 14 million related to a claim on a defaulted counterparty position.

- Refer to “Note 5 Other income” in the “Consolidated financial statements” section of this report for more information

¹ Reflects restructuring expenses related to legacy cost programs as well as expenses for new restructuring initiatives. ² Changes to the Pension Fund of UBS in Switzerland in the first quarter of 2018 resulted in a reduction in the pension obligation recognized by UBS. As a consequence, a pre-tax gain of USD 241 million was recognized in the income statement in the first quarter of 2018, with no overall effect on total equity. Refer to "Note 29 Pension and other post-employment benefit plans" in the "Consolidated financial statements" section of our Annual Report 2018 for more information. ³ Adjusted results are non-GAAP financial measures as defined by SEC regulations. ⁴ Financial advisor compensation consists of formulaic compensation based directly on compensable revenues generated by financial advisors and supplemental compensation calculated on the basis of financial advisor productivity, firm tenure, new assets and other variables. It also includes expenses related to compensation commitments with financial advisors entered into at the time of recruitment that are subject to vesting requirements. ⁵ Consists of expenses related to contractors, social security, pension and other post-employment benefit plans, and other personnel expenses. Refer to "Note 6 Personnel expenses" in the "Consolidated financial statements" section of this report for more information.

Group performance

Operating expenses: 2Q19 vs 2Q18

Total operating expenses decreased by USD 165 million, or 3%, to USD 5,773 million. Adjusted total operating expenses decreased by USD 88 million, or 2%, to USD 5,735 million. These exclude net restructuring expenses related to legacy cost programs and new restructuring initiatives of USD 39 million, compared with USD 115 million in the prior year.

Personnel expenses

Personnel expenses increased by USD 51 million to USD 4,153 million on a reported basis, and by USD 88 million to USD 4,127 million on an adjusted basis, primarily reflecting higher salary expenses, mainly in Corporate Center, driven by insourcing of certain activities and staff from third-party vendors to our Business Solutions Centers over the last 12 months, with an offsetting effect in general and administrative expenses.

→ Refer to “**Note 6 Personnel expenses**” in the “**Consolidated financial statements**” section of this report for more information

General and administrative expenses

General and administrative expenses decreased by USD 358 million to USD 1,175 million, mainly driven by lower rent expenses, expenses related to litigation, regulatory and similar matters, outsourcing costs and professional fees. A USD 137 million decrease in rent expenses was a direct result of the adoption of IFRS 16, *Leases*, in the first quarter of 2019. This decrease was more than offset by an increase of USD 119 million in depreciation expense and an increase of USD 31 million in interest expense relating to lease liabilities, also as a result of the adoption of IFRS 16.

On an adjusted basis, general and administrative expenses decreased by USD 319 million to USD 1,164 million, largely due to the aforementioned decreases in expenses related to litigation, regulatory and similar matters, rent expenses, outsourcing costs and professional fees.

We believe that the industry continues to operate in an environment in which expenses associated with litigation, regulatory and similar matters will remain elevated for the foreseeable future and we continue to be exposed to a number of significant claims and regulatory matters. The outcome of many of these matters, the timing of a resolution, and the potential effects of resolutions on our future business, financial results or financial condition are extremely difficult to predict.

- Refer to “**Note 1 Basis of accounting**” in the “**Consolidated financial statements**” section of this report for more information on the adoption of IFRS 16
- Refer to “**Note 7 General and administrative expenses**” in the “**Consolidated financial statements**” section of this report for more information
- Refer to “**Note 16 Provisions and contingent liabilities**” in the “**Consolidated financial statements**” section of this report and to the “**Regulatory and legal developments**” and “**Risk factors**” sections of our **Annual Report 2018** for more information on litigation, regulatory and similar matters

Depreciation, amortization and impairment

Depreciation, amortization and impairment of property, equipment and software increased by USD 142 million to USD 445 million on a reported basis, and by USD 142 million to USD 443 million on an adjusted basis, mainly resulting from USD 119 million higher depreciation expenses following the adoption of IFRS 16 in the first quarter of 2019.

→ Refer to “**Note 1 Basis of accounting**” in the “**Consolidated financial statements**” section of this report for more information on the adoption of IFRS 16

Tax: 2Q19 vs 2Q18

We recognized income tax expenses of USD 366 million for the second quarter of 2019, compared with USD 322 million for the second quarter of 2018.

Current tax expenses were USD 209 million, compared with USD 198 million, and related to taxable profits of UBS Switzerland AG and other entities.

Deferred tax expenses were USD 157 million, compared with USD 124 million. Deferred tax expenses in the second quarter of 2019 included expenses of USD 222 million, which reflect the amortization of deferred tax assets (DTAs) previously recognized in relation to tax losses carried forward and deductible temporary differences to reflect their offset against profits for the quarter, including the amortization of US tax loss DTAs at the level of UBS Americas Inc. Deferred tax expenses were decreased by a benefit of USD 130 million in respect of additional DTA recognition that resulted from the contribution of real estate assets by UBS AG to UBS Americas Inc. during the second quarter of 2019. The additional DTA recognition related to the elections that were made in the fourth quarter of 2018 to capitalize certain historic real estate costs. This amount represents one half of the expected full year benefit and, therefore, further amounts totaling USD 65 million will be recognized in each of the third and fourth quarters in accordance with the requirements of IAS 34, *Interim Financial Reporting*.

As a result of the above-mentioned item, we expect a tax rate for the second half of 2019 that is lower than the 23.4% tax rate for the first half of this year, subject to any potential DTA-related adjustments made as part of our annual business planning process. From 2020 onwards, we expect a tax rate, excluding any potential effects from reassessment of deferred tax assets, of around 25%.

→ Refer to “**Note 8 Income taxes**” in the “**Consolidated financial statements**” section of this report for more information

Total comprehensive income attributable to shareholders: 2Q19 vs 2Q18

Total comprehensive income attributable to shareholders was USD 2,478 million compared with USD 362 million. Net profit attributable to shareholders was USD 1,392 million compared with USD 1,382 million and other comprehensive income (OCI) attributable to shareholders, net of tax, was positive USD 1,086 million compared with negative USD 1,020 million.

In the second quarter of 2019, OCI related to cash flow hedges was positive USD 773 million, mainly reflecting an increase in unrealized gains on US dollar hedging derivatives resulting from decreases in the relevant US dollar long-term interest rates. In the second quarter of 2018, OCI related to cash flow hedges was negative USD 160 million.

Foreign currency translation OCI was positive USD 168 million in the second quarter of 2019, mainly resulting from the strengthening of the Swiss franc and the euro against the US dollar. OCI related to foreign currency translation in the same quarter of last year was negative USD 1,343 million.

OCI related to own credit on financial liabilities designated at fair value was positive USD 72 million compared with positive USD 250 million and mainly reflected a widening of credit spreads.

OCI associated with financial assets measured at fair value through OCI was positive USD 65 million compared with negative USD 14 million and largely reflected net unrealized gains following decreases in the relevant US dollar long-term interest rates in the second quarter of 2019.

Defined benefit plan OCI was positive USD 8 million compared with positive USD 247 million. We recorded net pre-tax OCI gains of USD 25 million related to our non-Swiss pension plans, mainly driven by the UK defined benefit plans, which recorded OCI gains of USD 49 million. This reflected OCI gains of USD 112 million due to a positive return on plan assets, partly offset by OCI losses of USD 63 million from the remeasurement of the defined benefit obligation. Net pre-tax OCI losses related to the Swiss pension plans were USD 10 million.

- Refer to “Statement of comprehensive income” in the “Consolidated financial statements” section of this report for more information
- Refer to “Note 29 Pension and other post-employment benefit plans” in the “Consolidated financial statements” section of our Annual Report 2018 for more information on other comprehensive income related to defined benefit plans

Sensitivity to interest rate movements

As of 30 June 2019, we estimate that a parallel shift in yield curves by +100 basis points could lead to a combined increase in annual net interest income of approximately USD 0.5 billion in Global Wealth Management and Personal & Corporate Banking. US dollar and euro interest rates each contribute approximately USD 0.2 billion to this increase.

These estimates are based on a hypothetical scenario of an immediate increase in interest rates, equal across all currencies and relative to implied forward rates applied to our banking book. These estimates further assume no change to balance sheet size and structure, constant foreign exchange rates and no specific management action.

- Refer to the “Risk management and control section” of this report for information on interest rate risk in the banking book under new Pillar 3 requirements

Key figures and personnel

Return on common equity tier 1 (CET1) capital: 2Q19 vs 2Q18

The annualized return on CET1 capital (RoCET1) was 16.0% compared with 16.1%, mainly driven by a USD 0.4 billion increase in the average CET1 capital.

Adjusted cost / income ratio: 2Q19 vs 2Q18

The adjusted cost / income ratio was 76.1% compared with 75.9%.

Risk-weighted assets: 2Q19 vs 1Q19

During the second quarter of 2019, risk-weighted assets (RWA) decreased by USD 5.4 billion to USD 262.1 billion, reflecting decreases from asset size and other movements of USD 3.5 billion, methodology and policy changes of USD 1.9 billion, and lower regulatory add-ons of USD 1.5 billion, partly offset by currency effects of USD 1.2 billion and increases from model updates of USD 0.3 billion.

- Refer to the “Capital management” section of this report for more information

Group performance

Common equity tier 1 capital ratio: 2Q19 vs 1Q19

Our common equity tier 1 (CET1) capital ratio increased to 13.3% from 13.0%, reflecting a USD 0.3 billion increase in CET1 capital and the aforementioned USD 5.4 billion decrease in RWA.

→ Refer to the “Capital management” section of this report for more information

Leverage ratio denominator: 2Q19 vs 1Q19

The leverage ratio denominator (LRD) remained stable at USD 911 billion in the second quarter of 2019.

→ Refer to the “Capital management” section of this report for more information

Common equity tier 1 leverage ratio: 2Q19 vs 1Q19

Our CET1 leverage ratio increased to 3.83% from 3.80%, reflecting the aforementioned increase in CET1 capital.

→ Refer to the “Capital management” section of this report for more information

Going concern leverage ratio: 2Q19 vs 1Q19

Our going concern leverage ratio increased from 5.4% to 5.5%, reflecting a USD 0.6 billion increase in going concern capital.

→ Refer to the “Capital management” section of this report for more information

Personnel: 2Q19 vs 1Q19

We employed 66,922 personnel (full-time equivalents) as of 30 June 2019, a net decrease of 559 compared with 31 March 2019. This mainly reflects the effect of our cost management initiatives, which was only partly offset by the effect of our insourcing initiatives. External staff in Corporate Center decreased by 890 over the same period.

Return on equity

Results: 6M19 vs 6M18

Profit before tax decreased by USD 501 million, or 13%, to USD 3,305 million.

Operating income decreased by USD 1,062 million, or 7%, mainly reflecting USD 590 million lower net interest income and other net income from fair value changes on financial instruments, primarily driven by decreases in the Investment Bank and in Global Wealth Management, partly offset by an increase in Corporate Center. In addition, net fee and commission income decreased by USD 562 million, mainly due to a USD 261 million decrease in net brokerage fees across both Global Wealth Management and the Investment Bank as well as USD 284 million lower investment fund fees and fees for portfolio management and related services, primarily in Global Wealth Management.

Operating expenses decreased by USD 562 million, or 5%, mainly reflecting USD 680 million lower general and administrative expenses. This was largely driven by decreases in outsourcing costs, expenses related to litigation, regulatory and similar matters, and professional fees. Additionally, following the adoption of IFRS 16, *Leases*, rent expenses decreased by USD 268 million, which was more than offset by a USD 279 million increase in expenses from depreciation, amortization and impairment of property, equipment and software. Personnel expenses decreased by USD 161 million, primarily due to lower variable compensation, financial advisor compensation and costs for contractors, partly offset by higher pension costs, as the first quarter of 2018 included a gain of USD 241 million related to changes to our Swiss pension plan.

On an adjusted basis, profit before tax decreased by USD 451 million, or 12%, reflecting lower operating income, partly offset by a decrease in operating expenses.

Adjusted operating income decreased by USD 1,072 million, or 7%, reflecting the aforementioned decreases in net interest income and other net income from fair value changes on financial instruments and net fee and commission income.

Adjusted operating expenses decreased by USD 622 million, or 5%, mainly reflecting a USD 314 million decrease in adjusted personnel expenses, mainly as a result of lower variable compensation, as well as the aforementioned decreases in outsourcing costs, expenses for litigation, regulatory and similar matters and professional fees.

Outlook

The overall pace of global growth has stabilized at a lower level after a synchronized global slowdown in prior quarters. Downside risks remain due to political uncertainties and geopolitical tensions. Central banks are indicating a reversal of monetary policy normalization and embarking on new stimulus measures.

A sharp drop in interest rates and expected rate cuts will continue to adversely affect net interest income compared with last year. Our regional and business diversification, along with higher invested assets benefitting recurring revenues, will help to mitigate this. An improvement in investor sentiment and higher market volatility could help to offset the typical third quarter seasonality.

We are executing our strategy with discipline, focusing on balancing efficiency and investments for growth, to deliver on our capital return objectives and to create sustainable long-term value for our shareholders.

¹ Prior-year comparative figures in this table have been restated for the changes in Corporate Center cost and resource allocation to the business divisions and the changes in the equity attribution framework effective 1 January 2019. Refer to "Note 2 Segment reporting" in the "Consolidated financial statements" section of this report for more information on the changes to the Corporate Center cost and resource allocation to business divisions and to the "Recent developments" section in our first quarter 2019 report for more information on the changes in the equity attribution framework. Comparatives may additionally differ as a result of adjustments following organizational changes, restatements due to the retrospective adoption of new accounting standards or changes in accounting policies, and events after the reporting period. ² Recurring net fee income consists of fees for services provided on an ongoing basis, such as portfolio management fees, asset-based investment fund fees, custody fees and account-keeping fees, which are generated on client assets. ³ Transaction-based income consists of the non-recurring portion of net fee and commission income, mainly composed of brokerage and transaction-based investment fund fees, as well as credit card fees and fees for payment transactions, together with Other net income from financial instruments measured at fair value through profit or loss. ⁴ Relates to licensed professionals with the ability to provide investment advice to clients in the Americas. ⁵ Financial advisor variable compensation consists of formulaic compensation based directly on compensable revenues generated by financial advisors and supplemental compensation calculated on the basis of financial advisor productivity, firm tenure, new assets and other variables. ⁶ Compensation commitments with recruited financial advisors represent expenses related to compensation commitments granted to financial advisors at the time of recruitment that are subject to vesting requirements. ⁷ Adjusted results are non-GAAP financial measures as defined by SEC regulations. ⁸ Reflects restructuring expenses related to legacy cost programs as well as expenses for new restructuring initiatives. ⁹ Refer to the "Performance targets and measurement" section of our Annual Report 2018 for the definitions of our performance measures. ¹⁰ Recurring income consists of net interest income and recurring net fee income. ¹¹ Refer to the "Capital management" section of this report for more information. ¹² Calculated as operating profit before tax (annualized as applicable) / average invested assets. ¹³ Loans and Customer deposits in this table include customer brokerage receivables and payables, respectively, which with the adoption of IFRS 9 effective 1 January 2018 have been reclassified to a separate reporting line on the balance sheet. ¹⁴ Customer deposits in Global Wealth Management have been restated to reflect a reclassification of balances from Corporate Center, with no impact on customer deposits reported for the Group. This has resulted in an increase in customer deposits reported for Global Wealth Management of USD 8.4 billion as of 31 March 2019.

Loans, gross	60.1³	37.4	42.3	36.0	175.8	
Advisors (full-time equivalents)	6,689	1,758	1,108	740	10,294	1,101⁴

¹ Refer to the "Performance targets and measurement" section of our Annual Report 2018 for the definitions of our performance measures. ² Excluding minor functions with 108 advisors, USD 3 billion of invested assets, USD 0.5 billion of loans and USD 0.1 billion of net new money outflows in the second quarter of 2019. ³ Loans include customer brokerage receivables, which with the adoption of IFRS 9 effective 1 January 2018 have been reclassified to a separate reporting line on the balance sheet. ⁴ Represents advisors who exclusively serve ultra high net worth clients in a globally managed unit.

Results: 2Q19 vs 2Q18

Profit before tax decreased by USD 87 million, or 9%, to USD 874 million. Excluding restructuring expenses, adjusted profit before tax decreased by USD 123 million, or 12%, to USD 886 million, reflecting lower operating income and higher operating expenses.

Operating income

Total operating income decreased by USD 107 million, or 3%, to USD 4,057 million, mainly driven by lower net interest and lower recurring net fee income.

Net interest income decreased by USD 75 million to USD 966 million, mainly reflecting lower deposit and loan margins, partly offset by higher investment of equity income.

Recurring net fee income decreased by USD 58 million to USD 2,315 million, reflecting margin compression, mainly driven by shifts into lower-margin mandate products, partly offset by an increase in overall mandate penetration.

Transaction-based income increased by USD 23 million to USD 764 million, mainly as a result of higher client activity in the Americas and in Switzerland.

Other income increased by USD 8 million to USD 17 million.

Operating expenses

Total operating expenses decreased by USD 19 million, or 1%, to USD 3,183 million, while adjusted operating expenses increased by USD 16 million, or 1%, to USD 3,171 million.

Personnel expenses decreased by USD 20 million and adjusted personnel expenses decreased by USD 17 million to USD 1,905 million, mainly as a result of lower variable compensation.

General and administrative expenses decreased by USD 34 million and adjusted general and administrative expenses decreased by USD 29 million to USD 271 million, predominantly driven by lower expenses for provisions for litigation matters.

Net expenses for services to / from Corporate Center and other business divisions increased by USD 33 million to USD 992 million. Excluding restructuring expenses, adjusted net expenses for services increased by USD 60 million to USD 980 million, mainly reflecting higher regulatory-driven expenses from control functions as well as higher property-related expenses.

Net new money: 2Q19 vs 2Q18

Net new money outflows were USD 1.7 billion compared with net outflows of USD 1.2 billion, an annualized net new money growth rate of negative 0.3% compared with negative 0.2%. The outflows were mainly driven by seasonal income tax payments in the Americas of approximately USD 5.1 billion compared with approximately USD 4.6 billion. Net new money from ultra high net worth clients was USD 1.1 billion.

Invested assets: 2Q19 vs 1Q19

Invested assets increased by USD 54 billion to USD 2,486 billion, driven by a positive market performance of USD 48 billion and currency effects of USD 8 billion, partly offset by net new money outflows of USD 2 billion. Mandate penetration increased to 34.4% from 33.9%.

Results: 6M19 vs 6M18

Profit before tax decreased by USD 327 million, or 16%, to USD 1,737 million. Excluding a credit of USD 66 million related to our Swiss pension plan in the first quarter of 2018 and restructuring expenses, adjusted profit before tax decreased by USD 349 million, or 17%, to USD 1,759 million, reflecting lower operating income, partly offset by lower operating expenses.

Total operating income decreased by USD 511 million, or 6%, to USD 8,061 million, driven by lower recurring net fee, transaction-based, and net interest income.

Net interest income decreased by USD 87 million to USD 1,975 million, primarily as a result of lower deposit and loan margins, as well as lower loan volumes. Decreases in net income from structural risk management activities and banking book interest income also contributed to the decrease in net interest income. This was partly offset by higher investment of equity income.

Recurring net fee income decreased by USD 260 million to USD 4,533 million, primarily driven by lower average invested assets as a result of the decline in market levels in the fourth quarter of 2018. Margin compression also contributed to the decrease, mainly reflecting shifts into lower-margin mandate products, which was partly offset by an increase in overall mandate penetration.

Transaction-based income decreased by USD 165 million to USD 1,529 million, mainly as a result of lower client activity in all regions, most notably in Asia Pacific and, to a lesser extent, the Americas.

Total operating expenses decreased by USD 186 million, or 3%, to USD 6,323 million, and adjusted operating expenses decreased by USD 164 million, or 3%, to USD 6,301 million.

Personnel expenses decreased by USD 93 million to USD 3,805 million. Excluding the aforementioned credit related to changes to our Swiss pension plan and restructuring expenses, adjusted personnel expenses decreased by USD 152 million to USD 3,806 million, driven by lower variable compensation and lower expenses for compensation commitments to recruited financial advisors.

General and administrative expenses decreased by USD 90 million and adjusted general and administrative expenses decreased by USD 74 million to USD 520 million, predominantly driven by lower expenses for provisions for litigation matters.

Net expenses for services to / from Corporate Center and other business divisions decreased by USD 6 million to USD 1,967 million, while adjusted net expenses for services increased by USD 60 million to USD 1,945 million. This increase was mainly driven by higher net expenses from control functions and higher property-related expenses.

¹ Prior-year comparative figures in this table have been restated for the changes in Corporate Center cost and resource allocation to the business divisions and the changes in the equity attribution framework effective 1 January 2019. Refer to "Note 2 Segment reporting" in the "Consolidated financial statements" section of this report for more information on the changes to the Corporate Center cost and resource allocation to business divisions and to the "Recent developments" section in our first quarter 2019 report for more information on the changes in the equity attribution framework. Comparatives may additionally differ as a result of adjustments following organizational changes, restatements due to the retrospective adoption of new accounting standards or changes in accounting policies, and events after the reporting period. ² Recurring net fee income consists of fees for services provided on an ongoing basis, such as portfolio management fees, asset-based investment fund fees, custody fees and account-keeping fees, which are generated on client assets. ³ Transaction-based income comprises the non-recurring portion of net fee and commission income, mainly consisting of brokerage and transaction-based investment fund fees, as well as credit card fees and fees for payment transactions, together with Other net income from financial instruments measured at fair value through profit or loss. ⁴ Adjusted results are non-GAAP financial measures as defined by SEC regulations. ⁵ Reflects restructuring expenses related to legacy cost programs. ⁶ Refer to the "Performance targets and measurement" section of our Annual Report 2018 for the definitions of our performance measures. ⁷ Refer to the "Capital management" section of this report for more information. ⁸ Calculated as net new business volume for the period (annualized as applicable) / business volume at the beginning of the period. ⁹ Client assets are comprised of invested assets and other assets held purely for transactional purposes or custody only. We do not measure net new money for Personal & Corporate Banking. ¹⁰ Refer to the "Risk management and control" section of this report for more information on (credit-)impaired exposures.

Results: 2Q19 vs 2Q18

Profit before tax increased by CHF 46 million, or 14%, to CHF 389 million, while adjusted profit before tax increased by CHF 38 million, or 11%, to CHF 391 million, predominantly reflecting higher operating income.

Operating income

Total operating income increased by 4% to CHF 957 million from CHF 920 million, mainly reflecting lower credit loss expenses as well as higher transaction-based income.

Net interest income increased by CHF 4 million to CHF 500 million as a result of higher deposit and loan revenues, partly offset by higher funding costs for total loss-absorbing capacity.

Recurring net fee income was CHF 159 million compared with CHF 157 million in the second quarter of 2018.

Transaction-based income increased by CHF 11 million to CHF 286 million, mainly reflecting higher revenues from both credit card fees and foreign exchange transactions.

Other income decreased by CHF 2 million to CHF 12 million.

Net credit loss expenses were CHF 1 million, compared with expenses of CHF 22 million in the second quarter of 2018. Stage 3 expected credit losses of CHF 13 million, primarily in the Corporate Clients area, were partly offset by a release of CHF 12 million of stage 1 and 2 expected credit losses.

Operating expenses

Total operating expenses decreased by CHF 10 million to CHF 568 million. Excluding a reduction in restructuring expenses, adjusted operating expenses decreased by CHF 3 million to CHF 565 million.

Personnel expenses increased by CHF 4 million to CHF 225 million, including slightly higher variable compensation accruals reflecting higher performance. General and administrative expenses decreased by CHF 3 million to CHF 53 million, mainly reflecting lower consulting costs.

Net expenses for services to / from Corporate Center and other business divisions decreased by CHF 11 million to CHF 286 million and by CHF 4 million to CHF 284 million on an adjusted basis, mainly reflecting higher net charges out for services provided by Personal & Corporate Banking to Global Wealth Management and vice versa.

Results: 6M19 vs 6M18

Profit before tax increased by CHF 47 million, or 7%, to CHF 774 million and adjusted profit before tax increased by CHF 70 million, or 10%, to CHF 781 million, mainly reflecting higher income and lower credit loss expenses.

Total operating income increased by CHF 65 million, or 4%, to CHF 1,910 million. Net interest income increased by CHF 9 million to CHF 991 million, as a result of higher deposit and loan revenues, partly offset by higher funding costs for total loss-absorbing capacity.

Recurring net fee income increased by CHF 4 million to CHF 315 million. Transaction-based income increased by CHF 13 million to CHF 569 million, mainly as a result of higher revenues from interest rate derivative and foreign exchange transactions. Other income increased by CHF 4 million to CHF 35 million.

Net credit loss recoveries were CHF 1 million compared with CHF 35 million expenses in the first half of 2018 and included CHF 16 million of stage 1 and 2 expected credit loss releases compared with CHF 17 million losses in the first half of 2018.

Total operating expenses increased by CHF 18 million, or 2%, to CHF 1,136 million, as the first half of 2018 included a credit of CHF 35 million related to changes to our Swiss pension plan. Adjusted operating expenses decreased by CHF 4 million to CHF 1,130 million. Personnel expenses increased by CHF 45 million to CHF 443 million and on an adjusted basis increased by CHF 11 million to CHF 443 million. General and administrative expenses decreased by CHF 10 million to CHF 105 million, mainly reflecting lower consulting and marketing costs. Net expenses for services to / from Corporate Center and other business divisions decreased by CHF 17 million to CHF 581 million, and by CHF 6 million to CHF 575 million on an adjusted basis, mainly reflecting lower expenses for Group Operations.

¹ Prior-year comparative figures in this table have been restated for the changes in Corporate Center cost and resource allocation to the business divisions and the changes in the equity attribution framework effective 1 January 2019. Refer to "Note 2 Segment reporting" in the "Consolidated financial statements" section of this report for more information on the changes to the Corporate Center cost and resource allocation to business divisions and to the "Recent developments" section in our first quarter 2019 report for more information on the changes in the equity attribution framework. Comparatives may additionally differ as a result of adjustments following organizational changes, restatements due to the retrospective adoption of new accounting standards or changes in accounting policies, and events after the reporting period. ² Net management fees include transaction fees, fund administration revenues (including net interest and trading income from lending activities and foreign exchange hedging as part of the fund services offering), gains or losses from seed money and co-investments, funding costs, and other items that are not performance fees. ³ Adjusted results are non-GAAP financial measures as defined by SEC regulations. ⁴ Reflects restructuring expenses related to legacy cost programs as well as expenses for new restructuring initiatives. ⁵ Refer to the "Performance targets and measurement" section of our Annual Report 2018 for the definitions of our performance measures. ⁶ Effective 1 January 2019, certain assets have been reclassified between asset classes to better reflect their underlying nature, with prior-period information restated. The adjustments have no effect on total net new money and total invested assets. ⁷ Excluding the effect of business exits. ⁸ Refer to the "Capital management" section of this report for more information. ⁹ Calculated as operating profit before tax (annualized as applicable) / average invested assets.

Results: 2Q19 vs 2Q18

Profit before tax increased by USD 27 million, or 29%, to USD 124 million. Excluding restructuring expenses, adjusted profit before tax increased by USD 13 million, or 10%, to USD 135 million, reflecting higher operating income.

Operating income

Total operating income increased by USD 14 million, or 3%, to USD 475 million.

Net management fees increased by USD 10 million to USD 452 million, reflecting slightly higher average invested assets.

Performance fees increased by USD 4 million to USD 23 million, mainly driven by an increase in performance fees in Equities, partly offset by lower performance fees from Real Estate & Private Markets.

Operating expenses

Total operating expenses decreased by USD 14 million, or 4%, to USD 351 million, while adjusted operating expenses were stable at USD 340 million.

Personnel expenses declined by USD 5 million to USD 186 million. Excluding expenses of USD 13 million related to the actions taken in the second quarter of 2018 to reduce costs and create capacity, and other personnel-related restructuring expenses, adjusted personnel expenses increased by USD 6 million to USD 183 million, mainly driven by increased expenses for variable compensation.

General and administrative expenses decreased by USD 5 million to USD 44 million, and on an adjusted basis by USD 3 million to USD 42 million, reflecting lower expenses for consulting and legal services, partly offset by higher outsourcing costs.

Net expenses for services to / from Corporate Center and other business divisions decreased by USD 3 million to USD 121 million. Adjusted net expenses decreased by USD 1 million to USD 115 million, as lower expenses from Group Operations and regulatory and compliance-driven initiatives were offset by higher expenses from Group Finance and Group Technology.

Net new money: 2Q19 vs 2Q18

Net new money outflows were USD 15.0 billion compared with net outflows of USD 2.1 billion. Excluding money market flows, net new money outflows were USD 13.9 billion compared with net inflows of USD 1.2 billion, an annualized net new money growth rate of negative 7.6% compared with positive 0.6%.

Net new money was negatively affected by continued macroeconomic uncertainties which, among other things, caused investors to de-risk, change asset allocations and delay investment decisions.

Invested assets: 2Q19 vs 1Q19

Invested assets increased by USD 7 billion to USD 831 billion, reflecting positive market performance of USD 18 billion and currency effects of USD 4 billion, partly offset by outflows of USD 15 billion.

Results: 6M19 vs 6M18

Profit before tax increased by USD 26 million, or 13%, to USD 228 million. Excluding a credit of USD 10 million related to changes to our Swiss pension plan in the first quarter of 2018 and restructuring expenses, adjusted profit before tax increased by USD 15 million, or 6%, to USD 244 million, reflecting reduced operating expenses.

Total operating income remained broadly unchanged at USD 921 million, with declining net management fees largely offset by increased performance fees.

Net management fees decreased by USD 22 million, reflecting lower average invested assets as a result of the lower market levels in the fourth quarter of 2018.

Performance fees increased by USD 16 million to USD 50 million, mainly driven by an increase in Equities.

Total operating expenses decreased by USD 32 million, or 4%, to USD 693 million, and adjusted operating expenses decreased by USD 21 million, or 3%, to USD 677 million.

Personnel expenses decreased by USD 4 million, or 1%, to USD 364 million. Excluding the aforementioned credit related to changes to our Swiss pension plan in the first quarter of 2018 and restructuring expenses, adjusted personnel expenses decreased by USD 3 million to USD 359 million.

General and administrative expenses decreased by USD 8 million to USD 92 million, and adjusted general and administrative expenses by USD 6 million to USD 88 million, primarily driven by reduced expenses for consulting services, marketing and travel, partly offset by higher outsourcing costs.

Net expenses for services to / from Corporate Center and other business divisions decreased by USD 18 million to USD 237 million, and adjusted expenses for services decreased by USD 11 million to USD 230 million, reflecting lower expenses from Group Operations, variable compensation, and strategic and regulatory initiatives, partly offset by higher expenses from Group Technology, rent expenses and Group Finance.

¹ Prior-year comparative figures in this table have been restated for the changes in Corporate Center cost and resource allocation to the business divisions and the changes in the equity attribution framework effective 1 January 2019. Refer to "Note 2 Segment reporting" in the "Consolidated financial statements" section of this report for more information on the changes to the Corporate Center cost and resource allocation to business divisions and to the "Recent developments" section in our first quarter 2019 report for more information on the changes in the equity attribution framework. Comparatives may additionally differ as a result of adjustments following organizational changes, restatements due to the retrospective adoption of new accounting standards or changes in accounting policies, and events after the reporting period. ² Adjusted results are non-GAAP financial measures as defined by SEC regulations. ³ Reflects restructuring expenses related to legacy cost programs. ⁴ Refer to the "Performance targets and measurement" section of our Annual Report 2018 for the definitions of our performance measures. ⁵ Refer to the "Capital management" section of this report for more information. ⁶ Refer to the "Risk management and control" section of this report for more information on (credit-)impaired loan exposures.

Results: 2Q19 vs 2Q18

Profit before tax decreased by USD 108 million, or 20%, to USD 427 million. Excluding restructuring expenses, adjusted profit before tax decreased by USD 131 million, or 23%, to USD 440 million. This was driven by lower operating income in Investor Client Services and higher operating expenses, partly offset by higher operating income in Corporate Client Solutions.

Operating income

Total operating income decreased by USD 91 million, or 4%, to USD 2,071 million, despite a strong performance in Corporate Client Solutions. This reflected lower revenues in Foreign Exchange, Rates and Credit, as the second quarter of 2018 included net income of around USD 100 million consisting mainly of previously deferred day-1 profits, as well as declines in Equities, amid ongoing challenging market conditions.

Corporate Client Solutions

Corporate Client Solutions revenues increased by USD 113 million, or 18%, to USD 742 million. This mainly reflected higher revenues in Advisory and Equity Capital Markets, partly offset by lower revenues in Risk Management and Financing Solutions.

Advisory revenues increased 59% to USD 268 million from USD 168 million, mainly driven by higher revenues from merger and acquisition transactions, despite a 26% decline in the global fee pool.

Equity Capital Markets revenues increased by USD 45 million, or 23%, to USD 235 million, mainly reflecting higher revenues from public offerings, despite a 5% decline in the global fee pool. Revenues from private transactions also increased.

Debt Capital Markets revenues were unchanged at USD 164 million. Revenues in both investment grade and leveraged finance were broadly stable, against a global fee pool increase of 2% and a decline of 42%, respectively.

Financing Solutions revenues decreased to USD 69 million from USD 79 million, reflecting lower levels of client activity across most products.

Risk Management revenues decreased by USD 21 million to USD 6 million, mainly driven by losses in a portfolio of loans that are being exited and lower gains on a restructured debt position.

Investor Client Services

Investor Client Services revenues decreased by USD 208 million, or 14%, to USD 1,331 million, reflecting decreases in Foreign Exchange, Rates and Credit revenues and Equities revenues.

Equities

Equities revenues decreased by USD 96 million, or 9%, to USD 940 million, reflecting lower market volumes, market volatility and client activity, as well as the strong second quarter of 2018.

Cash revenues were USD 289 million compared with USD 315 million, mainly reflecting lower client activity levels.

Derivatives revenues decreased to USD 255 million from USD 280 million, reflecting the strong second quarter of 2018 and lower client activity levels.

Financing Services revenues decreased to USD 399 million from USD 451 million, driven by lower prime brokerage and equity finance revenues as a result of lower client balances and activity levels.

Foreign Exchange, Rates and Credit

Foreign Exchange, Rates and Credit revenues decreased by USD 112 million, or 22%, to USD 391 million, primarily because the second quarter of 2018 included net income of around USD 100 million consisting mainly of previously deferred day-1 profits that were subsequently recognized as a result of enhanced observability and revised valuations in the funding curve used to value UBS interest rate-linked notes. Excluding this net income, Foreign Exchange, Rates and Credit revenues decreased slightly. Higher Rates and Credit revenues that mainly reflected improved trading performance were more than offset by decreased Foreign Exchange revenues as a result of lower volatility and client activity levels. The second quarter of 2019 included a gain of USD 38 million on the sale of our remaining investment in TradeWeb, compared with mark-to-market gains of USD 20 million recognized in the second quarter of 2018.

Operating expenses

Total operating expenses increased by USD 17 million, or 1%, to USD 1,644 million, and adjusted operating expenses increased by USD 40 million, or 3%, to USD 1,631 million.

Personnel expenses increased by USD 15 million to USD 794 million, and adjusted personnel expenses increased by USD 16 million to USD 793 million.

General and administrative expenses remained broadly unchanged at USD 143 million, and on an adjusted basis at USD 141 million.

Net expenses for services to / from Corporate Center and other business divisions increased to USD 704 million from USD 698 million. Excluding restructuring expenses, adjusted net expenses increased to USD 694 million from USD 666 million, mainly reflecting higher expenses from Group Technology.

Risk-weighted assets and leverage ratio denominator: 2Q19 vs 1Q19

Risk-weighted assets

Total risk-weighted assets (RWA) decreased by USD 7 billion to USD 86 billion, driven by lower credit risk RWA, primarily due to methodology changes and exposure decreases in unutilized credit facilities, and lower market risk RWA, reflecting lower average regulatory and stressed value-at-risk (VaR) levels.

→ **Refer to the "Capital management" section of this report for more information**

Leverage ratio denominator

The leverage ratio denominator (LRD) increased by USD 12 billion to USD 300 billion, mainly driven by higher trading portfolio assets, reflecting the unwinding of short positions in our Equities business.

→ **Refer to the "Capital management" and "Balance sheet, liquidity and funding management" sections of this report for more information**

Results: 6M19 vs 6M18

Profit before tax decreased by USD 477 million, or 43%, to USD 634 million. Excluding restructuring expenses, adjusted profit before tax decreased by USD 529 million, or 44%, to USD 661 million. This mainly resulted from lower Investor Client Services and Corporate Client Solutions revenues, reflecting lower levels of client activity and declines in the global fee pool, partly offset by lower operating expenses.

Revenues in Corporate Client Solutions decreased by USD 310 million, or 21%, to USD 1,193 million, as a result of significantly lower levels of market activity and significantly reduced private transaction revenues, particularly in Equity Capital Markets, compared with the strong first half of 2018.

Advisory revenues increased by USD 12 million to USD 377 million, reflecting higher revenues from merger and acquisition transactions, against a global fee pool decrease of 13%, partly offset by lower revenues from private transactions.

Equity Capital Markets revenues decreased 28% from USD 503 million to USD 361 million, largely driven by lower revenues from private transactions, as well as lower revenues from public offerings, against a decline in the global fee pool of 22%.

Debt Capital Markets revenues decreased to USD 318 million from USD 426 million, mainly reflecting lower leveraged finance revenues against a global fee pool decrease of 29%. Financing Solutions revenues decreased to USD 126 million from USD 151 million, reflecting lower levels of client activity across most products.

Risk Management revenues decreased to USD 11 million from USD 58 million, mainly driven by losses in a portfolio of loans that are being exited and lower gains on a restructured debt position.

Investor Client Services revenues decreased by USD 427 million, or 14%, to USD 2,668 million, reflecting lower revenues across Equities and Foreign Exchange, Rates and Credit.

Equities revenues decreased by USD 351 million to USD 1,823 million. Cash revenues decreased to USD 591 million from USD 661 million, mainly reflecting lower client activity levels. Derivatives revenues decreased to USD 513 million from USD 642 million, reflecting the very strong first quarter of 2018 and lower client activity levels. Financing Services revenues decreased to USD 737 million from USD 885 million, reflecting lower client activity level across most products.

Foreign Exchange, Rates and Credit revenues decreased to USD 845 million from USD 920 million, primarily as the second quarter of 2018 included net income of around USD 100 million consisting mainly of previously deferred day-1 profits that were subsequently recognized as a result of enhanced observability and revised valuations in the funding curve used to value UBS interest rate-linked notes. Excluding this, Foreign Exchange, Rates and Credit revenues increased 3%. The first half of 2019 included a gain of USD 68 million on our investment in TradeWeb, which was sold in the second quarter of 2019, compared with mark-to-market gains of USD 22 million recognized in the first half of 2018.

Total operating expenses decreased by USD 263 million, or 8%, to USD 3,202 million, and adjusted operating expenses decreased by USD 212 million, or 6%, to USD 3,175 million. Personnel expenses decreased to USD 1,499 million from USD 1,731 million, and adjusted personnel expenses decreased to USD 1,497 million from USD 1,723 million, mainly reflecting lower variable compensation expenses. General and administrative expenses decreased to USD 284 million from USD 297 million and on an adjusted basis decreased to USD 280 million from USD 292 million. Net expenses for services to / from Corporate Center and other business divisions decreased to USD 1,412 million from USD 1,428 million, mainly as higher expenses from Group Technology were more than offset by lower expenses from strategic and regulatory initiatives and other services. Excluding restructuring expenses, adjusted net expenses increased to USD 1,391 million from USD 1,363 million, mainly driven by higher expenses from Group Technology.

¹ Prior-year comparative figures in this table have been restated for the changes in Corporate Center cost and resource allocation to the business divisions and the changes in the equity attribution framework effective 1 January 2019. Refer to "Note 2 Segment reporting" in the "Consolidated financial statements" section of this report for more information on the changes to the Corporate Center cost and resource allocation to business divisions and to the "Recent developments" section in our first quarter 2019 report for more information on the changes in the equity attribution framework. Comparatives may additionally differ as a result of adjustments following organizational changes, restatements due to the retrospective adoption of new accounting standards or changes in accounting policies, and events after the reporting period. ² Adjusted results are non-GAAP financial measures as defined by SEC regulations. ³ Reflects restructuring expenses related to legacy cost programs. ⁴ Refer to the "Capital management" section of this report for more information.

Results: 2Q19 vs 2Q18

Corporate Center recorded a loss before tax of USD 56 million compared with a loss of USD 233 million in the prior-year quarter, and an adjusted loss before tax of USD 65 million compared with a loss of USD 238 million.

We continue to expect Corporate Center to average a loss before tax of around USD 250 million per quarter in the second half of 2019, excluding gains, losses, income or expense from accounting asymmetries, hedge accounting ineffectiveness and litigation.

Operating income

Operating income was negative USD 30 million compared with negative USD 73 million. An increase in net treasury income of USD 156 million was partly offset by lower net income from Non-core and Legacy Portfolio and a decrease in other Corporate Center revenues.

Net treasury income

The net treasury income result was positive USD 39 million compared with negative USD 117 million. Excluding net foreign currency translation gains of USD 10 million, adjusted operating income was positive USD 29 million compared with negative USD 117 million.

Net treasury income included negative revenues of USD 69 million relating to centralized Group Treasury risk management services, compared with negative revenues of USD 64 million. Income related to hedge accounting ineffectiveness was positive USD 87 million compared with negative USD 16 million. Revenues from accounting asymmetries were positive USD 13 million compared with negative USD 33 million.

Operating income from Non-core and Legacy Portfolio

The operating income from Non-core and Legacy Portfolio was USD 61 million compared with USD 99 million. The second quarter of 2019 included a gain of USD 38 million related to the settlement of a litigation claim and income of USD 14 million related to a claim on a defaulted counterparty position. The second quarter of 2018 included valuation gains of USD 89 million on financial assets measured at fair value through profit and loss.

Operating expenses

Total operating expenses remaining in Corporate Center after allocations were USD 26 million compared with USD 160 million, and USD 25 million on an adjusted basis compared with USD 165 million, mainly related to a net release of USD 14 million of provisions for litigation, regulatory and similar matters compared with a net expense of USD 78 million and the allocation of the funding costs recorded under operating income.

Results: 6M19 vs 6M18

Corporate Center recorded a loss before tax of USD 71 million, compared with a loss of USD 325 million. The first quarter of 2018 included a credit of USD 122 million related to changes to our Swiss pension plan. On an adjusted basis, Corporate Center recorded a loss before tax of USD 82 million compared with USD 448 million.

Total operating income was positive USD 17 million compared with negative USD 174 million. An increase in net treasury income of USD 411 million was partly offset by lower net income from Non-core and Legacy Portfolio and a decrease in other Corporate Center revenues, driven mainly by higher funding costs relating to Corporate Center balance sheet assets, most of which were allocated to the business divisions through the line "Services (to) / from business divisions."

The net treasury income result was positive USD 163 million in the first half of 2019 compared with negative USD 248 million. Excluding net foreign currency translation gains of USD 10 million, adjusted operating income was positive USD 153 million compared with negative USD 248 million.

Net treasury income included negative revenues of USD 88 million relating to centralized Group Treasury risk management services, compared with negative revenues of USD 152 million. Income related to hedge accounting ineffectiveness was positive USD 147 million compared with negative USD 71 million. Revenues from accounting asymmetries were positive USD 94 million compared with negative USD 28 million.

The operating income from Non-core and Legacy Portfolio was USD 108 million compared with USD 149 million. The first half of 2019 included a gain related to the settlement of a litigation claim, valuation gains on financial assets measured at fair value through profit and loss, and income related to a claim on a defaulted counterparty position.

Total operating expenses remaining in Corporate Center after allocations were USD 88 million compared with USD 151 million and USD 89 million compared with USD 274 million on an adjusted basis, reflecting the aforementioned credit related to litigation, regulatory and similar matters and the allocation of the funding costs recorded under operating income.

Personnel: 2Q19 vs 1Q19

As of 30 June 2019, Corporate Center employed 31,191 personnel (full-time equivalents), a net decrease of 29 compared with 31 March 2019. External staff decreased by 890 over the same period.

Risk management and control

This section provides information on key developments during the reporting period and should be read in conjunction with the "Risk management and control" section of our Annual Report 2018.

Credit risk

Total net credit loss expenses in the second quarter of 2019 were USD 12 million, mainly in Corporate Center – Non-core and Legacy Portfolio and Global Wealth Management, reflecting losses of USD 35 million from credit-impaired (stage 3) positions,

partly offset by USD 23 million of releases in expected credit losses from stage 1 and 2 positions.

Overall credit risk exposures were broadly unchanged during the second quarter of 2019.

We continue to seek to manage our Swiss lending portfolios prudently and remain watchful for signs of deterioration that could affect our counterparties.

Within the Investment Bank, our leveraged loan underwriting business's overall ability to distribute risk remained robust. Loan underwriting exposures are held for trading, with fair values reflecting the market conditions at the end of the quarter.

Market risk

We continued to manage market risks at generally low levels of management value-at-risk (VaR). Average management VaR (1-day, 95% confidence level) remained unchanged, at USD 11 million, compared with the first quarter of 2019. Average regulatory VaR and stressed VaR decreased slightly in the second quarter.

There were no Group VaR negative backtesting exceptions in the second quarter of 2019, and the total number of negative backtesting exceptions within the most recent 250-business-day window decreased, from 2 to 1. The FINMA VaR multiplier for market risk RWA was unchanged compared with the prior quarter, at 3.

Management value-at-risk (1-day, 95% confidence, 5 years of historical data) of our business divisions and Corporate Center by general market risk type¹

<i>USD million</i>	Min.	Max.	Period end	Average	Average by risk type				
					Equity	Interest rates	Credit spreads	Foreign exchange	Commodities
Global Wealth Management	1	1	1	1	0	1	1	0	0
Personal & Corporate Banking	0	0	0	0	0	0	0	0	0
Asset Management	0	0	0	0	0	0	0	0	0
Investment Bank	8	13	11	10	7	7	4	3	2
Corporate Center	4	8	5	5	1	5	2	1	0
Diversification effect ^{2,3}			(4)	(4)	(1)	(4)	(2)	(1)	0
Total as of 30.6.19	9	15	12	11	7	9	4	4	2
Total as of 31.3.19	7	15	15	11	6	8	4	4	2

¹ Statistics at individual levels may not be summed to deduce the corresponding aggregate figures. The minima and maxima for each level may occur on different days, and, likewise, the VaR for each business line or risk type, being driven by the extreme loss tail of the corresponding distribution of simulated profits and losses for that business line or risk type, may well be driven by different days in the historical time series, rendering invalid the simple summation of figures to arrive at the aggregate total. ² Difference between the sum of the standalone VaR for the business divisions and Corporate Center and the VaR for the Group as a whole. ³ As the minimum and maximum occur on different days for different business divisions and Corporate Center, it is not meaningful to calculate a portfolio diversification effect.

Changes to our interest rate risk in the banking book (IRRBB) disclosure

Based on the 2016 standards of the Basel Committee on Banking Supervision, FINMA published a revised circular on the minimum standards for the measurement, management, monitoring and control of interest rate risks in the banking book (IRRBB). This circular came into effect in January 2019 with the first enhanced Pillar 3 disclosure to be provided for the period ended 30 June 2019 in our 30 June 2019 Pillar 3 report, which will be available as of 27 August 2019 under "Pillar 3 disclosures" at www.ubs.com/investors. The new IRRBB regulation is centered around two complementary metrics:

- an economic value of equity (EVE)-based measure for changes in the theoretical present value of the banking book, which represents pro-forma information; and
- an earnings-based measure for assessing the sensitivity of the net interest income (NII) of the banking book to changes in interest rates.

The EVE sensitivity, which excludes equity, goodwill, real estate and additional tier 1 (AT1) capital instruments, is assessed under six regulatory rate-shock scenarios defined by FINMA in Circular 2019/2 *Interest Rate Risk – Banks*, which are currency-specific and not subject to flooring. Disclosure of the NII sensitivity is only required for the two parallel shock scenarios.

USD Scenarios ¹	Description
Parallel up	rates for all tenors move by +200 bps
Parallel down	rates for all tenors move by –200 bps
Steeper	front-end moves by –195 bps, long-end by +134 bps
Flattener	front-end moves by +240 bps, long-end by –89 bps
Short-term up	front-end moves by +300 bps, long-end by +1 bp
Short-term down	front-end moves by –300 bps, long-end by –1 bp

¹ The six scenarios for other currencies have a similar shape, but different magnitude: the parallel shocks are 150 basis points for CHF, 200 basis points for EUR, and 250 basis points for GBP. The term "front-end" stands for overnight tenor and "long-end" for a 20-year tenor of the yield curve. Refer to FINMA Circular 2019/2 for more information.

As of 30 June 2019, the interest rate sensitivity of our banking book to a +1 basis point parallel shift in yield curves was negative USD 22.2 million and excludes additional tier 1 capital instruments (AT1) as per FINMA Pillar 3 disclosure requirements. The interest rate sensitivity also excludes our equity, goodwill and real estate with a modelled sensitivity of approximately USD 4 million per basis point in Swiss francs and USD 14 million per basis point in US dollars. The disclosures provided in the "Risk management and control" section of previous reports included the sensitivities of these exposures.

The most adverse of the six FINMA interest rate scenarios was the "Parallel up" scenario (+200 basis points for US dollar and +150 basis points for Swiss francs) resulting in a change of the economic value of equity of the banking book of negative USD 4.5 billion, representing a pro-forma effect equal to 9.0% of tier 1 capital, which is well below a threshold of 15% of tier 1 capital of the regulatory outlier test in the IRRBB regulation. The

immediate effect of the "Parallel up" scenario on tier 1 capital as of 30 June 2019 would be a reduction of 0.5%, or USD 0.2 billion, relating to the part of our banking book that is measured at fair value through profit or loss with recognition in eligible capital and a positive effect from pension funds.

Furthermore, this scenario would have a positive effect on net interest income.

- Refer to "Interest rate risk in the banking book" in the "Market risk" section of our Annual Report 2018 for more information on the management of interest rate risk in the banking book
- Refer to "Sensitivity to interest rate movements" in the "Group performance" section of this report for more information on the effect of increases in interest rates on equity, capital and net interest income of Global Wealth Management and Personal & Corporate Banking
- Refer to the 30 June 2019 Pillar 3 report, which will be available as of 27 August 2019 under "Pillar 3 disclosures" at www.ubs.com/investors

Risk management and control

Country risk

We remain watchful of developments in Europe and political shifts in a number of countries. Our direct exposure to peripheral European countries is limited, although we have significant country risk exposure to major European economies, including the UK, Germany and France. The UK's process of withdrawing from the EU, as well as Italy's budget deficit and tensions between Italy and the EU remain areas of concern.

We are closely monitoring the growing risks stemming from ongoing US trade policy shifts, and their potential effect on key markets, economies and countries.

We also continue to closely monitor our direct exposure to China. In addition, a number of emerging markets are facing economic, political and market pressures. Our exposure to emerging market countries is well diversified.

→ Refer to the "Risk management and control" section of our Annual Report 2018 for more information

Operational risk

Operational resilience, conduct and culture, and financial crime continue to be the pervasive consequential risk themes challenging both UBS and the wider financial industry.

Operational resilience remains a key focus for the firm, as we continually enhance our ability to respond to disruptions and maintain effective day-to-day business activities. Cybersecurity and data protection are critical elements of operational resilience, and our cybersecurity objectives are set in line with prevailing international standards, while our data protection standards are intended to align with applicable data protection regulations and standards. We are investing in preemptive and detective measures to defend against evolving and highly sophisticated cyberattacks, to achieve our objectives and meet applicable standards. Our investment priorities focus on increasing readiness to detect and respond to cyber threats and data loss, employee training and behaviors, and application and infrastructure security (including vulnerability management).

Financial crime (including money laundering, terrorist financing, sanctions violations, fraud, bribery and corruption) continues to present a risk, as technological innovation and geopolitical developments increase the complexity of doing business and heightened regulatory attention persists. An effective financial crime prevention program remains essential for the firm. Money laundering and financial fraud techniques

are becoming increasingly sophisticated, while geopolitical volatility makes the sanctions landscape more complex. We continue to invest heavily in our detection capabilities and core systems as part of our financial crime prevention program, with a focus on improving these to meet regulatory expectations, including to address the requirements of the May 2018 cease and desist order issued by the Office of the Comptroller of the Currency relating to our US branch know-your-customer and AML programs.

Management of conduct risk is an integral part of our operational risk framework. In addition to that framework, our two areas of focus when managing conduct risk are enhancing management information and improving our effectiveness at identifying and remediating operational risk. Conduct-related management information is reviewed at the business and regional governance level, providing metrics on employee conduct, clients and markets. Furthermore, we continue to pursue behavioral initiatives, such as the "Principles of Good Supervision," and to provide mandatory compliance and risk training.

We maintain our focus on regulatory reporting, updating our regulatory process management framework and enhancing our regulatory developments tracking, as well as continuing to enhance our operational risk framework (ORF) assessment processes, including legal entity reporting, to meet evolving regulatory expectations.

Balance sheet, liquidity and funding management

Strategy, objectives and governance

This section provides balance sheet, liquidity and funding management information and should be read in conjunction with the "Treasury management" section of our Annual Report 2018, which provides more information about the Group's strategy, objectives and governance in connection with liquidity and funding management.

Balances disclosed in this section represent quarter-end positions, unless indicated otherwise. Intra-quarter balances fluctuate in the ordinary course of business and may differ from quarter-end positions.

Assets and liquidity management

Balance sheet assets (30 June 2019 vs 31 March 2019)

As of 30 June 2019, balance sheet assets totaled USD 969 billion, an increase of USD 12 billion from 31 March 2019.

Total assets excluding derivatives and cash collateral receivables on derivative instruments increased by USD 3 billion to USD 823 billion, mainly driven by increases in trading portfolio assets and other financial assets measured at amortized cost and fair value. This was partly offset by decreases in cash and balances at central banks and receivables from securities financing transactions held at amortized cost.

Trading portfolio assets increased by USD 11 billion, mainly in the Investment Bank, largely reflecting the unwinding of short positions in our Equities business. Other financial assets measured at amortized cost and fair value increased by USD 8 billion, predominantly driven by an increase in receivables from securities financing transactions measured at fair value as a result of client activities, and a transfer from cash into debt securities measured at fair value within our high-quality liquid assets (HQLA) portfolio.

These increases were partly offset by a USD 9 billion reduction in cash and balances at central banks, mainly as a result of increased funding consumption by the business divisions, particularly the Investment Bank, and maturities of short-term borrowings. Receivables from securities financing transactions held at amortized cost decreased by USD 7 billion, mainly reflecting lower sourcing requirements for non-cash collateral within Group Treasury.

Derivatives and cash collateral receivables on derivative instruments increased by USD 9 billion, primarily due to mark-to-market effects on derivatives held and higher embedded spreads on new trades compared with those rolling off in our Foreign Exchange, Rates and Credit business in the Investment Bank.

→ Refer to the "Consolidated financial statements" section of this report for more information

Balance sheet, liquidity and funding management

Liquidity coverage ratio

In the second quarter of 2019, the UBS Group liquidity coverage ratio (LCR) decreased by 8 percentage points to 145%, remaining above the 110% Group LCR minimum communicated by the Swiss Financial Market Supervisory Authority (FINMA). The LCR decrease was primarily driven by decreased high-quality

liquid assets resulting from lower average cash balances, reflecting increased funding consumption by the business divisions over the quarter.

→ **Refer to the “Treasury management” section of our Annual Report 2018 for more information on liquidity management and the liquidity coverage ratio**

¹ Calculated based on an average of 65 data points in the second quarter of 2019 and 63 data points in the first quarter of 2019. ² Calculated after the application of haircuts. ³ Includes cash and balances at central banks and other eligible balances as prescribed by FINMA. ⁴ Calculated in accordance with FINMA requirements. ⁵ Calculated after the application of inflow and outflow rates.

Liabilities and funding management**Liabilities (30 June 2019 vs 31 March 2019)**

Total liabilities increased by USD 13 billion to USD 915 billion as of 30 June 2019. Total liabilities excluding derivatives and cash collateral were broadly unchanged at USD 763 billion as of 30 June 2019.

Customer deposits increased by USD 7 billion, primarily in Global Wealth Management and Personal & Corporate Banking, mainly driven by currency effects.

This increase was offset by a reduction in short-term borrowings of USD 7 billion, mainly reflecting net maturities of commercial paper and certificates of deposit.

Derivatives and cash collateral payables on derivative instruments increased by USD 11 billion, in line with the aforementioned increase in derivative financial assets and cash collateral receivables.

The “Funding by product and currency” table in this section provides more information on our funding sources.

→ **Refer to the “Consolidated financial statements” section of this report for more information**

Equity

Equity attributable to shareholders decreased to USD 53,180 million as of 30 June 2019 from USD 53,667 million as of 31 March 2019.

Total comprehensive income attributable to shareholders was USD 2,478 million, reflecting net profit of USD 1,392 million and positive other comprehensive income (OCI) of USD 1,086 million. OCI included positive cash flow hedge OCI of USD 773 million, positive foreign currency translation OCI of USD 168 million, positive OCI related to own credit of USD 72 million, positive OCI related to debt instruments measured at fair value through OCI of USD 65 million and positive defined benefit plan OCI of USD 8 million.

Share premium decreased by USD 2,333 million, mainly due to the distribution of USD 2,544 million to shareholders out of the capital contribution reserve of UBS Group AG, partly offset by the amortization of deferred share-based compensation awards, which increased share premium by USD 174 million.

Net treasury share activity reduced equity attributable to shareholders by USD 633 million. This was largely due to the purchase of USD 382 million of shares from the market to hedge future share delivery obligations related to employee share-based compensation awards as well as repurchases of USD 297 million under our share repurchase program.

- Refer to the “Consolidated financial statements” and “Group performance” sections of this report for more information
- Refer to “UBS shares” in the “Capital management” section of this report for more information on the share repurchase program

¹ Consists of short-term debt issued measured at amortized cost and amounts due to banks. ² Consists of long-term debt issued measured at amortized cost and debt issued designated at fair value. The classification of debt issued into short-term and long-term does not consider any early redemption features. ³ Consists of financial liabilities at fair value held for trading. ⁴ Consists of other financial liabilities measured at amortized cost and other financial liabilities designated at fair value, but excludes financial liabilities related to unit-linked investment contracts. ⁵ Excludes defined benefit plans and own credit that are recorded directly in Retained earnings.

Balance sheet, liquidity and funding management

Off-balance sheet¹

USD billion	As of		% change from 31.3.19
	30.6.19	31.3.19	
Total guarantees ²	15.7	16.5	(5)
Loan commitments ²	30.8	33.6	(8)
Forward starting reverse repurchase agreements	34.3	31.3	10
Forward starting repurchase agreements	18.8	16.0	18

¹ The information provided in this table is aligned with the scope disclosed in "Note 17 Guarantees, commitments and forward starting transactions" in the "Consolidated financial statements" section of this report. ² Total guarantees and Loan commitments are shown net of sub-participations.

Off-balance sheet (30 June 2019 vs 31 March 2019)

Forward starting reverse repurchase agreements and forward starting repurchase agreements each increased by USD 3 billion, primarily in Corporate Center, reflecting higher market activity in short-dated securities financing transactions. Guarantees decreased by USD 1 billion, primarily in Global Wealth

Management and in the Investment Bank. Loan commitments decreased by USD 3 billion, primarily in our Corporate Client Solutions business in the Investment Bank, mainly reflecting commitments that were cancelled, reduced or funded during the quarter.

Pro forma net stable funding ratio

USD billion, except where indicated	30.6.19	31.3.19
Available stable funding	483	474
Required stable funding	435	432
Pro forma net stable funding ratio (%)	111	110

Net stable funding ratio

As of 30 June 2019, our estimated pro forma net stable funding ratio (NSFR) was 111%, an increase of 1 percentage point compared with 31 March 2019, primarily reflecting a USD 9 billion increase in available stable funding, mainly driven by an increase in deposits, and a USD 3 billion increase in required stable funding, mainly due to an increase in trading assets.

The calculation of our pro forma NSFR includes estimates of the effect of the Basel Committee on Banking Supervision rules and will be refined when NSFR rule-making is completed in Switzerland and as regulatory interpretations evolve and new models and associated systems are enhanced.

→ Refer to the "Treasury management" section of our Annual Report 2018 for more information on the net stable funding ratio

¹ Short-term debt issued is comprised of certificates of deposit, commercial paper, acceptances and promissory notes, and other money market paper. ² Long-term debt issued also includes debt with a remaining time to maturity of less than one year.

Capital management

This section provides information on key developments during the reporting period and should be read in conjunction with the “Capital management” section of our Annual Report 2018, which provides more information about our strategy, objectives and governance for capital management. Disclosures in this section are provided for UBS Group AG on a consolidated basis and focus on information in accordance with the Basel III framework, as applicable to Swiss systemically relevant banks (SRBs).

Information in accordance with the Basel Committee on Banking Supervision framework for UBS Group AG consolidated together with capital and other regulatory information for UBS AG standalone, UBS Switzerland AG standalone, UBS Europe SE consolidated and UBS Americas Holding LLC consolidated is provided in our 30 June 2019 Pillar 3 report, which will be available as of 27 August 2019 under “Pillar 3 disclosures” at www.ubs.com/investors.

Capital and other regulatory information for UBS AG consolidated is provided in the UBS AG second quarter 2019 report, which will be available as of 26 July 2019 under “Quarterly reporting” at www.ubs.com/investors.

Swiss SRB requirements and information

Information on the Swiss SRB capital framework and on Swiss SRB going and gone concern requirements that are being phased in until the end of 2019 is provided in the "Capital management" section of our Annual Report 2018. These requirements are also applicable to UBS AG consolidated and UBS Switzerland AG standalone. UBS AG is subject to going concern requirements on a standalone basis, for which details are provided in the 31 December 2018 Pillar 3 report, which is

available under "Pillar 3 disclosures" at www.ubs.com/investors, and in our 30 June 2019 Pillar 3 report, which will be available as of 27 August 2019 under "Pillar 3 disclosures" at www.ubs.com/investors.

The table below provides the risk-weighted assets (RWA)- and leverage ratio denominator (LRD)-based requirements and information as of 30 June 2019.

¹ Includes applicable add-ons of 1.44% for RWA and 0.5% for LRD. ² Includes outstanding low-trigger loss-absorbing additional tier 1 (AT1) and tier 2 capital instruments, which are available under the transitional rules of the Swiss SRB framework to meet the going concern requirements until their first call date, even if the first call date is after 31 December 2019. As of their first call date, these instruments are eligible to meet the gone concern requirements. Outstanding low-trigger loss-absorbing tier 2 capital instruments are subject to amortization starting five years prior to their maturity, with the amortized portion qualifying as gone concern loss-absorbing capacity. Instruments available to meet gone concern requirements are eligible until one year before maturity, with a haircut of 50% applied in the last year of eligibility.

Total loss-absorbing capacity

The table below provides Swiss SRB going and gone concern information based on transitional arrangements and based on the final rules, which will be effective as of 1 January 2020. The remaining differences between the columns "Swiss SRB, including transitional arrangements" and "Swiss SRB as of 1.1.20" are fully related to the eligibility of instruments as

required by the too big to fail provisions in the Swiss Capital Adequacy Ordinance applicable to Swiss SRBs, which are described in the "Swiss SRB total loss-absorbing capacity framework" in the "Capital management" section of our Annual Report 2018.

¹ Under the transitional rules of the Swiss SRB framework, outstanding low-trigger loss-absorbing tier 2 capital instruments are subject to amortization starting five years prior to their maturity, with the amortized portion qualifying as gone concern loss-absorbing capacity. ² Instruments available to meet gone concern requirements are eligible until one year before maturity, with a haircut of 50% applied in the last year of eligibility. ³ Non-Basel III-compliant tier 2 capital instruments qualify as gone concern instruments.

Capital management

Total loss-absorbing capacity and movement under Swiss SRB rules applicable as of 1 January 2020**Going concern capital and movement**

As of 30 June 2019, our common equity tier 1 (CET1) capital increased by USD 0.3 billion to USD 34.9 billion, mainly as a result of operating profit before tax and foreign currency translation effects, partly offset by accruals for capital returns to shareholders, compensation-related regulatory capital accruals, share repurchases under our share repurchase program and current tax expense.

→ Refer to “UBS shares” in this section for more information on the share repurchase program

Gone concern loss-absorbing capacity and movement

Our total gone concern loss-absorbing capacity decreased by USD 0.7 billion to USD 37.4 billion, primarily as a result of a decrease in the eligibility of two total loss-absorbing capacity (TLAC)-eligible senior unsecured debt instruments of which the residual tenor fell to below two years.

→ Refer to “Bondholder information” at www.ubs.com/investors for more information on the eligibility of capital and senior unsecured debt instruments and on key features and terms and conditions of capital instruments

Loss-absorbing capacity and leverage ratios

Our CET1 capital ratio increased 0.4 percentage points to 13.3%, reflecting the aforementioned USD 0.3 billion increase in CET1 capital and a USD 5.4 billion decrease in risk-weighted assets (RWA).

Our CET1 leverage ratio increased to 3.83% from 3.80% in the second quarter of 2019, reflecting the aforementioned increase in CET1 capital.

Our gone concern loss-absorbing capacity ratio increased to 14.3% from 14.2%, mainly driven by the aforementioned decrease in RWA. Our gone concern leverage ratio decreased 0.1 percentage points to 4.1%, reflecting the aforementioned decrease in gone concern loss-absorbing capacity.

Capital management

Additional information**Sensitivity to currency movements***Risk-weighted assets*

We estimate that a 10% depreciation of the US dollar against other currencies would increase our RWA by USD 11 billion and our CET1 capital by USD 1.1 billion as of 30 June 2019 (31 March 2019: USD 11 billion and USD 1.2 billion, respectively) and reduce our CET1 capital ratio by 13 basis points (31 March 2019: 9 basis points). Conversely, we estimate that a 10% appreciation of the US dollar against other currencies would reduce our RWA by USD 10 billion and our CET1 capital by USD 1.0 billion (31 March 2019: USD 10 billion and USD 1.1 billion, respectively) and increase our CET1 capital ratio by 13 basis points (31 March 2019: 9 basis points).

Leverage ratio denominator

We estimate that a 10% depreciation of the US dollar against other currencies would increase our LRD by USD 57 billion (31 March 2019: USD 58 billion) and reduce our Swiss SRB going concern leverage ratio by 18 basis points (31 March 2019: 18 basis points). Conversely, we estimate that a 10% appreciation of the US dollar against other currencies would have reduced our LRD by USD 52 billion (31 March 2019: USD 52 billion) and increase our Swiss SRB going concern leverage ratio by 19 basis points (31 March 2019: 18 basis points).

The aforementioned sensitivities do not consider foreign currency translation effects related to defined benefit plans other than those related to the currency translation of the net equity of foreign operations.

→ Refer to **“Active management of sensitivity to currency movements”** in the **“Capital management”** section of our **Annual Report 2018** for more information

Estimated effect on capital from litigation, regulatory and similar matters subject to provisions and contingent liabilities

We have estimated the loss in capital that we could incur as a result of the risks associated with the matters described in “Note 16 Provisions and contingent liabilities” in the “Consolidated financial statements” section of this report. We have used for this purpose the advanced measurement approach (AMA) methodology that we use when determining the capital requirements associated with operational risks, based on a 99.9% confidence level over a 12-month horizon. The methodology takes into consideration UBS and industry experience for the AMA operational risk categories to which those matters correspond, as well as the external environment affecting risks of these types, in isolation from other areas. On this standalone basis, we estimate the loss in capital that we could incur over a 12-month period as a result of our risks associated with these operational risk categories at USD 4.6 billion as of 30 June 2019. This estimate is not related to and does not take into account any provisions recognized for any of these matters and does not constitute a subjective assessment of our actual exposure in any of these matters.

- Refer to **“Operational risk”** in the **“Risk management and control”** section of our **Annual Report 2018** for more information
- Refer to **“Note 16 Provisions and contingent liabilities”** in the **“Consolidated financial statements”** section of this report for more information

Risk-weighted assets

During the second quarter of 2019, risk-weighted assets (RWA) decreased by USD 5.4 billion to USD 262.1 billion, reflecting decreases from asset size and other movements of USD 3.5 billion, methodology and policy changes of USD 1.9 billion and lower regulatory add-ons of USD 1.5 billion, partly offset by currency effects of USD 1.2 billion and increases from model updates of USD 0.3 billion.

Movement in risk-weighted assets by key driver

<i>USD billion</i>	RWA as of 31.3.19	Currency effects	Methodology and policy changes	Model updates / changes	Regulatory add-ons	Asset size and other ¹	RWA as of 30.6.19
Credit and counterparty credit risk ²	152.7	1.1	(1.9)	0.5		(3.4)	149.1
Non-counterparty-related risk	21.5	0.1				0.2	21.8
Market risk	13.0			(0.2)	(1.5)	(0.3)	11.0
Operational risk	80.3					0.0	80.3
Total	267.6	1.2	(1.9)	0.3	(1.5)	(3.5)	262.1

¹ Includes the Pillar 3 categories "Asset size," "Credit quality of counterparties," "Acquisitions and disposals" and "Other." For more information, refer to the 30 June 2019 Pillar 3 report, which will be available as of 27 August 2019 under "Pillar 3 disclosures" at www.ubs.com/investors. ² Includes settlement risk, credit valuation adjustments, equity exposures in the banking book and securitization exposures in the banking book.

Credit and counterparty credit risk

Credit and counterparty credit risk RWA decreased by USD 3.6 billion to USD 149.1 billion as of 30 June 2019.

The RWA decrease from asset size and other movements of USD 3.4 billion was mainly driven by decreases in loan exposures, margin loans and unutilized credit facilities in the Investment Bank's Corporate Client Solutions business.

The decrease from methodology and policy changes was predominantly driven by the exclusion of certain collar financing transactions in the Investment Bank from credit risk RWA due to their non-credit bearing nature.

The aforementioned decreases were partly offset by a USD 0.5 billion increase in RWA from model updates, driven by the continued phasing-in of RWA increases related to probability of default (PD) and loss given default (LGD) changes from the implementation of revised models for Swiss residential mortgages, affecting Personal & Corporate Banking and Global Wealth Management.

We anticipate that methodology changes and model updates, including the continued phase-in of RWA increases related to PD and LGD factors on Swiss mortgages, will increase credit and

counterparty credit risk RWA by around USD 1.5 billion in the second half of 2019. The extent and timing of RWA changes may vary as methodology changes and model updates are completed and receive regulatory approval, and as regulatory multipliers are adjusted. In addition, changes in the composition of the relevant portfolios and other factors will affect our RWA.

→ Refer to "Credit risk models" in the "Risk management and control" section of our Annual Report 2018 for more information

Market risk

Market risk RWA decreased by USD 2.0 billion in the second quarter of 2019, primarily driven by reduction from regulatory add-ons, reflecting updates from the monthly risks-not-in-VaR assessment.

→ Refer to the "Risk management and control" section of this report and the 30 June 2019 Pillar 3 report, which will be available as of 27 August 2019 under "Pillar 3 disclosures" at www.ubs.com/investors, for more information

→ Refer to "Market risk" within the "Risk management and control" section of our Annual Report 2018 for more information

Capital management

Operational risk

Operational risk RWA were USD 80.3 billion as of 30 June 2019, unchanged from 31 March 2019.

→ Refer to "Operational risk" in the "Risk management and control" section of our Annual Report 2018 for information on the advanced measurement approach model

Operational risk	0.0	0.0	0.0	0.0	0.0	0.0
Total	0.4	1.4	(0.2)	(6.7)	(0.4)	(5.5)

¹ Includes settlement risk, credit valuation adjustments, equity exposures in the banking book and securitization exposures in the banking book. ² Non-counterparty-related risk includes deferred tax assets recognized for temporary differences (30 June 2019: USD 8.9 billion; 31 March 2019: USD 8.7 billion), property, equipment and software (30 June 2019: USD 12.7 billion; 31 March 2019: USD 12.6 billion) and other items (30 June 2019: USD 0.3 billion; 31 March 2019: USD 0.2 billion).

Leverage ratio denominator

Leverage ratio denominator (LRD) remained stable at USD 911 billion in the second quarter of 2019, as the increase from currency effects was substantially offset by the decrease in asset size and other movements.

Movement in leverage ratio denominator by key driver

<i>USD billion</i>	LRD as of 31.3.19	Currency effects	Asset size and other	LRD as of 30.6.19
On-balance sheet exposures (excluding derivative exposures and SFTs) ¹	671.1	5.7	0.8	677.6
Derivative exposures	95.0	0.3	(2.3)	93.0
Securities financing transactions	132.1	0.2	(3.7)	128.7
Off-balance sheet items	26.3	0.2	(1.0)	25.5
Deduction items	(13.6)	0.0	0.2	(13.5)
Total	911.0	6.4	(6.0)	911.4

¹ Excludes positive replacement values, cash collateral receivables on derivative instruments, cash collateral on securities borrowed, reverse repurchase agreements, margin loans and prime brokerage receivables related to securities financing transactions, which are presented separately under Derivative exposures and Securities financing transactions in this table.

The LRD movements described below exclude currency effects.

Derivative exposures decreased by USD 2 billion, mainly as a result of client-driven reductions in cash collateral on derivative instruments within the Investment Bank's Equities business, and lower notional amounts for exchange-traded options in Global Wealth Management, resulting in lower add-on exposures under the current exposure method.

Securities financing transactions (SFTs) decreased by USD 4 billion, primarily reflecting the net decrease in Corporate Center whereby lower sourcing requirements for non-cash collateral were partly offset by client-driven increase in other financial assets at fair value not held for trading.

→ **Refer to the "Balance sheet, liquidity and funding management" section of this report for more information on balance sheet movements**

¹ Represents the difference between the IFRS and the regulatory scope of consolidation, which is the applicable scope for the LRD calculation. ² Consists of derivative financial instruments, cash collateral receivables on derivative instruments, receivables from securities financing transactions, and margin loans as well as prime brokerage receivables and financial assets at fair value not held for trading, both related to securities financing transactions, in accordance with the regulatory scope of consolidation, which are presented separately under Derivative exposures and Securities financing transactions.

Equity attribution and return on attributed equity

Under our equity attribution framework, tangible equity is attributed based on a weighting of 50% each for average risk weighted assets (RWA) and average leverage ratio denominator (LRD), which both include resource allocations from Corporate Center to the business divisions. Average RWA and LRD are converted to their common equity tier 1 (CET1) capital equivalents based on capital ratios of 12.5% and 3.75%, respectively. If the attributed tangible equity calculated under the weighted-driver approach is less than the CET1 capital equivalent of risk-based capital (RBC) for any business division, the CET1 capital equivalent of RBC is used as a floor for that business division.

Furthermore, we allocate to business divisions attributed equity that is related to certain CET1 deduction items, such as compensation-related components and the expected loss on advanced internal ratings-based portfolio less general provisions.

In addition to tangible equity, we allocate equity to our businesses to support goodwill and intangible assets.

We attribute all remaining Basel III capital deduction items to Corporate Center Group items. These deduction items include deferred tax assets (DTAs) recognized for tax loss carry-forwards and DTAs on temporary differences in excess of the threshold, which together constituted the largest component of Corporate Center Group items, dividend accruals and unrealized gains from cash flow hedges.

→ Refer to the “Capital management” section of our Annual Report 2018 for more information on the equity attribution framework

UBS shares

UBS Group AG shares are listed on the SIX Swiss Exchange (SIX). They are also listed on the New York Stock Exchange (NYSE) as global registered shares. Each share has a par value of CHF 0.10 per share.

Shares issued increased slightly in the second quarter of 2019, due to the issuance of shares out of conditional share capital upon exercise of employee share options.

Treasury shares totaled 199 million shares as of 30 June 2019, of which 72 million shares were acquired under our share repurchase program for cancellation purposes. The remaining shares are primarily held to hedge our share delivery obligations related to employee share-based compensation and participation plans and totaled 127 million shares as of 30 June 2019.

Treasury shares held increased by 53 million shares in the second quarter of 2019. This largely reflected the purchase of 32.5 million shares from the market to hedge future share delivery obligations related to employee share-based compensation awards as well as repurchases of 24.1 million shares under our share repurchase program. Since March 2018, when the share repurchase program was started, we have acquired 72.4 million shares for a total consideration of CHF 1,050 million (USD 1,059 million).

¹ Refer to "Note 9 Earnings per share (EPS) and shares outstanding" in the "Consolidated financial statements" section of this report for more information. ² Basic and diluted earnings per share in Swiss francs are calculated based on a translation of net profit / (loss) under our US dollar presentation currency. As a consequence of the restatement to a US dollar presentation currency, amounts may differ from those originally published in our quarterly and annual reports. ³ Represents the share price as listed on the SIX Swiss Exchange, translated to US dollars using the closing exchange rate as of the respective date. ⁴ Beginning with our Annual Report 2018, the calculation of market capitalization has been amended to reflect total shares outstanding multiplied by the share price at the end of the period. The calculation was previously based on total shares issued multiplied by the share price at the end of the period. Market capitalization has been reduced by USD 1.9 billion as of 30 June 2018 as a result.

¹ Includes dividends received from associates. ² USD 3,161 million and USD 4,078 million of cash and cash equivalents (mainly reflected in Loans and advances to banks) were restricted as of 30 June 2019 and 30 June 2018, respectively. Refer to "Note 26 Restricted and transferred financial assets" in the "Consolidated financial statements" section of the Annual Report 2018 for more information. ³ Money market paper is included in the balance sheet under Financial assets at fair value held for trading, Financial assets measured at fair value through other comprehensive income, Financial assets at fair value not held for trading and Other financial assets measured at amortized cost. ⁴ Includes dividends received from associates reported within Net cash flow from / (used in) investing activities.

Notes to the UBS Group AG interim consolidated financial statements (unaudited)

Note 1 Basis of accounting

Basis of preparation

The consolidated financial statements (the financial statements) of UBS Group AG and its subsidiaries (together "UBS" or "the Group") are prepared in accordance with International Financial Reporting Standards (IFRS), as issued by the International Accounting Standards Board (IASB), and are presented in US dollars (USD), which is also the functional currency of UBS Group AG, UBS AG's Head Office, UBS AG's London Branch and UBS's US-based operations. These interim financial statements are prepared in accordance with IAS 34, *Interim Financial Reporting*.

In preparing these interim financial statements, the same accounting policies and methods of computation have been applied as in the UBS Group AG consolidated annual financial statements for the period ended 31 December 2018, except for the changes described in this note. These interim financial statements are unaudited and should be read in conjunction with UBS Group AG's audited consolidated financial statements included in the Annual Report 2018. In the opinion of management, all necessary adjustments were made for a fair presentation of the Group's financial position, results of operations and cash flows.

Preparation of these interim financial statements requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, income, expenses and disclosures of contingent assets and liabilities. These estimates and assumptions are based on the best available information. Actual results in the future could differ from such estimates and such differences may be material to the financial statements. Revisions to estimates, based on regular reviews, are recognized in the period in which they occur. For more information on areas of estimation uncertainty that are considered to require critical judgment, refer to "Note 1a Significant accounting policies" in the "Consolidated financial statements" section of the Annual Report 2018.

Adoption of IFRS 16, *Leases*

Application and transition effect

Effective from 1 January 2019, UBS adopted IFRS 16, *Leases*, which replaced IAS 17, *Leases*, and sets out the principles for the recognition, measurement, presentation and disclosure of leases.

IFRS 16 introduces a single lessee accounting model and fundamentally changes how UBS accounts for operating leases when acting as a lessee, with a requirement to record a right-of-use asset and lease liability on the balance sheet. UBS is a lessee in a number of leases, primarily of real estate, including offices, retail branches and sales offices, with a smaller number of IT hardware leases. As permitted by the transitional provisions of IFRS 16, UBS elected to apply the modified retrospective approach and has not restated comparative figures. Overall, adoption of IFRS 16 resulted in a USD 3.5 billion increase in both total assets and total liabilities in UBS's consolidated financial statements. There was no effect on equity.

→ **Refer to the tables on the next page for more information**

UBS applied the following practical expedients that are permitted on transition to IFRS 16 where UBS is the lessee in a lease previously classified as an operating lease:

- to not reassess whether or not a contract contained a lease;
- to rely on previous assessments of whether such contracts were considered onerous;
- to rely on previous sale-and-leaseback assessments;
- to adjust lease terms with the benefit of hindsight with respect to whether extension or termination options are reasonably certain of being exercised;
- to discount lease liabilities using the Group's incremental borrowing rate in each currency as at 1 January 2019;
- to initially measure the right-of-use asset at an amount equal to the lease liability for leases previously classified as operating leases, adjusted for existing lease balances such as rent prepayments, rent accruals, lease incentives and onerous lease provisions, but excluding initial direct costs; and
- to not apply IFRS 16 to leases whose remaining term will end within 12 months from the transition date.

Note 1 Basis of accounting (continued)

The measurement of leases previously classified as finance leases, where UBS acts as lessee, has not changed on transition to IFRS 16. Similarly UBS has made no adjustments where UBS acts as lessor, in either a finance or operating lease, of physical assets it owns. Where UBS acts as an intermediate lessor, i.e., where UBS enters into a head lease and subleases the asset to a third party, the sublease has been classified as either a finance or operating

lease based primarily on whether the sublease term consumes the majority of the remaining useful life of the right-of-use asset arising from the head lease as at the transition date.

The following table reconciles the obligations in respect of operating leases as at 31 December 2018 to the opening lease liabilities recognized on 1 January 2019:

Reconciliation between operating lease commitments disclosed under IAS 17 and lease liabilities recognized under IFRS 16

<i>USD million</i>	
Total undiscounted operating lease commitments as of 31 December 2018	4,688
Leases with a remaining term of less than one year as of 1 January 2019	(18)
Excluded service components	(296)
Reassessment of lease term for extension or termination options	403
Total undiscounted lease payments	4,777
Discounted at a weighted average incremental borrowing rate of 3.07%	(744)
IFRS 16 transition adjustment	4,033
Finance lease liabilities as of 31 December 2018	24
Carrying amount of total lease liabilities as of 1 January 2019	4,057

The following table provides details on the determination of right-of-use assets on transition:

Determination of right-of-use (RoU) assets on transition

<i>USD million</i>	Carrying amount
Recognition of gross RoU assets upon adoption of IFRS 16 (IFRS 16 transition adjustment)	4,033
Offset by liabilities recognized as of 31 December 2018	(521)
<i>of which: other non-financial liabilities (lease incentives)</i>	<i>(204)</i>
<i>of which: other financial liabilities measured at amortized cost (rent accruals)</i>	<i>(185)</i>
<i>of which: provisions (onerous lease provisions)</i>	<i>(132)</i>
Increase in total assets resulting from the adoption of IFRS 16 on 1 January 2019¹	3,512
Reclassification of assets recognized as of 31 December 2018 as an addition to RoU assets	43
<i>of which: other financial assets measured at amortized cost (finance lease assets recognized under IAS 17 as of 31 December 2018)</i>	<i>24</i>
<i>of which: other non-financial assets (prepaid rent)</i>	<i>19</i>
Reclassification of finance lease receivables from subleases to other financial assets measured at amortized cost resulting in a reduction of RoU assets	(176)
Total right-of-use assets as of 1 January 2019 presented within Property, equipment and software	3,378

¹ Total liabilities increased by the same amount upon adoption of IFRS 16.

Lease liabilities are presented within *Other financial liabilities measured at amortized cost* and right-of-use assets within *Property, equipment and software*. Finance lease receivables are included within *Other financial assets measured at amortized cost*. Due to the practical expedients taken on transition, there was no effect on equity. The weighted average lease term at 1 January 2019 was approximately 9 years.

During the second quarter the depreciation charge for right-of-use assets presented within *Depreciation and impairment of property, equipment and software* was USD 119 million (first quarter of 2019: USD 118 million). The interest charge on lease

liabilities presented within *Interest expense from financial instruments measured at amortized cost* was USD 31 million (first quarter of 2019: USD 32 million) and other rent expenses (including non-lease components paid to landlords) presented within *General and administrative expenses* were USD 12 million (first quarter of 2019: USD 16 million). This compares with a total rent expense presented in *General and administrative expenses* of USD 149 million and USD 152 million for the quarters ended 30 June 2018 and 31 March 2018, respectively.

Note 1 Basis of accounting (continued)**Update to significant accounting policy – Leasing (disclosed in Note 1a item 15 Leasing in the financial statements 2018)**

UBS predominantly enters into lease contracts, or contracts that include lease components, as a lessee of real estate, including offices, retail branches and sales offices, with a small number of IT hardware leases. UBS identifies non-lease components of a contract and accounts for them separately from lease components.

When UBS is lessee in a lease arrangement, UBS recognizes a lease liability and corresponding right-of-use (RoU) asset at the commencement of the lease term when UBS acquires control of the physical use of the asset. Lease liabilities are presented within *Other financial liabilities measured at amortized cost* and RoU assets within *Property, equipment and software*. The lease liability is measured based on the present value of the lease payments over the lease term, discounted using UBS's unsecured borrowing rate given the rate implicit in a lease is generally not observable to the lessee. Interest expense on the lease liability is presented within *Interest expense from financial instruments measured at amortized cost*. The RoU asset is recorded at an amount equal to the lease liability but is adjusted for rent prepayments, initial direct costs, any costs to refurbish the leased asset or lease incentives received. The RoU asset is depreciated over the shorter of the lease term or the useful life of the underlying asset, with the depreciation presented within *Depreciation and impairment of property, equipment and software*.

Lease payments generally include fixed payments and variable payments that depend on an index (such as an inflation index). When the lease contains an extension or termination option that the Group considers reasonably certain to be exercised, the expected rental payments or costs of termination are included within the lease payments used to generate the lease liability. UBS does not typically enter into leases with purchase options or residual value guarantees.

Where UBS acts as lessor or sublessor under a finance lease, a receivable is recognized in *Other financial assets measured at amortized cost* at an amount equal to the present value of the aggregate of the lease payments plus any unguaranteed residual value that UBS expects to recover at the end of the lease term. Initial direct costs are also included in the initial measurement of the lease receivable. Lease payments received during the lease term are allocated as repayments of the outstanding receivable. Interest income reflects a constant periodic rate of return on UBS's net investment using the interest rate implicit in the lease (or, for subleases, the rate for the head lease). UBS reviews the estimated unguaranteed residual value annually, and if the

estimated residual value to be realized is less than the amount assumed at lease inception, a loss is recognized for the expected shortfall. Where UBS acts as a lessor or sublessor in an operating lease, UBS recognizes the operating lease income on a straight-line basis over the lease term.

Lease receivables are subject to impairment requirements as set out in point g. in "Note 1a item 3 Financial instruments." Expected credit losses (ECL) on lease receivables are determined following the general impairment model within IFRS 9, *Financial Instruments*, without utilizing the simplified approach of always measuring impairment at the amount of lifetime ECL.

Other changes to accounting policies**Changes in Corporate Center segment reporting, cost and resource allocation to business divisions**

Effective from 1 January 2019, UBS made changes to Corporate Center segment reporting, as well as cost and resource allocation to business divisions.

→ Refer to "Note 2 Segment reporting" for more information

Presentation of dividend income and expense from financial instruments measured at fair value through profit or loss

Effective from 1 January 2019, UBS refined the presentation of dividend income and expense. This resulted in a reclassification of dividends from *Interest income (expense) from financial instruments measured at fair value through profit or loss* into *Other net income from financial instruments measured at fair value through profit or loss* (prior to 1 January 2019: *Other net income from fair value changes on financial instruments*). The change aligns the presentation of dividends with related fair value changes from the equity instruments and economic hedges removing volatility that has historically arisen within both *Net interest income* and *Other net income from fair value changes on financial instruments*. There is no effect on *Total operating income* or *Net profit / (loss)*. Prior periods have been restated for this presentational change and the effect on the respective reporting lines is outlined in the table below.

Refer to "Note 1d International Financial Reporting Standards and Interpretations to be adopted in 2019 and later and other changes" in the "Consolidated financial statements" section of the Annual Report 2018 for further details on standards adopted by UBS from 1 January 2019, none of which had a material effect on the Group's financial statements.

Changes to the presentation of dividend income and expense from financial instruments measured at fair value through profit or loss

USD million	For the quarter ended				Year-to-date
	31.3.18	30.6.18	30.9.18	31.12.18	31.12.18

Interest expense from financial instruments measured at fair value through profit or loss	160	846	175	151	1,331
Net interest income	(412)	210	(524)	(250)	(976)
Other net income from financial instruments measured at fair value through profit or loss	412	(210)	524	250	976

Note 2 Segment reporting

Overview and changes in Corporate Center segment reporting

UBS's businesses are organized globally into four business divisions: Global Wealth Management, Personal & Corporate Banking, Asset Management and the Investment Bank. All four business divisions are supported by Corporate Center and qualify as reportable segments for the purpose of segment reporting. Together with Corporate Center they reflect the management structure of the Group.

→ Refer to "Note 1a Significant accounting policies item 2" and "Note 2 Segment reporting" in the "Consolidated financial statements" section of the Annual Report 2018 for more information on the Group's reporting segments

As a consequence of a substantial reduction in the size and resource consumption of the Non-core and Legacy Portfolio and following the changes to UBS's methodology for allocating funding costs and expenses from Corporate Center – Services and Corporate Center – Group Asset and Liability Management to the business divisions, beginning with the first quarter 2019 report, UBS provides results for total Corporate Center only and does not separately report Corporate Center – Services, Group Asset and Liability Management and Non-core and Legacy Portfolio.

Changes in Corporate Center cost and resource allocation to business divisions

In order to further align Group and divisional performance, UBS has adjusted its methodology for the allocation of Corporate

Center funding costs and expenses to the business divisions. At the same time, it has updated its funds transfer pricing framework to better reflect the sources and usage of funding. Prior-period information for the six months ended 30 June 2018 has been restated, resulting in a decrease in *Operating profit / (loss) before tax* for Global Wealth Management of USD 184 million, for Personal & Corporate Banking of USD 62 million, for Asset Management of USD 13 million and for the Investment Bank of USD 91 million, with a corresponding increase for Corporate Center of USD 350 million.

Additionally, UBS has increased the allocation of balance sheet resources from Corporate Center to the business divisions, predominantly from high-quality liquid assets and certain other assets centrally managed on behalf of the business divisions. Prior-period information for the fourth quarter of 2018 has been restated, resulting in an increase of *Total assets* in Global Wealth Management of USD 114 billion, in Personal & Corporate Banking of USD 62 billion, in Asset Management of USD 4 billion and in the Investment Bank of USD 44 billion, with a corresponding decrease of assets in Corporate Center of USD 223 billion.

These changes had no effect on the reported results or financial position of the Group.

Upon adoption of IFRS 16, *Leases*, as of 1 January 2019, UBS additionally allocated approximately USD 3.5 billion of newly recognized right-of-use assets and finance lease receivables to the business divisions.

Total personnel expenses	4,153	4,043	4,102	8,196	8,357

¹ Financial advisor compensation consists of grid-based compensation based directly on compensable revenues generated by financial advisors and supplemental compensation calculated on the basis of financial advisor productivity, firm tenure, assets and other variables. It also includes expenses related to compensation commitments with financial advisors entered into at the time of recruitment that are subject to vesting requirements. ² Changes to the Pension Fund of UBS in Switzerland in the first quarter of 2018 resulted in a reduction in the pension obligation recognized by UBS. As a consequence, a pre-tax gain of USD 241 million was recognized in the income statement in the first quarter of 2018, with no overall effect on total equity. Refer to "Note 29 Pension and other post-employment benefit plans" in the "Consolidated financial statements" section of our Annual Report 2018 for more information.

Note 7 General and administrative expenses

USD million	For the quarter ended			Year-to-date	
	30.6.19	31.3.19	30.6.18	30.6.19	30.6.18

Travel and entertainment	100	90	113	190	211
Professional fees	193	176	240	370	485
Outsourcing of IT and other services	259	271	351	530	711
Litigation, regulatory and similar matters ¹	4	(8)	132	(4)	121
Other	28	32	11	60	46
Total general and administrative expenses	1,175	1,187	1,533	2,362	3,042

¹ Reflects the net increase in / (release of) provisions for litigation, regulatory and similar matters recognized in the income statement. Refer to Note 16 for more information. Also includes recoveries from third parties (second quarter of 2019: USD 1 million; first quarter of 2019: USD 7 million; second quarter of 2018: USD 10 million).

Note 8 Income taxes

We recognized income tax expenses of USD 366 million for the second quarter of 2019, compared with USD 322 million for the second quarter of 2018.

Current tax expenses were USD 209 million, compared with USD 198 million, and related to taxable profits of UBS Switzerland AG and other entities.

Deferred tax expenses were USD 157 million, compared with USD 124 million. Deferred tax expenses in the second quarter of 2019 include expenses of USD 222 million, which reflect the amortization of deferred tax assets (DTAs) previously recognized in relation to tax losses carried forward and deductible temporary differences to reflect their offset against profits for the quarter, including the amortization of US tax loss DTAs at the

level of UBS Americas Inc. Deferred tax expenses were decreased by a benefit of USD 130 million in respect of additional DTA recognition that resulted from the contribution of real estate assets by UBS AG to UBS Americas Inc. during the second quarter of 2019. The additional DTA recognition related to the elections that were made in the fourth quarter of 2018 to capitalize certain historic real estate costs. This amount represents one half of the expected full year benefit and, therefore, further amounts of USD 65 million will be recognized in each of the third and fourth quarters in accordance with the requirements of IAS 34, *Interim Financial Reporting*.

Note 9 Earnings per share (EPS) and shares outstanding

Diluted	0.37	0.30	0.36	0.67	0.76
Shares outstanding					
Shares issued	3,859,055,395	3,858,959,179	3,854,589,552		
Treasury shares	199,121,101	145,878,663	125,469,362		
Shares outstanding	3,659,934,294	3,713,080,516	3,729,120,190		
¹ The weighted average shares outstanding for basic EPS are calculated by taking the number of shares at the beginning of the period, adjusted by the number of shares acquired or issued during the period, multiplied by a time-weighted factor for the period outstanding. As a result, balances are affected by the timing of acquisitions and issuances during the period.					
<p>The table below outlines the potential shares that could dilute basic earnings per share in the future, but were not dilutive for the periods presented.</p>

Note 10 Expected credit loss measurement

a) Expected credit losses in the period

Total net credit loss expenses were USD 12 million in the second quarter of 2019, reflecting recoveries of USD 23 million in expected credit losses (ECL) from stage 1 and 2 positions and losses of USD 35 million from credit-impaired (stage 3) positions.

The recoveries of USD 23 million in stage 1 and 2 ECL during the quarter were primarily the result of updates to macroeconomic and market data in Personal & Corporate Banking, Global Wealth Management and the Investment Bank.

Stage 3 net losses of USD 35 million were recognized, primarily across a number of defaulted positions in Personal & Corporate Banking (USD 13 million) and Global Wealth Management (USD 12 million).

No changes, with material effect on ECL, were made to the models used to calculate ECL and to determine stage allocation during the second quarter of 2019.

UBS uses four different economic scenarios in the ECL calculation: an upside, a baseline, a mild downside and a severe downside scenario. The scenario weights were reviewed and remain unchanged from those applied as of 31 March 2019. During the quarter, the baseline scenario shocks were updated, alongside current macroeconomic and market data across all scenarios.

→ **Refer to “Note 1a Significant accounting policies item g” and “Note 23 Expected credit loss measurement” in the “Consolidated financial statements” section of the Annual Report 2018 for more information**

b) ECL-relevant balance sheet and off-balance sheet positions including ECL allowances and provisions

The tables on the following pages provide information on financial instruments and certain non-financial instruments that are subject to ECL. For amortized cost instruments, the carrying amount represents the maximum exposure to credit risk, taking into account the allowance for credit losses. Financial assets measured at fair value through other comprehensive income (FVOCI) are also subject to ECL; however, unlike amortized cost instruments, the allowance for credit losses for FVOCI

instruments does not reduce the carrying value of these financial assets. Rather, the carrying value of financial assets measured at FVOCI represents the maximum exposure to credit risk.

In addition to on-balance sheet financial assets, certain off-balance sheet and other credit lines are also subject to ECL. The maximum exposure to credit risk for off-balance sheet financial instruments is calculated based on notional amounts.

Note 11 Fair value measurement

This Note provides fair value measurement information for both financial and non-financial instruments and should be read in conjunction with "Note 24 Fair value measurement" in the "Consolidated financial statements" section of the Annual Report 2018, which provides more information on valuation principles, valuation governance, fair value hierarchy classification, valuation adjustments, valuation techniques and inputs, sensitivity of fair value measurements, and methods applied to calculate fair values for financial instruments not measured at fair value.

All financial and non-financial assets and liabilities measured or disclosed at fair value are categorized into one of three fair

value hierarchy levels. In certain cases, the inputs used to measure fair value may fall within different levels of the fair value hierarchy. For disclosure purposes, the level in the hierarchy within which the instrument is classified in its entirety is based on the lowest level input that is significant to the position's fair value measurement:

- Level 1: quoted prices (unadjusted) in active markets for identical assets and liabilities;
- Level 2: valuation techniques for which all significant inputs are, or are based on, observable market data; or
- Level 3: valuation techniques for which significant inputs are not based on observable market data.

Note 11 Fair value measurement (continued)**a) Fair value hierarchy**

The fair value hierarchy classification of financial and non-financial assets and liabilities measured at fair value is summarized in the table below.

Determination of fair values from quoted market prices or valuation techniques¹

¹ Bifurcated embedded derivatives are presented on the same balance sheet lines as their host contracts and are not included in this table. The fair value of these derivatives was not material for the periods presented. ² Fair value hierarchy information for Financial assets for unit-linked investment contracts in the comparative periods have been restated, resulting in an increase in Level 1 assets of USD 4,908 million as of 31 March 2019 and of USD 4,746 million as of 31 December 2018, with a corresponding decrease in Level 2 assets. ³ Other non-financial assets primarily consist of properties and other non-current assets held for sale, which are measured at the lower of their net carrying amount or fair value less costs to sell.

Note 11 Fair value measurement (continued)**b) Valuation adjustments****Deferred day-1 profit or loss reserves**

The table below summarizes the changes in deferred day-1 profit or loss reserves during the relevant period.

Deferred day-1 profit or loss is generally released into *Other net income from financial instruments measured at fair value through profit or loss* when pricing of equivalent products or the underlying parameters become observable or when the transaction is closed out.

Deferred day-1 profit or loss reserves

USD million	For the quarter ended			Year-to-date	
	30.6.19	31.3.19	30.6.18	30.6.19	30.6.18
Reserve balance at the beginning of the period	161	255	479	255	338
Profit / (loss) deferred on new transactions	58	33	53	90	250
(Profit) / loss recognized in the income statement	(60)	(126)	(252)	(187)	(308)
Foreign currency translation	0	(1)	(4)	(1)	(3)
Reserve balance at the end of the period	158	161	276	158	276

c) Transfers between Level 1 and Level 2

The amounts disclosed in this section reflect transfers between Level 1 and Level 2 for instruments that were held for the entire reporting period.

Assets totaling approximately USD 1.4 billion, which mainly consisted of investment fund units presented in the line *Financial assets at fair value held for trading* on the balance sheet, were transferred from Level 2 to Level 1 during the first six months of

2019, generally due to increased levels of trading activity observed within the market for these instruments. Liabilities transferred from Level 2 to Level 1 during the first six months of 2019 were not material. Assets and liabilities transferred from Level 1 to Level 2 during the first six months of 2019 were also not material.

Note 11 Fair value measurement (continued)**d) Level 3 instruments: valuation techniques and inputs**

The table below presents material Level 3 assets and liabilities together with the valuation techniques used to measure fair value, the significant inputs used in the valuation technique that are considered unobservable and a range of values for those unobservable inputs.

The range of values represents the highest- and lowest-level input used in the valuation techniques. Therefore, the range does not reflect the level of uncertainty regarding a particular input, but rather the different underlying characteristics of the relevant assets and liabilities. The ranges will therefore vary from period to period and parameter to parameter based on characteristics of the instruments held at each balance sheet date. Furthermore, the ranges and weighted averages of unobservable inputs may differ

across other financial institutions due to the diversity of the products in each firm's inventory.

The significant unobservable inputs disclosed in the table below are consistent with those included in "Note 24 Fair value measurement" in the "Consolidated financial statements" section of the Annual Report 2018. A description of the potential effect that a change in each unobservable input in isolation may have on a fair value measurement, including information to facilitate an understanding of factors that give rise to the input ranges shown, is also provided in "Note 24 Fair value measurement" in the "Consolidated financial statements" section of the Annual Report 2018.

Valuation techniques and inputs used in the fair value measurement of Level 3 assets and liabilities

	Fair value				Valuation technique(s)	Significant unobservable input(s) ¹	Range of inputs						
	Assets		Liabilities				30.6.19			31.12.18			unit ¹
USD billion	30.6.19	31.12.18	30.6.19	31.12.18		low	high	weighted average ²	low	high	weighted average ²		
Financial assets and liabilities at fair value held for trading and Financial assets at fair value not held for trading													
Corporate and municipal bonds	0.5	0.7	0.0	0.0	Relative value to market comparable	Bond price equivalent	0	135	97	0	134	89	points
Traded loans, loans designated at fair value, loan commitments and guarantees	2.2	2.7	0.0	0.0	Relative value to market comparable	Loan price equivalent	0	101	99	0	100	99	points
					Discounted expected cash flows	Credit spread	301	700		301	513		basis points
					Market comparable and securitization model	Discount margin	1	14	2	1	14	2	%
Auction rate securities	1.6	1.7			Relative value to market comparable	Bond price equivalent	79	99	89	79	99	89	points
Investment fund units ³	0.3	0.6	0.0	0.0	Relative value to market comparable	Net asset value							
Equity instruments ³	0.6	0.6	0.1	0.0	Relative value to market comparable	Price							
Debt issued designated at fair value ⁴			11.4	11.0									
Other financial liabilities designated at fair value ⁴			0.7	1.0									
Derivative financial instruments													
Interest rate contracts	0.6	0.4	0.2	0.2	Option model	Volatility of interest rates	18	67		50	81		basis points
					Discounted expected cash flows	Credit spreads	3	571		4	545		basis points
						Bond price equivalent	3	100		3	99		points
Equity / index contracts	0.4	0.5	1.0	1.4	Option model	Equity dividend yields	0	11		0	12		%
						Volatility of equity stocks, equity and other indices	4	85		4	93		%
						Equity-to-FX correlation	(45)	64		(39)	67		%
						Equity-to-equity correlation	(17)	97		(50)	97		%

¹ The ranges of significant unobservable inputs are represented in points, percentages and basis points. Points are a percentage of par (e.g., 100 points would be 100% of par). ² Weighted averages are provided for non-derivative financial instruments and were calculated by weighting inputs based on the fair values of the respective instruments. Weighted averages are not provided for inputs related to derivative contracts as this would not be meaningful. ³ The range of inputs is not disclosed as there is a dispersion of values given the diverse nature of the investments. ⁴ Valuation techniques, significant unobservable inputs and the respective input ranges for Debt issued designated at fair value and Other financial liabilities designated at fair value, which mainly include over-the-counter debt instruments, are the same as the equivalent derivative or structured financing instruments presented elsewhere in this table.

Note 11 Fair value measurement (continued)**e) Level 3 instruments: sensitivity to changes in unobservable input assumptions**

The table below summarizes those financial assets and liabilities classified as Level 3 for which a change in one or more of the unobservable inputs to reflect reasonably possible alternative assumptions would change fair value significantly, and the estimated effect thereof.

The table shown presents the favorable and unfavorable effects for each class of financial assets and liabilities for which the potential change in fair value is considered significant. The sensitivity of fair value measurements for debt issued designated at fair value and over-the-counter debt instruments designated at fair value is reported with the equivalent derivative or structured financing instrument within the table below.

The sensitivity data shown below presents an estimation of valuation uncertainty based on reasonably possible alternative values for Level 3 inputs at the balance sheet date and does not represent the estimated effect of stress scenarios. Typically, these financial assets and liabilities are sensitive to a combination of inputs from Levels 1–3. Although well-defined interdependencies may exist between Levels 1–2 and Level 3 parameters (e.g., between interest rates, which are generally Level 1 or Level 2, and prepayments, which are generally Level 3), these have not been incorporated in the table. Furthermore, direct interrelationships between the Level 3 parameters are not a significant element of the valuation uncertainty.

Sensitivity of fair value measurements to changes in unobservable input assumptions

<i>USD million</i>	30.6.19		31.3.19		31.12.18

Note 11 Fair value measurement (continued)

f) Level 3 instruments: movements during the period

Significant changes in Level 3 instruments

The table on the following pages presents additional information about Level 3 assets and liabilities measured at fair value on a recurring basis. Level 3 assets and liabilities may be hedged with instruments classified as Level 1 or Level 2 in the fair value hierarchy and, as a result, realized and unrealized gains and losses included in the table may not include the effect of related hedging activity. Furthermore, the realized and unrealized gains and losses presented within the table are not limited solely to those arising from Level 3 inputs, as valuations are generally derived from both observable and unobservable parameters.

Upon adoption of IFRS 9 on 1 January 2018, certain financial assets and liabilities were newly classified as measured at fair value through profit or loss and designated as Level 3 in the fair value hierarchy. Certain assets were also reclassified from *Financial assets measured at fair value through other comprehensive income* to *Financial assets at fair value not held for trading*. Refer to "Note 24 Fair value measurement" in the "Consolidated financial statements" section of the Annual Report 2018 for more information.

Note 11 Fair value measurement (continued)

Assets and liabilities transferred into or out of Level 3 are presented as if those assets or liabilities had been transferred at the beginning of the year.

Assets transferred into and out of Level 3 in the first six months of 2019 totaled USD 0.8 billion and USD 1.2 billion, respectively. Transfers into Level 3 mainly consisted of loans, investment fund units and equity / index contracts, reflecting decreased observability of the relevant valuation inputs.

Transfers out of Level 3 mainly consisted of loans due to increased observability of the relevant valuation inputs.

Liabilities transferred into and out of Level 3 in the first six months of 2019 totaled USD 0.7 billion and USD 2.3 billion, respectively. Transfers into and out of Level 3 mainly consisted of debt issued designated at fair value, primarily equity-linked issued debt instruments, due to decreased or increased observability, respectively, of the embedded derivative inputs.

g) Financial instruments not measured at fair value

The table below reflects the estimated fair values of financial instruments not measured at fair value.

Financial instruments not measured at fair value

<i>USD billion</i>	30.6.19		31.3.19		31.12.18	
	Carrying value	Fair value	Carrying value	Fair value	Carrying value	Fair value
Assets						
Cash and balances at central banks	101.5	101.5	110.6	110.6	108.4	108.4
Loans and advances to banks	12.9	12.9	17.0	17.0	16.9	16.9
Receivables from securities financing transactions	92.9	92.9	100.2	100.2	95.3	95.4
Cash collateral receivables on derivative instruments	23.8	23.8	25.2	25.2	23.6	23.6
Loans and advances to customers	322.7	325.9	318.6	320.7	320.4	320.9
Other financial assets measured at amortized cost	22.2	22.4	22.4	22.4	22.6	22.4
Liabilities						
Amounts due to banks	9.5	9.5	9.1	9.1	11.0	11.0
Payables from securities financing transactions	6.8	6.8	5.2	5.2	10.3	10.3
Cash collateral payables on derivative instruments	31.4	31.4	30.3	30.3	28.9	28.9
Customer deposits	433.0	433.2	425.9	426.0	419.8	419.9
Debt issued measured at amortized cost	120.8	123.3	128.1	130.4	132.3	135.0
Other financial liabilities measured at amortized cost	10.5	10.5	10.4	10.4	6.9	6.9

The fair values included in the table above have been calculated for disclosure purposes only. The fair value valuation techniques and assumptions relate only to the fair value of UBS's financial instruments not measured at fair value. Other institutions may

use different methods and assumptions for their fair value estimation, and therefore such fair value disclosures cannot necessarily be compared from one financial institution to another.

¹ Derivative financial liabilities as of 30 June 2019 include USD 14 million related to derivative loan commitments (31 March 2019: USD 18 million; 31 December 2018: USD 17 million). No notional amounts related to these commitments are included in this table, but they are disclosed in Note 17 under Loan commitments. ² Includes certain forward starting repurchase and reverse repurchase agreements that are classified as measured at fair value through profit or loss and are recognized within derivative instruments. The fair value of these derivative instruments was not material as of 30 June 2019, 31 March 2019 or 31 December 2018. No notional amounts related to these instruments are included in this table, but they are disclosed within Note 17 under Forward starting transactions. ³ In cases where derivative financial instruments are presented on a net basis on the balance sheet, the respective notional values of the netted derivative financial instruments are still presented on a gross basis. ⁴ Other notional values relate to derivatives that are cleared through either a central counterparty or an exchange. The fair value of these derivatives is presented on the balance sheet net of the corresponding cash margin under Cash collateral receivables on derivative instruments and Cash collateral payables on derivative instruments and was not material for all periods presented. ⁵ Changes in the fair value of purchased and sold non-derivative financial instruments between trade date and settlement date are recognized as derivative financial instruments. ⁶ Financial assets and liabilities are presented net on the balance sheet if UBS has the unconditional and legally enforceable right to offset the recognized amounts, both in the normal course of business and in the event of default, bankruptcy or insolvency of the entity and all of the counterparties, and intends either to settle on a net basis or to realize the asset and settle the liability simultaneously. ⁷ Reflects the netting potential in accordance with enforceable master netting and similar arrangements where not all criteria for a net presentation on the balance sheet have been met. Refer to "Note 25 Offsetting financial assets and financial liabilities" in the "Consolidated financial statements" section of the Annual Report 2018 for more information.

Other	2,405	2,386	2,185
Total debt issued designated at fair value	67,984	66,919	57,031
<i>of which: issued by UBS AG with original maturity greater than one year²</i>	45,707	46,431	40,289
<i>of which: life-to-date own credit (gain) / loss</i>	(34)	33	(270)

¹ Includes investment fund unit-linked instruments issued. ² Issued by the legal entity UBS AG. Based on original contractual maturity without considering any early redemption features. More than 99% of the balance as of 30 June 2019 was unsecured (31 March 2019: more than 99% of the balance was unsecured; 31 December 2018: more than 99% of the balance was unsecured).

Note 15 Debt issued measured at amortized cost

<i>USD million</i>	30.6.19	31.3.19	31.12.18
Certificates of deposit	4,523	6,869	7,980
Commercial paper	17,266	21,711	27,514
Other short-term debt	2,902	3,453	3,531
Short-term debt¹	24,692	32,033	39,025
Senior unsecured debt that contributes to total loss-absorbing capacity (TLAC)	29,721	30,548	29,988
Senior unsecured debt other than TLAC	33,081	32,850	33,018
<i>of which: issued by UBS AG with original maturity greater than one year²</i>	30,705	31,962	32,133
Covered bonds	3,853	3,815	3,947
Subordinated debt	20,680	20,299	17,665
<i>of which: high-trigger loss-absorbing additional tier 1 capital instruments</i>	10,595	10,396	7,785
<i>of which: low-trigger loss-absorbing additional tier 1 capital instruments</i>	2,436	2,381	2,369
<i>of which: low-trigger loss-absorbing tier 2 capital instruments</i>	6,947	6,821	6,808
<i>of which: non-Basel III-compliant tier 2 capital instruments</i>	702	700	703
Debt issued through the Swiss central mortgage institutions	8,724	8,505	8,569
Other long-term debt	54	55	58
<i>of which: issued by UBS AG with original maturity greater than one year²</i>	49	49	52
Long-term debt³	96,113	96,072	93,246
Total debt issued measured at amortized cost⁴	120,805	128,105	132,271

¹ Debt with an original maturity of less than one year. ² Issued by the legal entity UBS AG. Based on original contractual maturity without considering any early redemption features. As of 30 June 2019, 100% of the balance was unsecured (31 March 2019: 100% of the balance was unsecured; 31 December 2018: 100% of the balance was unsecured). ³ Debt with an original maturity greater than or equal to one year. The classification of debt issued into short-term and long-term does not consider any early redemption features. ⁴ Net of bifurcated embedded derivatives, the fair value of which was not material for the periods presented.

Note 16 Provisions and contingent liabilities

a) Provisions

The table below presents an overview of total provisions recognized under both IAS 37 and IFRS 9.

<i>USD million</i>	30.6.19	31.3.19	31.12.18
Provisions recognized under IAS 37	2,888	3,063	3,377
Provisions for off-balance sheet financial instruments	80	91	79
Provisions for other credit lines	42	43	37
Total provisions	3,011	3,197	3,494

The following table presents additional information for provisions recognized under IAS 37.

<i>USD million</i>	Operational risks ²	Litigation, regulatory and similar matters ³	Restructuring	Real estate	Employee benefits ⁶	Other	Total
Balance as of 31 December 2018	46	2,827	224	131	70	78	3,377
Adjustment from adoption of IFRS 16 ¹	0	0	(103)	(29)	0	0	(132)
Balance as of 1 January 2019	46	2,827	121	102	70	78	3,245
Balance as of 31 March 2019	45	2,677	101	98	69	73	3,063
Increase in provisions recognized in the income statement	2	40	9	0	1	2	54
Release of provisions recognized in the income statement	0	(35)	(3)	0	(1)	0	(40)
Provisions used in conformity with designated purpose	(3)	(184)	(16)	0	0	(1)	(205)
Foreign currency translation / unwind of discount	1	11	0	1	1	1	15
Balance as of 30 June 2019	45	2,509	91⁴	99⁵	70	75	2,888

¹ Refer to Note 1 for more information. ² Comprises provisions for losses resulting from security risks and transaction processing risks. ³ Comprises provisions for losses resulting from legal, liability and compliance risks. ⁴ Primarily consists of personnel-related restructuring provisions of USD 23 million as of 30 June 2019 (31 March 2019: USD 31 million; 31 December 2018: USD 50 million) and provisions for onerous contracts of USD 63 million as of 30 June 2019 (31 March 2019: USD 64 million; 31 December 2018: USD 170 million). ⁵ Consists of reinstatement costs for leasehold improvements of USD 89 million as of 30 June 2019 (31 March 2019: USD 88 million; 31 December 2018: USD 89 million) and provisions for onerous contracts of USD 10 million as of 30 June 2019 (31 March 2019: USD 10 million; 31 December 2018: USD 42 million). ⁶ Includes provisions for sabbatical and anniversary awards.

Restructuring provisions primarily relate to onerous contracts and severance payments. Onerous contracts for property are recognized when UBS is committed to pay for non-lease components, such as utilities, when a property is vacated or not fully recovered from subtenants. Severance-related provisions are used within a short time period, usually within six months, but potential changes in amount may be triggered when natural

staff attrition reduces the number of people affected by a restructuring event and therefore the estimated costs.

Information on provisions and contingent liabilities in respect of litigation, regulatory and similar matters, as a class, is included in Note 16b. There are no material contingent liabilities associated with the other classes of provisions.

b) Litigation, regulatory and similar matters

The Group operates in a legal and regulatory environment that exposes it to significant litigation and similar risks arising from disputes and regulatory proceedings. As a result, UBS (which for purposes of this Note may refer to UBS Group AG and / or one or more of its subsidiaries, as applicable) is involved in various disputes and legal proceedings, including litigation, arbitration, and regulatory and criminal investigations.

Such matters are subject to many uncertainties, and the outcome and the timing of resolution are often difficult to predict, particularly in the earlier stages of a case. There are also situations where the Group may enter into a settlement agreement. This may occur in order to avoid the expense, management distraction or reputational implications of continuing to contest liability, even for those matters for which the Group believes it should be exonerated. The uncertainties inherent in all such matters affect the amount and timing of any potential outflows for both matters with respect to which provisions have been established and other contingent liabilities. The Group makes provisions for such matters brought against it when, in the opinion of management after seeking legal advice, it is more likely than not that the Group has a present legal or

constructive obligation as a result of past events, it is probable that an outflow of resources will be required, and the amount can be reliably estimated. Where these factors are otherwise satisfied, a provision may be established for claims that have not yet been asserted against the Group, but are nevertheless expected to be, based on the Group's experience with similar asserted claims. If any of those conditions is not met, such matters result in contingent liabilities. If the amount of an obligation cannot be reliably estimated, a liability exists that is not recognized even if an outflow of resources is probable. Accordingly, no provision is established even if the potential outflow of resources with respect to such matters could be significant. Developments relating to a matter that occur after the relevant reporting period, but prior to the issuance of financial statements, which affect management's assessment of the provision for such matter (because, for example, the developments provide evidence of conditions that existed at the end of the reporting period), are adjusting events after the reporting period under IAS 10 and must be recognized in the financial statements for the reporting period.

Note 16 Provisions and contingent liabilities (continued)

Specific litigation, regulatory and other matters are described below, including all such matters that management considers to be material and others that management believes to be of significance due to potential financial, reputational and other effects. The amount of damages claimed, the size of a transaction or other information is provided where available and appropriate in order to assist users in considering the magnitude of potential exposures.

In the case of certain matters below, we state that we have established a provision, and for the other matters, we make no such statement. When we make this statement and we expect disclosure of the amount of a provision to prejudice seriously our position with other parties in the matter because it would reveal what UBS believes to be the probable and reliably estimable outflow, we do not disclose that amount. In some cases we are subject to confidentiality obligations that preclude such disclosure. With respect to the matters for which we do not state whether we have established a provision, either (a) we have not established a provision, in which case the matter is treated as a contingent liability under the applicable accounting standard; or (b) we have established a provision but expect disclosure of that fact to prejudice seriously our position with other parties in the matter because it would reveal the fact that UBS believes an outflow of resources to be probable and reliably estimable.

With respect to certain litigation, regulatory and similar matters for which we have established provisions, we are able to estimate the expected timing of outflows. However, the aggregate amount of the expected outflows for those matters for which we are able to estimate expected timing is immaterial relative to our current and expected levels of liquidity over the relevant time periods.

The aggregate amount provisioned for litigation, regulatory and similar matters as a class is disclosed in the "Provisions" table in Note 16a above. It is not practicable to provide an aggregate estimate of liability for our litigation, regulatory and similar matters as a class of contingent liabilities. Doing so would require us to provide speculative legal assessments as to claims

and proceedings that involve unique fact patterns or novel legal theories, that have not yet been initiated or are at early stages of adjudication, or as to which alleged damages have not been quantified by the claimants. Although we therefore cannot provide a numerical estimate of the future losses that could arise from litigation, regulatory and similar matters, we believe that the aggregate amount of possible future losses from this class that are more than remote substantially exceeds the level of current provisions.

Litigation, regulatory and similar matters may also result in non-monetary penalties and consequences. For example, the non-prosecution agreement described in item 5 of this Note, which we entered into with the US Department of Justice (DOJ), Criminal Division, Fraud Section in connection with our submissions of benchmark interest rates, including, among others, the British Bankers' Association London Interbank Offered Rate (LIBOR), was terminated by the DOJ based on its determination that we had committed a US crime in relation to foreign exchange matters. As a consequence, UBS AG pleaded guilty to one count of wire fraud for conduct in the LIBOR matter, paid a fine and is subject to probation through January 2020.

A guilty plea to, or conviction of, a crime could have material consequences for UBS. Resolution of regulatory proceedings may require us to obtain waivers of regulatory disqualifications to maintain certain operations, may entitle regulatory authorities to limit, suspend or terminate licenses and regulatory authorizations, and may permit financial market utilities to limit, suspend or terminate our participation in such utilities. Failure to obtain such waivers, or any limitation, suspension or termination of licenses, authorizations or participations, could have material consequences for UBS.

The risk of loss associated with litigation, regulatory and similar matters is a component of operational risk for purposes of determining our capital requirements. Information concerning our capital requirements and the calculation of operational risk for this purpose is included in the "Capital management" section of this report.

Provisions for litigation, regulatory and similar matters by business division and in Corporate Center¹

¹ Provisions, if any, for the matters described in this disclosure are recorded in Global Wealth Management (item 3 and item 4) and Corporate Center (item 2). Provisions, if any, for the matters described in items 1 and 6 of this disclosure are allocated between Global Wealth Management and Personal & Corporate Banking, and provisions, if any, for the matters described in this disclosure in item 5 are allocated between the Investment Bank and Corporate Center.

Note 16 Provisions and contingent liabilities (continued)

1. Inquiries regarding cross-border wealth management businesses

Tax and regulatory authorities in a number of countries have made inquiries, served requests for information or examined employees located in their respective jurisdictions relating to the cross-border wealth management services provided by UBS and other financial institutions. It is possible that the implementation of automatic tax information exchange and other measures relating to cross-border provision of financial services could give rise to further inquiries in the future. UBS has received disclosure orders from the Swiss Federal Tax Administration (FTA) to transfer information based on requests for international administrative assistance in tax matters. The requests concern a number of UBS account numbers pertaining to current and former clients and are based on data from 2006 and 2008. UBS has taken steps to inform affected clients about the administrative assistance proceedings and their procedural rights, including the right to appeal. The requests are based on data received from the German authorities, who seized certain data related to UBS clients booked in Switzerland during their investigations and have apparently shared this data with other European countries. UBS expects additional countries to file similar requests.

The Swiss Federal Administrative Court ruled in 2016 that, in the administrative assistance proceedings related to a French bulk request, UBS has the right to appeal all final FTA client data disclosure orders. On 30 July 2018, the Swiss Federal Administrative Court granted UBS's appeal by holding the French administrative assistance request inadmissible. The FTA filed a final appeal with the Swiss Federal Supreme Court. The Supreme Court has scheduled a hearing for 26 July 2019, at which UBS expects that it will announce a decision.

Since 2013, UBS (France) S.A., UBS AG and certain former employees have been under investigation in France for alleged complicity in having illicitly solicited clients on French territory, regarding the laundering of proceeds of tax fraud, and banking and financial solicitation by unauthorized persons. In connection with this investigation, the investigating judges ordered UBS AG to provide bail ("caution") of EUR 1.1 billion and UBS (France) S.A. to post bail of EUR 40 million, which was reduced on appeal to EUR 10 million.

A trial in the court of first instance took place from 8 October 2018 until 15 November 2018. On 20 February 2019, the court announced a verdict finding UBS AG guilty of illicitly soliciting clients on French territory and aggravated laundering of the proceeds of tax fraud, and UBS France S.A. guilty of aiding and abetting unlawful solicitation and laundering the proceeds of tax fraud. The court imposed fines aggregating EUR 3.7 billion on UBS AG and UBS France S.A. and awarded EUR 800 million of civil damages to the French state. UBS has appealed the decision. Under French law, the judgment is suspended while the appeal is pending. The Court of Appeal will

retry the case de novo as to both the law and the facts, and the fines and penalties can be greater than or less than those imposed by the court of first instance. A subsequent appeal to the Cour de Cassation, France's highest court, is possible with respect to questions of law.

UBS believes that based on both the law and the facts the judgment of the court of first instance should be reversed. UBS believes it followed its obligations under Swiss and French law as well as the European Savings Tax Directive. Even assuming liability, which it contests, UBS believes the penalties and damage amounts awarded greatly exceed the amounts that could be supported by the law and the facts. In particular, UBS believes the court incorrectly based the penalty on the total regularized assets rather than on any unpaid taxes on those assets for which a fraud has been characterized and further incorrectly awarded damages based on costs that were not proven by the civil party. Notwithstanding that UBS believes it should be acquitted, our balance sheet at 30 June 2019 reflected provisions with respect to this matter in an amount of USD 516 million. The wide range of possible outcomes in this case contributes to a high degree of estimation uncertainty. The provision reflected on our balance sheet at 30 June 2019 reflects our best estimate of possible financial implications, although it is reasonably possible that actual penalties and civil damages could exceed the provision amount.

In 2016, UBS was notified by the Belgian investigating judge that it is under formal investigation ("inculpé") regarding the laundering of proceeds of tax fraud, of banking and financial solicitation by unauthorized persons, and of serious tax fraud. In 2018, tax authorities and a prosecutor's office in Italy asserted that UBS is potentially liable for taxes and penalties as a result of its activities in Italy from 2012 to 2017. In June 2019, UBS entered into a settlement agreement with the Italian tax authorities under which it paid EUR 101 million to resolve the claims asserted by the authority related to UBS AG's potential permanent establishment in Italy.

UBS has, and reportedly numerous other financial institutions have, received inquiries from authorities concerning accounts relating to the Fédération Internationale de Football Association (FIFA) and other constituent soccer associations and related persons and entities. UBS is cooperating with authorities in these inquiries.

Our balance sheet at 30 June 2019 reflected provisions with respect to matters described in this item 1 in an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

Note 16 Provisions and contingent liabilities (continued)**2. Claims related to sales of residential mortgage-backed securities and mortgages**

From 2002 through 2007, prior to the crisis in the US residential loan market, UBS was a substantial issuer and underwriter of US residential mortgage-backed securities (RMBS) and was a purchaser and seller of US residential mortgages. A subsidiary of UBS, UBS Real Estate Securities Inc. (UBS RESI), acquired pools of residential mortgage loans from originators and (through an affiliate) deposited them into securitization trusts. In this manner, from 2004 through 2007, UBS RESI sponsored approximately USD 80 billion in RMBS, based on the original principal balances of the securities issued.

UBS RESI also sold pools of loans acquired from originators to third-party purchasers. These whole loan sales during the period 2004 through 2007 totaled approximately USD 19 billion in original principal balance.

UBS was not a significant originator of US residential loans. A branch of UBS originated approximately USD 1.5 billion in US residential mortgage loans during the period in which it was active from 2006 to 2008 and securitized less than half of these loans.

Lawsuits related to contractual representations and warranties concerning mortgages and RMBS: When UBS acted as an RMBS sponsor or mortgage seller, it generally made certain representations relating to the characteristics of the underlying loans. In the event of a material breach of these representations, UBS was in certain circumstances contractually obligated to repurchase the loans to which the representations related or to indemnify certain parties against losses. In 2012, certain RMBS trusts filed an action in the US District Court for the Southern District of New York seeking to enforce UBS RESI's obligation to repurchase loans in the collateral pools for three RMBS securitizations issued and underwritten by UBS with an original principal balance of approximately USD 2 billion. In July 2018, UBS and the trustee entered into an agreement under which UBS will pay USD 850 million to resolve this matter. A significant portion of this amount will be borne by other parties that indemnified UBS. The settlement remains subject to court approval and proceedings to determine how the settlement funds will be distributed to RMBS holders. After giving effect to this settlement, UBS considers claims relating to substantially all loan repurchase demands to be resolved and believes that new demands to repurchase US residential mortgage loans are time-barred under a decision rendered by the New York Court of Appeals.

Mortgage-related regulatory matters: Since 2014, the US Attorney's Office for the Eastern District of New York has sought information from UBS pursuant to the Financial Institutions Reform, Recovery and Enforcement Act of 1989 (FIRREA), related to UBS's RMBS business from 2005 through 2007. On 8 November 2018, the DOJ filed a civil complaint in the District Court for the Eastern District of New York. The complaint seeks unspecified civil monetary penalties under FIRREA related to UBS's issuance, underwriting and sale of 40 RMBS transactions in 2006 and 2007. UBS moved to dismiss the civil complaint on 6 February 2019.

Our balance sheet at 30 June 2019 reflected a provision with respect to matters described in this item 2 in an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of this matter cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

3. Madoff

In relation to the Bernard L. Madoff Investment Securities LLC (BMIS) investment fraud, UBS AG, UBS (Luxembourg) S.A. (now UBS Europe SE, Luxembourg branch) and certain other UBS subsidiaries have been subject to inquiries by a number of regulators, including the Swiss Financial Market Supervisory Authority (FINMA) and the Luxembourg Commission de Surveillance du Secteur Financier. Those inquiries concerned two third-party funds established under Luxembourg law, substantially all assets of which were with BMIS, as well as certain funds established in offshore jurisdictions with either direct or indirect exposure to BMIS. These funds faced severe losses, and the Luxembourg funds are in liquidation. The documentation establishing both funds identifies UBS entities in various roles, including custodian, administrator, manager, distributor and promoter, and indicates that UBS employees serve as board members.

In 2009 and 2010, the liquidators of the two Luxembourg funds filed claims against UBS entities, non-UBS entities and certain individuals, including current and former UBS employees, seeking amounts totaling approximately EUR 2.1 billion, which includes amounts that the funds may be held liable to pay the trustee for the liquidation of BMIS (BMIS Trustee).

Note 16 Provisions and contingent liabilities (continued)

A large number of alleged beneficiaries have filed claims against UBS entities (and non-UBS entities) for purported losses relating to the Madoff fraud. The majority of these cases have been filed in Luxembourg, where decisions that the claims in eight test cases were inadmissible have been affirmed by the Luxembourg Court of Appeal, and the Luxembourg Supreme Court has dismissed a further appeal in one of the test cases.

In the US, the BMIS Trustee filed claims against UBS entities, among others, in relation to the two Luxembourg funds and one of the offshore funds. The total amount claimed against all defendants in these actions was not less than USD 2 billion. In 2014, the US Supreme Court rejected the BMIS Trustee's motion for leave to appeal decisions dismissing all claims except those for the recovery of approximately USD 125 million of payments alleged to be fraudulent conveyances and preference payments. In 2016, the bankruptcy court dismissed these claims against the UBS entities. The BMIS Trustee appealed. In February 2019, the Court of Appeals reversed the dismissal of the BMIS Trustee's remaining claims. The defendants, including UBS, are preparing a petition to the US Supreme Court requesting that it review the Court of Appeals' decision. The bankruptcy proceedings have been stayed pending a decision with respect to that petition.

4. Puerto Rico

Declines since 2013 in the market prices of Puerto Rico municipal bonds and of closed-end funds (funds) that are sole-managed and co-managed by UBS Trust Company of Puerto Rico and distributed by UBS Financial Services Incorporated of Puerto Rico (UBS PR) have led to multiple regulatory inquiries, as well as customer complaints and arbitrations with aggregate claimed damages of USD 3.2 billion, of which claims with aggregate claimed damages of USD 2.2 billion have been resolved through settlements, arbitration or withdrawal of the claim. The claims have been filed by clients in Puerto Rico who own the funds or Puerto Rico municipal bonds and / or who used their UBS account assets as collateral for UBS non-purpose loans; customer complaint and arbitration allegations include fraud, misrepresentation and unsuitability of the funds and of the loans.

A shareholder derivative action was filed in 2014 against various UBS entities and current and certain former directors of the funds, alleging hundreds of millions of US dollars in losses in the funds. In 2015, defendants' motion to dismiss was denied and a request for permission to appeal that ruling was denied by the Puerto Rico Supreme Court. In 2014, a federal class action complaint also was filed against various UBS entities, certain members of UBS PR senior management and the co-manager of certain of the funds, seeking damages for investor losses in the funds during the period from May 2008 through May 2014. Following denial of the plaintiffs' motion for class certification, the case was dismissed in October 2018.

In 2014 and 2015, UBS entered into settlements with the Office of the Commissioner of Financial Institutions for the Commonwealth of Puerto Rico, the US Securities and Exchange Commission (SEC) and the Financial Industry Regulatory Authority in relation to their examinations of UBS's operations.

In 2011, a purported derivative action was filed on behalf of the Employee Retirement System of the Commonwealth of Puerto Rico (System) against over 40 defendants, including UBS PR, which was named in connection with its underwriting and consulting services. Plaintiffs alleged that defendants violated their purported fiduciary duties and contractual obligations in connection with the issuance and underwriting of USD 3 billion of bonds by the System in 2008 and sought damages of over USD 800 million. In 2016, the court granted the System's request to join the action as a plaintiff, but ordered that plaintiffs must file an amended complaint. In 2017, the court denied defendants' motion to dismiss the amended complaint.

Beginning in 2015, and continuing through 2017, certain agencies and public corporations of the Commonwealth of Puerto Rico (Commonwealth) defaulted on certain interest payments on Puerto Rico bonds. In 2016, US federal legislation created an oversight board with power to oversee Puerto Rico's finances and to restructure its debt. The oversight board has imposed a stay on the exercise of certain creditors' rights. In 2017, the oversight board placed certain of the bonds into a bankruptcy-like proceeding under the supervision of a Federal District Judge. These events, further defaults or any further legislative action to create a legal means of restructuring Commonwealth obligations or to impose additional oversight on the Commonwealth's finances, or any restructuring of the Commonwealth's obligations, may increase the number of claims against UBS concerning Puerto Rico securities, as well as potential damages sought.

In May 2019 the oversight board filed complaints in Puerto Rico federal district court bringing claims against financial, legal and accounting firms that had participated in Puerto Rico municipal bond offerings, including UBS, seeking a return of underwriting and swap fees paid in connection with those offerings. UBS estimates that it received approximately USD 125 million in fees in the relevant offerings.

Our balance sheet at 30 June 2019 reflected provisions with respect to matters described in this item 4 in amounts that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provisions that we have recognized.

Note 16 Provisions and contingent liabilities (continued)**5. Foreign exchange, LIBOR and benchmark rates, and other trading practices**

Foreign exchange-related regulatory matters: Beginning in 2013, numerous authorities commenced investigations concerning possible manipulation of foreign exchange markets and precious metals prices. In 2014 and 2015, UBS reached settlements with the UK Financial Conduct Authority (FCA) and the US Commodity Futures Trading Commission (CFTC) in connection with their foreign exchange investigations, FINMA issued an order concluding its formal proceedings relating to UBS's foreign exchange and precious metals businesses, and the Board of Governors of the Federal Reserve System (Federal Reserve Board) and the Connecticut Department of Banking issued a Cease and Desist Order and assessed monetary penalties against UBS AG. In 2015, the DOJ's Criminal Division terminated the 2012 non-prosecution agreement with UBS AG related to UBS's submissions of benchmark interest rates, and UBS AG pleaded guilty to one count of wire fraud, paid a fine and is subject to probation through January 2020. In 2019 the European Commission announced two decisions with respect to foreign exchange trading. UBS was granted immunity by the European Commission in these matters and therefore was not fined. UBS has ongoing obligations to cooperate with these authorities and to undertake certain remediation measures. UBS has also been granted conditional immunity by the Antitrust Division of the DOJ and by authorities in other jurisdictions in connection with potential competition law violations relating to foreign exchange and precious metals businesses. Investigations relating to foreign exchange matters by certain authorities remain ongoing notwithstanding these resolutions.

Foreign exchange-related civil litigation: Putative class actions have been filed since 2013 in US federal courts and in other jurisdictions against UBS and other banks on behalf of putative classes of persons who engaged in foreign currency transactions with any of the defendant banks. UBS has resolved US federal court class actions relating to foreign currency transactions with the defendant banks and persons who transacted in foreign exchange futures contracts and options on such futures under a settlement agreement that provides for UBS to pay an aggregate of USD 141 million and provide cooperation to the settlement classes. Certain class members have excluded themselves from that settlement and have filed individual actions in US and English courts against UBS and other banks, alleging violations of US and European competition laws and unjust enrichment.

In 2015, a putative class action was filed in federal court against UBS and numerous other banks on behalf of persons and businesses in the US who directly purchased foreign

currency from the defendants and alleged co-conspirators for their own end use. In March 2017, the court granted UBS's (and the other banks') motions to dismiss the complaint. The plaintiffs filed an amended complaint in August 2017. In March 2018, the court denied the defendants' motions to dismiss the amended complaint.

In 2017, two putative class actions were filed in federal court in New York against UBS and numerous other banks on behalf of persons and entities who had indirectly purchased foreign exchange instruments from a defendant or co-conspirator in the US, and a consolidated complaint was filed in June 2017. In March 2018, the court dismissed the consolidated complaint. In October 2018, the court granted plaintiffs' motion seeking leave to file an amended complaint.

LIBOR and other benchmark-related regulatory matters: Numerous government agencies, including the SEC, the CFTC, the DOJ, the FCA, the UK Serious Fraud Office, the Monetary Authority of Singapore, the Hong Kong Monetary Authority, FINMA, various state attorneys general in the US and competition authorities in various jurisdictions have conducted or are continuing to conduct investigations regarding potential improper attempts by UBS, among others, to manipulate LIBOR and other benchmark rates at certain times. In 2012, UBS reached settlements relating to benchmark interest rates with the UK Financial Services Authority, the CFTC and the Criminal Division of the DOJ, and FINMA issued an order in its proceedings with respect to UBS relating to benchmark interest rates. In addition, UBS entered into settlements with the European Commission and with the Swiss Competition Commission (WEKO) regarding its investigation of bid-ask spreads in connection with Swiss franc interest rate derivatives. UBS has ongoing obligations to cooperate with the authorities with whom we have reached resolutions and to undertake certain remediation measures with respect to benchmark interest rate submissions. In December 2018, UBS entered into a settlement agreement with the New York and other state attorneys general under which it has paid USD 68 million to resolve claims by the attorneys general related to LIBOR. UBS has been granted conditional leniency or conditional immunity from authorities in certain jurisdictions, including the Antitrust Division of the DOJ and WEKO, in connection with potential antitrust or competition law violations related to certain rates. However, UBS has not reached a final settlement with WEKO, as the Secretariat of WEKO has asserted that UBS does not qualify for full immunity.

Note 16 Provisions and contingent liabilities (continued)

LIBOR and other benchmark-related civil litigation: A number of putative class actions and other actions are pending in the federal courts in New York against UBS and numerous other banks on behalf of parties who transacted in certain interest rate benchmark-based derivatives. Also pending in the US and in other jurisdictions are a number of other actions asserting losses related to various products whose interest rates were linked to LIBOR and other benchmarks, including adjustable rate mortgages, preferred and debt securities, bonds pledged as collateral, loans, depository accounts, investments and other interest-bearing instruments. The complaints allege manipulation, through various means, of certain benchmark interest rates, including USD LIBOR, Euroyen TIBOR, Yen LIBOR, EURIBOR, CHF LIBOR, GBP LIBOR, USD and SGD SIBOR and SOR and Australian BBSW, and seek unspecified compensatory and other damages under varying legal theories.

USD LIBOR class and individual actions in the US: In 2013 and 2015, the district court in the USD LIBOR actions dismissed, in whole or in part, certain plaintiffs' antitrust claims, federal racketeering claims, CEA claims, and state common law claims. Although the Second Circuit vacated the district court's judgment dismissing antitrust claims, the district court again dismissed antitrust claims against UBS in 2016. Certain plaintiffs have appealed that decision to the Second Circuit. Separately, in 2018, the Second Circuit reversed in part the district court's 2015 decision dismissing certain individual plaintiffs' claims. UBS entered into an agreement in 2016 with representatives of a class of bondholders to settle their USD LIBOR class action. The agreement has received preliminary court approval and remains subject to final approval. In 2018, the district court denied plaintiffs' motions for class certification in the USD class actions for claims pending against UBS, and plaintiffs sought permission to appeal that ruling to the Second Circuit. In July 2018, the Second Circuit denied the petition to appeal of the class of USD lenders and in November 2018 denied the petition of the USD exchange class. In January 2019, a putative class action was filed in the District Court for the Southern District of New York against UBS and numerous other banks on behalf of US residents who, since 1 February 2014, directly transacted with a defendant bank in USD LIBOR instruments. The complaint asserts antitrust and unjust enrichment claims.

Other benchmark class actions in the US: In 2014, the court in one of the Euroyen TIBOR lawsuits dismissed certain of the plaintiffs' claims, including a federal antitrust claim, for lack of standing. In 2015, this court dismissed the plaintiffs' federal racketeering claims on the same basis and affirmed its previous dismissal of the plaintiffs' antitrust claims against UBS. In 2017, this court also dismissed the other Yen LIBOR / Euroyen TIBOR action in its entirety on standing grounds, as did the court in the CHF LIBOR action. Also in 2017, the courts in the EURIBOR lawsuit dismissed the cases as to UBS and certain other foreign defendants for lack of personal jurisdiction. In October 2018, the

court in the SIBOR / SOR action dismissed all but one of plaintiffs' claims against UBS. Plaintiffs in the CHF LIBOR and SIBOR / SOR actions have filed amended complaints following the dismissals, which UBS and other defendants have moved to dismiss. In November 2018, the court in the BBSW lawsuit dismissed the case as to UBS and certain other foreign defendants for lack of personal jurisdiction. Following that dismissal, plaintiffs in the BBSW action filed an amended complaint in April 2019, which UBS and other defendants named in the amended complaint have moved to dismiss. UBS and other defendants also moved to dismiss the GBP LIBOR action in December 2016, but that motion was denied as to UBS in December 2018. UBS moved for reconsideration of that decision in January 2019.

Government bonds: Putative class actions have been filed since 2015 in US federal courts against UBS and other banks on behalf of persons who participated in markets for US Treasury securities since 2007. A consolidated complaint was filed in 2017 in the US District Court for the Southern District of New York alleging that the banks colluded with respect to, and manipulated prices of, US Treasury securities sold at auction and in the secondary market and asserting claims under the antitrust laws and for unjust enrichment. Defendants' motions to dismiss the consolidated complaint are pending.

UBS and reportedly other banks are responding to investigations and requests for information from various authorities regarding US Treasury securities and other government bond trading practices. As a result of its review to date, UBS has taken appropriate action.

With respect to additional matters and jurisdictions not encompassed by the settlements and orders referred to above, our balance sheet at 30 June 2019 reflected a provision in an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

6. Swiss retrocessions

The Federal Supreme Court of Switzerland ruled in 2012, in a test case against UBS, that distribution fees paid to a firm for distributing third-party and intra-group investment funds and structured products must be disclosed and surrendered to clients who have entered into a discretionary mandate agreement with the firm, absent a valid waiver.

FINMA has issued a supervisory note to all Swiss banks in response to the Supreme Court decision. UBS has met the FINMA requirements and has notified all potentially affected clients.

Note 16 Provisions and contingent liabilities (continued)

The Supreme Court decision has resulted, and may continue to result, in a number of client requests for UBS to disclose and potentially surrender retrocessions. Client requests are assessed on a case-by-case basis. Considerations taken into account when assessing these cases include, among other things, the existence of a discretionary mandate and whether or not the client documentation contained a valid waiver with respect to distribution fees.

Our balance sheet at 30 June 2019 reflected a provision with respect to matters described in this item 6 in an amount that

UBS believes to be appropriate under the applicable accounting standard. The ultimate exposure will depend on client requests and the resolution thereof, factors that are difficult to predict and assess. Hence, as in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

Note 17 Guarantees, commitments and forward starting transactions

The table below presents the maximum irrevocable amount of guarantees, commitments and forward starting transactions.

USD million	30.6.19				31.3.19				31.12.18			
	Gross		Sub-participations	Net	Gross		Sub-participations	Net	Gross		Sub-participations	Net
	Measured at fair value	Not measured at fair value			Measured at fair value	Not measured at fair value			Measured at fair value	Not measured at fair value		
Total guarantees	1,830	16,810	(2,929)	15,712	1,840	17,434	(2,760)	16,514	1,639	18,146	(2,803)	16,982
Loan commitments	3,990	27,463	(675)	30,778	6,401	27,919	(690)	33,630	3,535	31,212	(647)	34,099
Forward starting transactions¹												
Reverse repurchase agreements	32,037	2,240			29,284	2,038			8,117	925		
Securities borrowing agreements		19				20				12		
Repurchase agreements	17,700	1,138			15,321	629			7,926	400		

¹ Cash to be paid in the future by either UBS or the counterparty.

Note 18 Currency translation rates

The following table shows the rates of the main currencies used to translate the financial information of UBS's operations with a functional currency other than the US dollar into US dollars.

	Closing exchange rate				Average rate ¹				
	As of				For the quarter ended			Year-to-date	
	30.6.19	31.3.19	31.12.18	30.6.18	30.6.19	31.3.19	30.6.18	30.6.19	30.6.18
1 CHF	1.02	1.00	1.02	1.01	1.00	1.00	1.01	1.00	1.03
1 EUR	1.14	1.12	1.15	1.17	1.13	1.14	1.18	1.13	1.21
1 GBP	1.27	1.30	1.28	1.32	1.28	1.31	1.34	1.30	1.37
100 JPY	0.93	0.90	0.91	0.90	0.92	0.91	0.91	0.91	0.92

¹ Monthly income statement items of operations with a functional currency other than the US dollar are translated with month-end rates into US dollars. Disclosed average rates for a quarter represent an average of three month-end rates, weighted according to the income and expense volumes of all operations of the Group with the same functional currency for each month. Weighted average rates for individual business divisions may deviate from the weighted average rates for the Group.

UBS AG interim consolidated financial information (unaudited)

This section contains a comparison of selected financial and capital information between UBS Group AG consolidated and UBS AG consolidated. Refer to the UBS AG second quarter 2019 report, which will be available as of 26 July 2019 under "Quarterly reporting" at www.ubs.com/investors, for the interim consolidated financial statements of UBS AG.

Comparison between UBS Group AG consolidated and UBS AG consolidated

The accounting policies applied under International Financial Reporting Standards (IFRS) to both UBS Group AG and UBS AG consolidated financial statements are identical. However, there are certain scope and presentation differences as noted below:

- Assets, liabilities, operating income, operating expenses and operating profit before tax relating to UBS Group AG and its directly held subsidiaries, including UBS Business Solutions AG, are reflected in the consolidated financial statements of UBS Group AG but not of UBS AG. UBS AG's assets, liabilities, operating income and operating expenses related to transactions with UBS Group AG and its directly held subsidiaries, including UBS Business Solutions AG and other shared services subsidiaries, are not subject to elimination in the UBS AG consolidated financial statements, but are eliminated in the UBS Group AG consolidated financial statements. UBS Business Solutions AG and other shared services subsidiaries of UBS Group AG charge other legal entities within the UBS AG consolidation scope for services provided, including a markup on costs incurred.
- UBS Group AG consolidated equity was USD 0.8 billion higher than the equity of UBS AG consolidated as of 30 June 2019, mainly driven by higher dividends paid by UBS AG to UBS Group AG compared with the dividend distributions of UBS Group AG, as well as higher retained

earnings in the UBS Group AG consolidated financial statements, largely related to the aforementioned markup charged by shared services subsidiaries of UBS Group AG to other legal entities in the UBS AG scope of consolidation. These effects were partly offset by additional share premium recognized at the UBS AG consolidated level related to the establishment of UBS Group AG and UBS Business Solutions AG, a wholly owned subsidiary of UBS Group AG. UBS Group AG is also the grantor of the majority of the compensation plans of the Group and recognizes share premium for equity-settled awards granted, partly offset by the treasury shares held to hedge the related share delivery obligation and those acquired as part of our share repurchase program.

- Going concern capital of UBS AG consolidated was USD 3.5 billion lower than going concern capital of UBS Group AG consolidated as of 30 June 2019, reflecting additional tier 1 (AT1) capital of USD 4.4 billion partly offset by higher common equity tier 1 (CET1) capital of USD 0.9 billion.
- CET1 capital of UBS AG consolidated was USD 0.9 billion higher than that of UBS Group AG consolidated as of 30 June 2019. The difference in CET1 capital was primarily due to compensation-related regulatory capital accruals at the UBS Group AG level, partly offset by differences in equity, as mentioned above.
- Going concern loss-absorbing AT1 capital of UBS AG consolidated was USD 4.4 billion lower than that of UBS Group AG consolidated as of 30 June 2019, reflecting Deferred Contingent Capital Plan awards and AT1 capital notes. These AT1 capital notes were issued by UBS Group Funding (Switzerland) AG, a direct subsidiary of UBS Group AG, after the implementation of the new Swiss SRB framework, and only qualify as going concern loss-absorbing capacity at the UBS AG consolidated level.

UBS AG interim consolidated financial information (unaudited)

Comparison between UBS Group AG consolidated and UBS AG consolidated

	As of or for the quarter ended 30.6.19		
	UBS Group AG (consolidated)	UBS AG (consolidated)	Difference (absolute)
<i>USD million, except where indicated</i>			
Income statement			
Operating income	7,532	7,632	(100)
Operating expenses	5,773	5,975	(202)

¹ As a result of the cross-border merger of UBS Limited into UBS Europe SE effective 1 March 2019, UBS Europe SE has become a significant regulated subsidiary of UBS Group AG. The size, scope and business model of the merged entity is now materially different. For more information on the cross-border merger of UBS Limited into UBS Europe SE, refer to the "Recent developments" section in our first quarter 2019 report. ² UBS AG and UBS Switzerland AG financial information is prepared in accordance with Swiss GAAP (FINMA Circular 2015/1 and Banking Ordinance), but does not represent interim financial statements under Swiss GAAP. ³ UBS Europe SE financial information is prepared in accordance with International Financial Reporting Standards (IFRS), but does not represent interim financial statements under IFRS. ⁴ UBS Americas Holding LLC financial information is prepared in accordance with accounting principles generally accepted in the US (US GAAP), but does not represent interim financial statements under US GAAP. ⁵ For UBS AG and UBS Switzerland AG, based on applicable transitional arrangements for Swiss systemically relevant banks (SRBs). For UBS Europe SE, based on applicable EU Basel III rules. ⁶ Refer to the 30 June 2019 Pillar 3 report, which will be available as of 27 August 2019 under "Pillar 3 disclosures" at www.ubs.com/investors for more information. ⁷ For UBS AG, on the basis of going concern capital. On the basis of tier 1 capital for UBS Europe SE and UBS Americas Holding LLC. ⁸ There was no local disclosure requirement for UBS Americas Holding LLC as of 30 June 2019 and 31 March 2019. ⁹ For UBS Europe SE, figures as of 30 June 2019 are based on a four-month average rather than a twelve-month average, as data produced on the same basis is only available for the period since the cross-border merger. For 31 March 2019, month-end reporting date values are disclosed. ¹⁰ UBS AG is required to maintain a minimum liquidity coverage ratio of 105% as communicated by FINMA. ¹¹ UBS Switzerland AG, as a Swiss SRB, is required to maintain a minimum liquidity coverage ratio of 100%. ¹² Refer to the "Capital management" section of our Annual Report 2018 for more information on the joint and several liability. Under certain circumstances, the Swiss Banking Act and FINMA's Banking Insolvency Ordinance authorize FINMA to modify, extinguish or convert to common equity liabilities of a bank in connection with a resolution or insolvency of such bank.

Significant regulated subsidiary and sub-group information

UBS Group AG is a holding company and conducts substantially all of its operations through UBS AG and its subsidiaries. UBS Group AG and UBS AG contribute a significant portion of their respective capital and provide substantial liquidity to subsidiaries. Many of these subsidiaries are subject to regulations requiring compliance with minimum capital, liquidity and similar requirements. The tables in this section summarize the regulatory capital components and capital ratios of our significant regulated subsidiaries and sub-groups determined under the regulatory framework of each subsidiary's or sub-group's home jurisdiction.

Supervisory authorities generally have discretion to impose higher requirements or to otherwise limit the activities of subsidiaries. Supervisory authorities also may require entities to measure capital and leverage ratios on a stressed basis and may limit the ability of an entity to engage in new activities or take capital actions based on the results of those tests.

In June 2019, the Federal Reserve Board released the results of its Comprehensive Capital Analysis and Review (CCAR) and did not object to the capital plan of UBS Americas Holding LLC, our US intermediate holding company.

Standalone financial information for UBS AG, UBS Switzerland AG as well as UBS Group AG will be available as of 26 July 2019 under "Complementary financial information" at www.ubs.com/investors.

Standalone regulatory information for UBS AG and UBS Switzerland AG as well as consolidated regulatory information for UBS Europe SE and UBS Americas Holding LLC is provided in the 30 June 2019 Pillar 3 report, which will be available as of 27 August 2019 under "Pillar 3 disclosures" at www.ubs.com/investors.

Selected financial and regulatory information for UBS AG consolidated is included in the key figures table below. Refer also to the UBS AG second quarter 2019 report, which will be available as of 26 July 2019 under "Quarterly reporting" at www.ubs.com/investors.

¹ Refer to the "Performance targets and measurement" section of our Annual Report 2018 for more information on our performance targets. ² Calculated as net profit attributable to shareholders (annualized as applicable) / average equity attributable to shareholders. ³ Calculated as net profit attributable to shareholders (annualized as applicable) / average equity attributable to shareholders less average goodwill and intangible assets. Effective 1 January 2019, the definition of the numerator for return on tangible equity has been revised to align with numerators for return on equity and return on CET1 capital; i.e., we no longer adjust for amortization and impairment of goodwill and intangible assets. Prior periods have been restated. ⁴ Calculated as net profit attributable to shareholders (annualized as applicable) / average common equity tier 1 capital. ⁵ Calculated as operating income before credit loss expense or recovery (annualized as applicable) / average risk-weighted assets and average leverage ratio denominator, respectively. ⁶ Calculated as operating expenses / operating income before credit loss expense or recovery. ⁷ Calculated as change in net profit attributable to shareholders from continuing operations between current and comparison periods / net profit attributable to shareholders from continuing operations of comparison period. ⁸ Based on the Swiss systemically relevant bank framework as of 1 January 2020. Refer to the "Capital management" section of this report for more information. ⁹ Includes invested assets for Global Wealth Management, Asset Management and Personal & Corporate Banking. ¹⁰ As of 30 June 2019, the breakdown of personnel by business division and Corporate Center was: Global Wealth Management: 22,883; Personal & Corporate Banking: 5,097; Asset Management: 2,240; Investment Bank: 4,999; Corporate Center: 11,854.

Information sources

Reporting publications

Annual publications: *Annual Report (SAP no. 80531)*: Published in English, this single-volume report provides descriptions of: our Group strategy and performance; the strategy and performance of the business divisions and Corporate Center; risk, treasury and capital management; corporate governance, corporate responsibility and our compensation framework, including information on compensation for the Board of Directors and the Group Executive Board members; and financial information, including the financial statements. *Auszug aus dem Geschäftsbericht (SAP no. 80531)*: This publication provides the translation into German of selected sections of the Annual Report. *Annual Review (SAP no. 80530)*: This booklet contains key information on our strategy and performance, with a focus on corporate responsibility at UBS. It is published in English, German, French and Italian. *Compensation Report (SAP no. 82307)*: The report discusses our compensation framework and provides information on compensation for the Board of Directors and the Group Executive Board members. It is available in English and German.

Quarterly publications: The quarterly financial report provides an update on our strategy and performance for the respective quarter. It is available in English.

How to order publications: The annual and quarterly publications are available in .pdf format at www.ubs.com/investors, in the "UBS Group AG and UBS AG consolidated financial information" section, and printed copies can be requested from UBS free of charge. For annual publications, refer to the "Investor services" section at www.ubs.com/investors. Alternatively, they can be ordered by quoting the SAP number and the language preference, where applicable, from UBS AG, F4UK–AUL, P.O. Box, CH-8098 Zurich, Switzerland.

Other information

Website: The "Investor Relations" website at www.ubs.com/investors provides the following information on UBS: news releases; financial information, including results-related filings with the US Securities and Exchange Commission; information for shareholders, including UBS share price charts as well as data and dividend information, and for bondholders; the UBS corporate calendar; and presentations by management for investors and financial analysts. Information on the internet is available in English, with some information also available in German.

Results presentations: Our quarterly results presentations are webcast live. A playback of most presentations is downloadable at www.ubs.com/presentations.

Messaging service: Email alerts to news about UBS can be subscribed to under "UBS news alert" at www.ubs.com/investors. Messages are sent in English, German, French or Italian, with an option to select theme preferences for such alerts.

Form 20-F and other submissions to the US Securities and Exchange Commission: We file periodic reports and submit other information about UBS to the US Securities and Exchange Commission (SEC). Principal among these filings is the annual report on Form 20-F, filed pursuant to the US Securities Exchange Act of 1934. The filing of Form 20-F is structured as a wrap-around document. Most sections of the filing can be satisfied by referring to the combined UBS Group AG and UBS AG annual report. However, there is a small amount of additional information in Form 20-F that is not presented elsewhere and is particularly targeted at readers in the US. Readers are encouraged to refer to this additional disclosure. Any document that we file with the SEC is available on the SEC's website www.sec.gov. Refer to www.ubs.com/investors for more information.

Cautionary Statement Regarding Forward-Looking Statements | This report contains statements that constitute "forward-looking statements," including but not limited to management's outlook for UBS's financial performance and statements relating to the anticipated effect of transactions and strategic initiatives on UBS's business and future development. While these forward-looking statements represent UBS's judgments and expectations concerning the matters described, a number of risks, uncertainties and other important factors could cause actual developments and results to differ materially from UBS's expectations. These factors include, but are not limited to: (i) the degree to which UBS is successful in the ongoing execution of its strategic plans, including its cost reduction and efficiency initiatives and its ability to manage its levels of risk-weighted assets (RWA) and leverage ratio denominator (LRD), including to counteract regulatory-driven increases, liquidity coverage ratio and other financial resources, and the degree to which UBS is successful in implementing changes to its businesses to meet changing market, regulatory and other conditions; (ii) the continuing low or negative interest rate environment in Switzerland and other jurisdictions, developments in the macroeconomic climate and in the markets in which UBS operates or to which it is exposed, including movements in securities prices or liquidity, credit spreads, and currency exchange rates, and the effects of economic conditions, market developments, and geopolitical tensions on the financial position or creditworthiness of UBS's clients and counterparties as well as on client sentiment and levels of activity; (iii) changes in the availability of capital and funding, including any changes in UBS's credit spreads and ratings, as well as availability and cost of funding to meet requirements for debt eligible for total loss-absorbing capacity (TLAC); (iv) changes in or the implementation of financial legislation and regulation in Switzerland, the US, the UK, the European Union and other financial centers that have imposed, or resulted in, or may do so in the future, more stringent or entity-specific capital, TLAC, leverage ratio, liquidity and funding requirements, incremental tax requirements, additional levies, limitations on permitted activities, constraints on remuneration, constraints on transfers of capital and liquidity and sharing of operational costs across the Group or other measures, and the effect these will or would have on UBS's business activities; (v) the degree to which UBS is successful in implementing further changes to its legal structure to improve its resolvability and meet related regulatory requirements and the potential need to make further changes to the legal structure or booking model of UBS Group in response to legal and regulatory requirements, proposals in Switzerland and other jurisdictions for mandatory structural reform of banks or systemically important institutions or to other external developments, and the extent to which such changes will have the intended effects; (vi) UBS's ability to maintain and improve its systems and controls for the detection and prevention of money laundering and compliance with sanctions to meet evolving regulatory requirements and expectations, in particular in the US; (vii) the uncertainty arising from the timing and nature of the UK's exit from the EU; (viii) changes in UBS's competitive position, including whether differences in regulatory capital and other requirements among the major financial centers will adversely affect UBS's ability to compete in certain lines of business; (ix) changes in the standards of conduct applicable to our businesses that may result from new regulation or new enforcement of existing standards, including recently enacted and proposed measures to impose new and enhanced duties when interacting with customers and in the execution and handling of customer transactions; (x) the liability to which UBS may be exposed, or possible constraints or sanctions that regulatory authorities might impose on UBS, due to litigation, contractual claims and regulatory investigations, including the potential for disqualification from certain businesses, potentially large fines or monetary penalties, or the loss of licenses or privileges as a result of regulatory or other governmental sanctions, as well as the effect that litigation, regulatory and similar matters have on the operational risk component of our RWA as well as the amount of capital available for return to shareholders; (xi) the effects on UBS's cross-border banking business of tax or regulatory developments and of possible changes in UBS's policies and practices relating to this business; (xii) UBS's ability to retain and attract the employees necessary to generate revenues and to manage, support and control its businesses, which may be affected by competitive factors; (xiii) changes in accounting or tax standards or policies, and determinations or interpretations affecting the recognition of gain or loss, the valuation of goodwill, the recognition of deferred tax assets and other matters; (xiv) UBS's ability to implement new technologies and business methods, including digital services and technologies and ability to successfully compete with both existing and new financial service providers, some of which may not be regulated to the same extent; (xv) limitations on the effectiveness of UBS's internal processes for risk management, risk control, measurement and modeling, and of financial models generally; (xvi) the occurrence of operational failures, such as fraud, misconduct, unauthorized trading, financial crime, cyberattacks, and systems failures; (xvii) restrictions on the ability of UBS Group AG to make payments or distributions, including due to restrictions on the ability of its subsidiaries to make loans or distributions, directly or indirectly, or, in the case of financial difficulties, due to the exercise by FINMA or the regulators of UBS's operations in other countries of their broad statutory powers in relation to protective measures, restructuring and liquidation proceedings; (xviii) the degree to which changes in regulation, capital or legal structure, financial results or other factors may affect UBS's ability to maintain its stated capital return objective; and (xix) the effect that these or other factors or unanticipated events may have on our reputation and the additional consequences that this may have on our business and performance. The sequence in which the factors above are presented is not indicative of their likelihood of occurrence or the potential magnitude of their consequences. Our business and financial performance could be affected by other factors identified in our past and future filings and reports, including those filed with the SEC. More detailed information about those factors is set forth in documents furnished by UBS and filings made by UBS with the SEC, including UBS's Annual Report on Form 20-F for the year ended 31 December 2018. UBS is not under any obligation to (and expressly disclaims any obligation to) update or alter its forward-looking statements, whether as a result of new information, future events, or otherwise.

Rounding | Numbers presented throughout this report may not add up precisely to the totals provided in the tables and text. Percentages, percent changes, and adjusted results are calculated on the basis of unrounded figures. Information on absolute changes between reporting periods, which is provided in text and that can be derived from figures displayed in the tables, is calculated on a rounded basis.

Tables | Within tables, blank fields generally indicate that the field is not applicable or not meaningful, or that information is not available as of the relevant date or for the relevant period. Zero values generally indicate that the respective figure is zero on an actual or rounded basis. Percentage changes are presented as a mathematical calculation of the change between periods.

¹ Refer to the "Performance targets and measurement" section of our Annual Report 2018 for more information on our performance targets. ² Calculated as net profit attributable to shareholders (annualized as applicable) / average equity attributable to shareholders. ³ Calculated as net profit attributable to shareholders (annualized as applicable) / average equity attributable to shareholders less average goodwill and intangible assets. Effective 1 January 2019, the definition of the numerator for return on tangible equity has been revised to align with numerators for return on equity and return on CET1 capital; i.e., we no longer adjust for amortization and impairment of goodwill and intangible assets. Prior periods have been restated. ⁴ Calculated as net profit attributable to shareholders (annualized as applicable) / average common equity tier 1 capital. ⁵ Calculated as operating income before credit loss expense or recovery (annualized as applicable) / average risk-weighted assets and average leverage ratio denominator, respectively. ⁶ Calculated as operating expenses / operating income before credit loss expense or recovery. ⁷ Calculated as change in net profit attributable to shareholders from continuing operations between current and comparison periods / net profit attributable to shareholders from continuing operations of comparison period. ⁸ Based on the Swiss systemically relevant bank framework as of 1 January 2020. Refer to the "Capital management" section of the UBS Group second quarter 2019 report for more information. ⁹ Includes invested assets for Global Wealth Management, Asset Management and Personal & Corporate Banking. ¹⁰ As of 30 June 2019, the breakdown of personnel by business division and Corporate Center was: Global Wealth Management: 22,883; Personal & Corporate Banking: 5,097; Asset Management: 2,240; Investment Bank: 4,999; Corporate Center: 11,854.

Changes to our presentation currency

Effective from 1 October 2018, the presentation currency of UBS AG's consolidated financial statements has changed from Swiss francs to US dollars. Comparative information in this report for periods prior to the fourth quarter of 2018 has been restated. Assets, liabilities and total equity were translated to US dollars at closing exchange rates prevailing on the respective balance sheet dates, and income and expenses were translated at the respective average rates prevailing for the relevant periods.

Introduction

Structure of this report

UBS Group AG is the holding company for the UBS Group and the parent company of UBS AG. UBS Group AG holds 100% of the issued shares in UBS AG. Financial information for UBS AG consolidated does not differ materially from that for UBS Group AG consolidated.

This report includes risk and capital management information for UBS AG consolidated and the interim consolidated financial statements, as well as UBS AG standalone financial information for the quarter ended 30 June 2019. Regulatory information for UBS AG standalone is provided in the 30 June 2019 Pillar 3 report, which will be available as of 27 August 2019 under "Pillar 3 disclosures" at www.ubs.com/investors.

→ **Refer to the UBS Group second quarter 2019 report under "Quarterly reporting" at www.ubs.com/investors for more information**

Comparison between UBS Group AG consolidated and UBS AG consolidated

The table on the following page contains a comparison of selected financial and capital information between UBS Group AG consolidated and UBS AG consolidated.

The accounting policies applied under International Financial Reporting Standards (IFRS) to both UBS Group AG and UBS AG consolidated financial statements are identical. However, there are certain scope and presentation differences as noted below:

– Assets, liabilities, operating income, operating expenses and operating profit before tax relating to UBS Group AG and its directly held subsidiaries, including UBS Business Solutions AG, are reflected in the consolidated financial statements of UBS Group AG but not of UBS AG. UBS AG's assets, liabilities, operating income and operating expenses related to transactions with UBS Group AG and its directly held subsidiaries, including UBS Business Solutions AG and other shared services subsidiaries, are not subject to elimination in the UBS AG consolidated financial statements, but are eliminated in the UBS Group AG consolidated financial statements. UBS Business Solutions AG and other shared services subsidiaries of UBS Group AG charge other legal entities within the UBS AG consolidation scope for services provided, including a markup on costs incurred.

– UBS Group AG consolidated equity was USD 0.8 billion higher than the equity of UBS AG consolidated as of 30 June 2019, mainly driven by higher dividends paid by UBS AG to UBS Group AG compared with the dividend distributions of UBS Group AG, as well as higher retained earnings in the UBS Group AG consolidated financial statements, largely related to the aforementioned markup charged by shared services subsidiaries of UBS Group AG to other legal entities in the UBS AG scope of consolidation. These effects were partly offset by additional share premium recognized at the UBS AG consolidated level related to the establishment of UBS Group AG and UBS Business Solutions AG, a wholly owned subsidiary of UBS Group AG. UBS Group AG is also the grantor of the majority of the compensation plans of the Group and recognizes share premium for equity-settled awards granted, partly offset by the treasury shares held to hedge the related share delivery obligation and those acquired as part of our share repurchase program.

– Going concern capital of UBS AG consolidated was USD 3.5 billion lower than going concern capital of UBS Group AG consolidated as of 30 June 2019, reflecting additional tier 1 (AT1) capital of USD 4.4 billion partly offset by higher common equity tier 1 (CET1) capital of USD 0.9 billion.

– CET1 capital of UBS AG consolidated was USD 0.9 billion higher than that of UBS Group AG consolidated as of 30 June 2019. The difference in CET1 capital was primarily due to compensation-related regulatory capital accruals at the UBS Group AG level, partly offset by differences in equity, as mentioned above.

– Going concern loss-absorbing AT1 capital of UBS AG consolidated was USD 4.4 billion lower than that of UBS Group AG consolidated as of 30 June 2019, reflecting Deferred Contingent Capital Plan awards and AT1 capital notes. These AT1 capital notes were issued by UBS Group Funding (Switzerland) AG, a direct subsidiary of UBS Group AG, after the implementation of the new Swiss SRB framework, and only qualify as going concern loss-absorbing capacity at the UBS AG consolidated level.

→ **Refer to "Holding company and significant regulated subsidiaries and sub-groups" at www.ubs.com/investors for an illustration of the consolidation scope differences between UBS AG and UBS Group AG**

→ **Refer to the "Capital management" section of this report for more information on differences in the loss-absorbing capacity between UBS Group AG consolidated and UBS AG consolidated**

Risk and capital management

Management report

Risk management and control

UBS AG consolidated risk profile

The risk profile of UBS AG consolidated does not differ materially from that of UBS Group AG consolidated and risk information provided in the UBS Group second quarter 2019 report is equally applicable to UBS AG consolidated.

The credit risk profile of UBS AG consolidated differs from that of UBS Group AG consolidated primarily in relation to

receivables of UBS AG and UBS Switzerland AG from UBS Group AG. As a result of these receivables, total banking products exposure of UBS AG consolidated as of 30 June 2019 was USD 1.5 billion, or 0.3%, higher than the exposure of UBS Group, compared with USD 1.7 billion, or 0.3%, as of 31 March 2019.

→ **Refer to the "Risk management and control" section of the UBS Group second quarter 2019 report for more information**

Capital management

Going and gone concern requirements and information

UBS AG is considered a systemically relevant bank (SRB) under Swiss banking law and, on a consolidated basis, both UBS Group AG and UBS AG are required to comply with regulations based on the Basel III framework as applicable for Swiss SRBs.

The Swiss SRB framework and requirements applicable to UBS AG consolidated are consistent with those applicable to UBS Group AG consolidated and are described in the "Capital management" section of our Annual Report 2018.

UBS AG is subject to going concern requirements on a standalone basis. Capital and other regulatory information for UBS AG standalone and consolidated is provided in the 30 June 2019 Pillar 3 report – UBS Group and significant regulated subsidiaries and sub-groups, which will be available as of 27 August 2019 under "Pillar 3 disclosures" at www.ubs.com/investors.

The table below provides the risk-weighted assets (RWA)- and leverage ratio denominator (LRD)-based requirements and information as of 30 June 2019 for UBS AG consolidated.

¹ Includes applicable add-ons of 0.72% for RWA. ² Includes applicable add-ons of 1.44% for RWA and 0.5% for LRD. ³ Includes outstanding low-trigger loss-absorbing tier 2 capital instruments, which are available under the transitional rules of the Swiss SRB framework to meet the going concern requirements until the earlier of (i) their maturity or first call date or (ii) 31 December 2019, and to meet gone concern requirements thereafter. Outstanding low-trigger loss-absorbing tier 2 capital instruments are subject to amortization starting five years prior to their maturity, with the amortized portion qualifying as gone concern loss-absorbing capacity. Instruments available to meet gone concern requirements are eligible until one year before maturity, with a haircut of 50% applied in the last year of eligibility. ⁴ The relevant capital instruments were issued after the new Swiss SRB framework had been implemented and therefore qualify as gone concern loss-absorbing capacity.

Other ¹	(1,490)	(1,605)	114
Total common equity tier 1 capital	34,948	35,881	(933)

¹ Includes accruals for dividends to shareholders for the current year and other items.**Total loss-absorbing capacity and leverage ratio information under Swiss SRB rules applicable as of 1 January 2020**

Going concern capital of UBS AG consolidated was USD 3.5 billion lower than going concern capital of UBS Group AG consolidated as of 30 June 2019, primarily reflecting lower additional tier 1 (AT1) capital of USD 4.4 billion, partly offset by higher common equity tier 1 (CET1) capital of USD 0.9 billion. The gone concern loss-absorbing capacity of UBS AG consolidated was USD 2.4 billion higher, due to low-trigger loss-absorbing AT1 capital.

CET1 capital of UBS AG consolidated was USD 0.9 billion higher than that of UBS Group AG consolidated, primarily due to the deductions for compensation-related regulatory capital components that are only reflected at the level of UBS Group AG consolidated. This effect was partly offset by lower equity of UBS AG consolidated.

Going concern loss-absorbing AT1 capital of UBS AG consolidated was USD 4.4 billion lower than that of UBS Group AG consolidated and relates to AT1 capital notes issued by UBS Group Funding (Switzerland) AG, a direct subsidiary of UBS Group AG, as well as Deferred Contingent Capital Plan awards granted to eligible employees for the performance years 2014 to 2018.

The difference of USD 2.4 billion in gone concern low-trigger AT1 capital relates to capital instruments that were issued by UBS AG after the new Swiss SRB framework had been implemented and are therefore not recognized within going

concern capital but qualify as gone concern loss-absorbing capacity. Issuances of low-trigger AT1 capital from UBS Group AG were all made prior to implementation of the new Swiss SRB framework and therefore qualify as going concern capital.

Differences in capital between UBS Group AG consolidated and UBS AG consolidated related to employee compensation plans will reverse to the extent underlying services are performed by employees of, and are consequently charged to, UBS AG and its subsidiaries. Such reversal generally occurs over the service period of the employee compensation plans.

The leverage ratio framework for UBS AG consolidated is consistent with that of UBS Group AG consolidated. As of 30 June 2019, the going concern leverage ratio of UBS AG consolidated was 0.4 percentage points lower than that of UBS Group AG consolidated, mainly as the going concern capital of UBS AG consolidated was USD 3.5 billion lower.

- Refer to the “Capital management” section of the UBS Group second quarter 2019 report under “Quarterly reporting” at www.ubs.com/investors for information on the developments of loss-absorbing capacity, risk-weighted assets and leverage ratio denominator for UBS Group AG consolidated
- Refer to the “Introduction” section of this report for more information on the differences in equity between UBS AG consolidated and UBS Group AG

Notes to the UBS AG interim consolidated financial statements (unaudited)

Note 1 Basis of accounting

Basis of preparation

The consolidated financial statements (the financial statements) of UBS AG and its subsidiaries (together "UBS AG") are prepared in accordance with International Financial Reporting Standards (IFRS), as issued by the International Accounting Standards Board (IASB), and are presented in US dollars (USD), which is also the functional currency of UBS AG's Head Office, UBS AG's London Branch and UBS AG's US-based operations. These interim financial statements are prepared in accordance with IAS 34, *Interim Financial Reporting*.

In preparing these interim financial statements, the same accounting policies and methods of computation have been applied as in the UBS AG consolidated annual financial statements for the period ended 31 December 2018, except for the changes described in this note. These interim financial statements are unaudited and should be read in conjunction with UBS AG's audited consolidated financial statements included in the Annual Report 2018. In the opinion of management, all necessary adjustments were made for a fair presentation of UBS AG's financial position, results of operations and cash flows.

Preparation of these interim financial statements requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, income, expenses and disclosures of contingent assets and liabilities. These estimates and assumptions are based on the best available information. Actual results in the future could differ from such estimates and such differences may be material to the financial statements. Revisions to estimates, based on regular reviews, are recognized in the period in which they occur. For more information on areas of estimation uncertainty that are considered to require critical judgment, refer to "Note 1a Significant accounting policies" in the "Consolidated financial statements" section of the Annual Report 2018.

Adoption of IFRS 16, *Leases*

Application and transition effect

Effective from 1 January 2019, UBS AG adopted IFRS 16, *Leases*, which replaced IAS 17, *Leases*, and sets out the principles for the recognition, measurement, presentation and disclosure of leases.

IFRS 16 introduces a single lessee accounting model and fundamentally changes how UBS AG accounts for operating leases when acting as a lessee, with a requirement to record a right-of-use asset and lease liability on the balance sheet. UBS AG is a lessee in a number of leases, primarily of real estate, including offices, retail branches and sales offices, with a smaller number of IT hardware leases. As permitted by the transitional provisions of IFRS 16, UBS AG elected to apply the modified retrospective approach and has not restated comparative figures. Overall, adoption of IFRS 16 resulted in a USD 3.4 billion increase in both total assets and total liabilities in UBS AG's consolidated financial statements. There was no effect on equity.

→ Refer to the tables on the next page for more information

UBS AG applied the following practical expedients that are permitted on transition to IFRS 16 where UBS AG is the lessee in a lease previously classified as an operating lease:

- to not reassess whether or not a contract contained a lease;
- to rely on previous assessments of whether such contracts were considered onerous;
- to rely on previous sale-and-leaseback assessments;
- to adjust lease terms with the benefit of hindsight with respect to whether extension or termination options are reasonably certain of being exercised;
- to discount lease liabilities using UBS AG's incremental borrowing rate in each currency as at 1 January 2019;
- to initially measure the right-of-use asset at an amount equal to the lease liability for leases previously classified as operating leases, adjusted for existing lease balances such as rent prepayments, rent accruals, lease incentives and onerous lease provisions, but excluding initial direct costs; and
- to not apply IFRS 16 to leases whose remaining term will end within 12 months from the transition date.

Note 1 Basis of accounting (continued)

The measurement of leases previously classified as finance leases, where UBS AG acts as lessee, has not changed on transition to IFRS 16. Similarly UBS AG has made no adjustments where UBS AG acts as lessor, in either a finance or operating lease, of physical assets it owns. Where UBS AG acts as an intermediate lessor, i.e., where UBS AG enters into a head lease and subleases the asset to a third party, the sublease has been

classified as either a finance or operating lease based primarily on whether the sublease term consumes the majority of the remaining useful life of the right-of-use asset arising from the head lease as at the transition date.

The following table reconciles the obligations in respect of operating leases as at 31 December 2018 to the opening lease liabilities recognized on 1 January 2019:

Reconciliation between operating lease commitments disclosed under IAS 17 and lease liabilities recognized under IFRS 16

<i>USD million</i>	
Total undiscounted operating lease commitments as of 31 December 2018	4,546
Leases with a remaining term of less than one year as of 1 January 2019	(18)
Excluded service components	(296)
Reassessment of lease term for extension or termination options	424
Total undiscounted lease payments	4,657
Discounted at a weighted average incremental borrowing rate of 3.07%	(720)
IFRS 16 transition adjustment	3,937
Finance lease liabilities as of 31 December 2018	19
Carrying amount of total lease liabilities as of 1 January 2019	3,956

The following table provides details on the determination of right-of-use assets on transition:

Determination of right-of-use (RoU) assets on transition

<i>USD million</i>	<i>Carrying amount</i>
Recognition of gross RoU assets upon adoption of IFRS 16 (IFRS 16 transition adjustment)	3,937
Offset by liabilities recognized as of 31 December 2018	(515)
<i>of which: other non-financial liabilities (lease incentives)</i>	<i>(204)</i>
<i>of which: other financial liabilities measured at amortized cost (rent accruals)</i>	<i>(180)</i>
<i>of which: provisions (onerous lease provisions)</i>	<i>(131)</i>
Increase in total assets resulting from the adoption of IFRS 16 on 1 January 2019¹	3,422
Reclassification of assets recognized as of 31 December 2018 as an addition to RoU assets	38
<i>of which: other financial assets measured at amortized cost (finance lease assets recognized under IAS 17 as of 31 December 2018)</i>	<i>19</i>
<i>of which: other non-financial assets (prepaid rent)</i>	<i>19</i>
Reclassification of finance lease receivables from subleases to other financial assets measured at amortized cost resulting in a reduction of RoU assets	(176)
Total right-of-use assets as of 1 January 2019 presented within Property, equipment and software	3,284

¹ Total liabilities increased by the same amount upon adoption of IFRS 16.

Lease liabilities are presented within *Other financial liabilities measured at amortized cost* and right-of-use assets within *Property, equipment and software*. Finance lease receivables are included within *Other financial assets measured at amortized cost*. Due to the practical expedients taken on transition, there was no effect on equity. The weighted average lease term at 1 January 2019 was approximately 9 years.

During the second quarter the depreciation charge for right-of-use assets presented within *Depreciation and impairment of property, equipment and software* was USD 113 million (first quarter of 2019: USD 113 million). The interest charge on lease

liabilities presented within *Interest expense from financial instruments measured at amortized cost* was USD 30 million (first quarter of 2019: USD 30 million) and other rent expenses (including non-lease components paid to landlords) presented within *General and administrative expenses* were USD 12 million (first quarter of 2019: USD 16 million). This compares with a total rent expense presented in *General and administrative expenses* of USD 143 million and USD 147 million for the quarters ended 30 June 2018 and 31 March 2018, respectively.

Note 1 Basis of accounting (continued)**Update to significant accounting policy – Leasing (disclosed in Note 1a item 15, Leasing in the financial statements 2018)**

UBS AG predominantly enters into lease contracts, or contracts that include lease components, as a lessee of real estate, including offices, retail branches and sales offices, with a small number of IT hardware leases. UBS AG identifies non-lease components of a contract and accounts for them separately from lease components.

When UBS AG is lessee in a lease arrangement, UBS AG recognizes a lease liability and corresponding right-of-use (RoU) asset at the commencement of the lease term when UBS AG acquires control of the physical use of the asset. Lease liabilities are presented within *Other financial liabilities measured at amortized cost* and RoU assets within *Property, equipment and software*. The lease liability is measured based on the present value of the lease payments over the lease term, discounted using UBS AG's unsecured borrowing rate given the rate implicit in a lease is generally not observable to the lessee. Interest expense on the lease liability is presented within *Interest expense from financial instruments measured at amortized cost*. The RoU asset is recorded at an amount equal to the lease liability but is adjusted for rent prepayments, initial direct costs, any costs to refurbish the leased asset or lease incentives received. The RoU asset is depreciated over the shorter of the lease term or the useful life of the underlying asset, with the depreciation presented within *Depreciation and impairment of property, equipment and software*.

Lease payments generally include fixed payments and variable payments that depend on an index (such as an inflation index). When the lease contains an extension or termination option that UBS AG considers reasonably certain to be exercised, the expected rental payments or costs of termination are included within the lease payments used to generate the lease liability. UBS AG does not typically enter into leases with purchase options or residual value guarantees.

Where UBS AG acts as lessor or sublessor under a finance lease, a receivable is recognized in *Other financial assets measured at amortized cost* at an amount equal to the present value of the aggregate of the lease payments plus any unguaranteed residual value that UBS AG expects to recover at the end of the lease term. Initial direct costs are also included in the initial measurement of the lease receivable. Lease payments received during the lease term are allocated as repayments of the outstanding receivable. Interest income reflects a constant periodic rate of return on UBS AG's net investment using the interest rate implicit in the lease (or for subleases, the rate for the head lease). UBS AG reviews the estimated unguaranteed residual value annually, and if the

estimated residual value to be realized is less than the amount assumed at lease inception, a loss is recognized for the expected shortfall. Where UBS AG acts as a lessor or sublessor in an operating lease, UBS AG recognizes the operating lease income on a straight-line basis over the lease term.

Lease receivables are subject to impairment requirements as set out in point g. in "Note 1a item 3 Financial instruments." Expected credit losses (ECL) on lease receivables are determined following the general impairment model within IFRS 9, *Financial Instruments*, without utilizing the simplified approach of always measuring impairment at the amount of lifetime ECL.

Other changes to accounting policies**Changes in Corporate Center segment reporting, cost and resource allocation to business divisions**

Effective from 1 January 2019, UBS AG made changes to Corporate Center segment reporting, as well as cost and resource allocation to business divisions.

→ Refer to "Note 2 Segment reporting" for more information

Presentation of dividend income and expense from financial instruments measured at fair value through profit or loss

Effective from 1 January 2019, UBS AG refined the presentation of dividend income and expense. This resulted in a reclassification of dividends from *Interest income (expense) from financial instruments measured at fair value through profit or loss* into *Other net income from financial instruments measured at fair value through profit or loss* (prior to 1 January 2019: *Other net income from fair value changes on financial instruments*). The change aligns the presentation of dividends with related fair value changes from the equity instruments and economic hedges removing volatility that has historically arisen within both *Net interest income* and *Other net income from fair value changes on financial instruments*. There is no effect on *Total operating income* or *Net profit / (loss)*. Prior periods have been restated for this presentational change and the effect on the respective reporting lines is outlined in the table below.

Refer to "Note 1d International Financial Reporting Standards and Interpretations to be adopted in 2019 and later and other changes" in the "Consolidated financial statements" section of the Annual Report 2018 for further details on standards adopted by UBS AG from 1 January 2019, none of which had a material effect on its financial statements.

Changes to the presentation of dividend income and expense from financial instruments measured at fair value through profit or loss

USD million	For the quarter ended				Year-to-date
	31.3.18	30.6.18	30.9.18	31.12.18	31.12.18

Other net income from financial instruments measured at fair value through profit or loss	412	(210)	524	250	976

Note 2 Segment reporting

Overview and changes in Corporate Center segment reporting

UBS AG's businesses are organized globally into four business divisions: Global Wealth Management, Personal & Corporate Banking, Asset Management and the Investment Bank. All four business divisions are supported by Corporate Center and qualify as reportable segments for the purpose of segment reporting. Together with Corporate Center they reflect the management structure of UBS AG.

→ Refer to "Note 1a Significant accounting policies item 2" and "Note 2 Segment reporting" in the "Consolidated financial statements" section of the Annual Report 2018 for more information on UBS AG's reporting segments

As a consequence of a substantial reduction in the size and resource consumption of the Non-core and Legacy Portfolio and following the changes to UBS AG's methodology for allocating funding costs and expenses from Corporate Center – Services and Corporate Center – Group Asset and Liability Management to the business divisions, beginning with the first quarter 2019 report, UBS AG provides results for total Corporate Center only and does not separately report Corporate Center – Services, Group Asset and Liability Management and Non-core and Legacy Portfolio.

Changes in Corporate Center cost and resource allocation to business divisions

In order to further align UBS AG and divisional performance, UBS AG has adjusted its methodology for the allocation of

Corporate Center funding costs and expenses to the business divisions. At the same time, it has updated its funds transfer pricing framework to better reflect the sources and usage of funding. Prior-period information for the six months ended 30 June 2018 has been restated, resulting in a decrease in *Operating profit / (loss) before tax* for Global Wealth Management of USD 184 million, for Personal & Corporate Banking of USD 62 million, for Asset Management of USD 13 million and for the Investment Bank of USD 91 million, with a corresponding increase for Corporate Center of USD 350 million.

Additionally, UBS AG has increased the allocation of balance sheet resources from Corporate Center to the business divisions, predominantly from high-quality liquid assets and certain other assets centrally managed on behalf of the business divisions. Prior-period information for the fourth quarter of 2018 has been restated, resulting in an increase of *Total assets* in Global Wealth Management of USD 114 billion, in Personal & Corporate Banking of USD 62 billion, in Asset Management of USD 4 billion and in the Investment Bank of USD 44 billion, with a corresponding decrease of assets in Corporate Center of USD 223 billion.

These changes had no effect on the reported results or financial position of UBS AG.

Upon adoption of IFRS 16, *Leases*, as of 1 January 2019, UBS AG additionally allocated approximately USD 3.4 billion of newly recognized right-of-use assets and finance lease receivables to the business divisions.

¹ Includes foreign exchange gains / (losses) reclassified from other comprehensive income related to disposed foreign subsidiaries and branches. ² Includes rent received from third parties.

Note 6 Personnel expenses

USD million	For the quarter ended			Year-to-date	
	30.6.19	31.3.19	30.6.18	30.6.19	30.6.18
Salaries and variable compensation	2,120	2,027	2,106	4,147	4,452
Financial advisor compensation ¹	1,005	960	1,007	1,965	2,040
Contractors	38	36	50	74	93
Social security	152	170	158	322	359
Pension and other post-employment benefit plans	139	170	120	309	141 ²
Other personnel expenses	116	105	119	222	247
Total personnel expenses	3,571	3,468	3,561	7,040	7,332

¹ Financial advisor compensation consists of grid-based compensation based directly on compensable revenues generated by financial advisors and supplemental compensation calculated on the basis of financial advisor productivity, firm tenure, assets and other variables. It also includes expenses related to compensation commitments with financial advisors entered into at the time of recruitment that are subject to vesting requirements. ² Changes to the Pension Fund of UBS AG in Switzerland in the first quarter of 2018 resulted in a reduction in the pension obligation recognized by UBS AG. As a consequence, a pre-tax gain of USD 132 million was recognized in the income statement in the first quarter of 2018, with no overall effect on total equity. Refer to "Note 29 Pension and other post-employment benefit plans" in the "Consolidated financial statements" section of the Annual Report 2018 for more information.

Note 7 General and administrative expenses

USD million	For the quarter ended			Year-to-date	
	30.6.19	31.3.19	30.6.18	30.6.19	30.6.18

Outsourcing of IT and other services	140	146	183	286	369
Litigation, regulatory and similar matters ¹	4	(8)	132	(4)	121
Other	24	29	7	53	38
Total general and administrative expenses	2,004	2,026	2,333	4,030	4,703

¹ Reflects the net increase in / (release of) provisions for litigation, regulatory and similar matters recognized in the income statement. Refer to Note 15 for more information. Also includes recoveries from third parties (second quarter of 2019: USD 1 million; first quarter of 2019: USD 7 million; second quarter of 2018: USD 10 million).

Note 8 Income taxes

We recognized income tax expenses of USD 349 million for the second quarter of 2019, compared with USD 296 million for the second quarter of 2018.

Current tax expenses were USD 196 million, compared with USD 178 million, and related to taxable profits of UBS Switzerland AG and other entities.

Deferred tax expenses were USD 153 million, compared with USD 118 million. These include expenses of USD 218 million, which reflect the amortization of deferred tax assets (DTAs) previously recognized in relation to tax losses carried forward and deductible temporary differences to reflect their offset against profits for the quarter, including the amortization of US tax loss DTAs at the level of UBS Americas Inc. Deferred tax

expenses were decreased by a benefit of USD 130 million in respect of additional DTA recognition that resulted from the contribution of real estate assets by UBS AG to UBS Americas Inc. during the second quarter of 2019. The additional DTA recognition related to the elections that were made in the fourth quarter of 2018 to capitalize certain historic real estate costs. This amount represents one half of the expected full year benefit and, therefore, further amounts of USD 65 million will be recognized in each of the third and fourth quarters in accordance with the requirements of IAS 34, *Interim Financial Reporting*.

Note 9 Expected credit loss measurement

a) Expected credit losses in the period

Total net credit loss expenses were USD 12 million in the second quarter of 2019, reflecting recoveries of USD 23 million in expected credit losses (ECL) from stage 1 and 2 positions and losses of USD 35 million from credit-impaired (stage 3) positions.

The recoveries of USD 23 million in stage 1 and 2 ECL during the quarter were primarily the result of updates to macroeconomic and market data in Personal & Corporate Banking, Global Wealth Management and the Investment Bank.

Stage 3 net losses of USD 35 million were recognized, primarily across a number of defaulted positions in Personal & Corporate Banking (USD 13 million) and Global Wealth Management (USD 12 million).

No changes, with material effect on ECL, were made to the models used to calculate ECL and to determine stage allocation during the second quarter of 2019.

UBS AG uses four different economic scenarios in the ECL calculation: an upside, a baseline, a mild downside and a severe downside scenario. The scenario weights were reviewed and remain unchanged from those applied as of 31 March 2019. During the quarter, the baseline scenario shocks were updated, alongside current macroeconomic and market data across all scenarios.

→ Refer to **"Note 1a Significant accounting policies item g"** and **"Note 23 Expected credit loss measurement"** in the **"Consolidated financial statements"** section of the **Annual Report 2018** for more information

b) ECL-relevant balance sheet and off-balance sheet positions including ECL allowances and provisions

The tables on the following pages provide information on financial instruments and certain non-financial instruments that are subject to ECL. For amortized cost instruments, the carrying amount represents the maximum exposure to credit risk, taking into account the allowance for credit losses. Financial assets measured at fair value through other comprehensive income (FVOCI) are also subject to ECL; however, unlike amortized cost instruments, the allowance for credit losses for FVOCI

instruments does not reduce the carrying value of these financial assets. Rather, the carrying value of financial assets measured at FVOCI represents the maximum exposure to credit risk.

In addition to on-balance sheet financial assets, certain off-balance sheet and other credit lines are also subject to ECL. The maximum exposure to credit risk for off-balance sheet financial instruments is calculated based on notional amounts.

Note 10 Fair value measurement

This Note provides fair value measurement information for both financial and non-financial instruments and should be read in conjunction with "Note 24 Fair value measurement" in the "Consolidated financial statements" section of the Annual Report 2018, which provides more information on valuation principles, valuation governance, fair value hierarchy classification, valuation adjustments, valuation techniques and inputs, sensitivity of fair value measurements, and methods applied to calculate fair values for financial instruments not measured at fair value.

All financial and non-financial assets and liabilities measured or disclosed at fair value are categorized into one of three fair

value hierarchy levels. In certain cases, the inputs used to measure fair value may fall within different levels of the fair value hierarchy. For disclosure purposes, the level in the hierarchy within which the instrument is classified in its entirety is based on the lowest level input that is significant to the position's fair value measurement:

- Level 1: quoted prices (unadjusted) in active markets for identical assets and liabilities;
- Level 2: valuation techniques for which all significant inputs are, or are based on, observable market data; or
- Level 3: valuation techniques for which significant inputs are not based on observable market data.

Note 10 Fair value measurement (continued)**a) Fair value hierarchy**

The fair value hierarchy classification of financial and non-financial assets and liabilities measured at fair value is summarized in the table below.

Determination of fair values from quoted market prices or valuation techniques¹

¹ Bifurcated embedded derivatives are presented on the same balance sheet lines as their host contracts and are not included in this table. The fair value of these derivatives was not material for the periods presented. ² Fair value hierarchy information for Financial assets for unit-linked investment contracts in the comparative periods have been restated, resulting in an increase in Level 1 assets of USD 4,908 million as of 31 March 2019 and of USD 4,746 million as of 31 December 2018, with a corresponding decrease in Level 2 assets. ³ Other non-financial assets primarily consist of properties and other non-current assets held for sale, which are measured at the lower of their net carrying amount or fair value less costs to sell.

Note 10 Fair value measurement (continued)**b) Valuation adjustments****Deferred day-1 profit or loss reserves**

The table below summarizes the changes in deferred day-1 profit or loss reserves during the relevant period.

Deferred day-1 profit or loss is generally released into *Other net income from financial instruments measured at fair value through profit or loss* when pricing of equivalent products or the underlying parameters become observable or when the transaction is closed out.

Deferred day-1 profit or loss reserves

USD million	For the quarter ended			Year-to-date	
	30.6.19	31.3.19	30.6.18	30.6.19	30.6.18
Reserve balance at the beginning of the period	161	255	479	255	338
Profit / (loss) deferred on new transactions	58	33	53	90	250
(Profit) / loss recognized in the income statement	(60)	(126)	(252)	(187)	(308)
Foreign currency translation	0	(1)	(4)	(1)	(3)
Reserve balance at the end of the period	158	161	276	158	276

c) Transfers between Level 1 and Level 2

The amounts disclosed in this section reflect transfers between Level 1 and Level 2 for instruments that were held for the entire reporting period.

Assets totaling approximately USD 1.4 billion, which mainly consisted of investment fund units presented in the line *Financial assets at fair value held for trading* on the balance sheet, were transferred from Level 2 to Level 1 during the first six months of

2019, generally due to increased levels of trading activity observed within the market for these instruments. Liabilities transferred from Level 2 to Level 1 during the first six months of 2019 were not material. Assets and liabilities transferred from Level 1 to Level 2 during the first six months of 2019 were also not material.

Note 10 Fair value measurement (continued)**d) Level 3 instruments: valuation techniques and inputs**

The table below presents material Level 3 assets and liabilities together with the valuation techniques used to measure fair value, the significant inputs used in the valuation technique that are considered unobservable and a range of values for those unobservable inputs.

The range of values represents the highest- and lowest-level input used in the valuation techniques. Therefore, the range does not reflect the level of uncertainty regarding a particular input, but rather the different underlying characteristics of the relevant assets and liabilities. The ranges will therefore vary from period to period and parameter to parameter based on characteristics of the instruments held at each balance sheet date. Furthermore, the ranges and weighted averages of unobservable inputs may differ

across other financial institutions due to the diversity of the products in each firm's inventory.

The significant unobservable inputs disclosed in the table below are consistent with those included in "Note 24 Fair value measurement" in the "Consolidated financial statements" section of the Annual Report 2018. A description of the potential effect that a change in each unobservable input in isolation may have on a fair value measurement, including information to facilitate an understanding of factors that give rise to the input ranges shown, is also provided in "Note 24 Fair value measurement" in the "Consolidated financial statements" section of the Annual Report 2018.

Valuation techniques and inputs used in the fair value measurement of Level 3 assets and liabilities

	Fair value				Valuation technique(s)	Significant unobservable input(s) ¹	Range of inputs						
	Assets		Liabilities				30.6.19			31.12.18			unit ¹
USD billion	30.6.19	31.12.18	30.6.19	31.12.18		low	high	weighted average ²	low	high	weighted average ²		
Financial assets and liabilities at fair value held for trading and Financial assets at fair value not held for trading													
Corporate and municipal bonds	0.5	0.7	0.0	0.0	Relative value to market comparable	Bond price equivalent	0	135	97	0	134	89	points
Traded loans, loans designated at fair value, loan commitments and guarantees	2.2	2.7	0.0	0.0	Relative value to market comparable	Loan price equivalent	0	101	99	0	100	99	points
					Discounted expected cash flows	Credit spread	301	700		301	513		basis points
					Market comparable and securitization model	Discount margin	1	14	2	1	14	2	%
Auction rate securities	1.6	1.7			Relative value to market comparable	Bond price equivalent	79	99	89	79	99	89	points
Investment fund units ³	0.3	0.6	0.0	0.0	Relative value to market comparable	Net asset value							
Equity instruments ³	0.6	0.6	0.1	0.0	Relative value to market comparable	Price							
Debt issued designated at fair value ⁴			11.4	11.0									
Other financial liabilities designated at fair value ⁴			0.7	1.0									
Derivative financial instruments													
Interest rate contracts	0.6	0.4	0.2	0.2	Option model	Volatility of interest rates	18	67		50	81		basis points
					Discounted expected cash flows	Credit spreads	3	571		4	545		basis points
						Bond price equivalent	3	100		3	99		points
Equity / index contracts	0.4	0.5	1.0	1.4	Option model	Equity dividend yields	0	11		0	12		%
						Volatility of equity stocks, equity and other indices	4	85		4	93		%
						Equity-to-FX correlation	(45)	64		(39)	67		%
						Equity-to-equity correlation	(17)	97		(50)	97		%

¹ The ranges of significant unobservable inputs are represented in points, percentages and basis points. Points are a percentage of par (e.g., 100 points would be 100% of par). ² Weighted averages are provided for non-derivative financial instruments and were calculated by weighting inputs based on the fair values of the respective instruments. Weighted averages are not provided for inputs related to derivative contracts as this would not be meaningful. ³ The range of inputs is not disclosed as there is a dispersion of values given the diverse nature of the investments. ⁴ Valuation techniques, significant unobservable inputs and the respective input ranges for Debt issued designated at fair value and Other financial liabilities designated at fair value, which mainly include over-the-counter debt instruments, are the same as the equivalent derivative or structured financing instruments presented elsewhere in this table.

Note 10 Fair value measurement (continued)**e) Level 3 instruments: sensitivity to changes in unobservable input assumptions**

The table below summarizes those financial assets and liabilities classified as Level 3 for which a change in one or more of the unobservable inputs to reflect reasonably possible alternative assumptions would change fair value significantly, and the estimated effect thereof.

The table shown presents the favorable and unfavorable effects for each class of financial assets and liabilities for which the potential change in fair value is considered significant. The sensitivity of fair value measurements for debt issued designated at fair value and over-the-counter debt instruments designated at fair value is reported with the equivalent derivative or structured financing instrument within the table below.

The sensitivity data shown below presents an estimation of valuation uncertainty based on reasonably possible alternative values for Level 3 inputs at the balance sheet date and does not represent the estimated effect of stress scenarios. Typically, these financial assets and liabilities are sensitive to a combination of inputs from Levels 1–3. Although well-defined interdependencies may exist between Levels 1–2 and Level 3 parameters (e.g., between interest rates, which are generally Level 1 or Level 2, and prepayments, which are generally Level 3), these have not been incorporated in the table. Furthermore, direct interrelationships between the Level 3 parameters are not a significant element of the valuation uncertainty.

Sensitivity of fair value measurements to changes in unobservable input assumptions

<i>USD million</i>	30.6.19		31.3.19		31.12.18

f) Level 3 instruments: movements during the period**Significant changes in Level 3 instruments**

The table on the following pages presents additional information about Level 3 assets and liabilities measured at fair value on a recurring basis. Level 3 assets and liabilities may be hedged with instruments classified as Level 1 or Level 2 in the fair value hierarchy and, as a result, realized and unrealized gains and losses included in the table may not include the effect of related hedging activity. Furthermore, the realized and unrealized gains and losses presented within the table are not limited solely to those arising from Level 3 inputs, as valuations are generally derived from both observable and unobservable parameters.

Upon adoption of IFRS 9 on 1 January 2018, certain financial assets and liabilities were newly classified as measured at fair value through profit or loss and designated as Level 3 in the fair value hierarchy. Certain assets were also reclassified from *Financial assets measured at fair value through other comprehensive income* to *Financial assets at fair value not held for trading*. Refer to "Note 24 Fair value measurement" in the "Consolidated financial statements" section of the Annual Report 2018 for more information.

Note 10 Fair value measurement (continued)

Assets and liabilities transferred into or out of Level 3 are presented as if those assets or liabilities had been transferred at the beginning of the year.

Assets transferred into and out of Level 3 in the first six months of 2019 totaled USD 0.8 billion and USD 1.2 billion, respectively. Transfers into Level 3 mainly consisted of loans, investment fund units and equity / index contracts, reflecting decreased observability of the relevant valuation inputs.

Transfers out of Level 3 mainly consisted of loans due to increased observability of the relevant valuation inputs.

Liabilities transferred into and out of Level 3 in the first six months of 2019 totaled USD 0.7 billion and USD 2.3 billion, respectively. Transfers into and out of Level 3 mainly consisted of debt issued designated at fair value, primarily equity-linked issued debt instruments, due to decreased or increased observability, respectively, of the embedded derivative inputs.

g) Financial instruments not measured at fair value

The table below reflects the estimated fair values of financial instruments not measured at fair value.

Financial instruments not measured at fair value

<i>USD billion</i>	30.6.19		31.3.19		31.12.18	
	Carrying value	Fair value	Carrying value	Fair value	Carrying value	Fair value
Assets						
Cash and balances at central banks	101.5	101.5	110.6	110.6	108.4	108.4
Loans and advances to banks	12.7	12.7	16.8	16.8	16.6	16.6
Receivables from securities financing transactions	92.9	92.9	100.2	100.2	95.3	95.4
Cash collateral receivables on derivative instruments	23.8	23.8	25.2	25.2	23.6	23.6
Loans and advances to customers	324.3	327.5	320.5	322.6	321.5	322.0
Other financial assets measured at amortized cost	22.2	22.4	22.5	22.5	22.6	22.5
Liabilities						
Amounts due to banks	9.5	9.5	9.1	9.1	11.0	11.0
Payables from securities financing transactions	6.8	6.8	5.2	5.2	10.3	10.3
Cash collateral payables on derivative instruments	31.4	31.4	30.3	30.3	28.9	28.9
Customer deposits	435.6	435.7	428.1	428.2	422.0	422.0
Funding from UBS Group AG and its subsidiaries	45.2	46.8	44.4	45.1	41.2	41.7
Debt issued measured at amortized cost	75.7	76.6	83.9	85.4	91.2	93.5
Other financial liabilities measured at amortized cost	10.9	10.9	10.8	10.8	7.6	7.6

The fair values included in the table above have been calculated for disclosure purposes only. The fair value valuation techniques and assumptions relate only to the fair value of UBS AG's financial instruments not measured at fair value. Other

institutions may use different methods and assumptions for their fair value estimation, and therefore such fair value disclosures cannot necessarily be compared from one financial institution to another.

¹ Derivative financial liabilities as of 30 June 2019 include USD 14 million related to derivative loan commitments (31 March 2019: USD 18 million; 31 December 2018: USD 17 million). No notional amounts related to these commitments are included in this table, but they are disclosed in Note 16 under Loan commitments. ² Includes certain forward starting repurchase and reverse repurchase agreements that are classified as measured at fair value through profit or loss and are recognized within derivative instruments. The fair value of these derivative instruments was not material as of 30 June 2019, 31 March 2019 or 31 December 2018. No notional amounts related to these instruments are included in this table, but they are disclosed within Note 16 under Forward starting transactions. ³ In cases where derivative financial instruments are presented on a net basis on the balance sheet, the respective notional values of the netted derivative financial instruments are still presented on a gross basis. ⁴ Other notional values relate to derivatives that are cleared through either a central counterparty or an exchange. The fair value of these derivatives is presented on the balance sheet net of the corresponding cash margin under Cash collateral receivables on derivative instruments and Cash collateral payables on derivative instruments and was not material for all periods presented. ⁵ Changes in the fair value of purchased and sold non-derivative financial instruments between trade date and settlement date are recognized as derivative financial instruments. ⁶ Financial assets and liabilities are presented net on the balance sheet if UBS AG has the unconditional and legally enforceable right to offset the recognized amounts, both in the normal course of business and in the event of default, bankruptcy or insolvency of the entity and all of the counterparties, and intends either to settle on a net basis or to realize the asset and settle the liability simultaneously. ⁷ Reflects the netting potential in accordance with enforceable master netting and similar arrangements where not all criteria for a net presentation on the balance sheet have been met. Refer to "Note 25 Offsetting financial assets and financial liabilities" in the "Consolidated financial statements" section of the Annual Report 2018 for more information.

¹ Debt with an original maturity of less than one year. ² Issued by the legal entity UBS AG. Based on original contractual maturity without considering any early redemption features. As of 30 June 2019, 100% of the balance was unsecured (31 March 2019: 100% of the balance was unsecured; 31 December 2018: 100% of the balance was unsecured). ³ Debt with an original maturity greater than or equal to one year. The classification of debt issued into short-term and long-term does not consider any early redemption features. ⁴ Net of bifurcated embedded derivatives, the fair value of which was not material for the periods presented.

Note 15 Provisions and contingent liabilities

a) Provisions

The table below presents an overview of total provisions recognized under both IAS 37 and IFRS 9.

<i>USD million</i>	30.6.19	31.3.19	31.12.18
Provisions recognized under IAS 37	2,855	3,030	3,341
Provisions for off-balance sheet financial instruments	80	91	79
Provisions for other credit lines	42	43	37
Total provisions	2,978	3,165	3,457

The following table presents additional information for provisions recognized under IAS 37.

<i>USD million</i>	Operational risks ²	Litigation, regulatory and similar matters ³	Restructuring	Real estate	Employee benefits ⁶	Other	Total
Balance as of 31 December 2018	45	2,827	215	122	55	77	3,341
Adjustment from adoption of IFRS 16 ¹	0	0	(103)	(28)	0	0	(131)
Balance as of 1 January 2019	45	2,827	112	94	55	77	3,210
Balance as of 31 March 2019	43	2,677	95	90	54	72	3,030
Increase in provisions recognized in the income statement	2	40	8	0	1	2	53
Release of provisions recognized in the income statement	0	(35)	(3)	0	(1)	0	(39)
Provisions used in conformity with designated purpose	(3)	(184)	(14)	0	0	(1)	(203)
Reclassifications	0	0	0	0	0	(1)	(1)
Foreign currency translation / unwind of discount	1	11	0	1	0	1	15
Balance as of 30 June 2019	43	2,509	86⁴	90⁵	55	73	2,855

¹ Refer to Note 1 for more information. ² Comprises provisions for losses resulting from security risks and transaction processing risks. ³ Comprises provisions for losses resulting from legal, liability and compliance risks. ⁴ Primarily consists of personnel-related restructuring provisions of USD 18 million as of 30 June 2019 (31 March 2019: USD 25 million; 31 December 2018: USD 40 million) and provisions for onerous contracts of USD 63 million as of 30 June 2019 (31 March 2019: USD 64 million; 31 December 2018: USD 170 million). ⁵ Consists of reinstatement costs for leasehold improvements of USD 82 million as of 30 June 2019 (31 March 2019: USD 81 million; 31 December 2018: USD 83 million) and provisions for onerous contracts of USD 9 million as of 30 June 2019 (31 March 2019: USD 9 million; 31 December 2018: USD 40 million). ⁶ Includes provisions for sabbatical and anniversary awards.

Restructuring provisions primarily relate to onerous contracts and severance payments. Onerous contracts for property are recognized when UBS AG is committed to pay for non-lease components, such as utilities, when a property is vacated or not fully recovered from subtenants. Severance-related provisions are used within a short time period, usually within six months, but potential changes in amount may be triggered when natural

staff attrition reduces the number of people affected by a restructuring event and therefore the estimated costs.

Information on provisions and contingent liabilities in respect of litigation, regulatory and similar matters, as a class, is included in Note 15b. There are no material contingent liabilities associated with the other classes of provisions.

b) Litigation, regulatory and similar matters

UBS operates in a legal and regulatory environment that exposes it to significant litigation and similar risks arising from disputes and regulatory proceedings. As a result, UBS (which for purposes of this Note may refer to UBS AG and / or one or more of its subsidiaries, as applicable) is involved in various disputes and legal proceedings, including litigation, arbitration, and regulatory and criminal investigations.

Such matters are subject to many uncertainties, and the outcome and the timing of resolution are often difficult to predict, particularly in the earlier stages of a case. There are also situations where UBS may enter into a settlement agreement. This may occur in order to avoid the expense, management distraction or reputational implications of continuing to contest liability, even for those matters for which UBS believes it should be exonerated. The uncertainties inherent in all such matters affect the amount and timing of any potential outflows for both matters with respect to which provisions have been established and other contingent liabilities. UBS makes provisions for such matters brought against it when, in the opinion of management after seeking legal advice, it is more likely than not that UBS has a present legal or constructive obligation as a result of past

events, it is probable that an outflow of resources will be required, and the amount can be reliably estimated. Where these factors are otherwise satisfied, a provision may be established for claims that have not yet been asserted against UBS, but are nevertheless expected to be, based on UBS's experience with similar asserted claims. If any of those conditions is not met, such matters result in contingent liabilities. If the amount of an obligation cannot be reliably estimated, a liability exists that is not recognized even if an outflow of resources is probable. Accordingly, no provision is established even if the potential outflow of resources with respect to such matters could be significant. Developments relating to a matter that occur after the relevant reporting period, but prior to the issuance of financial statements, which affect management's assessment of the provision for such matter (because, for example, the developments provide evidence of conditions that existed at the end of the reporting period), are adjusting events after the reporting period under IAS 10 and must be recognized in the financial statements for the reporting period.

Note 15 Provisions and contingent liabilities (continued)

Specific litigation, regulatory and other matters are described below, including all such matters that management considers to be material and others that management believes to be of significance due to potential financial, reputational and other effects. The amount of damages claimed, the size of a transaction or other information is provided where available and appropriate in order to assist users in considering the magnitude of potential exposures.

In the case of certain matters below, we state that we have established a provision, and for the other matters, we make no such statement. When we make this statement and we expect disclosure of the amount of a provision to prejudice seriously our position with other parties in the matter because it would reveal what UBS believes to be the probable and reliably estimable outflow, we do not disclose that amount. In some cases we are subject to confidentiality obligations that preclude such disclosure. With respect to the matters for which we do not state whether we have established a provision, either (a) we have not established a provision, in which case the matter is treated as a contingent liability under the applicable accounting standard; or (b) we have established a provision but expect disclosure of that fact to prejudice seriously our position with other parties in the matter because it would reveal the fact that UBS believes an outflow of resources to be probable and reliably estimable.

With respect to certain litigation, regulatory and similar matters for which we have established provisions, we are able to estimate the expected timing of outflows. However, the aggregate amount of the expected outflows for those matters for which we are able to estimate expected timing is immaterial relative to our current and expected levels of liquidity over the relevant time periods.

The aggregate amount provisioned for litigation, regulatory and similar matters as a class is disclosed in the "Provisions" table in Note 15a above. It is not practicable to provide an aggregate estimate of liability for our litigation, regulatory and similar matters as a class of contingent liabilities. Doing so would require us to provide speculative legal assessments as to claims

and proceedings that involve unique fact patterns or novel legal theories, that have not yet been initiated or are at early stages of adjudication, or as to which alleged damages have not been quantified by the claimants. Although we therefore cannot provide a numerical estimate of the future losses that could arise from litigation, regulatory and similar matters, we believe that the aggregate amount of possible future losses from this class that are more than remote substantially exceeds the level of current provisions.

Litigation, regulatory and similar matters may also result in non-monetary penalties and consequences. For example, the non-prosecution agreement described in item 5 of this Note, which we entered into with the US Department of Justice (DOJ), Criminal Division, Fraud Section in connection with our submissions of benchmark interest rates, including, among others, the British Bankers' Association London Interbank Offered Rate (LIBOR), was terminated by the DOJ based on its determination that we had committed a US crime in relation to foreign exchange matters. As a consequence, UBS AG pleaded guilty to one count of wire fraud for conduct in the LIBOR matter, paid a fine and is subject to probation through January 2020.

A guilty plea to, or conviction of, a crime could have material consequences for UBS. Resolution of regulatory proceedings may require us to obtain waivers of regulatory disqualifications to maintain certain operations, may entitle regulatory authorities to limit, suspend or terminate licenses and regulatory authorizations, and may permit financial market utilities to limit, suspend or terminate our participation in such utilities. Failure to obtain such waivers, or any limitation, suspension or termination of licenses, authorizations or participations, could have material consequences for UBS.

The risk of loss associated with litigation, regulatory and similar matters is a component of operational risk for purposes of determining our capital requirements. Information concerning our capital requirements and the calculation of operational risk for this purpose is included in the "Capital management" section of the UBS Group second quarter 2019 report.

Provisions for litigation, regulatory and similar matters by business division and in Corporate Center¹

<i>USD million</i>	Global Wealth Management	Personal & Corporate Banking	Asset Management	Investment Bank	Corporate Center	UBS
Balance as of 31 December 2018	1,003	117	0	269	1,438	2,827

¹ Provisions, if any, for the matters described in this disclosure are recorded in Global Wealth Management (item 3 and item 4) and Corporate Center (item 2). Provisions, if any, for the matters described in items 1 and 6 of this disclosure are allocated between Global Wealth Management and Personal & Corporate Banking, and provisions, if any, for the matters described in this disclosure in item 5 are allocated between the Investment Bank and Corporate Center.

Note 15 Provisions and contingent liabilities (continued)

1. Inquiries regarding cross-border wealth management businesses

Tax and regulatory authorities in a number of countries have made inquiries, served requests for information or examined employees located in their respective jurisdictions relating to the cross-border wealth management services provided by UBS and other financial institutions. It is possible that the implementation of automatic tax information exchange and other measures relating to cross-border provision of financial services could give rise to further inquiries in the future. UBS has received disclosure orders from the Swiss Federal Tax Administration (FTA) to transfer information based on requests for international administrative assistance in tax matters. The requests concern a number of UBS account numbers pertaining to current and former clients and are based on data from 2006 and 2008. UBS has taken steps to inform affected clients about the administrative assistance proceedings and their procedural rights, including the right to appeal. The requests are based on data received from the German authorities, who seized certain data related to UBS clients booked in Switzerland during their investigations and have apparently shared this data with other European countries. UBS expects additional countries to file similar requests.

The Swiss Federal Administrative Court ruled in 2016 that, in the administrative assistance proceedings related to a French bulk request, UBS has the right to appeal all final FTA client data disclosure orders. On 30 July 2018, the Swiss Federal Administrative Court granted UBS's appeal by holding the French administrative assistance request inadmissible. The FTA filed a final appeal with the Swiss Federal Supreme Court. The Supreme Court has scheduled a hearing for 26 July 2019, at which UBS expects that it will announce a decision.

Since 2013, UBS (France) S.A., UBS AG and certain former employees have been under investigation in France for alleged complicity in having illicitly solicited clients on French territory, regarding the laundering of proceeds of tax fraud, and banking and financial solicitation by unauthorized persons. In connection with this investigation, the investigating judges ordered UBS AG to provide bail ("caution") of EUR 1.1 billion and UBS (France) S.A. to post bail of EUR 40 million, which was reduced on appeal to EUR 10 million.

A trial in the court of first instance took place from 8 October 2018 until 15 November 2018. On 20 February 2019, the court announced a verdict finding UBS AG guilty of illicitly soliciting clients on French territory and aggravated laundering of the proceeds of tax fraud, and UBS France S.A. guilty of aiding and abetting unlawful solicitation and laundering the proceeds of tax fraud. The court imposed fines aggregating EUR 3.7 billion on UBS AG and UBS France S.A. and awarded EUR 800 million of civil damages to the French state. UBS has appealed the decision. Under French law, the judgment is suspended while the appeal is pending. The Court of Appeal will

retry the case de novo as to both the law and the facts, and the fines and penalties can be greater than or less than those imposed by the court of first instance. A subsequent appeal to the Cour de Cassation, France's highest court, is possible with respect to questions of law.

UBS believes that based on both the law and the facts the judgment of the court of first instance should be reversed. UBS believes it followed its obligations under Swiss and French law as well as the European Savings Tax Directive. Even assuming liability, which it contests, UBS believes the penalties and damage amounts awarded greatly exceed the amounts that could be supported by the law and the facts. In particular, UBS believes the court incorrectly based the penalty on the total regularized assets rather than on any unpaid taxes on those assets for which a fraud has been characterized and further incorrectly awarded damages based on costs that were not proven by the civil party. Notwithstanding that UBS believes it should be acquitted, our balance sheet at 30 June 2019 reflected provisions with respect to this matter in an amount of USD 516 million. The wide range of possible outcomes in this case contributes to a high degree of estimation uncertainty. The provision reflected on our balance sheet at 30 June 2019 reflects our best estimate of possible financial implications, although it is reasonably possible that actual penalties and civil damages could exceed the provision amount.

In 2016, UBS was notified by the Belgian investigating judge that it is under formal investigation ("inculpé") regarding the laundering of proceeds of tax fraud, of banking and financial solicitation by unauthorized persons, and of serious tax fraud. In 2018, tax authorities and a prosecutor's office in Italy asserted that UBS is potentially liable for taxes and penalties as a result of its activities in Italy from 2012 to 2017. In June 2019, UBS entered into a settlement agreement with the Italian tax authorities under which it paid EUR 101 million to resolve the claims asserted by the authority related to UBS AG's potential permanent establishment in Italy.

UBS has, and reportedly numerous other financial institutions have, received inquiries from authorities concerning accounts relating to the Fédération Internationale de Football Association (FIFA) and other constituent soccer associations and related persons and entities. UBS is cooperating with authorities in these inquiries.

Our balance sheet at 30 June 2019 reflected provisions with respect to matters described in this item 1 in an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

Note 15 Provisions and contingent liabilities (continued)**2. Claims related to sales of residential mortgage-backed securities and mortgages**

From 2002 through 2007, prior to the crisis in the US residential loan market, UBS was a substantial issuer and underwriter of US residential mortgage-backed securities (RMBS) and was a purchaser and seller of US residential mortgages. A subsidiary of UBS, UBS Real Estate Securities Inc. (UBS RESI), acquired pools of residential mortgage loans from originators and (through an affiliate) deposited them into securitization trusts. In this manner, from 2004 through 2007, UBS RESI sponsored approximately USD 80 billion in RMBS, based on the original principal balances of the securities issued.

UBS RESI also sold pools of loans acquired from originators to third-party purchasers. These whole loan sales during the period 2004 through 2007 totaled approximately USD 19 billion in original principal balance.

UBS was not a significant originator of US residential loans. A branch of UBS originated approximately USD 1.5 billion in US residential mortgage loans during the period in which it was active from 2006 to 2008 and securitized less than half of these loans.

Lawsuits related to contractual representations and warranties concerning mortgages and RMBS: When UBS acted as an RMBS sponsor or mortgage seller, it generally made certain representations relating to the characteristics of the underlying loans. In the event of a material breach of these representations, UBS was in certain circumstances contractually obligated to repurchase the loans to which the representations related or to indemnify certain parties against losses. In 2012, certain RMBS trusts filed an action in the US District Court for the Southern District of New York seeking to enforce UBS RESI's obligation to repurchase loans in the collateral pools for three RMBS securitizations issued and underwritten by UBS with an original principal balance of approximately USD 2 billion. In July 2018, UBS and the trustee entered into an agreement under which UBS will pay USD 850 million to resolve this matter. A significant portion of this amount will be borne by other parties that indemnified UBS. The settlement remains subject to court approval and proceedings to determine how the settlement funds will be distributed to RMBS holders. After giving effect to this settlement, UBS considers claims relating to substantially all loan repurchase demands to be resolved and believes that new demands to repurchase US residential mortgage loans are time-barred under a decision rendered by the New York Court of Appeals.

Mortgage-related regulatory matters: Since 2014, the US Attorney's Office for the Eastern District of New York has sought information from UBS pursuant to the Financial Institutions Reform, Recovery and Enforcement Act of 1989 (FIRREA), related to UBS's RMBS business from 2005 through 2007. On 8 November 2018, the DOJ filed a civil complaint in the District Court for the Eastern District of New York. The complaint seeks unspecified civil monetary penalties under FIRREA related to UBS's issuance, underwriting and sale of 40 RMBS transactions in 2006 and 2007. UBS moved to dismiss the civil complaint on 6 February 2019.

Our balance sheet at 30 June 2019 reflected a provision with respect to matters described in this item 2 in an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of this matter cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

3. Madoff

In relation to the Bernard L. Madoff Investment Securities LLC (BMIS) investment fraud, UBS AG, UBS (Luxembourg) S.A. (now UBS Europe SE, Luxembourg branch) and certain other UBS subsidiaries have been subject to inquiries by a number of regulators, including the Swiss Financial Market Supervisory Authority (FINMA) and the Luxembourg Commission de Surveillance du Secteur Financier. Those inquiries concerned two third-party funds established under Luxembourg law, substantially all assets of which were with BMIS, as well as certain funds established in offshore jurisdictions with either direct or indirect exposure to BMIS. These funds faced severe losses, and the Luxembourg funds are in liquidation. The documentation establishing both funds identifies UBS entities in various roles, including custodian, administrator, manager, distributor and promoter, and indicates that UBS employees serve as board members.

In 2009 and 2010, the liquidators of the two Luxembourg funds filed claims against UBS entities, non-UBS entities and certain individuals, including current and former UBS employees, seeking amounts totaling approximately EUR 2.1 billion, which includes amounts that the funds may be held liable to pay the trustee for the liquidation of BMIS (BMIS Trustee).

Note 15 Provisions and contingent liabilities (continued)

A large number of alleged beneficiaries have filed claims against UBS entities (and non-UBS entities) for purported losses relating to the Madoff fraud. The majority of these cases have been filed in Luxembourg, where decisions that the claims in eight test cases were inadmissible have been affirmed by the Luxembourg Court of Appeal, and the Luxembourg Supreme Court has dismissed a further appeal in one of the test cases.

In the US, the BMIS Trustee filed claims against UBS entities, among others, in relation to the two Luxembourg funds and one of the offshore funds. The total amount claimed against all defendants in these actions was not less than USD 2 billion. In 2014, the US Supreme Court rejected the BMIS Trustee's motion for leave to appeal decisions dismissing all claims except those for the recovery of approximately USD 125 million of payments alleged to be fraudulent conveyances and preference payments. In 2016, the bankruptcy court dismissed these claims against the UBS entities. The BMIS Trustee appealed. In February 2019, the Court of Appeals reversed the dismissal of the BMIS Trustee's remaining claims. The defendants, including UBS, are preparing a petition to the US Supreme Court requesting that it review the Court of Appeals' decision. The bankruptcy proceedings have been stayed pending a decision with respect to that petition.

4. Puerto Rico

Declines since 2013 in the market prices of Puerto Rico municipal bonds and of closed-end funds (funds) that are sole-managed and co-managed by UBS Trust Company of Puerto Rico and distributed by UBS Financial Services Incorporated of Puerto Rico (UBS PR) have led to multiple regulatory inquiries, as well as customer complaints and arbitrations with aggregate claimed damages of USD 3.2 billion, of which claims with aggregate claimed damages of USD 2.2 billion have been resolved through settlements, arbitration or withdrawal of the claim. The claims have been filed by clients in Puerto Rico who own the funds or Puerto Rico municipal bonds and / or who used their UBS account assets as collateral for UBS non-purpose loans; customer complaint and arbitration allegations include fraud, misrepresentation and unsuitability of the funds and of the loans.

A shareholder derivative action was filed in 2014 against various UBS entities and current and certain former directors of the funds, alleging hundreds of millions of US dollars in losses in the funds. In 2015, defendants' motion to dismiss was denied and a request for permission to appeal that ruling was denied by the Puerto Rico Supreme Court. In 2014, a federal class action complaint also was filed against various UBS entities, certain members of UBS PR senior management and the co-manager of certain of the funds, seeking damages for investor losses in the funds during the period from May 2008 through May 2014. Following denial of the plaintiffs' motion for class certification, the case was dismissed in October 2018.

In 2014 and 2015, UBS entered into settlements with the Office of the Commissioner of Financial Institutions for the Commonwealth of Puerto Rico, the US Securities and Exchange Commission (SEC) and the Financial Industry Regulatory Authority in relation to their examinations of UBS's operations.

In 2011, a purported derivative action was filed on behalf of the Employee Retirement System of the Commonwealth of Puerto Rico (System) against over 40 defendants, including UBS PR, which was named in connection with its underwriting and consulting services. Plaintiffs alleged that defendants violated their purported fiduciary duties and contractual obligations in connection with the issuance and underwriting of USD 3 billion of bonds by the System in 2008 and sought damages of over USD 800 million. In 2016, the court granted the System's request to join the action as a plaintiff, but ordered that plaintiffs must file an amended complaint. In 2017, the court denied defendants' motion to dismiss the amended complaint.

Beginning in 2015, and continuing through 2017, certain agencies and public corporations of the Commonwealth of Puerto Rico (Commonwealth) defaulted on certain interest payments on Puerto Rico bonds. In 2016, US federal legislation created an oversight board with power to oversee Puerto Rico's finances and to restructure its debt. The oversight board has imposed a stay on the exercise of certain creditors' rights. In 2017, the oversight board placed certain of the bonds into a bankruptcy-like proceeding under the supervision of a Federal District Judge. These events, further defaults or any further legislative action to create a legal means of restructuring Commonwealth obligations or to impose additional oversight on the Commonwealth's finances, or any restructuring of the Commonwealth's obligations, may increase the number of claims against UBS concerning Puerto Rico securities, as well as potential damages sought.

In May 2019 the oversight board filed complaints in Puerto Rico federal district court bringing claims against financial, legal and accounting firms that had participated in Puerto Rico municipal bond offerings, including UBS, seeking a return of underwriting and swap fees paid in connection with those offerings. UBS estimates that it received approximately USD 125 million in fees in the relevant offerings.

Our balance sheet at 30 June 2019 reflected provisions with respect to matters described in this item 4 in amounts that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provisions that we have recognized.

Note 15 Provisions and contingent liabilities (continued)**5. Foreign exchange, LIBOR and benchmark rates, and other trading practices**

Foreign exchange-related regulatory matters: Beginning in 2013, numerous authorities commenced investigations concerning possible manipulation of foreign exchange markets and precious metals prices. In 2014 and 2015, UBS reached settlements with the UK Financial Conduct Authority (FCA) and the US Commodity Futures Trading Commission (CFTC) in connection with their foreign exchange investigations, FINMA issued an order concluding its formal proceedings relating to UBS's foreign exchange and precious metals businesses, and the Board of Governors of the Federal Reserve System (Federal Reserve Board) and the Connecticut Department of Banking issued a Cease and Desist Order and assessed monetary penalties against UBS AG. In 2015, the DOJ's Criminal Division terminated the 2012 non-prosecution agreement with UBS AG related to UBS's submissions of benchmark interest rates, and UBS AG pleaded guilty to one count of wire fraud, paid a fine and is subject to probation through January 2020. In 2019 the European Commission announced two decisions with respect to foreign exchange trading. UBS was granted immunity by the European Commission in these matters and therefore was not fined. UBS has ongoing obligations to cooperate with these authorities and to undertake certain remediation measures. UBS has also been granted conditional immunity by the Antitrust Division of the DOJ and by authorities in other jurisdictions in connection with potential competition law violations relating to foreign exchange and precious metals businesses. Investigations relating to foreign exchange matters by certain authorities remain ongoing notwithstanding these resolutions.

Foreign exchange-related civil litigation: Putative class actions have been filed since 2013 in US federal courts and in other jurisdictions against UBS and other banks on behalf of putative classes of persons who engaged in foreign currency transactions with any of the defendant banks. UBS has resolved US federal court class actions relating to foreign currency transactions with the defendant banks and persons who transacted in foreign exchange futures contracts and options on such futures under a settlement agreement that provides for UBS to pay an aggregate of USD 141 million and provide cooperation to the settlement classes. Certain class members have excluded themselves from that settlement and have filed individual actions in US and English courts against UBS and other banks, alleging violations of US and European competition laws and unjust enrichment.

In 2015, a putative class action was filed in federal court against UBS and numerous other banks on behalf of persons and businesses in the US who directly purchased foreign

currency from the defendants and alleged co-conspirators for their own end use. In March 2017, the court granted UBS's (and the other banks') motions to dismiss the complaint. The plaintiffs filed an amended complaint in August 2017. In March 2018, the court denied the defendants' motions to dismiss the amended complaint.

In 2017, two putative class actions were filed in federal court in New York against UBS and numerous other banks on behalf of persons and entities who had indirectly purchased foreign exchange instruments from a defendant or co-conspirator in the US, and a consolidated complaint was filed in June 2017. In March 2018, the court dismissed the consolidated complaint. In October 2018, the court granted plaintiffs' motion seeking leave to file an amended complaint.

LIBOR and other benchmark-related regulatory matters: Numerous government agencies, including the SEC, the CFTC, the DOJ, the FCA, the UK Serious Fraud Office, the Monetary Authority of Singapore, the Hong Kong Monetary Authority, FINMA, various state attorneys general in the US and competition authorities in various jurisdictions have conducted or are continuing to conduct investigations regarding potential improper attempts by UBS, among others, to manipulate LIBOR and other benchmark rates at certain times. In 2012, UBS reached settlements relating to benchmark interest rates with the UK Financial Services Authority, the CFTC and the Criminal Division of the DOJ, and FINMA issued an order in its proceedings with respect to UBS relating to benchmark interest rates. In addition, UBS entered into settlements with the European Commission and with the Swiss Competition Commission (WEKO) regarding its investigation of bid-ask spreads in connection with Swiss franc interest rate derivatives. UBS has ongoing obligations to cooperate with the authorities with whom we have reached resolutions and to undertake certain remediation measures with respect to benchmark interest rate submissions. In December 2018, UBS entered into a settlement agreement with the New York and other state attorneys general under which it has paid USD 68 million to resolve claims by the attorneys general related to LIBOR. UBS has been granted conditional leniency or conditional immunity from authorities in certain jurisdictions, including the Antitrust Division of the DOJ and WEKO, in connection with potential antitrust or competition law violations related to certain rates. However, UBS has not reached a final settlement with WEKO, as the Secretariat of WEKO has asserted that UBS does not qualify for full immunity.

Note 15 Provisions and contingent liabilities (continued)

LIBOR and other benchmark-related civil litigation: A number of putative class actions and other actions are pending in the federal courts in New York against UBS and numerous other banks on behalf of parties who transacted in certain interest rate benchmark-based derivatives. Also pending in the US and in other jurisdictions are a number of other actions asserting losses related to various products whose interest rates were linked to LIBOR and other benchmarks, including adjustable rate mortgages, preferred and debt securities, bonds pledged as collateral, loans, depository accounts, investments and other interest-bearing instruments. The complaints allege manipulation, through various means, of certain benchmark interest rates, including USD LIBOR, Euroyen TIBOR, Yen LIBOR, EURIBOR, CHF LIBOR, GBP LIBOR, USD and SGD SIBOR and SOR and Australian BBSW, and seek unspecified compensatory and other damages under varying legal theories.

USD LIBOR class and individual actions in the US: In 2013 and 2015, the district court in the USD LIBOR actions dismissed, in whole or in part, certain plaintiffs' antitrust claims, federal racketeering claims, CEA claims, and state common law claims. Although the Second Circuit vacated the district court's judgment dismissing antitrust claims, the district court again dismissed antitrust claims against UBS in 2016. Certain plaintiffs have appealed that decision to the Second Circuit. Separately, in 2018, the Second Circuit reversed in part the district court's 2015 decision dismissing certain individual plaintiffs' claims. UBS entered into an agreement in 2016 with representatives of a class of bondholders to settle their USD LIBOR class action. The agreement has received preliminary court approval and remains subject to final approval. In 2018, the district court denied plaintiffs' motions for class certification in the USD class actions for claims pending against UBS, and plaintiffs sought permission to appeal that ruling to the Second Circuit. In July 2018, the Second Circuit denied the petition to appeal of the class of USD lenders and in November 2018 denied the petition of the USD exchange class. In January 2019, a putative class action was filed in the District Court for the Southern District of New York against UBS and numerous other banks on behalf of US residents who, since 1 February 2014, directly transacted with a defendant bank in USD LIBOR instruments. The complaint asserts antitrust and unjust enrichment claims.

Other benchmark class actions in the US: In 2014, the court in one of the Euroyen TIBOR lawsuits dismissed certain of the plaintiffs' claims, including a federal antitrust claim, for lack of standing. In 2015, this court dismissed the plaintiffs' federal racketeering claims on the same basis and affirmed its previous dismissal of the plaintiffs' antitrust claims against UBS. In 2017, this court also dismissed the other Yen LIBOR / Euroyen TIBOR action in its entirety on standing grounds, as did the court in the CHF LIBOR action. Also in 2017, the courts in the EURIBOR lawsuit dismissed the cases as to UBS and certain other foreign defendants for lack of personal jurisdiction. In October 2018, the

court in the SIBOR / SOR action dismissed all but one of plaintiffs' claims against UBS. Plaintiffs in the CHF LIBOR and SIBOR / SOR actions have filed amended complaints following the dismissals, which UBS and other defendants have moved to dismiss. In November 2018, the court in the BBSW lawsuit dismissed the case as to UBS and certain other foreign defendants for lack of personal jurisdiction. Following that dismissal, plaintiffs in the BBSW action filed an amended complaint in April 2019, which UBS and other defendants named in the amended complaint have moved to dismiss. UBS and other defendants also moved to dismiss the GBP LIBOR action in December 2016, but that motion was denied as to UBS in December 2018. UBS moved for reconsideration of that decision in January 2019.

Government bonds: Putative class actions have been filed since 2015 in US federal courts against UBS and other banks on behalf of persons who participated in markets for US Treasury securities since 2007. A consolidated complaint was filed in 2017 in the US District Court for the Southern District of New York alleging that the banks colluded with respect to, and manipulated prices of, US Treasury securities sold at auction and in the secondary market and asserting claims under the antitrust laws and for unjust enrichment. Defendants' motions to dismiss the consolidated complaint are pending.

UBS and reportedly other banks are responding to investigations and requests for information from various authorities regarding US Treasury securities and other government bond trading practices. As a result of its review to date, UBS has taken appropriate action.

With respect to additional matters and jurisdictions not encompassed by the settlements and orders referred to above, our balance sheet at 30 June 2019 reflected a provision in an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

6. Swiss retrocessions

The Federal Supreme Court of Switzerland ruled in 2012, in a test case against UBS, that distribution fees paid to a firm for distributing third-party and intra-group investment funds and structured products must be disclosed and surrendered to clients who have entered into a discretionary mandate agreement with the firm, absent a valid waiver.

FINMA has issued a supervisory note to all Swiss banks in response to the Supreme Court decision. UBS has met the FINMA requirements and has notified all potentially affected clients.

Note 15 Provisions and contingent liabilities (continued)

The Supreme Court decision has resulted, and may continue to result, in a number of client requests for UBS to disclose and potentially surrender retrocessions. Client requests are assessed on a case-by-case basis. Considerations taken into account when assessing these cases include, among other things, the existence of a discretionary mandate and whether or not the client documentation contained a valid waiver with respect to distribution fees.

Our balance sheet at 30 June 2019 reflected a provision with respect to matters described in this item 6 in an amount that

UBS believes to be appropriate under the applicable accounting standard. The ultimate exposure will depend on client requests and the resolution thereof, factors that are difficult to predict and assess. Hence, as in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

Note 16 Guarantees, commitments and forward starting transactions

The table below presents the maximum irrevocable amount of guarantees, commitments and forward starting transactions.

USD million	30.6.19				31.3.19				31.12.18			
	Gross		Sub-participations	Net	Gross		Sub-participations	Net	Gross		Sub-participations	Net
	Measured at fair value	Not measured at fair value			Measured at fair value	Not measured at fair value			Measured at fair value	Not measured at fair value		
Total guarantees	1,830	16,810	(2,929)	15,712	1,840	17,434	(2,760)	16,514	1,639	18,146	(2,803)	16,982

Forward starting transactions¹												
Reverse repurchase agreements	32,037	2,240			29,284	2,038			8,117	925		
Securities borrowing agreements		19				20				12		
Repurchase agreements	17,700	1,138			15,321	629			7,926	400		

¹ Cash to be paid in the future by either UBS or the counterparty.

Note 17 Currency translation rates

The following table shows the rates of the main currencies used to translate the financial information of UBS AG's operations with a functional currency other than the US dollar into US dollars.

	Closing exchange rate				Average rate ¹					
	As of				For the quarter ended			Year-to-date		
	30.6.19	31.3.19	31.12.18	30.6.18	30.6.19	31.3.19	30.6.18	30.6.19	30.6.18	
1 CHF	1.02	1.00	1.02	1.01	1.00	1.00	1.01	1.00	1.03	
1 EUR	1.14	1.12	1.15	1.17	1.13	1.14	1.18	1.13	1.21	
1 GBP	1.27	1.30	1.28	1.32	1.28	1.31	1.34	1.30	1.37	
100 JPY	0.93	0.90	0.91	0.90	0.92	0.91	0.91	0.91	0.92	

¹ Monthly income statement items of operations with a functional currency other than the US dollar are translated with month-end rates into US dollars. Disclosed average rates for a quarter represent an average of three month-end rates, weighted according to the income and expense volumes of all operations of UBS AG with the same functional currency for each month. Weighted average rates for individual business divisions may deviate from the weighted average rates for UBS AG.

Note 18 Supplemental guarantor information required under SEC regulations**Joint liability of UBS Switzerland AG**

In 2015, the Personal & Corporate Banking and Wealth Management businesses booked in Switzerland were transferred from UBS AG to UBS Switzerland AG through an asset transfer in accordance with the Swiss Merger Act. Under the terms of the asset transfer agreement, UBS Switzerland AG assumed joint liability for contractual obligations of UBS AG existing on the

asset transfer date, including the full and unconditional guarantee of certain registered debt securities issued by UBS AG. To reflect this joint liability, UBS Switzerland AG is presented in a separate column as a subsidiary co-guarantor.

The joint liability of UBS Switzerland AG for contractual obligations of UBS AG decreased by USD 3 billion in the first half of 2019 to USD 23 billion as of 30 June 2019, mainly due to contractual maturities of derivative financial instruments.

¹ During the second quarter of 2019, a payment of a cash dividend of USD 3,250 million (CHF 3,312 million) was made out of Profit / (loss) carried forward to UBS Group AG, as approved at the Annual General Meeting of Shareholders held on 18 April 2019. The remainder of the balance under Profit / (loss) carried forward was appropriated to the Voluntary earnings reserve.

Basis of accounting

UBS AG standalone financial statements are prepared in accordance with Swiss GAAP (FINMA Circular 2015/1 and the Banking Ordinance).

The accounting policies are principally the same as the IFRS-based accounting policies for the consolidated financial statements outlined in Note 1 to the consolidated financial statements of UBS AG included in the Annual Report 2018. Major differences between Swiss GAAP and IFRS are described in Note 39 to the consolidated financial statements of UBS AG. Further information on the accounting policies applied for the standalone financial statements of UBS AG is provided in Note 2 to the UBS AG standalone financial statements as of 31 December 2018.

In preparing the interim financial information for UBS AG, the same accounting policies and methods of computation have been applied as in the annual standalone financial statements as of 31 December 2018.

In the second quarter of 2019, the beneficial ownership of a portion of Global Wealth Management international business booked in Switzerland was transferred from UBS Switzerland AG to UBS AG to further optimize Group legal and operational

structures. The transfer was made in the form of a dividend in kind in the amount of USD 2.1 billion (CHF 2.1 billion). We expect full legal transfer to take place before the end of 2022. UBS AG's share of the net profits for the first half year of USD 236 million (CHF 234 million) is reflected in *Fee and commission income from securities and investment business and other fee and commission income*.

As part of UBS's efforts to improve the resolvability of the Group, the portion of the Asset Management business in Switzerland conducted by UBS AG was transferred from UBS AG to its indirect subsidiary, UBS Asset Management Switzerland AG. The business transfer, which was effective 1 April 2019, included a contribution at book value of net assets of USD 98 million (CHF 97 million) into the equity of UBS Asset Management AG.

This interim financial information is unaudited and should be read in conjunction with the audited 2018 standalone financial statements of UBS AG, available under "Holding company and significant regulated subsidiaries and sub-groups" under complementary financial information at www.ubs.com/investors.

Cautionary Statement Regarding Forward-Looking Statements | This report contains statements that constitute “forward-looking statements,” including but not limited to management’s outlook for UBS’s financial performance and statements relating to the anticipated effect of transactions and strategic initiatives on UBS’s business and future development. While these forward-looking statements represent UBS’s judgments and expectations concerning the matters described, a number of risks, uncertainties and other important factors could cause actual developments and results to differ materially from UBS’s expectations. These factors include, but are not limited to: (i) the degree to which UBS is successful in the ongoing execution of its strategic plans, including its cost reduction and efficiency initiatives and its ability to manage its levels of risk-weighted assets (RWA) and leverage ratio denominator (LRD), including to counteract regulatory-driven increases, liquidity coverage ratio and other financial resources, and the degree to which UBS is successful in implementing changes to its businesses to meet changing market, regulatory and other conditions; (ii) the continuing low or negative interest rate environment in Switzerland and other jurisdictions, developments in the macroeconomic climate and in the markets in which UBS operates or to which it is exposed, including movements in securities prices or liquidity, credit spreads, and currency exchange rates, and the effects of economic conditions, market developments, and geopolitical tensions on the financial position or creditworthiness of UBS’s clients and counterparties as well as on client sentiment and levels of activity; (iii) changes in the availability of capital and funding, including any changes in UBS’s credit spreads and ratings, as well as availability and cost of funding to meet requirements for debt eligible for total loss-absorbing capacity (TLAC); (iv) changes in or the implementation of financial legislation and regulation in Switzerland, the US, the UK, the European Union and other financial centers that have imposed, or resulted in, or may do so in the future, more stringent or entity-specific capital, TLAC, leverage ratio, liquidity and funding requirements, incremental tax requirements, additional levies, limitations on permitted activities, constraints on remuneration, constraints on transfers of capital and liquidity and sharing of operational costs across UBS’s affiliated entities or other measures, and the effect these will or would have on UBS’s business activities; (v) the degree to which UBS is successful in implementing further changes to its legal structure to improve its resolvability and meet related regulatory requirements and the potential need to make further changes to the legal structure or booking model of UBS in response to legal and regulatory requirements, proposals in Switzerland and other jurisdictions for mandatory structural reform of banks or systemically important institutions or to other external developments, and the extent to which such changes will have the intended effects; (vi) UBS’s ability to maintain and improve its systems and controls for the detection and prevention of money laundering and compliance with sanctions to meet evolving regulatory requirements and expectations, in particular in the US; (vii) the uncertainty arising from the timing and nature of the UK’s exit from the EU; (viii) changes in UBS’s competitive position, including whether differences in regulatory capital and other requirements among the major financial centers will adversely affect UBS’s ability to compete in certain lines of business; (ix) changes in the standards of conduct applicable to our businesses that may result from new regulation or new enforcement of existing standards, including recently enacted and proposed measures to impose new and enhanced duties when interacting with customers and in the execution and handling of customer transactions; (x) the liability to which UBS may be exposed, or possible constraints or sanctions that regulatory authorities might impose on UBS, due to litigation, contractual claims and regulatory investigations, including the potential for disqualification from certain businesses, potentially large fines or monetary penalties, or the loss of licenses or privileges as a result of regulatory or other governmental sanctions, as well as the effect that litigation, regulatory and similar matters have on the operational risk component of our RWA as well as the amount of capital available for return to shareholders; (xi) the effects on UBS’s cross-border banking business of tax or regulatory developments and of possible changes in UBS’s policies and practices relating to this business; (xii) UBS’s ability to retain and attract the employees necessary to generate revenues and to manage, support and control its businesses, which may be affected by competitive factors; (xiii) changes in accounting or tax standards or policies, and determinations or interpretations affecting the recognition of gain or loss, the valuation of goodwill, the recognition of deferred tax assets and other matters; (xiv) UBS’s ability to implement new technologies and business methods, including digital services and technologies and ability to successfully compete with both existing and new financial service providers, some of which may not be regulated to the same extent; (xv) limitations on the effectiveness of UBS’s internal processes for risk management, risk control, measurement and modeling, and of financial models generally; (xvi) the occurrence of operational failures, such as fraud, misconduct, unauthorized trading, financial crime, cyberattacks, and systems failures; (xvii) restrictions on the ability of UBS AG to make payments or distributions, including due to restrictions on the ability of its subsidiaries to make loans or distributions, directly or indirectly, or, in the case of financial difficulties, due to the exercise by FINMA or the regulators of UBS’s operations in other countries of their broad statutory powers in relation to protective measures, restructuring and liquidation proceedings; (xviii) the degree to which changes in regulation, capital or legal structure, financial results or other factors may affect UBS’s ability to maintain its stated capital return objective; and (xix) the effect that these or other factors or unanticipated events may have on our reputation and the additional consequences that this may have on our business and performance. The sequence in which the factors above are presented is not indicative of their likelihood of occurrence or the potential magnitude of their consequences. Our business and financial performance could be affected by other factors identified in our past and future filings and reports, including those filed with the SEC. More detailed information about those factors is set forth in documents furnished by UBS and filings made by UBS with the SEC, including UBS’s Annual Report on Form 20-F for the year ended 31 December 2018. UBS is not under any obligation to (and expressly disclaims any obligation to) update or alter its forward-looking statements, whether as a result of new information, future events, or otherwise.

Rounding | Numbers presented throughout this report may not add up precisely to the totals provided in the tables and text. Percentages, percent changes, and adjusted results are calculated on the basis of unrounded figures. Information on absolute changes between reporting periods, which is provided in text and that can be derived from figures displayed in the tables, is calculated on a rounded basis.

Tables | Within tables, blank fields generally indicate that the field is not applicable or not meaningful, or that information is not available as of the relevant date or for the relevant period. Zero values generally indicate that the respective figure is zero on an actual or rounded basis. Percentage changes are presented as a mathematical calculation of the change between periods.

¹ Refer to "Note 9 Earnings per share (EPS) and shares outstanding" in the "Consolidated financial statements" section of this report for more information. ² Refer to the "Performance targets and measurement" section of our Annual Report 2018 for more information about our performance targets. ³ Calculated as net profit attributable to shareholders (annualized as applicable) divided by average equity attributable to shareholders. ⁴ Calculated as net profit attributable to shareholders (annualized as applicable) divided by average equity attributable to shareholders less average goodwill and intangible assets. Effective 1 January 2019, the definition of the numerator for return on tangible equity has been revised to align with numerators for return on equity and return on common equity tier 1 capital; i.e., we no longer adjust for amortization and impairment of goodwill and intangible assets. Prior periods have been restated. ⁵ Calculated as net profit attributable to shareholders (annualized as applicable) divided by average common equity tier 1 capital. ⁶ Calculated as operating income before credit loss expense or recovery (annualized as applicable) divided by average risk-weighted assets and average leverage ratio denominator, respectively. ⁷ Calculated as operating expenses divided by operating income before credit loss expense or recovery. ⁸ Calculated as adjusted operating expenses divided by adjusted operating income before credit loss expense or recovery. ⁹ Calculated as change in net profit attributable to shareholders from continuing operations between current and comparison periods divided by net profit attributable to shareholders from continuing operations of comparison period. ¹⁰ Based on the Swiss systemically relevant bank framework as of 1 January 2020. Refer to the "Capital management" section of this report for more information. ¹¹ Refer to the "Balance sheet, liquidity and funding management" section of this report for more information. ¹² Includes invested assets for Global Wealth Management, Asset Management and Personal & Corporate Banking. ¹³ Refer to "UBS shares" in the "Capital management" section of this report for more information. ¹⁴ Beginning with our Annual Report 2018, the calculation of market capitalization has been amended to reflect total shares outstanding multiplied by the share price at the end of the period. The calculation was previously based on total shares issued multiplied by the share price at the end of the period. Market capitalization has been reduced by USD 2.1 billion as of 31 December 2018 and by USD 2.0 billion as of 30 September 2018 as a result. ¹⁵ Total book value per share and tangible book value per share in Swiss francs are calculated based on a translation of equity under our US dollar presentation currency. As a consequence of the restatement to a US dollar presentation currency, amounts may differ from those originally published in our quarterly and annual reports.

Performance measures: reasons for use

Return on equity	This measure provides information about the profitability of the business in relation to equity.
Return on tangible equity	This measure provides information about the profitability of the business in relation to tangible equity.
Return on common equity tier 1 capital	This measure provides information about the profitability of the business in relation to common equity tier 1 capital.
Return on risk-weighted assets, gross	This measure provides information about the revenues of the business in relation to risk-weighted assets.
Return on leverage ratio denominator, gross	This measure provides information about the revenues of the business in relation to leverage ratio denominator.
Cost / income ratio	This measure provides information about the efficiency of the business by comparing operating expenses with gross income.
Adjusted cost / income ratio	This measure provides information about the efficiency of the business by comparing operating expenses with gross income, while excluding items that management believes are not representative of the underlying performance of the businesses.
Net profit growth	This measure provides information about profit growth in comparison with the prior-year period.

UBS Group

Management report

Changes to our presentation currency

Effective from 1 October 2018, the presentation currency of UBS Group AG's consolidated financial statements has changed from Swiss francs to US dollars. Comparative information in this report for periods prior to the fourth quarter of 2018 has been restated. Assets, liabilities and total equity were translated to US dollars at closing exchange rates prevailing on the respective balance sheet dates, and income and expenses were translated at the respective average rates prevailing for the relevant periods.

Terms used in this report, unless the context requires otherwise

"UBS AG" and "UBS AG standalone"	UBS AG on a standalone basis
"UBS Switzerland AG" and "UBS Switzerland AG standalone"	UBS Switzerland AG on a standalone basis
"UBS Europe SE consolidated"	UBS Europe SE and its consolidated subsidiaries
"UBS Americas Holding LLC" and "UBS Americas Holding LLC consolidated"	UBS Americas Holding LLC and its consolidated subsidiaries

Recent developments

Regulatory and legal developments

Tightened self-regulation for income-producing real estate

In August 2019, FINMA approved the Swiss Bankers Association's revised self-regulation on mortgage lending for income-producing real estate. The revisions increase the minimum equity required for new and increased mortgages on these properties, from 10% to 25% of the market value at origination, and require mortgages to amortize to two-thirds of the market value at origination within 10 years (previously 15 years). UBS Switzerland AG will be subject to the revised self-regulation that will come into effect on 1 January 2020. We expect the overall effect on UBS to be limited.

Volcker Rule revisions

US regulators have adopted amendments (2019 Final Rule) to their regulations implementing the Volcker Rule prohibitions on proprietary trading and limitations on covered fund activities. The amendments will become effective on 1 January 2020, with compliance voluntary from that date and mandatory from 1 January 2021.

Among other changes, the 2019 Final Rule tailors compliance program obligations for trading activities in tiers based on the level of US trading assets and liabilities and relaxes certain conditions for exemptions to the Volcker Rule restrictions to apply to activities engaged in by foreign banking entities outside the United States.

We expect UBS will fall within the "Significant" category, which will require UBS to maintain its compliance program but should eliminate certain reporting requirements. US regulators also signaled the intention to propose further amendments to the covered funds provisions of their Volcker Rule regulations.

Tailoring of regulation for foreign banks in the US

On 10 October 2019, the Board of Governors of the Federal Reserve System adopted two proposals that tailor how certain capital and liquidity requirements and enhanced prudential standards apply to foreign banking organizations (FBOs) with significant US operations. Under the final rules, FBOs and their

US intermediate holding companies (IHCs) will be assigned to categories based on their size measured in total assets as well as on scores relating to four other risk-based indicators: non-bank assets, a weighted measure of short-term wholesale funding, off-balance sheet exposure and cross-jurisdictional activity.

Each of UBS Americas Holdings LLC (our IHC) and our combined US operations, which include our IHC and US branches of UBS AG, are expected to be a "Category III" firm under the final rule. In this category, among other things, UBS Americas Holding LLC will continue to be: (i) required to submit its capital plan annually; (ii) subject to limitations on distributions through the Comprehensive Capital Analysis and Review (CCAR) process; and (iii) subject to annual supervisory stress testing and (iv) subject to the supplementary leverage ratio. It will also become subject to the newly applicable liquidity coverage ratio requirements and the proposed net stable funding ratio requirements. "Category III firms" will be required to conduct company-run stress tests once every two years, rather than annually, and to submit US resolution plans once every three years.

China further opening up its financial sector

In July 2019, China's Office of Financial Stability and Development Committee and the State Administration of Foreign Exchange announced measures designed to accelerate the opening up of the financial sector to foreign financial institutions and investors. Measures include: the removal of foreign ownership limits on securities, fund management and futures companies one year earlier, in 2020; encouraging overseas financial institutions to establish and invest in asset and wealth management entities and currency brokers and participate in the bond market; and eliminating requirements and quotas for qualified foreign investors to invest in China. More detailed implementation guidance is expected over the coming months.

The accelerated removal of the ownership caps for securities companies means that UBS AG is expected to be permitted to increase its stake in UBS Securities China from the current level of 51% to 100% by 2020. The exact effective date remains to be clarified.

The Swiss National Bank to adjust the zero interest rate exemption threshold

In September 2019, the Swiss National Bank (SNB) announced that it would keep the SNB policy rate and interest on sight deposits at the SNB at negative 0.75% and reconfirmed its willingness to intervene in the foreign exchange market as necessary. The SNB also announced adjustments to the calculation of the amount of sight deposits at the SNB that are exempt from negative interest rates. The exemption threshold will be increased from 20 to 25 times each bank's minimum requirement. In addition, the threshold will be updated on a monthly basis. These changes will come into effect on 1 November 2019. The SNB communicated that this decision was taken based on the assumption that the low interest rate environment around the world will persist for some time. UBS maintains significant sight deposits at the SNB. The adjustments to the exemption threshold calculation are expected to benefit our net interest income.

Swiss emergency plan credibility determination

UBS has developed and annually submits to FINMA an emergency plan demonstrating how it will maintain functions that are systemically important for the Swiss economy in the event of a crisis. UBS has developed a comprehensive emergency plan and has completed substantial measures designed to ensure the maintenance of systemically important functions, including the transfer of systemically important functions to UBS Switzerland AG and the establishment of a separate service company to provide services to Group companies. FINMA is expected to make a formal determination of whether the emergency plans of Swiss systemically relevant banks are "credible" in early 2020. As a result of this review, FINMA may require us to amend the plan or put other measures in place.

Developments related to the transition away from IBORs

Liquidity and activity in Alternative Reference Rates (ARRs) continue to develop in markets around the world, with work progressing to resolve certain issues associated with transitioning away from interbank offered rates (IBORs). Regulatory authorities continue to focus on transitioning to ARR by the end of 2021. The Alternative Reference Rates Committee is considering potential legislative solutions that would mitigate legal risks related to legacy contracts in the event of IBOR discontinuation. In addition, in October 2019 the US Treasury Department and Internal Revenue Service published proposed regulations providing tax relief related to issues that may arise as a result of the modification of debt, derivative, and other financial contracts from IBOR-based language to ARR. The European Central Bank published the euro short-term rate (€STR), the risk-free rate for EUR markets, for the first time on 2 October 2019, reflecting trading activity on 1 October 2019. The Bank of England Working Group on Sterling Risk-Free

Reference Rates continues to be supportive of the development of a term reference rate (Sterling Overnight Index Average, or SONIA).

We have a substantial number of contracts linked to IBORs. The new, risk-free ARR do not currently provide a term structure, which will require a change in the contractual terms of products currently indexed on terms other than overnight. We have established a cross-divisional, cross-regional governance structure and change program to address the scale and complexity of the transition.

Strategic initiatives

Strategic partnership with Banco do Brasil

In September 2019, we announced our intention to enter into a strategic investment banking partnership with Banco do Brasil. By building on the complementary strengths of both firms, UBS and Banco do Brasil believe that the formation of a strategic, long-term partnership will create a leading investment bank platform in South America with global coverage. It is envisaged that UBS will hold the majority (50.01%) of the shares in the partnership, which would be established by a contribution of assets by both parties. Closing of the transaction is subject to the execution of transaction documents as well as obtaining all required internal and external approvals.

Structural changes in the Investment Bank

We are realigning our Investment Bank to meet the evolving needs of its clients, further focus its resources on opportunities for profitable growth and allow it to invest in our digital transformation. Corporate Client Solutions (CCS) and Investor Client Services (ICS) will be renamed Global Banking and Global Markets, respectively. Global Banking will adopt a global coverage model and will deploy its deep global industry expertise to meet the needs of its most important clients. Global Markets will combine Equities and Foreign Exchange, Rates and Credit, and will introduce three product verticals (Execution & Platform, Derivatives & Solutions, and Financing). Research and Evidence Lab Innovations will continue to be a critical part of the Investment Bank's advisory and content offering. Associated with these changes, which will be effective 1 January 2020, we expect the Investment Bank to incur restructuring expenses of around USD 100 million in the fourth quarter of 2019.

Separately, we are continuing to execute on various strategic initiatives across the Group and are considering opportunities that would leverage our technology capabilities, build on our strengths and focus resources on growth areas. These opportunities may include strategic partnerships, additional collaboration across business divisions, evolution of our business models and optimization of our legal entities.

Also includes recoveries from third parties of USD 10 million and USD 28 million for the first nine months of 2019 and 2018, respectively. ⁸ Changes to the pension fund of UBS in Switzerland in the first quarter of 2018 resulted in a reduction in the pension obligation recognized by UBS. As a consequence, a pre-tax gain of USD 241 million was recognized in the income statement in the first quarter of 2018, with no overall effect on total equity. Refer to "Note 29 Pension and other post-employment benefit plans" in the "Consolidated financial statements" section of our Annual Report 2018 for more information.

Group performance

Results: 3Q19 vs 3Q18

Profit before tax decreased by USD 359 million, or 21%, to USD 1,345 million, predominantly reflecting a decrease in operating income. Operating income decreased by USD 340 million, or 5%, to USD 7,088 million, mainly reflecting USD 194 million lower net interest income and other net income from financial instruments measured at fair value through profit or loss, as well as a USD 62 million decrease in other income and a USD 57 million decrease in net fee and commission income. Operating expenses were broadly stable at USD 5,743 million, with a USD 154 million decrease in general and administrative expenses, mostly offset by a USD 122 million increase in depreciation, amortization and impairment of property, equipment and software, both effects mainly resulting from the adoption of IFRS 16, *Leases*, in the first quarter of 2019. Personnel expenses increased by USD 51 million.

In addition to reporting our results in accordance with International Financial Reporting Standards (IFRS), we report adjusted results that exclude items which management believes are not representative of the underlying performance of our businesses. Such adjusted results are non-GAAP financial measures as defined by US Securities and Exchange Commission (SEC) regulations. These adjustments include restructuring expenses related to our CHF 2.1 billion cost reduction program completed at the end of 2017 (referred to as our "legacy cost programs" in this report), as well as expenses relating to new restructuring initiatives. For the full year 2019, we expect

restructuring expenses associated with our legacy cost programs to be approximately USD 200 million, and nil beyond 2019. In addition, we expect to incur around USD 100 million of restructuring expenses in the fourth quarter of 2019 in connection with the planned structural changes in the Investment Bank.

For the purpose of determining adjusted results for the third quarter of 2019, we excluded net foreign currency translation losses related to the closure of subsidiaries of USD 46 million and net restructuring expenses of USD 69 million. For the third quarter of 2018, we excluded USD 56 million gains related to the sale of Widder Hotel and net restructuring expenses of USD 122 million.

On this adjusted basis, profit before tax for the third quarter of 2019 decreased by USD 311 million, or 18%, to USD 1,459 million, driven by a decrease in operating income of USD 238 million, or 3%, and an increase in operating expenses of USD 73 million, or 1%.

→ **Refer to the "Recent developments" section of this report for more information about planned structural changes in the Investment Bank**

Operating income: 3Q19 vs 3Q18

Total operating income decreased by USD 340 million, or 5%, to USD 7,088 million. Adjusted operating income decreased by USD 238 million, or 3%, to USD 7,133 million. This excludes net foreign currency translation losses of USD 46 million related to the closure of subsidiaries in the third quarter of 2019, compared with gains of USD 56 million related to the sale of Widder Hotel in the prior year.

¹ Effective as of 1 January 2019, UBS refined the presentation of dividend income and expense by reclassifying dividends from Net interest income from financial instruments measured at fair value through profit or loss to Other net income from financial instruments measured at fair value through profit or loss. Prior-period information was restated accordingly and the total effect to the Group was as follows: for the quarter ended 30 September 2018 and the first nine months of 2018, respectively, USD 524 million and USD 726 million of net dividend income was reclassified. Refer to "Note 1 Basis of accounting" in the "Consolidated financial statements" section of this report for more information. ² Prior-year comparative figures have been restated for changes in Corporate Center cost allocations to the business divisions. Refer to "Note 2 Segment reporting" in the "Consolidated financial statements" section of this report for more information. ³ Mainly includes spread-related income in connection with client-driven transactions, foreign currency translation effects and income and expenses from precious metals, which are included in the income statement line Other net income from financial instruments measured at fair value through profit or loss. The amounts reported on this line are one component of Transaction-based income in the management discussion and analysis of Global Wealth Management and Personal & Corporate Banking in the "Global Wealth Management" and "Personal & Corporate Banking" sections of this report. ⁴ Investment Bank information is provided at the business line level rather than by financial statement reporting line in order to reflect the underlying business activities, which is consistent with the structure of the management discussion and analysis in the "Investment Bank" section of this report.

Net interest income and other net income from financial instruments measured at fair value through profit or loss

Total combined net interest income and other net income from financial instruments measured at fair value through profit or loss decreased by USD 194 million to USD 2,677 million. This was mainly driven by our Corporate Client Solutions and Equities businesses in the Investment Bank, as well as by Corporate Center.

Global Wealth Management

In Global Wealth Management, net interest income decreased by USD 32 million to USD 979 million, mainly reflecting lower deposit and loan margins, partly offset by higher investment-of-equity income.

Transaction-based income from foreign exchange and other intermediary activity increased by USD 43 million to USD 240 million, driven by higher levels of client activity.

Personal & Corporate Banking

In Personal & Corporate Banking, net interest income decreased by USD 18 million to USD 497 million, mainly as a result of the persistent low interest rate environment leading to lower deposit margin.

Investment Bank

In the Investment Bank, net interest income and other net income from financial instruments measured at fair value through profit or loss decreased by USD 121 million to USD 962 million amid challenging market conditions in the third quarter of 2019. This was driven by USD 74 million lower income in our Corporate Client Solutions business, mainly reflecting a decrease in leveraged finance revenues, and USD 38 million lower income in our Equities business, reflecting reduced client activity levels and lower client balances.

Group performance

Corporate Center

In Corporate Center, net interest income and other net income from financial instruments measured at fair value through profit or loss decreased by USD 75 million to negative USD 101 million. This mainly reflects lower other Corporate Center income of USD 59 million, largely as a result of USD 30 million of additional interest expense related to lease liabilities recognized as a result of the adoption of IFRS 16, *Leases*, effective from 1 January 2019, and higher funding expenses for Group Technology assets, as well as lower net income of USD 53 million in Non-core and Legacy Portfolio, mainly as the third quarter of 2018 included valuation gains on auction rate securities. These effects were partly offset by an increase in net treasury income of USD 36 million, mainly reflecting higher net interest income.

→ Refer to “**Note 1 Basis of accounting**” in the “**Consolidated financial statements**” section of this report for more information about the adoption of IFRS 16

→ Refer to “**Note 3 Net interest income**” in the “**Consolidated financial statements**” section of this report for more information about net interest income

Net fee and commission income

Net fee and commission income was USD 4,409 million, compared with USD 4,466 million.

M&A and corporate finance fees decreased by USD 57 million to USD 204 million, primarily reflecting lower revenues from merger and acquisition transactions.

Underwriting fees decreased by USD 41 million to USD 169 million, largely driven by lower equity underwriting revenues from public offerings.

Investment fund fees decreased by USD 21 million to USD 1,200 million, mainly in Personal & Corporate Banking and Global Wealth Management, partly offset by an increase in Asset Management.

Other fee and commission income increased by USD 28 million to USD 475 million, reflecting increases in Global Wealth Management and Personal & Corporate Banking, largely as a result of higher levels of client activity and increased revenues from credit card transactions, respectively.

In the fourth quarter of 2019, we plan to realign our client coverage between Global Wealth Management and Personal & Corporate Banking as a result of a detailed client segmentation review. We expect that this will result in a reduction of approximately USD 5 billion in invested assets in Global Wealth Management and the shifting of approximately USD 1 billion in loans from Global Wealth Management to Personal & Corporate Banking. In line with the remuneration framework for net client shifts and referrals, we expect Global Wealth Management to receive a fee of approximately USD 70 million from Personal & Corporate Banking related to this shift in the fourth quarter of 2019. This will increase transaction-based income in Global Wealth Management, with an offsetting decrease in transaction-based income in Personal & Corporate Banking in the fourth quarter of 2019. The shift of invested assets and loans will not affect net new money or net new business volume reported by Global Wealth Management and Personal & Corporate Banking, respectively.

→ Refer to “**Note 4 Net fee and commission income**” in the “**Consolidated financial statements**” section of this report for more information

Other income

Other income was USD 39 million, compared with USD 101 million. The third quarter of 2019 included net foreign currency translation losses of USD 46 million related to the closure of subsidiaries. In comparison, the third quarter of 2018 included gains of USD 31 million on sale of real estate and gains of USD 25 million on sale of subsidiaries and businesses, both related to the sale of Widder Hotel. Excluding these items, adjusted other income increased by USD 41 million, reflecting gains from the disposal of financial assets measured at fair value through OCI and a gain related to legacy securities positions in Global Wealth Management.

→ Refer to “**Note 5 Other income**” in the “**Consolidated financial statements**” section of this report for more information

Credit loss expense / recovery

Total net credit loss expenses in the third quarter of 2019 were USD 38 million, reflecting net expenses of USD 43 million related to credit impaired (stage 3) positions and recoveries of USD 5 million related to stage 1 and stage 2 positions. The net stage 3 expenses of USD 43 million were recognized across a number of defaulted positions: USD 29 million in Personal & Corporate

Banking, mainly related to a single exposure; USD 8 million in the Investment Bank; and USD 6 million in Global Wealth Management.

→ Refer to "Note 10 Expected credit loss measurement" in the "Consolidated financial statements" section of this report for more information about credit loss expense / recovery

¹ Reflects restructuring expenses related to legacy cost programs as well as expenses for new restructuring initiatives. ² Changes to the pension fund of UBS in Switzerland in the first quarter of 2018 resulted in a reduction in the pension obligation recognized by UBS. As a consequence, a pre-tax gain of USD 241 million was recognized in the income statement in the first quarter of 2018, with no overall effect on total equity. Refer to "Note 29 Pension and other post-employment benefit plans" in the "Consolidated financial statements" section of our Annual Report 2018 for more information. ³ Adjusted results are non-GAAP financial measures as defined by SEC regulations. ⁴ Financial advisor compensation consists of formulaic compensation based directly on compensable revenues generated by financial advisors and supplemental compensation calculated on the basis of financial advisor productivity, firm tenure, new assets and other variables. It also includes expenses related to compensation commitments with financial advisors entered into at the time of recruitment that are subject to vesting requirements. ⁵ Consists of expenses related to contractors, social security, pension and other post-employment benefit plans, and other personnel expenses. Refer to "Note 6 Personnel expenses" in the "Consolidated financial statements" section of this report for more information.

Group performance

Operating expenses: 3Q19 vs 3Q18

Total operating expenses were broadly stable, with an increase of USD 19 million to USD 5,743 million. Adjusted total operating expenses increased by USD 73 million, or 1%, to USD 5,674 million. These exclude net restructuring expenses related to legacy cost programs and new restructuring initiatives of USD 69 million, compared with USD 122 million in the prior year.

Personnel expenses

Personnel expenses increased by USD 51 million to USD 3,987 million on a reported basis, and by USD 65 million to USD 3,941 million on an adjusted basis, primarily reflecting higher salaries and variable compensation, including the effect from the insourcing of certain activities from third-party vendors, as well as expenses related to pension and other post-employment benefit plans. This was partly offset by lower expenses related to contractors in Corporate Center, mainly reflecting our insourcing initiatives.

→ Refer to “**Note 6 Personnel expenses**” in the “**Consolidated financial statements**” section of this report for more information

General and administrative expenses

General and administrative expenses decreased by USD 154 million to USD 1,308 million, mainly driven by lower rent expenses. The decrease in rent expenses included a USD 133 million decrease as a result of the adoption of IFRS 16, *Leases*, in the first quarter of 2019. This decrease was more than offset by an increase of USD 117 million in depreciation expense and an increase of USD 30 million in interest expense relating to lease liabilities, also as a direct result of the adoption of IFRS 16.

On an adjusted basis, general and administrative expenses decreased by USD 139 million to USD 1,287 million, largely due to the aforementioned decrease in rent expenses.

We believe that the industry continues to operate in an environment in which expenses associated with litigation, regulatory and similar matters will remain elevated for the foreseeable future and we continue to be exposed to a number of significant claims and regulatory matters. The outcome of many of these matters, the timing of a resolution, and the potential effects of resolutions on our future business, financial results or financial condition are extremely difficult to predict.

- Refer to “**Note 1 Basis of accounting**” in the “**Consolidated financial statements**” section of this report for more information about the adoption of IFRS 16
- Refer to “**Note 7 General and administrative expenses**” in the “**Consolidated financial statements**” section of this report for more information
- Refer to “**Note 16 Provisions and contingent liabilities**” in the “**Consolidated financial statements**” section of this report and to the “**Regulatory and legal developments**” and “**Risk factors**” sections of our **Annual Report 2018** for more information about litigation, regulatory and similar matters

Depreciation, amortization and impairment

Depreciation, amortization and impairment of property, equipment and software increased by USD 122 million to USD 448 million on a reported basis, and by USD 149 million to USD 447 million on an adjusted basis, mainly driven by USD 117 million higher depreciation expenses as a result of the adoption of IFRS 16 in the first quarter of 2019.

→ Refer to “**Note 1 Basis of accounting**” in the “**Consolidated financial statements**” section of this report for more information about the adoption of IFRS 16

Tax: 3Q19 vs 3Q18

We recognized income tax expenses of USD 294 million for the third quarter of 2019, representing an effective tax rate of 21.9%, compared with USD 448 million for the third quarter of 2018.

Current tax expenses were USD 229 million, compared with USD 235 million, and related to taxable profits of UBS Switzerland AG and other entities.

Deferred tax expenses were USD 65 million, compared with USD 213 million. Deferred tax expenses in the third quarter of 2019 include expenses of USD 130 million that primarily reflect the amortization of deferred tax assets (DTAs) previously recognized in relation to tax losses carried forward and deductible temporary differences to reflect their offset against profits for the quarter, including the amortization of US tax loss DTAs at the level of UBS Americas Inc. Deferred tax expenses were decreased by a benefit of USD 65 million in respect of additional DTA recognition that resulted from the contribution of real estate assets by UBS AG to UBS Americas Inc. during the second quarter of 2019 in accordance with the requirements of IAS 34, *Interim Financial Reporting*, as described in our second quarter 2019 report. A further benefit of USD 65 million will be recognized in the fourth quarter of 2019.

We expect a tax rate for the fourth quarter of 2019 that is similar to the 23.0% tax rate for the first nine months of this year, subject to any potential DTA-related adjustments made in the quarter as part of our annual business planning process. Our tax rate over the longer term is expected to be around 25%, excluding any potential effects from the reassessment of deferred tax assets.

→ Refer to “**Note 8 Income taxes**” in the “**Consolidated financial statements**” section of this report for more information

Total comprehensive income attributable to shareholders: 3Q19 vs 3Q18

Total comprehensive income attributable to shareholders was USD 3,151 million, compared with USD 805 million. Net profit attributable to shareholders was USD 1,049 million, compared with USD 1,253 million, and other comprehensive income (OCI) attributable to shareholders, net of tax, was positive USD 2,101 million, compared with negative USD 448 million.

Defined benefit plan OCI was positive USD 2,000 million, compared with negative USD 52 million. We recorded net pre-tax OCI gains of USD 2,624 million related to our Swiss pension plan, reflecting the recognition of the plan's surplus of USD 2,631 million as of 30 September 2019. The plan's surplus was recognized in accordance with IFRS requirements, which stipulate when a pension asset is recognized by considering whether the service benefits in the plan exceed the contributions that UBS is required to make. This was primarily due to a 36-basis-point decrease in the applicable discount rate, which increased the value of the service benefits. There was no significant effect on regulatory capital as the Swiss pension plan surplus is reversed as a CET1 capital deduction.

Net pre-tax OCI losses related to the non-Swiss pension plans amounted to USD 146 million, primarily driven by the UK defined benefit plans.

The total net pre-tax OCI gains on defined benefit plans of USD 2,478 million were partly offset by a net tax expense of USD 478 million, mainly related to the aforementioned pre-tax OCI gains in the Swiss pension plan.

In the third quarter of 2019, OCI related to cash flow hedges was positive USD 417 million, mainly reflecting an increase in unrealized gains on US dollar hedging derivatives resulting from decreases in the relevant US dollar long-term interest rates. In the third quarter of 2018, OCI related to cash flow hedges was negative USD 237 million.

OCI related to own credit on financial liabilities designated at fair value was positive USD 1 million, compared with negative USD 288 million, mainly as the credit spreads were broadly unchanged in the third quarter of 2019.

OCI associated with financial assets measured at fair value through OCI was negligible, compared with negative USD 18 million, and reflected net unrealized gains of USD 30 million following decreases in the relevant US dollar long-term interest rates in the third quarter of 2019, offset by the reclassification of USD 26 million net gains from OCI to the income statement upon sale of the respective instruments and a net tax expense of USD 4 million.

Foreign currency translation OCI was negative USD 316 million in the third quarter of 2019, mainly resulting from the weakening of the Swiss franc and the euro against the US dollar, partly offset by the reclassification of net losses totaling USD 46 million to the income statement. OCI related to foreign currency translation in the same quarter of last year was positive USD 148 million.

- Refer to **"Statement of comprehensive income" in the "Consolidated financial statements" section of this report for more information**
- Refer to **"Note 29 Pension and other post-employment benefit plans" in the "Consolidated financial statements" section of our Annual Report 2018 for more information about other comprehensive income related to defined benefit plans**

Sensitivity to interest rate movements

As of 30 September 2019, we estimate that a parallel shift in yield curves by +100 basis points could lead to a combined increase in annual net interest income of approximately USD 0.4 billion in Global Wealth Management and Personal & Corporate Banking. US dollar and euro interest rates contribute approximately USD 0.2 billion and USD 0.1 billion, respectively, to this increase.

These estimates are based on a hypothetical scenario of an immediate increase in interest rates, equal across all currencies and relative to implied forward rates applied to our banking book. These estimates further assume no change to balance sheet size and structure, constant foreign exchange rates and no specific management action.

- Refer to the **"Risk management and control" section of this report for information about interest rate risk in the banking book**

Key figures and personnel

Below we provide an overview of select key figures of the Group. For further information about key figures related to capital management, refer to the "Capital management" section of this report.

Adjusted cost / income ratio: 3Q19 vs 3Q18

The adjusted cost / income ratio was 79.1%, compared with 75.9%, driven mainly by a decrease in adjusted income.

Common equity tier 1 capital: 3Q19 vs 2Q19

During the third quarter of 2019, our common equity tier 1 (CET1) capital decreased by USD 0.3 billion to USD 34.7 billion.

Return on CET1 capital: 3Q19 vs 3Q18

The annualized return on CET1 capital (RoCET1) was 12.1%, compared with 14.5%, driven by a USD 0.8 billion decrease in annualized quarterly net profit attributable to shareholders and a USD 0.3 billion increase in the average CET1 capital.

Group performance

Risk-weighted assets: 3Q19 vs 2Q19

Risk-weighted assets (RWA) increased by USD 2.5 billion to USD 264.6 billion, reflecting increases from asset size and other movements of USD 5.7 billion, partly offset by currency effects of USD 2.5 billion, as well as decreases in regulatory add-ons of USD 0.5 billion and model updates of USD 0.1 billion.

Common equity tier 1 capital ratio: 3Q19 vs 2Q19

During the third quarter of 2019, our CET1 capital ratio decreased 0.2 percentage points to 13.1%, reflecting a USD 2.5 billion increase in RWA and a USD 0.3 billion decrease in CET1 capital.

Leverage ratio denominator: 3Q19 vs 2Q19

During the third quarter of 2019, the leverage ratio denominator (LRD) decreased by USD 9 billion to USD 902 billion. This decrease was driven by currency effects of USD 13 billion, partly offset by an increase in asset size and other movements of USD 4 billion.

Common equity tier 1 leverage ratio: 3Q19 vs 2Q19

Our CET1 leverage ratio increased from 3.83% to 3.84% in the third quarter of 2019, as the aforementioned USD 9 billion decrease in LRD was partly offset by the aforementioned decrease in CET1 capital.

Going concern leverage ratio: 3Q19 vs 2Q19

Our going concern leverage ratio increased from 5.5% to 5.6%, reflecting a USD 0.7 billion increase in going concern capital.

Personnel: 3Q19 vs 2Q19

We employed 67,634 personnel (full-time equivalents) as of 30 September 2019, a net increase of 712 compared with 30 June 2019, driven by regulatory requirements and strategic initiatives.

Return on equity

Return on common equity tier 1 capital (%) ³	12.1	16.0	14.5	13.8	16.3

¹ Calculated as net profit attributable to shareholders (annualized as applicable) divided by average equity attributable to shareholders. ² Calculated as net profit attributable to shareholders (annualized as applicable) divided by average equity attributable to shareholders less average goodwill and intangible assets. Effective 1 January 2019, the definition of the numerator for return on tangible equity has been revised to align with numerators for return on equity and return on CET1 capital; i.e., we no longer adjust for amortization and impairment of goodwill and intangible assets. Prior periods have been restated. ³ Calculated as net profit attributable to shareholders (annualized as applicable) divided by average common equity tier 1 capital.

Net new money and invested assets

Management's discussion and analysis of net new money and invested assets is provided in the "UBS business divisions and Corporate Center" section of this report.

Net new money¹

USD billion	For the quarter ended			Year-to-date	
	30.9.19	30.6.19	30.9.18	30.9.19	30.9.18

Results: 9M19 vs 9M18

Profit before tax decreased by USD 860 million, or 16%, to USD 4,650 million.

Operating income decreased by USD 1,402 million, or 6%, mainly reflecting USD 783 million lower net interest income and other net income from financial instruments measured at fair value through profit or loss, mainly in the Investment Bank. In addition, net fee and commission income decreased by USD 618 million, mainly due to USD 298 million lower investment fund fees and fees for portfolio management and related services, mainly in Global Wealth Management and Personal & Corporate Banking, as well as a USD 252 million decrease in net brokerage fees across both Global Wealth Management and the Investment Bank.

Operating expenses decreased by USD 542 million, or 3%, mainly reflecting USD 834 million lower general and administrative expenses. This was largely driven by decreases in outsourcing costs, professional fees and expenses related to litigation, regulatory and similar matters. Additionally, following the adoption of IFRS 16, *Leases*, rent expenses decreased by USD 406 million, which was offset by a USD 402 million increase in expenses from depreciation, amortization and impairment of property, equipment and software, also as a result of the adoption of IFRS 16. Personnel expenses decreased by USD 111 million, primarily due to lower variable compensation, costs for contractors and financial advisor compensation, partly offset by higher pension costs, as the first quarter of 2018 included a gain of USD 241 million related to changes to our Swiss pension plan.

On an adjusted basis, profit before tax decreased by USD 762 million, or 14%, reflecting lower operating income, partly offset by a decrease in operating expenses.

Adjusted operating income decreased by USD 1,311 million, or 6%, reflecting the aforementioned decreases in net interest income and other net income from financial instruments measured at fair value through profit or loss and net fee and commission income.

Adjusted operating expenses decreased by USD 550 million, or 3%, mainly reflecting a USD 249 million decrease in personnel expenses, as well as the aforementioned decreases in outsourcing costs, professional fees, and expenses for litigation, regulatory and similar matters.

Outlook

Stimulus measures and easing of monetary policy by central banks may help to mitigate slowing global economic growth over the medium term. Geopolitical tensions and trade disputes continue to impact investor confidence. Positive momentum toward resolving these issues would likely improve confidence and the economic outlook.

Low and persistent negative interest rates and expectations of further monetary easing will adversely affect net interest income compared with last year. Our regional and business diversification, along with actions that we are taking, will help to mitigate these headwinds. Recurring revenues should also benefit from higher invested assets.

As we execute on our strategy, we are balancing investments for growth while managing for efficiency. We remain committed to delivering on our capital return objectives and creating sustainable long-term value for our shareholders.

¹ Prior-year comparative figures in this table have been restated for the changes in Corporate Center cost and resource allocation to the business divisions and the changes in the equity attribution framework effective 1 January 2019. Refer to "Note 2 Segment reporting" in the "Consolidated financial statements" section of our second quarter 2019 report for more information about the changes to the Corporate Center cost and resource allocation to business divisions and to the "Recent developments" section of our first quarter 2019 report for more information about the changes in the equity attribution framework. Comparatives may additionally differ as a result of adjustments following organizational changes, restatements due to the retrospective adoption of new accounting standards or changes in accounting policies, and events after the reporting period. ² Recurring net fee income consists of fees for services provided on an ongoing basis, such as portfolio management fees, asset-based investment fund fees, custody fees and account-keeping fees, which are generated on client assets. ³ Transaction-based income consists of the non-recurring portion of net fee and commission income, mainly composed of brokerage and transaction-based investment fund fees, as well as credit card fees and fees for payment transactions, together with Other net income from financial instruments measured at fair value through profit or loss. ⁴ Relates to licensed professionals with the ability to provide investment advice to clients in the Americas. ⁵ Financial advisor variable compensation consists of formulaic compensation based directly on compensable revenues generated by financial advisors and supplemental compensation calculated on the basis of financial advisor productivity, firm tenure, new assets and other variables. ⁶ Compensation commitments with recruited financial advisors represent expenses related to compensation commitments granted to financial advisors at the time of recruitment that are subject to vesting requirements. ⁷ Adjusted results are non-GAAP financial measures as defined by SEC regulations. ⁸ Reflects restructuring expenses related to legacy cost programs as well as expenses for new restructuring initiatives. ⁹ Prior periods may include allocations (to) / from other business divisions. ¹⁰ Refer to the "Performance targets and measurement" section of our Annual Report 2018 for the definitions of our performance measures. ¹¹ Recurring income consists of net interest income and recurring net fee income. ¹² Refer to the "Capital management" section of this report for more information. ¹³ Calculated as operating profit before tax (annualized as applicable) divided by average invested assets. ¹⁴ Loans and Customer deposits in this table include customer brokerage receivables and payables, respectively, which, with the adoption of IFRS 9, effective 1 January 2018 have been reclassified to a separate reporting line on the balance sheet.

Regional breakdown of performance measures¹

<i>As of or for the quarter ended 30.9.19</i>					Total of	<i>of which: ultra high</i>
<i>USD billion, except where indicated</i>	Americas	EMEA	Asia Pacific	Switzerland	regions ²	<i>net worth (UHNW)</i>
Net new money	0.0	3.2	10.9	1.9	16.0	18.2
Net new money growth (%)	0.0	2.4	10.6	3.5	2.6	5.7
Invested assets	1,334	524	420	221	2,498	1,290
Loans, gross	60.7³	36.4	42.6	35.9	175.5	
Advisors (full-time equivalents)	6,627	1,691	1,068	732	10,118	1,068⁴

¹ Refer to the "Performance targets and measurement" section of our Annual Report 2018 for the definitions of our performance measures. ² Excluding minor functions with 99 advisors, USD 4 billion of invested assets, USD 0.6 billion of loans and USD 0.3 billion of net new money outflows in the third quarter of 2019. ³ Loans include customer brokerage receivables, which with the adoption of IFRS 9 effective 1 January 2018 have been reclassified to a separate reporting line on the balance sheet. ⁴ Represents advisors who exclusively serve ultra high net worth clients in a globally managed unit.

Results: 3Q19 vs 3Q18

Profit before tax increased by USD 30 million, or 3%, to USD 894 million. Excluding restructuring expenses, adjusted profit before tax decreased by USD 17 million, or 2%, to USD 919 million, reflecting higher operating expenses, partly offset by higher operating income.

Operating income

Total operating income increased by USD 58 million, or 1%, to USD 4,142 million, mainly driven by higher transaction-based and other income, partly offset by lower recurring net fee and net interest income.

Net interest income decreased by USD 32 million to USD 979 million, mainly reflecting lower deposit and loan margins, partly offset by higher investment-of-equity income.

Recurring net fee income decreased by USD 40 million to USD 2,371 million, reflecting margin compression, mainly driven by shifts into lower-margin mandate products, partly offset by an increase in overall mandate penetration and higher average invested assets.

Transaction-based income increased by USD 91 million to USD 741 million, driven by higher levels of client activity in all regions.

Other income increased by USD 39 million to USD 58 million, primarily due to a gain related to the repositioning of the liquidity portfolio in the Americas and a gain related to legacy securities positions.

Operating expenses

Total operating expenses increased by USD 28 million, or 1%, to USD 3,248 million, and adjusted operating expenses increased by USD 75 million, or 2%, to USD 3,223 million.

Personnel expenses were unchanged at USD 1,903 million, while adjusted personnel expenses increased by USD 12 million to USD 1,903 million, mainly as a result of higher variable compensation.

General and administrative expenses increased by USD 46 million to USD 344 million, predominantly driven by higher expenses for provisions for litigation, regulatory and similar matters, and higher regulatory remediation costs.

Net expenses for services to / from Corporate Center and other business divisions decreased by USD 23 million to USD 985 million. Excluding restructuring expenses, adjusted net expenses for services increased by USD 12 million to USD 959 million.

Expenses for services from Corporate Center decreased by USD 28 million to USD 948 million. Excluding restructuring expenses, adjusted expenses for services from Corporate Center increased by USD 7 million to USD 922 million, mainly reflecting higher operations expenses, mostly data management expenses.

Net expenses for services from other business divisions increased by USD 4 million to USD 37 million, and increased by USD 5 million to USD 37 million on an adjusted basis, mainly due to lower charges for platform execution and wealth planning services provided to Personal & Corporate Banking.

Net new money: 3Q19 vs 3Q18

Net new money inflows were USD 15.7 billion, compared with net inflows of USD 13.8 billion, an annualized net new money growth rate of 2.5%, compared with 2.3%. Net new money from ultra high net worth clients was USD 18.2 billion.

Invested assets: 3Q19 vs 2Q19

Invested assets increased by USD 16 billion to USD 2,502 billion, driven by positive market performance of USD 18 billion and net new money inflows of USD 16 billion, partly offset by negative currency effects of USD 19 billion. Mandate penetration was stable at 34.4%.

Results: 9M19 vs 9M18

Profit before tax decreased by USD 296 million, or 10%, to USD 2,631 million. Excluding a credit of USD 66 million related to our Swiss pension plan in the first quarter of 2018 and restructuring expenses, adjusted profit before tax decreased by USD 366 million, or 12%, to USD 2,678 million, reflecting lower operating income, partly offset by lower operating expenses.

Total operating income decreased by USD 454 million, or 4%, to USD 12,202 million, driven by lower recurring net fee, net interest and transaction-based income.

Net interest income decreased by USD 120 million to USD 2,953 million, primarily as a result of lower deposit and loan margins, as well as lower loan volumes. Decreases in net income from structural risk management activities also contributed to the decrease in net interest income. This was partly offset by higher investment-of-equity income.

Recurring net fee income decreased by USD 299 million to USD 6,904 million, primarily driven by margin compression, mainly reflecting shifts into lower-margin mandate products, and lower average invested assets as a result of a decrease in market levels in the fourth quarter of 2018. This was partly offset by an increase in overall mandate penetration.

Transaction-based income decreased by USD 74 million to USD 2,270 million, mainly as a result of lower levels of client activity in Asia Pacific and, to a lesser extent, in EMEA.

Total operating expenses decreased by USD 158 million, or 2%, to USD 9,571 million, and adjusted operating expenses decreased by USD 88 million, or 1%, to USD 9,524 million.

Personnel expenses decreased by USD 93 million to USD 5,708 million. Excluding the aforementioned credit related to changes to our Swiss pension plan and restructuring expenses, adjusted personnel expenses decreased by USD 140 million to USD 5,709 million, driven by lower variable compensation and lower expenses for compensation commitments to recruited financial advisors.

General and administrative expenses decreased by USD 44 million and adjusted general and administrative expenses decreased by USD 28 million to USD 864 million, predominantly driven by lower expenses for provisions for litigation, regulatory and similar matters.

Net expenses for services to / from Corporate Center and other business divisions decreased by USD 30 million to USD 2,952 million, while adjusted net expenses for services increased by USD 72 million to USD 2,904 million.

Expenses for services from Corporate Center decreased by USD 52 million to USD 2,834 million, while adjusted expenses for services increased by USD 48 million to USD 2,786 million. This increase was mainly driven by higher property-related expenses, mostly in the Americas, and higher operations expenses, mainly data management expenses, as well as higher funding expenses from Group Technology.

Net expenses for services from other business divisions increased by USD 22 million to USD 118 million, and by USD 24 million to USD 118 million on an adjusted basis, mainly due to lower charges for platform execution and wealth planning services provided to the Investment Bank and Personal & Corporate Banking.

¹ Prior-year comparative figures in this table have been restated for the changes in Corporate Center cost and resource allocation to the business divisions and the changes in the equity attribution framework effective 1 January 2019. Refer to "Note 2 Segment reporting" in the "Consolidated financial statements" section of our second quarter 2019 report for more information about the changes to the Corporate Center cost and resource allocation to business divisions and to the "Recent developments" section of our first quarter 2019 report for more information about the changes in the equity attribution framework. Comparatives may additionally differ as a result of adjustments following organizational changes, restatements due to the retrospective adoption of new accounting standards or changes in accounting policies, and events after the reporting period. ² Recurring net fee income consists of fees for services provided on an ongoing basis, such as portfolio management fees, asset-based investment fund fees, custody fees and account-keeping fees, which are generated on client assets. ³ Transaction-based income comprises the non-recurring portion of net fee and commission income, mainly consisting of brokerage and transaction-based investment fund fees, as well as credit card fees and fees for payment transactions, together with Other net income from financial instruments measured at fair value through profit or loss. ⁴ Adjusted results are non-GAAP financial measures as defined by SEC regulations. ⁵ Reflects restructuring expenses related to legacy cost programs. ⁶ Prior periods may include allocations (to) / from other business divisions. ⁷ Refer to the "Performance targets and measurement" section of our Annual Report 2018 for the definitions of our performance measures. ⁸ Refer to the "Capital management" section of this report for more information. ⁹ Calculated as net new business volume for the period (annualized as applicable) divided by business volume at the beginning of the period. ¹⁰ Client assets are comprised of invested assets and other assets held purely for transactional purposes or custody only. We do not measure net new money for Personal & Corporate Banking. ¹¹ Refer to the "Risk management and control" section of this report for more information about (credit-)impaired exposures.

Results: 3Q19 vs 3Q18

Profit before tax decreased by CHF 37 million, or 10%, to CHF 353 million, while adjusted profit before tax decreased by CHF 39 million, or 10%, to CHF 360 million, predominantly reflecting lower operating income.

Operating income

Total operating income decreased by CHF 39 million, or 4%, to CHF 914 million from CHF 953 million, mainly reflecting higher net credit loss expenses as well as lower net interest income.

Net interest income decreased by CHF 10 million to CHF 495 million, mainly as a result of the persistent low interest rate environment leading to lower deposit margin.

Recurring net fee income was stable at CHF 155 million.

Transaction-based income increased by CHF 4 million to CHF 283 million, mainly reflecting higher revenues from credit card and foreign exchange transactions.

Other income decreased by CHF 4 million to CHF 11 million, mainly reflecting lower revenues from our equity participations.

Net credit loss expenses were CHF 30 million, compared with expenses of CHF 3 million in the third quarter of 2018. Stage 3 expected credit losses were CHF 29 million, mainly related to a single exposure, compared with CHF 7 million in the prior-year period.

Operating expenses

Total operating expenses decreased by CHF 1 million to CHF 562 million. Excluding restructuring expenses, adjusted operating expenses were stable at CHF 554 million.

Personnel expenses were stable at CHF 204 million.

General and administrative expenses increased to CHF 57 million from CHF 55 million.

Net expenses for services to / from Corporate Center and other business divisions decreased by CHF 5 million to CHF 298 million, and decreased by CHF 5 million to CHF 290 million on an adjusted basis.

Expenses for services from Corporate Center on a reported and an adjusted basis were unchanged at CHF 323 million and CHF 315 million, respectively.

Net cost recovery from services to / from other business divisions and services to Corporate Center increased by CHF 4 million to CHF 25 million, and increased by CHF 5 million to CHF 25 million on an adjusted basis, mainly reflecting lower charges for platform execution and wealth planning services consumed from Global Wealth Management.

Results: 9M19 vs 9M18

Profit before tax increased by CHF 10 million, or 1%, to CHF 1,127 million, and adjusted profit before tax increased by CHF 31 million, or 3%, to CHF 1,141 million, mainly reflecting higher income and lower credit loss expenses.

Total operating income increased by CHF 26 million, or 1%, to CHF 2,824 million. Net interest income was broadly stable at CHF 1,486 million, as higher deposit and loan revenues were offset by higher funding costs for total loss-absorbing capacity.

Recurring net fee income increased by CHF 2 million to CHF 470 million. Transaction-based income increased by CHF 17 million to CHF 852 million, mainly as a result of higher revenues from credit card transactions. Other income was stable at CHF 46 million.

Net credit loss expenses were CHF 29 million, compared with CHF 38 million. Stage 3 expected credit losses were CHF 44 million, primarily in the Corporate Clients area and mainly related to a single exposure, compared with losses of CHF 25 million in the prior-year period. Stage 1 and 2 expected credit loss releases were CHF 15 million, compared with CHF 13 million losses in the prior-year period.

Total operating expenses increased by CHF 16 million, or 1%, to CHF 1,697 million, due to the first nine months of 2018 including a credit of CHF 35 million related to changes to our Swiss pension plan. Adjusted operating expenses decreased by CHF 4 million to CHF 1,684 million.

Personnel expenses increased by CHF 46 million to CHF 647 million, and on an adjusted basis increased by CHF 14 million to CHF 647 million.

General and administrative expenses decreased by CHF 8 million to CHF 162 million, mainly reflecting lower consulting and marketing costs.

Net expenses for services to / from Corporate Center and other business divisions decreased by CHF 22 million to CHF 879 million, and decreased by CHF 11 million to CHF 865 million on an adjusted basis.

Expenses for services from Corporate Center decreased by CHF 15 million to CHF 961 million, and decreased by CHF 2 million to CHF 947 million on an adjusted basis.

Net cost recovery from services to / from other business divisions and services to Corporate Center increased by CHF 6 million to CHF 82 million, and increased by CHF 8 million to CHF 82 million on an adjusted basis, mainly reflecting lower charges for platform execution and wealth planning services consumed from Global Wealth Management.

¹ Prior-year comparative figures in this table have been restated for the changes in Corporate Center cost and resource allocation to the business divisions and the changes in the equity attribution framework effective 1 January 2019. Refer to "Note 2 Segment reporting" in the "Consolidated financial statements" section of our second quarter 2019 report for more information about the changes to the Corporate Center cost and resource allocation to business divisions and to the "Recent developments" section of our first quarter 2019 report for more information about the changes in the equity attribution framework. Comparatives may additionally differ as a result of adjustments following organizational changes, restatements due to the retrospective adoption of new accounting standards or changes in accounting policies, and events after the reporting period. ² Recurring net fee income consists of fees for services provided on an ongoing basis, such as portfolio management fees, asset-based investment fund fees, custody fees and account-keeping fees, which are generated on client assets. ³ Transaction-based income comprises the non-recurring portion of net fee and commission income, mainly consisting of brokerage and transaction-based investment fund fees, as well as credit card fees and fees for payment transactions, together with Other net income from financial instruments measured at fair value through profit or loss. ⁴ Adjusted results are non-GAAP financial measures as defined by SEC regulations. ⁵ Reflects restructuring expenses related to legacy cost programs. ⁶ Prior periods may include allocations (to) / from other business divisions. ⁷ Refer to the "Performance targets and measurement" section of our Annual Report 2018 for the definitions of our performance measures. ⁸ Refer to the "Capital management" section of this report for more information. ⁹ Calculated as net new business volume for the period (annualized as applicable) divided by business volume at the beginning of the period. ¹⁰ Client assets are comprised of invested assets and other assets held purely for transactional purposes or custody only. We do not measure net new money for Personal & Corporate Banking. ¹¹ Refer to the "Risk management and control" section of this report for more information about (credit-)impaired exposures.

¹ Prior-year comparative figures in this table have been restated for the changes in Corporate Center cost and resource allocation to the business divisions and the changes in the equity attribution framework effective 1 January 2019. Refer to "Note 2 Segment reporting" in the "Consolidated financial statements" section of our second quarter 2019 report for more information about the changes to the Corporate Center cost and resource allocation to business divisions and to the "Recent developments" section of our first quarter 2019 report for more information about the changes in the equity attribution framework. Comparatives may additionally differ as a result of adjustments following organizational changes, restatements due to the retrospective adoption of new accounting standards or changes in accounting policies, and events after the reporting period. ² Net management fees include transaction fees, fund administration revenues (including net interest and trading income from lending activities and foreign exchange hedging as part of the fund services offering), gains or losses from seed money and co-investments, funding costs, and other items that are not performance fees. ³ Adjusted results are non-GAAP financial measures as defined by SEC regulations. ⁴ Reflects restructuring expenses related to legacy cost programs as well as expenses for new restructuring initiatives. ⁵ Refer to the "Performance targets and measurement" section of our Annual Report 2018 for the definitions of our performance measures. ⁶ Effective 1 January 2019, certain assets have been reclassified between asset classes to better reflect their underlying nature, with prior-period information restated. The adjustments have no effect on total net new money and total invested assets. ⁷ Excluding the effect of business exits. ⁸ Refer to the "Capital management" section of this report for more information. ⁹ Calculated as operating profit before tax (annualized as applicable) divided by average invested assets.

Results: 3Q19 vs 3Q18

Profit before tax increased by USD 6 million, or 5%, to USD 124 million. Excluding restructuring expenses, adjusted profit before tax increased by USD 8 million, or 6%, to USD 135 million, reflecting higher operating income.

Operating income

Total operating income increased by USD 8 million, or 2%, to USD 465 million.

Net management fees increased by USD 12 million to USD 452 million, with the effect of higher average invested assets more than offsetting continued pressure on margins.

Performance fees decreased by USD 3 million to USD 14 million, driven by a decrease in performance fees in Equities and Real Estate & Private Markets, partly offset by higher performance fees in Hedge Fund Businesses.

Operating expenses

Total operating expenses increased by USD 2 million, or 1%, to USD 341 million, and adjusted operating expenses were stable at USD 331 million.

Personnel expenses increased by USD 5 million to USD 174 million. Excluding restructuring expenses, adjusted personnel expenses increased by USD 6 million to USD 173 million, driven primarily by increased expenses for variable compensation.

General and administrative expenses increased by USD 4 million to USD 49 million. Excluding restructuring expenses, adjusted general and administrative expenses increased by USD 3 million to USD 47 million.

Net expenses for services to / from Corporate Center and other business divisions decreased by USD 5 million to USD 119 million, and by USD 8 million to USD 111 million on an adjusted basis.

Expenses for services from Corporate Center decreased by USD 5 million to USD 130 million on a reported basis, and by USD 7 million to USD 122 million on an adjusted basis. This decrease was primarily driven by the shift of market data service charges from Group Operations to the Asset Management business.

Net cost recovery from services to / from other business divisions and services to Corporate Center was stable at USD 11 million on both a reported and an adjusted basis.

Net new money: 3Q19 vs 3Q18

Net new money inflows were USD 33.1 billion, compared with net inflows of USD 3.2 billion. Excluding money market flows, net new money inflows were USD 24.1 billion, compared with net inflows of USD 0.6 billion, an annualized net new money growth rate of positive 13.1%, compared with positive 0.3%. Strong net new money generation reflected the funding of previously delayed investment decisions.

Invested assets: 3Q19 vs 2Q19

Invested assets increased by USD 27 billion to USD 858 billion, reflecting inflows of USD 33 billion and positive market performance of USD 7 billion, partly offset by currency effects of USD 13 billion, resulting primarily from the strengthening of the US dollar against the euro and the Swiss franc.

Results: 9M19 vs 9M18

Profit before tax increased by USD 32 million, or 10%, to USD 352 million. Excluding a credit of USD 10 million related to changes to our Swiss pension plan in the first quarter of 2018 and restructuring expenses, adjusted profit before tax increased by USD 22 million, or 6%, to USD 378 million, mainly driven by lower operating expenses.

Total operating income increased by USD 2 million to USD 1,386 million, reflecting increased performance fees, largely offset by lower net management fees.

Net management fees decreased by USD 10 million to USD 1,323 million, reflecting lower average invested assets as a result of the lower market levels at the end of the fourth quarter of 2018.

Performance fees increased by USD 12 million to USD 64 million, mainly driven by an increase in performance fees for Equities.

Total operating expenses decreased by USD 29 million, or 3%, to USD 1,035 million, and adjusted operating expenses decreased by USD 20 million, or 2%, to USD 1,008 million.

Personnel expenses were virtually unchanged at USD 538 million. Excluding the aforementioned credit related to changes to our Swiss pension plan in the first quarter of 2018 and restructuring expenses, adjusted personnel expenses increased by USD 3 million to USD 532 million, driven by increased expenses for variable compensation.

General and administrative expenses decreased by USD 4 million to USD 141 million, and adjusted general and administrative expenses by USD 3 million to USD 135 million.

Net expenses for services to / from Corporate Center and other business divisions decreased by USD 24 million to USD 356 million, and adjusted expenses for services decreased by USD 18 million to USD 341 million.

Expenses for services from Corporate Center decreased by USD 24 million to USD 389 million on a reported basis, and by USD 18 million to USD 374 million on an adjusted basis. This decrease was primarily driven by the shift of market data service charges from Group Operations to the Asset Management business.

Net cost recovery from services to / from other business divisions and services to Corporate Center was stable at USD 33 million on both a reported and an adjusted basis.

Results: 3Q19 vs 3Q18

Profit before tax decreased by USD 281 million, or 62%, to USD 172 million. Excluding restructuring expenses, adjusted profit before tax decreased by USD 286 million, or 59%, to USD 203 million. This was driven by lower operating income and higher operating expenses.

Operating income

Total operating income decreased by USD 192 million, or 10%, to USD 1,752 million. This mainly reflected lower revenues in Corporate Client Solutions, in part due to a reduction in global fee pools, as well as a decrease in Equities amid ongoing challenging market conditions.

Corporate Client Solutions

Corporate Client Solutions revenues decreased by USD 125 million, or 19%, to USD 532 million, largely driven by decreases in Advisory, Equity Capital Markets and Debt Capital Markets.

Advisory revenues decreased by USD 50 million, or 21%, to USD 186 million from a strong prior-year quarter of USD 236 million, mainly driven by lower revenues from merger and acquisition transactions, against a 10% decrease in the global fee pool.

Equity Capital Markets revenues decreased by USD 35 million, or 22%, to USD 126 million, mainly reflecting lower revenues from public offerings across all regions, against a global fee pool increase of 4%. Revenues from private transactions were broadly stable.

Debt Capital Markets revenues decreased by USD 27 million, or 15%, to USD 156 million. Investment grade revenues increased 37%, against a global fee pool increase of 17%. Leveraged finance revenues decreased 45%, against a global fee pool decrease of 18% and a strong prior-year quarter.

Financing Solutions revenues increased by USD 2 million, or 2%, to USD 76 million.

Risk Management revenues were negative USD 12 million, compared with positive USD 3 million, mainly resulting from valuation losses on a restructured debt position.

Investor Client Services

Investor Client Services revenues decreased by USD 65 million, or 5%, to USD 1,220 million, mainly reflecting decreases in Equities.

Equities

Equities revenues decreased by USD 61 million, or 7%, to USD 838 million, reflecting a more challenging market environment with lower client activity levels, as well as the strong third quarter of 2018.

Cash revenues were broadly unchanged at USD 294 million.

Derivatives revenues decreased to USD 170 million from USD 243 million, reflecting the strong third quarter of 2018 and lower client activity levels.

Financing Services revenues decreased to USD 369 million from USD 380 million, mainly driven by lower prime brokerage revenues as a result of lower client balances and margin compression.

Foreign Exchange, Rates and Credit

Foreign Exchange, Rates and Credit revenues decreased slightly by USD 4 million, or 1%, to USD 382 million. Foreign Exchange revenues increased 2% as the business benefited from higher levels of volatility in August. Rates and Credit revenues decreased 6%, reflecting challenging market conditions.

Operating expenses

Total operating expenses increased by USD 90 million, or 6%, to USD 1,580 million, and adjusted operating expenses increased by USD 94 million, or 6%, to USD 1,549 million.

Personnel expenses increased by USD 26 million to USD 699 million, and adjusted personnel expenses increased by USD 26 million to USD 698 million.

General and administrative expenses increased by USD 42 million to USD 143 million, and on an adjusted basis increased by USD 43 million to USD 142 million, mostly due to the prior-year period including a USD 59 million net release of provisions for litigation, regulatory and similar matters.

Net expenses for services to / from Corporate Center and other business divisions increased to USD 735 million from USD 709 million. Excluding restructuring expenses, adjusted net expenses increased to USD 707 million from USD 677 million.

Expenses for services from Corporate Center increased by USD 21 million to USD 748 million, and by USD 25 million to USD 720 million on an adjusted basis. This reflected higher expenses for IT development and amortization of software and compliance costs.

Net cost recovery from services to / from other business divisions and services to Corporate Center decreased by USD 5 million on both a reported and an adjusted basis due to lower charges in connection with Group regulatory projects.

Risk-weighted assets and leverage ratio denominator: 3Q19 vs 2Q19

Risk-weighted assets

Total risk-weighted assets (RWA) increased by USD 3 billion to USD 89 billion, driven by higher credit risk RWA, reflecting increases in traded loans, term loans exposures and unutilized credit facilities, partly offset by lower market risk RWA, reflecting lower average regulatory and stressed value-at-risk (VaR) levels.

→ **Refer to the "Capital management" section of this report for more information**

Leverage ratio denominator

The leverage ratio denominator (LRD) was flat at USD 300 billion.

→ **Refer to the "Capital management" and "Balance sheet, liquidity and funding management" sections of this report for more information**

Results: 9M19 vs 9M18

Profit before tax decreased by USD 758 million, or 48%, to USD 806 million. Excluding restructuring expenses, adjusted profit before tax decreased by USD 815 million, or 49%, to USD 864 million. This mainly resulted from lower operating income, reflecting lower levels of client activity and decreases in the global fee pools, partly offset by lower operating expenses.

Revenues in Corporate Client Solutions decreased by USD 436 million, or 20%, to USD 1,724 million, as a result of significantly lower levels of market activity and decreased private transaction revenues, particularly in Equity Capital Markets, and compared with the strong first nine months of 2018.

Advisory revenues decreased by USD 38 million, or 6%, to USD 563 million, reflecting lower revenues from merger and acquisition transactions, while the global fee pool decreased 12%. This was partly offset by higher revenues from private transactions.

Equity Capital Markets revenues decreased 27% to USD 487 million from USD 664 million, largely driven by lower revenues from private transactions due to the strong prior-year period, as well as lower revenues from public offerings, against a decrease in the global fee pool of 14%.

Debt Capital Markets revenues decreased 22% to USD 474 million from USD 609 million, mainly reflecting lower leveraged finance revenues, against a global fee pool decrease of 23%.

Financing Solutions revenues decreased 10% to USD 201 million from USD 225 million, reflecting lower levels of client activity across most products.

Risk Management revenues were marginally negative, compared with positive USD 61 million, mainly due to lower gains from a portfolio of loans that were largely exited in 2018 and by lower gains on a restructured debt position.

Investor Client Services revenues decreased by USD 492 million, or 11%, to USD 3,888 million, reflecting lower revenues across Equities and Foreign Exchange, Rates and Credit.

Equities revenues decreased by USD 413 million, or 13%, to USD 2,661 million. Cash revenues decreased to USD 885 million from USD 955 million, mainly reflecting lower client activity levels. Derivatives revenues decreased to USD 683 million from USD 885 million, reflecting the strong prior-year period and lower client activity levels. Financing Services revenues decreased to USD 1,106 million from USD 1,265 million, reflecting lower client activity levels across most products.

Foreign Exchange, Rates and Credit revenues decreased 6% to USD 1,227 million from USD 1,306 million, primarily due to the second quarter of 2018 including net income of around USD 100 million, consisting mainly of previously deferred day-1 profits that were subsequently recognized as a result of enhanced observability and revised valuations in the funding curve used to value UBS interest rate-linked notes. Excluding that, Foreign Exchange, Rates and Credit revenues increased 2%. The first nine months of 2019 included a gain of USD 68 million on our investment in TradeWeb, which was sold in the second quarter of 2019, compared with mark-to-market gains of USD 22 million recognized in the first nine months of 2018.

Total operating expenses decreased by USD 174 million, or 4%, to USD 4,782 million, and adjusted operating expenses decreased by USD 116 million, or 2%, to USD 4,725 million.

Personnel expenses decreased to USD 2,198 million from USD 2,404 million, and adjusted personnel expenses decreased to USD 2,195 million from USD 2,395 million, mainly reflecting lower variable compensation expenses. General and administrative expenses increased to USD 427 million from USD 398 million, and on an adjusted basis increased to USD 422 million from USD 391 million, mostly due to the prior-year period including a USD 58 million net release of provisions for litigation, regulatory and similar matters.

Net expenses for services to / from Corporate Center and other business divisions increased to USD 2,147 million from USD 2,137 million. Excluding restructuring expenses, adjusted net expenses increased to USD 2,098 million from USD 2,040 million.

Expenses for services from Corporate Center increased by USD 12 million to USD 2,187 million, and by USD 60 million to USD 2,138 million on an adjusted basis, mainly due to higher spending on IT development and amortization of software and compliance costs. This was partly offset by lower charges in connection with Group regulatory projects.

Net cost recovery from services to / from other business divisions and services to Corporate Center increased by USD 2 million on both a reported and an adjusted basis, mainly reflecting lower charges for services from Global Wealth Management, partly offset by lower charges in connection with Group regulatory projects.

¹ Prior-year comparative figures in this table have been restated for the changes in Corporate Center cost and resource allocation to the business divisions and the changes in the equity attribution framework effective 1 January 2019. Refer to "Note 2 Segment reporting" in the "Consolidated financial statements" section of our second quarter 2019 report for more information about the changes to the Corporate Center cost and resource allocation to business divisions and to the "Recent developments" section of our first quarter 2019 report for more information about the changes in the equity attribution framework. Comparatives may additionally differ as a result of adjustments following organizational changes, restatements due to the retrospective adoption of new accounting standards or changes in accounting policies, and events after the reporting period. ² This table has been amended to present total operating expenses as the only expense line item. Operating expenses related to services provided to the business divisions continue to be presented in the results of the respective business divisions. ³ Adjusted results are non-GAAP financial measures as defined by SEC regulations. ⁴ Reflects restructuring expenses related to legacy cost programs. ⁵ Refer to the "Capital management" section of this report for more information.

Results: 3Q19 vs 3Q18

Corporate Center recorded a loss before tax of USD 200 million, compared with a loss of USD 128 million in the prior-year quarter, and an adjusted loss before tax of USD 160 million, compared with a loss of USD 188 million.

Operating income

Operating income was negative USD 191 million, compared with negative USD 29 million. Excluding net foreign currency translation losses of USD 46 million related to the closure of subsidiaries in the third quarter of 2019 and the gain on sale of Widder Hotel of USD 56 million in the third quarter of 2018, adjusted income was negative USD 145 million compared with negative USD 85 million. This decrease was driven by lower other Corporate Center revenues, mainly reflecting higher interest expenses relating to the adoption of IFRS 16, *Leases*, increased funding expenses for Group Technology assets, and lower net income from the Non-core and Legacy Portfolio, partly offset by higher net treasury income.

Net treasury income

The net treasury income result was negative USD 60 million, compared with negative USD 55 million. Excluding the aforementioned net foreign currency translation losses, adjusted net treasury income was negative USD 15 million, compared with negative USD 55 million.

Net treasury income included negative revenues of USD 84 million relating to centralized Group Treasury risk management services, compared with negative revenues of USD 75 million. Revenues from accounting asymmetries were USD 57 million, compared with USD 18 million. Income related to hedge accounting ineffectiveness was USD 4 million compared with USD 5 million.

Operating income from Non-core and Legacy Portfolio

The operating income from Non-core and Legacy Portfolio was negative USD 6 million, compared with positive USD 40 million. The decrease was mainly due to the third quarter of 2018 including valuation gains of USD 60 million on financial assets measured at fair value through profit or loss.

Operating expenses

Total operating expenses were USD 9 million, compared with USD 100 million, and, on an adjusted basis, USD 15 million, compared with USD 103 million. The decrease was mainly driven by a net release of provisions related to litigation, regulatory and similar matters, as well as the aforementioned higher expenses for lease contracts and Group Technology assets which are presented as negative revenues and allocated to the business divisions through operating expenses.

Results: 9M19 vs 9M18

Corporate Center recorded a loss before tax of USD 271 million, compared with a loss of USD 454 million in the prior-year period. On an adjusted basis, Corporate Center recorded a loss before tax of USD 242 million, compared with a loss of USD 637 million.

Total operating income was negative USD 174 million, compared with negative USD 203 million. Excluding net foreign currency translation losses of USD 35 million in the first nine months of 2019 and the aforementioned gain on the sale of Widder Hotel in the first nine months of 2018, adjusted income was negative USD 139 million compared with negative USD 259 million. The increase reflected USD 440 million higher net treasury income, partly offset by lower net income from Non-core and Legacy Portfolio and a decrease in other Corporate Center revenues, driven mainly by higher interest expenses relating to the adoption of IFRS 16, *Leases*, and increased funding expenses for Group Technology assets.

The net treasury income result was positive USD 103 million, compared with negative USD 302 million. Excluding the aforementioned net foreign currency translation losses, adjusted net treasury income was positive USD 138 million, compared with negative USD 302 million.

Net treasury income included negative revenues of USD 173 million relating to centralized Group Treasury risk management services, compared with negative revenues of USD 228 million. Income related to hedge accounting ineffectiveness was positive USD 151 million, compared with negative USD 66 million. Revenues from accounting asymmetries were positive USD 151 million, compared with negative USD 10 million.

The operating income from Non-core and Legacy Portfolio was USD 102 million, compared with USD 189 million. The decrease was mainly due to the first nine months of 2018 including USD 145 million higher valuation gains on financial assets measured at fair value through profit or loss, partly offset by proceeds related to the settlement of a litigation claim and income related to a claim on a defaulted counterparty position in the first nine months of 2019.

Total operating expenses were USD 97 million, compared with USD 251 million, and, on an adjusted basis, USD 103 million, compared with USD 377 million. The decrease was mainly due to a net release of provisions related to litigation, regulatory and similar matters compared with a net expense in the first nine months of 2018 and the aforementioned higher allocated funding expenses recorded under operating income.

Personnel: 3Q19 vs 2Q19

As of 30 September 2019, Corporate Center employed 31,913 personnel (full-time equivalents). Personnel increased by 722 and external staff by 269 compared with 30 June 2019, mainly related to regulatory projects and strategic initiatives.

Risk management and control

This section provides information about key developments during the reporting period and should be read in conjunction with the "Risk management and control" section of our Annual Report 2018.

Credit risk

Total net credit loss expenses in the third quarter of 2019 were USD 38 million, reflecting net expenses of USD 43 million related to credit-impaired (stage 3) positions and recoveries of USD 5 million related to stage 1 and stage 2 positions. The net stage 3 expenses of USD 43 million were recognized across a number of defaulted positions: USD 29 million in Personal & Corporate

Banking, mainly related to a single exposure; USD 8 million in the Investment Bank; and USD 6 million in Global Wealth Management.

Overall credit risk exposures were broadly unchanged during the third quarter of 2019.

We aim to manage our Swiss lending portfolios prudently and remain watchful for signs of deterioration that could affect our counterparties.

Within the Investment Bank, our leveraged loan underwriting business's overall ability to distribute risk remained sound. Loan underwriting exposures are held for trading, with fair values reflecting the market conditions at the end of the quarter.

Market risk

Market risks remain generally at low levels due to our continued focus on managing tail risks. Average management value-at-risk (VaR) (1-day, 95% confidence level) increased marginally to USD 12 million from USD 11 million in the previous quarter.

There were no Group VaR negative backtesting exceptions in the third quarter of 2019, and the total number of negative backtesting exceptions within the most recent 250 business-days remained at 1. The FINMA VaR multiplier for market risk RWA was unchanged compared with the previous quarter, at 3.

Management value-at-risk (1-day, 95% confidence, 5 years of historical data) of our business divisions and Corporate Center by general market risk type¹

<i>USD million</i>	Min.	Max.	Period end	Average	Average by risk type				
					Equity	Interest rates	Credit spreads	Foreign exchange	Commodities
Global Wealth Management	0	1	0	1	0	1	1	0	0
Personal & Corporate Banking	0	0	0	0	0	0	0	0	0
Asset Management	0	0	0	0	0	0	0	0	0
Investment Bank	6	17	10	10	8	7	4	3	2
Corporate Center	4	8	5	6	1	6	2	1	0
Diversification effect ^{2,3}			(4)	(5)	(1)	(4)	(2)	(1)	0
Total as of 30.9.19	8	18	11	12	8	9	4	3	2
Total as of 30.6.19	9	15	12	11	7	9	4	4	2

¹ Statistics at individual levels may not be summed to deduce the corresponding aggregate figures. The minima and maxima for each level may occur on different days, and, likewise, the VaR for each business line or risk type, being driven by the extreme loss tail of the corresponding distribution of simulated profits and losses for that business line or risk type, may well be driven by different days in the historical time series, rendering invalid the simple summation of figures to arrive at the aggregate total. ² Difference between the sum of the standalone VaR for the business divisions and Corporate Center and the VaR for the Group as a whole. ³ As the minimum and maximum occur on different days for different business divisions and Corporate Center, it is not meaningful to calculate a portfolio diversification effect.

As of 30 September 2019, the interest rate sensitivity of our banking book to a +1-basis-point parallel shift in yield curves was negative USD 24.3 million, compared with negative USD 22.2 million as of 30 June 2019. The change in interest rate sensitivity was driven by market moves (interest rates decreased substantially over the quarter), issuance of additional tier 1 (AT1) capital instruments and active risk management of the exposures in the banking book. The reported interest rate sensitivity excludes the AT1 capital instruments as per FINMA Pillar 3 disclosure requirements and our equity, goodwill and real estate with a modeled sensitivity of approximately USD 4 million per basis point in Swiss francs and USD 15 million per basis point in US dollars.

The most adverse of the six FINMA interest rate scenarios was the "Parallel up" scenario, which resulted in a change in the economic value of equity of negative USD 4.9 billion, representing a pro forma effect equal to 9.7% of tier 1 capital, which is well below the regulatory outlier test of 15% of tier 1 capital. The immediate effect of the "Parallel up" scenario on

tier 1 capital as of 30 September 2019 would be a reduction of 1.3%, or USD 0.6 billion, arising from the part of our banking book that is measured at fair value through profit or loss and from the financial assets measured at fair value through other comprehensive income. This scenario would also have a positive effect on net interest income.

- Refer to "Interest rate risk in the banking book" in the "Market risk" section of our Annual Report 2018 and the 30 June 2019 Pillar 3 report available under "Pillar 3 disclosures" at www.ubs.com/investors, for more information about the management of interest rate risk in the banking book
- Refer to "Sensitivity to interest rate movements" in the "Group performance" section of this report for more information about the effects of increases in interest rates on the equity, capital and net interest income of Global Wealth Management and Personal & Corporate Banking
- Refer to the 30 September 2019 Pillar 3 report available under "Pillar 3 disclosures" at www.ubs.com/investors

Risk management and control

Country risk

We remain watchful of developments in Europe and political shifts in a number of countries. Our direct exposure to peripheral European countries is limited, although we have significant country risk exposure to major European economies, including the UK, Germany and France. The UK's process of withdrawing from the EU remains an area of concern.

Tensions in the Middle East have increased following an attack on Saudi energy facilities and led to disruption of world oil supplies.

We are closely monitoring the growing risks stemming from ongoing US trade policy shifts, and their potential effects on key markets, economies and countries.

We also continue to closely monitor our direct exposure to China. In addition, a number of emerging markets are facing economic, political and market pressures, such as Argentina, which has had a major negative market correction and may soon need to reprofile its sovereign debt.

Our exposure to emerging market countries is well diversified.

Operational risk

There have been no significant changes in the operational risk environment over the quarter, with financial crime, conduct and culture, and operational resilience (particularly with respect to cyber risks and data management) remaining the dominant themes for UBS and the industry. We continue to prioritize our efforts to meet the developing nature of these risks and to invest

heavily in our detection capabilities and core systems as part of our financial crime prevention program, with a focus on improving these to meet regulatory expectations, including to address the requirements of the May 2018 cease and desist order issued by the Office of the Comptroller of the Currency related to our US branch know-your-customer and anti-money laundering programs.

Balance sheet, liquidity and funding management

Strategy, objectives and governance

This section provides balance sheet, liquidity and funding management information and should be read in conjunction with the "Treasury management" section of our Annual Report 2018, which provides more information about the Group's strategy, objectives and governance in connection with liquidity and funding management.

Balances disclosed in this section represent quarter-end positions, unless indicated otherwise. Intra-quarter balances fluctuate in the ordinary course of business and may differ from quarter-end positions.

Assets and liquidity management

Balance sheet assets (30 September 2019 vs 30 June 2019)

As of 30 September 2019, balance sheet assets totaled USD 973 billion, an increase of USD 4 billion compared with 30 June 2019.

Total assets excluding derivatives and cash collateral receivables on derivative instruments decreased by USD 10 billion to USD 813 billion, mainly driven by decreases in cash and balances at central banks and in trading portfolio assets. This was partly offset by increases in other financial assets measured at amortized cost and fair value as well as non-financial assets and financial assets for unit-linked investment contracts.

Cash and balances at central banks decreased by USD 10 billion, mainly as a result of a transfer of cash into debt securities measured at fair value within our high-quality liquid assets (HQLA) portfolio and the investment of cash in securities financing transactions at amortized cost. Trading portfolio assets decreased by USD 4 billion, mainly in the Investment Bank, largely reflecting reduced hedging requirements on the back of client activity in our Equities business, as well as currency effects.

These decreases were partly offset by an increase of USD 4 billion in other financial assets measured at amortized cost and fair value, predominantly driven by the aforementioned transfer from cash into debt securities measured at fair value within our HQLA portfolio. Non-financial assets and financial assets for unit-linked investment contracts increased by USD 3 billion, reflecting the recognition of the Swiss pension plan surplus.

Derivatives and cash collateral receivables on derivative instruments increased by USD 14 billion, primarily due to mark-to-market effects on foreign exchange and interest rate contracts held in our Foreign Exchange, Rates and Credit business, as well as an overall increase in trading volumes compared with the previous quarter.

- Refer to the "Group performance" section of this report for more information about the Swiss pension plan surplus
- Refer to the "Consolidated financial statements" section of this report for more information

¹ Consists of loans and advances to banks and customers. ² Consists of financial assets at fair value held for trading. ³ Consists of financial assets at fair value not held for trading, financial assets measured at fair value through other comprehensive income and other financial assets measured at amortized cost, but excludes financial assets for unit-linked investment contracts and cash collateral receivables on derivative instruments.

Balance sheet, liquidity and funding management

Liquidity coverage ratio

In the third quarter of 2019, the quarterly average UBS Group liquidity coverage ratio (LCR) decreased 7 percentage points to 138%, remaining above the 110% Group LCR minimum communicated by FINMA.

The LCR decrease was primarily driven by lower average high-quality liquid assets due to a reduction of cash at central banks, reflecting higher average funding consumption by the business divisions and reductions in the level of issued debt.

→ **Refer to the “Treasury management” section of our Annual Report 2018 for more information about liquidity management and the liquidity coverage ratio**

¹ Calculated based on an average of 66 data points in the third quarter of 2019 and 65 data points in the second quarter of 2019. ² Calculated after the application of haircuts. ³ Includes cash and balances at central banks and other eligible balances as prescribed by FINMA. ⁴ Calculated in accordance with FINMA requirements. ⁵ Calculated after the application of inflow and outflow rates.

Liabilities and funding management**Liabilities (30 September 2019 vs 30 June 2019)**

Total liabilities increased by USD 1 billion to USD 917 billion as of 30 September 2019. Total liabilities excluding derivatives and cash collateral payables on derivative instruments decreased by USD 10 billion to USD 753 billion as of 30 September 2019.

Customer deposits decreased by USD 6 billion, primarily in Global Wealth Management and Personal & Corporate Banking, mainly driven by currency effects. Long-term debt issued decreased by USD 6 billion, mainly reflecting net maturities of senior unsecured debt.

Derivatives and cash collateral payables on derivative instruments increased by USD 11 billion, in line with the aforementioned increase in derivative financial assets and cash collateral receivables.

The “Funding by product and currency” table in this section provides more information about our funding sources.

→ **Refer to “Bondholder information” at www.ubs.com/investors for more information about capital and senior debt instruments**
 → **Refer to the “Consolidated financial statements” section of this report for more information**

Equity

Equity attributable to shareholders increased to USD 56,187 million as of 30 September 2019, from USD 53,180 million as of 30 June 2019.

Total comprehensive income attributable to shareholders was USD 3,151 million, reflecting net profit of USD 1,049 million and positive other comprehensive income (OCI) of USD 2,101 million. OCI mainly included positive defined benefit plan OCI of USD 2,000 million, positive cash flow hedge OCI of USD 417 million and negative foreign currency translation OCI of USD 316 million.

Share premium increased by USD 164 million, mainly due to the amortization of deferred share-based compensation awards.

Net treasury share activity reduced equity attributable to shareholders by USD 308 million. This was predominantly due to repurchases of USD 306 million under our share repurchase program.

→ Refer to the “Consolidated financial statements” and “Group performance” sections of this report for more information

→ Refer to “UBS shares” in the “Capital management” section of this report for more information about the share repurchase program

¹ These lines provided in this table are aligned with the scope disclosed in "Note 17 Guarantees, commitments and forward starting transactions" in the "Consolidated financial statements" section of this report. Total guarantees and Loan commitments are shown net of sub-participations. ² Refer to "Note 10 Expected credit loss measurement" in the "Consolidated financial statements" section of this report for more information.

Off-balance sheet (30 September 2019 vs 30 June 2019)

Forward starting reverse repurchase agreements and forward starting repurchase agreements increased by USD 3 billion and USD 2 billion, respectively, primarily in Corporate Center, reflecting higher market activity in short-dated securities financing transactions. Guarantees decreased by USD 1 billion,

primarily in the Investment Bank, Personal & Corporate Banking and in Global Wealth Management. Loan commitments increased by USD 3 billion, primarily in our Corporate Client Solutions business in the Investment Bank, mainly reflecting new commitments.

Pro forma net stable funding ratio

USD billion, except where indicated	30.9.19	30.6.19
Available stable funding	479	483
Required stable funding	445	435
Pro forma net stable funding ratio (%)	108	111

Net stable funding ratio

As of 30 September 2019, our estimated pro forma net stable funding ratio (NSFR) was 108%, a decrease of 3 percentage points compared with 30 June 2019, primarily reflecting a USD 4 billion decrease in available stable funding, primarily driven by a decrease in deposits, and a USD 10 billion increase in required stable funding, including increases in derivatives.

The calculation of our pro forma NSFR includes estimates of the effect of the Basel Committee on Banking Supervision rules and will be refined when NSFR rule-making is completed in Switzerland and as regulatory interpretations evolve and new models and associated systems are enhanced.

→ Refer to the "Treasury management" section of our Annual Report 2018 for more information about the net stable funding ratio

¹ Short-term debt issued is comprised of certificates of deposit, commercial paper, acceptances and promissory notes, and other money market paper. ² Long-term debt issued also includes debt with a remaining time to maturity of less than one year.

Capital management

This section provides information about key developments during the reporting period and should be read in conjunction with the “Capital management” section of our Annual Report 2018, which provides more information about our strategy, objectives and governance for capital management. Disclosures in this section are provided for UBS Group AG on a consolidated basis and focus on information in accordance with the Basel III framework, as applicable to Swiss systemically relevant banks (SRBs).

Information in accordance with the Basel Committee on Banking Supervision framework for UBS Group AG consolidated together with capital and other regulatory information for UBS AG standalone, UBS Switzerland AG standalone, UBS Europe SE consolidated and UBS Americas Holding LLC consolidated is provided in our 30 September 2019 Pillar 3 report available under “Pillar 3 disclosures” at www.ubs.com/investors.

Capital and other regulatory information for UBS AG consolidated is provided in the UBS AG third quarter 2019 report, which will be available as of 25 October 2019 under “Quarterly reporting” at www.ubs.com/investors.

Swiss SRB requirements and information

Information about the Swiss SRB capital framework and about Swiss SRB going and gone concern requirements that are being phased in until the end of 2019 is provided in the "Capital management" section of our Annual Report 2018. These requirements are also applicable to UBS AG consolidated and UBS Switzerland AG standalone. UBS AG is subject to going concern requirements on a standalone basis, for which details

are provided in our 31 December 2018 Pillar 3 report and in our 30 September 2019 Pillar 3 report available under "Pillar 3 disclosures" at www.ubs.com/investors.

The table below provides the risk-weighted assets (RWA)- and leverage ratio denominator (LRD)-based requirements and information as of 30 September 2019.

Eligible total loss-absorbing capacity	33.32	88,178	9.78	88,178	33.32	88,178	9.78	88,178

¹ Includes applicable add-ons of 1.44% for RWA and 0.5% for LRD. ² Includes outstanding low-trigger loss-absorbing additional tier 1 and tier 2 capital instruments, which are available under the transitional rules of the Swiss SRB framework to meet the going concern requirements until their first call date, even if the first call date is after 31 December 2019. As of their first call date, these instruments are eligible to meet the gone concern requirements. Outstanding low-trigger loss-absorbing tier 2 capital instruments are subject to amortization starting five years prior to their maturity, with the amortized portion qualifying as gone concern loss-absorbing capacity. Instruments available to meet gone concern requirements are eligible until one year before maturity, with a haircut of 50% applied in the last year of eligibility. ³ Based on the actions we completed up to December 2018 to improve resolvability, FINMA granted a rebate on the gone concern requirement of 42.5% of the maximum rebate in the third quarter of 2019 as compared with 40% in the previous quarter.

Total loss-absorbing capacity

The table below provides Swiss SRB going and gone concern information based on transitional arrangements and based on the final rules, which will be effective as of 1 January 2020. The remaining differences between the "Swiss SRB, including transitional arrangements" and "Swiss SRB as of 1.1.20" columns are entirely related to the eligibility of instruments as

required by the too big to fail provisions in the Swiss Capital Adequacy Ordinance applicable to Swiss SRBs, which are described under "Swiss SRB total loss-absorbing capacity framework" in the "Capital management" section of our Annual Report 2018.

¹ Under the transitional rules of the Swiss SRB framework, outstanding low-trigger loss-absorbing tier 2 capital instruments are subject to amortization starting five years prior to their maturity, with the amortized portion qualifying as gone concern loss-absorbing capacity. ² Instruments available to meet gone concern requirements are eligible until one year before maturity, with a haircut of 50% applied in the last year of eligibility. ³ Non-Basel III-compliant tier 2 capital instruments qualify as gone concern instruments.

Capital management

Total loss-absorbing capacity and movement under Swiss SRB rules applicable as of 1 January 2020**Going concern capital and movement**

As of 30 September 2019, our going concern capital increased by USD 0.7 billion to USD 50.7 billion, primarily due to a USD 1.0 billion increase in total loss-absorbing additional tier 1 (AT1) capital, reflecting two separate issuances of high-trigger loss-absorbing AT1 capital instruments of AUD 700 million and SGD 750 million, respectively. Our common equity tier 1 (CET1) capital decreased by USD 0.3 billion to USD 34.7 billion, mainly as a result of accruals for capital returns to shareholders, share repurchases under our share repurchase program, foreign currency translation effects, current tax expense and increases in pension liabilities of non-Swiss pension plans, partly offset by operating profit before tax.

→ Refer to “UBS shares” in this section for more information about the share repurchase program

Gone concern loss-absorbing capacity and movement

Our total gone concern loss-absorbing capacity increased by USD 0.1 billion to USD 37.5 billion, mainly due to the issuance of a USD 1.5 billion total loss-absorbing capacity (TLAC)-eligible

senior unsecured debt instrument, partly offset by a USD 1.0 billion decrease in the eligibility of two TLAC-eligible senior unsecured debt instruments and a non-Basel III-compliant tier 2 capital instrument as well as currency and other effects.

→ Refer to “Bondholder information” at www.ubs.com/investors for more information about the eligibility of capital and senior unsecured debt instruments and about key features and terms and conditions of capital instruments

Loss-absorbing capacity and leverage ratios

Our CET1 capital ratio decreased 0.2 percentage points to 13.1%, reflecting a USD 2.5 billion increase in risk-weighted assets (RWA) and the USD 0.3 billion decrease in CET1 capital.

Our CET1 leverage ratio increased from 3.83% to 3.84% in the third quarter of 2019, as the USD 9 billion decrease in leverage ratio denominator (LRD) was partly offset by the aforementioned decrease in CET1 capital.

Our gone concern loss-absorbing capacity ratio decreased from 14.3% to 14.2%, mainly driven by the aforementioned increase in RWA. Our gone concern leverage ratio increased from 4.1% to 4.2%, mainly due to the aforementioned decrease in LRD.

Capital management

Additional information**Sensitivity to currency movements***Risk-weighted assets*

We estimate that a 10% depreciation of the US dollar against other currencies would have increased our RWA by USD 11 billion and our CET1 capital by USD 1.0 billion as of 30 September 2019 (30 June 2019: USD 11 billion and USD 1.1 billion, respectively) and decreased our CET1 capital ratio 13 basis points (30 June 2019: 13 basis points). Conversely, we estimate that a 10% appreciation of the US dollar against other currencies would have decreased our RWA by USD 10 billion and our CET1 capital by USD 0.9 billion (30 June 2019: USD 10 billion and USD 1.0 billion, respectively) and increased our CET1 capital ratio 13 basis points (30 June 2019: 13 basis points).

Leverage ratio denominator

We estimate that a 10% depreciation of the US dollar against other currencies would have increased our LRD by USD 56 billion as of 30 September 2019 (30 June 2019: USD 57 billion) and decreased our Swiss SRB going concern leverage ratio 18 basis points (30 June 2019: 18 basis points). Conversely, we estimate that a 10% appreciation of the US dollar against other currencies would have decreased our LRD by USD 50 billion (30 June 2019: USD 52 billion) and increased our Swiss SRB going concern leverage ratio 18 basis points (30 June 2019: 19 basis points).

The aforementioned sensitivities do not consider foreign currency translation effects related to defined benefit plans other than those related to the currency translation of the net equity of foreign operations.

→ Refer to **“Active management of sensitivity to currency movements”** in the **“Capital management”** section of our **Annual Report 2018** for more information

Estimated effect on capital from litigation, regulatory and similar matters subject to provisions and contingent liabilities

We have estimated the loss in capital that we could incur as a result of the risks associated with the matters described in “Note 16 Provisions and contingent liabilities” in the “Consolidated financial statements” section of this report. We have used for this purpose the advanced measurement approach (AMA) methodology that we use when determining the capital requirements associated with operational risks, based on a 99.9% confidence level over a 12-month horizon. The methodology takes into consideration UBS and industry experience for the AMA operational risk categories to which those matters correspond, as well as the external environment affecting risks of these types, in isolation from other areas. On this standalone basis, we estimate the loss in capital that we could incur over a 12-month period as a result of our risks associated with these operational risk categories at USD 4.5 billion as of 30 September 2019. This estimate is not related to and does not take into account any provisions recognized for any of these matters and does not constitute a subjective assessment of our actual exposure in any of these matters.

→ Refer to **“Operational risk”** in the **“Risk management and control”** section of our **Annual Report 2018** for more information

→ Refer to **“Note 16 Provisions and contingent liabilities”** in the **“Consolidated financial statements”** section of this report for more information

Risk-weighted assets

During the third quarter of 2019, risk-weighted assets (RWA) increased by USD 2.5 billion to USD 264.6 billion, reflecting increases from asset size and other movements of USD 5.7 billion, partly offset by currency effects of USD 2.5 billion, a decrease in regulatory add-ons of USD 0.5 billion and model updates of USD 0.1 billion.

Movement in risk-weighted assets by key driver

<i>USD billion</i>	RWA as of 30.6.19	Currency effects	Model updates / changes	Regulatory add-ons	Asset size and other ¹	RWA as of 30.9.19
Credit and counterparty credit risk ²	149.1	(2.4)	0.9		6.1	153.7
Non-counterparty-related risk	21.8	(0.2)			(0.2)	21.4
Market risk	11.0		(1.0)	(0.5)	(0.3)	9.2
Operational risk	80.3					80.3
Total	262.1	(2.5)	(0.1)	(0.5)	5.7	264.6

¹ Includes the Pillar 3 categories "Asset size," "Credit quality of counterparties," "Acquisitions and disposals" and "Other." For more information, refer to the 30 September 2019 Pillar 3 report under "Pillar 3 disclosures" at www.ubs.com/investors. ² Includes settlement risk, credit valuation adjustments, equity exposures in the banking book and securitization exposures in the banking book.

Credit and counterparty credit risk

Credit and counterparty credit risk RWA increased by USD 4.6 billion to USD 153.7 billion as of 30 September 2019. The RWA movements described below exclude currency effects.

The RWA increase from asset size and other movements of USD 6.1 billion was predominantly driven by increases in traded loans, term loans exposures and unutilized credit facilities in the Investment Bank's Corporate Client Solutions business.

The increase in RWA from model updates of USD 0.9 billion was mainly driven by the continued phasing-in of RWA increases related to probability of default (PD) and loss given default (LGD) changes from the implementation of revised models for Swiss residential mortgages, which resulted in an RWA increase of USD 0.4 billion in Personal & Corporate Banking and USD 0.1 billion in Global Wealth Management. In addition, a change of the credit conversion factor from 5% to 10% for zero-balance securities-backed lending and margin loans exposures increased RWA in Global Wealth Management by USD 0.4 billion.

We anticipate that methodology changes and model updates, including the continued phase-in of RWA increases related to PD and LGD factors on Swiss mortgages, will increase credit and counterparty credit risk RWA by around USD 1 billion in the fourth quarter of 2019. We expect there will be further regulatory-driven increases in credit risk RWA in 2020, especially upon the implementation of the standardized approach for

counterparty credit risk (SA-CCR) in January 2020. The extent and timing of RWA changes may vary as methodology changes and model updates are completed and receive regulatory approval, and as regulatory multipliers are adjusted. In addition, changes in the composition of the relevant portfolios and other factors will affect our RWA.

→ Refer to "Credit risk models" in the "Risk management and control" section of our Annual Report 2018 for more information

Market risk

Market risk RWA decreased by USD 1.8 billion to USD 9.2 billion in the third quarter of 2019, mainly driven by reductions from model updates of USD 1.0 billion reflecting changes to the VaR model parameters following our periodic review of VaR model parameters and from regulatory add-ons of USD 0.5 billion, which reflect updates from the monthly risks-not-in-VaR assessment.

→ Refer to the "Risk management and control" section of this report and our 30 September 2019 Pillar 3 report available under "Pillar 3 disclosures" at www.ubs.com/investors, for more information

→ Refer to "Market risk" in the "Risk management and control" section of our Annual Report 2018 for more information

Capital management

Operational risk

Operational risk RWA were USD 80.3 billion as of 30 September 2019, unchanged from 30 June 2019.

→ Refer to "Operational risk" in the "Risk management and control" section of our Annual Report 2018 for information about the advanced measurement approach model

¹ Includes settlement risk, credit valuation adjustments, equity exposures in the banking book and securitization exposures in the banking book. ² Non-counterparty-related risk includes deferred tax assets recognized for temporary differences (30 September 2019: USD 8.7 billion; 30 June 2019: USD 8.9 billion), property, equipment and software (30 September 2019: USD 12.4 billion; 30 June 2019: USD 12.7 billion) and other items (30 September 2019: USD 0.2 billion; 30 June 2019: USD 0.3 billion).

Leverage ratio denominator

During the third quarter of 2019, the leverage ratio denominator (LRD) decreased by USD 9 billion to USD 902 billion. This decrease was driven by currency effects of USD 13 billion, partly offset by an increase in asset size and other movements of USD 4 billion.

Movement in leverage ratio denominator by key driver

<i>USD billion</i>	LRD as of 30.6.19	Currency effects	Asset size and other	LRD as of 30.9.19
On-balance sheet exposures (excluding derivative exposures and SFTs) ¹	677.6	(10.1)	0.1	667.6
Derivative exposures	93.0	(1.5)	4.1	95.7
Securities financing transactions	128.7	(1.2)	1.5	129.0
Off-balance sheet items	25.5	(0.3)	0.1	25.2
Deduction items	(13.5)	0.1	(2.2)	(15.6)
Total	911.4	(13.1)	3.6	901.9

¹ Excludes positive replacement values, cash collateral receivables on derivative instruments, cash collateral on securities borrowed, reverse repurchase agreements, margin loans and prime brokerage receivables related to securities financing transactions, which are presented separately under Derivative exposures and Securities financing transactions in this table.

The LRD movements described below exclude currency effects.

Derivative exposures increased by USD 4 billion, mainly as a result of mark-to-market effects on foreign exchange and interest rate contracts held in our Foreign Exchange, Rates and Credit business in the Investment Bank.

Securities financing transactions (SFTs) increased by USD 2 billion, mainly reflecting higher brokerage receivables driven by new business and mark-to-market movements.

Deduction items increased by USD 2 billion, predominantly driven by the recognition in OCI of the Swiss pension plan surplus in the third quarter of 2019.

→ **Refer to the “Balance sheet, liquidity and funding management” section of this report for more information about balance sheet movements**

¹ Represents the difference between the IFRS and the regulatory scope of consolidation, which is the applicable scope for the LRD calculation. ² Consists of derivative financial instruments, cash collateral receivables on derivative instruments, receivables from securities financing transactions, and margin loans as well as prime brokerage receivables and financial assets at fair value not held for trading, both related to securities financing transactions, in accordance with the regulatory scope of consolidation, which are presented separately under Derivative exposures and Securities financing transactions.

Equity attribution and return on attributed equity

Under our equity attribution framework, tangible equity is attributed based on a weighting of 50% each for average risk weighted assets (RWA) and average leverage ratio denominator (LRD), which both include resource allocations from Corporate Center to the business divisions. Average RWA and LRD are converted to their common equity tier 1 (CET1) capital equivalents based on capital ratios of 12.5% and 3.75%, respectively. If the attributed tangible equity calculated under the weighted-driver approach is less than the CET1 capital equivalent of risk-based capital (RBC) for any business division, the CET1 capital equivalent of RBC is used as a floor for that business division.

Furthermore, we allocate to business divisions attributed equity that is related to certain CET1 deduction items, such as compensation-related components and the expected losses on advanced internal ratings-based portfolio less general provisions.

In addition to tangible equity, we allocate equity to our businesses to support goodwill and intangible assets.

We attribute all remaining Basel III capital deduction items to Corporate Center Group items. These deduction items include deferred tax assets (DTAs) recognized for tax loss carry-forwards and DTAs on temporary differences in excess of the threshold, which together constituted the largest component of Corporate Center Group items, dividend accruals and unrealized gains from cash flow hedges.

- Refer to the “Capital management” section of our Annual Report 2018 for more information about the equity attribution framework
- Refer to the “Balance sheet, liquidity and funding management” section of this report for more information about movements in equity attributable to shareholders

¹ Return on attributed equity for Corporate Center is not shown, as it is not meaningful. ² Adjusted results are non-GAAP financial measures as defined by SEC regulations.

UBS shares

UBS Group AG shares are listed on the SIX Swiss Exchange (SIX). They are also listed on the New York Stock Exchange (NYSE) as global registered shares. Each share has a par value of CHF 0.10 per share.

Shares issued were unchanged in the third quarter of 2019.

Treasury shares totaled 228 million shares as of 30 September 2019, of which 101 million shares had been acquired under our share repurchase program for cancellation purposes. The remaining shares are primarily held to hedge our share delivery

obligations related to employee share-based compensation and participation plans and totaled 127 million shares as of 30 September 2019.

Treasury shares held increased by 29 million shares in the third quarter of 2019. This largely reflected repurchases of 28.3 million shares under our share repurchase program. Since March 2018, when the share repurchase program was started, we have acquired 100.7 million shares for a total consideration of CHF 1,350 million (USD 1,365 million).

¹ Refer to "Note 9 Earnings per share (EPS) and shares outstanding" in the "Consolidated financial statements" section of this report for more information. ² Basic and diluted earnings per share in Swiss francs are calculated based on a translation of net profit / (loss) under our US dollar presentation currency. As a consequence of the restatement to a US dollar presentation currency, amounts may differ from those originally published in our quarterly and annual reports. ³ Represents the share price as listed on the SIX Swiss Exchange, translated to US dollars using the closing exchange rate as of the respective date. ⁴ Beginning with our Annual Report 2018, the calculation of market capitalization has been amended to reflect total shares outstanding multiplied by the share price at the end of the period. The calculation was previously based on total shares issued multiplied by the share price at the end of the period. Market capitalization has been reduced by USD 2.0 billion as of 30 September 2018 as a result.

Refer to "Note 26 Restricted and transferred financial assets" in the "Consolidated financial statements" section of the Annual Report 2018 for more information. ³ Money market paper is included in the balance sheet under Financial assets at fair value held for trading, Financial assets measured at fair value through other comprehensive income, Financial assets at fair value not held for trading and Other financial assets measured at amortized cost. ⁴ Includes dividends received from associates reported within Net cash flow from / (used in) investing activities.

Notes to the UBS Group AG interim consolidated financial statements (unaudited)

Note 1 Basis of accounting

Basis of preparation

The consolidated financial statements (the financial statements) of UBS Group AG and its subsidiaries (together, "UBS" or the "Group") are prepared in accordance with International Financial Reporting Standards (IFRS), as issued by the International Accounting Standards Board (IASB), and are presented in US dollars (USD), which is also the functional currency of UBS Group AG, UBS AG's Head Office, UBS AG's London Branch and UBS's US-based operations. These interim financial statements are prepared in accordance with IAS 34, *Interim Financial Reporting*.

In preparing these interim financial statements, the same accounting policies and methods of computation have been applied as in the UBS Group AG consolidated annual financial statements for the period ended 31 December 2018, except for the changes described in this note. These interim financial statements are unaudited and should be read in conjunction with UBS Group AG's audited consolidated financial statements included in the Annual Report 2018. In the opinion of management, all necessary adjustments were made for a fair presentation of the Group's financial position, results of operations and cash flows.

Preparation of these interim financial statements requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, income, expenses and disclosures of contingent assets and liabilities. These estimates and assumptions are based on the best available information. Actual results in the future could differ from such estimates and such differences may be material to the financial statements. Revisions to estimates, based on regular reviews, are recognized in the period in which they occur. For more information about areas of estimation uncertainty that are considered to require critical judgment, refer to "Note 1a Significant accounting policies" in the "Consolidated financial statements" section of the Annual Report 2018.

Adoption of IFRS 16, *Leases*

Application and transition effect

Effective from 1 January 2019, UBS adopted IFRS 16, *Leases*, which replaced IAS 17, *Leases*, and sets out the principles for the recognition, measurement, presentation and disclosure of leases.

IFRS 16 introduces a single lessee accounting model and fundamentally changes how UBS accounts for operating leases when acting as a lessee, with a requirement to record a right-of-use asset and lease liability on the balance sheet. UBS is a lessee in a number of leases, primarily of real estate, including offices, retail branches and sales offices, with a smaller number of IT hardware leases. As permitted by the transitional provisions of IFRS 16, UBS elected to apply the modified retrospective approach and has not restated comparative figures. Overall, adoption of IFRS 16 resulted in a USD 3.5 billion increase in both total assets and total liabilities in UBS's consolidated financial statements. There was no effect on equity.

→ **Refer to the tables on the next page for more information**

UBS applied the following practical expedients that are permitted on transition to IFRS 16 where UBS is the lessee in a lease previously classified as an operating lease:

- to not reassess whether or not a contract contained a lease;
- to rely on previous assessments of whether such contracts were considered onerous;
- to rely on previous sale-and-leaseback assessments;
- to adjust lease terms with the benefit of hindsight with respect to whether extension or termination options are reasonably certain of being exercised;
- to discount lease liabilities using the Group's incremental borrowing rate in each currency as at 1 January 2019;
- to initially measure the right-of-use asset at an amount equal to the lease liability for leases previously classified as operating leases, adjusted for existing lease balances such as rent prepayments, rent accruals, lease incentives and onerous lease provisions, but excluding initial direct costs; and
- to not apply IFRS 16 to leases in which the remaining term will end within 12 months from the transition date.

Note 1 Basis of accounting (continued)

The measurement of leases previously classified as finance leases where UBS acts as a lessee has not changed on transition to IFRS 16. Similarly, UBS has made no adjustments where UBS acts as a lessor, in either a finance or operating lease, of physical assets it owns. Where UBS acts as an intermediate lessor, i.e., where UBS enters into a head lease and sub-leases the asset to a third party, the sub-lease has been classified as either a finance or operating

lease based primarily on whether the sub-lease term consumes the majority of the remaining useful life of the right-of-use asset arising from the head lease as at the transition date.

The following table reconciles the obligations in respect of operating leases as at 31 December 2018 to the opening lease liabilities recognized on 1 January 2019:

Reconciliation between operating lease commitments disclosed under IAS 17 and lease liabilities recognized under IFRS 16

<i>USD million</i>	
Total undiscounted operating lease commitments as of 31 December 2018	4,688
Leases with a remaining term of less than one year as of 1 January 2019	(18)
Excluded service components	(296)
Reassessment of lease term for extension or termination options	403
Total undiscounted lease payments	4,777
Discounted at a weighted average incremental borrowing rate of 3.07%	(744)
IFRS 16 transition adjustment	4,033
Finance lease liabilities as of 31 December 2018	24
Carrying amount of total lease liabilities as of 1 January 2019	4,057

The following table provides details on the determination of right-of-use assets on transition:

Determination of right-of-use (RoU) assets on transition

<i>USD million</i>	Carrying amount
Recognition of gross RoU assets upon adoption of IFRS 16 (IFRS 16 transition adjustment)	4,033
Offset by liabilities recognized as of 31 December 2018	(521)
<i>of which: other non-financial liabilities (lease incentives)</i>	<i>(204)</i>
<i>of which: other financial liabilities measured at amortized cost (rent accruals)</i>	<i>(185)</i>
<i>of which: provisions (onerous lease provisions)</i>	<i>(132)</i>
Increase in total assets resulting from the adoption of IFRS 16 on 1 January 2019¹	3,512
Reclassification of assets recognized as of 31 December 2018 as an addition to RoU assets	43
<i>of which: other financial assets measured at amortized cost (finance lease assets recognized under IAS 17 as of 31 December 2018)</i>	<i>24</i>
<i>of which: other non-financial assets (prepaid rent)</i>	<i>19</i>
Reclassification of finance lease receivables from subleases to other financial assets measured at amortized cost resulting in a reduction of RoU assets	(176)
Total right-of-use assets as of 1 January 2019 presented within Property, equipment and software	3,378

¹ Total liabilities increased by the same amount upon adoption of IFRS 16.

Lease liabilities are presented within *Other financial liabilities measured at amortized cost* and right-of-use assets within *Property, equipment and software*. Finance lease receivables are included within *Other financial assets measured at amortized cost*. Due to the practical expedients taken on transition, there was no effect on equity. The weighted average lease term on 1 January 2019 was approximately 9 years.

During the third quarter of 2019 the depreciation expense for right-of-use assets presented within *Depreciation and impairment of property, equipment and software* was USD 117 million (second quarter of 2019: USD 119 million; first quarter of 2019: USD 118 million). The interest expense on lease liabilities

presented within *Interest expense from financial instruments measured at amortized cost* was USD 30 million (second quarter of 2019: USD 31 million; first quarter of 2019: USD 32 million) and other rent expenses (including non-lease components paid to landlords) presented within *General and administrative expenses* were USD 15 million (second quarter of 2019: USD 12 million; first quarter of 2019: USD 16 million). This compares with total rent expenses presented in *General and administrative expenses* of USD 148 million, USD 149 million and USD 152 million for the quarters ended 30 September 2018, 30 June 2018 and 31 March 2018, respectively.

Note 1 Basis of accounting (continued)**Update to significant accounting policy – Leasing (disclosed in “Note 1a item 15 Leasing” in the “Consolidated financial statements” section of the Annual Report 2018)**

UBS predominantly enters into lease contracts, or contracts that include lease components, as a lessee of real estate, including offices, retail branches and sales offices, with a small number of IT hardware leases. UBS identifies non-lease components of a contract and accounts for them separately from lease components.

When UBS is a lessee in a lease arrangement, UBS recognizes a lease liability and corresponding right-of-use asset at the commencement of the lease term when UBS acquires control of the physical use of the asset. Lease liabilities are presented within *Other financial liabilities measured at amortized cost* and right-of-use assets within *Property, equipment and software*. The lease liability is measured based on the present value of the lease payments over the lease term, discounted using UBS’s unsecured borrowing rate given that the rate implicit in a lease is generally not observable to the lessee. Interest expense on the lease liability is presented within *Interest expense from financial instruments measured at amortized cost*. The right-of-use asset is recorded at an amount equal to the lease liability but is adjusted for rent prepayments, initial direct costs, any costs to refurbish the leased asset or lease incentives received. The right-of-use asset is depreciated over the shorter of the lease term or the useful life of the underlying asset, with the depreciation presented within *Depreciation and impairment of property, equipment and software*.

Lease payments generally include fixed payments and variable payments that depend on an index (such as an inflation index). When a lease contains an extension or termination option that the Group considers reasonably certain to be exercised, the expected rental payments or costs of termination are included within the lease payments used to generate the lease liability. UBS does not typically enter into leases with purchase options or residual value guarantees.

Where UBS acts as a lessor or sub-lessor under a finance lease, a receivable is recognized in *Other financial assets measured at amortized cost* at an amount equal to the present value of the aggregate of the lease payments plus any unguaranteed residual value that UBS expects to recover at the end of the lease term. Initial direct costs are also included in the initial measurement of the lease receivable. Lease payments received during the lease term are allocated as repayments of the outstanding receivable. Interest income reflects a constant periodic rate of return on UBS’s net investment using the interest rate implicit in the lease (or, for sub-leases, the rate for

the head lease). UBS reviews the estimated unguaranteed residual value annually, and if the estimated residual value to be realized is less than the amount assumed at lease inception, a loss is recognized for the expected shortfall. Where UBS acts as a lessor or sub-lessor in an operating lease, UBS recognizes the operating lease income on a straight-line basis over the lease term.

Lease receivables are subject to impairment requirements as set out in “Note 1a item 3g” in the “Consolidated financial statements” section of the Annual Report 2018. Expected credit losses (ECL) on lease receivables are determined following the general impairment model within IFRS 9, *Financial Instruments*, without utilizing the simplified approach of always measuring impairment at the amount of lifetime ECL.

Other changes to accounting policies**Changes in Corporate Center segment reporting, cost and resource allocation to business divisions**

Effective from 1 January 2019, UBS made changes to Corporate Center segment reporting, as well as cost and resource allocation to business divisions.

→ Refer to Note 2 for more information

Presentation of dividend income and expense from financial instruments measured at fair value through profit or loss

Effective from 1 January 2019, UBS refined the presentation of dividend income and expense. This resulted in a reclassification of dividends from *Interest income (expense) from financial instruments measured at fair value through profit or loss* into *Other net income from financial instruments measured at fair value through profit or loss* (prior to 1 January 2019: *Other net income from fair value changes on financial instruments*). The change aligns the presentation of dividends with related fair value changes from the equity instruments and economic hedges removing volatility that has historically arisen within both *Net interest income* and *Other net income from fair value changes on financial instruments*. There is no effect on *Total operating income* or *Net profit / (loss)*. Prior periods have been restated for this presentational change and the effect on the respective reporting lines is outlined in the table below.

Refer to “Note 1d International Financial Reporting Standards and Interpretations to be adopted in 2019 and later and other changes” in the “Consolidated financial statements” section of the Annual Report 2018 for further details on standards adopted by UBS from 1 January 2019, none of which had a material effect on the Group’s financial statements.

Note 1 Basis of accounting (continued)**Changes to the presentation of dividend income and expense from financial instruments measured at fair value through profit or loss**

<i>USD million</i>	For the quarter ended				For the year ended
	31.3.18	30.6.18	30.9.18	31.12.18	31.12.18
Interest income from financial instruments measured at fair value through profit or loss	(572)	(636)	(699)	(401)	(2,308)

Net interest income	(412)	210	(524)	(250)	(976)
Other net income from financial instruments measured at fair value through profit or loss	412	(210)	524	250	976

Changes in accounting standards to be adopted in future reporting periods**Amendments to IAS 39, IFRS 9 and IFRS 7 (Interest Rate Benchmark Reform)**

In September 2019, the IASB issued *Interest Rate Benchmark Reform, Amendments to IFRS 9, IAS 39 and IFRS 7*, enabling hedge accounting to continue during the period of uncertainty before existing interest rate benchmarks are replaced with alternative risk-free interest rates. The amendments are mandatorily effective from 1 January 2020, with early adoption permitted, and apply to hedge relationships that exist at the

beginning of the reporting period or are designated thereafter, and to the gains or losses that exist in OCI on adoption. Adopting these amendments will allow UBS to maintain current hedge accounting relationships and to assume that the current benchmark rates will continue to exist, with no consequential impact on the financial statements. In addition, the amendments bring in a number of new disclosure requirements to provide detail on the effects arising from the change in interest rate benchmarks. UBS is continuing to assess the effects of the amendments and will shortly determine whether it expects to early adopt the revisions in the fourth quarter of 2019 or instead from their mandatory effective date in the first quarter of 2020.

Note 2 Segment reporting

Overview and changes in Corporate Center segment reporting

UBS's businesses are organized globally into four business divisions: Global Wealth Management, Personal & Corporate Banking, Asset Management and the Investment Bank. All four business divisions are supported by Corporate Center and qualify as reportable segments for the purpose of segment reporting. Together with Corporate Center they reflect the management structure of the Group.

As a consequence of a substantial reduction in the Non-core and Legacy Portfolio and following changes to UBS's methodology for allocating Corporate Center costs to the business divisions, beginning with the first quarter 2019 report, UBS provides results for total Corporate Center only and does not separately report Corporate Center – Services, Group Asset and Liability Management and Non-core and Legacy Portfolio.

→ Refer to "Note 1a Significant accounting policies item 2" and "Note 2 Segment reporting" in the "Consolidated financial statements" section of the Annual Report 2018 for more information about the Group's reporting segments

Total assets¹						

¹ Prior-period information for the nine months ended 30 September 2018 has been restated to reflect the changed approach used for allocating Corporate Center funding costs and expenses to the business divisions and the updated fund transfer pricing framework, resulting in a decrease in Operating profit / (loss) before tax for Global Wealth Management of USD 270 million, for Personal & Corporate Banking of USD 85 million, for Asset Management of USD 18 million and for the Investment Bank of USD 122 million, with a corresponding increase for Corporate Center of USD 495 million. Additionally, Total assets as of 31 December 2018, has been restated to reflect the changed approach used for allocating balance sheet resources from Corporate Center to the business divisions, predominantly from high-quality liquid assets, resulting in an increase of Total assets in Global Wealth Management of USD 114 billion, in Personal & Corporate Banking of USD 62 billion, in Asset Management of USD 4 billion and in the Investment Bank of USD 44 billion, with a corresponding decrease of assets in Corporate Center of USD 223 billion. Upon adoption of IFRS 16, Leases, as of 1 January 2019, UBS additionally allocated approximately USD 3.5 billion of newly recognized right-of-use assets and finance lease receivables to the business divisions. ² Effective from the first quarter of 2019, UBS refined the presentation of dividend income and expense, reclassifying dividends from financial instruments measured at fair value through profit or loss from Net interest income to Non-interest income. Prior-period information was restated accordingly, with virtually all of the effect on the Group arising from the Investment Bank. Refer to Note 1 for more information.

Other personnel expenses	134	140	158	403	451
Total personnel expenses	3,987	4,153	3,936	12,182	12,293

¹ Financial advisor compensation consists of grid-based compensation based directly on compensable revenues generated by financial advisors and supplemental compensation calculated on the basis of financial advisor productivity, firm tenure, assets and other variables. It also includes expenses related to compensation commitments with financial advisors entered into at the time of recruitment that are subject to vesting requirements. ² Changes to the pension fund of UBS in Switzerland in the first quarter of 2018 resulted in a reduction in the pension obligation recognized by UBS. As a consequence, a pre-tax gain of USD 241 million was recognized in the income statement in the first quarter of 2018, with no overall effect on total equity. Refer to "Note 29 Pension and other post-employment benefit plans" in the "Consolidated financial statements" section of the Annual Report 2018 for more information.

Note 7 General and administrative expenses

Outsourcing of IT and other services	288	259	348	818	1,059
Litigation, regulatory and similar matters ¹	65	4	2	61	123
Other	28	28	27	87	73
Total general and administrative expenses	1,308	1,175	1,462	3,670	4,504

¹ Reflects the net increase in / (release of) provisions for litigation, regulatory and similar matters recognized in the income statement. Refer to Note 16 for more information. Also includes recoveries from third parties (third quarter of 2019: USD 2 million; second quarter of 2019: USD 1 million; third quarter of 2018: USD 0 million).

Note 8 Income taxes

The Group recognized income tax expenses of USD 294 million for the third quarter of 2019, compared with USD 448 million for the third quarter of 2018.

Current tax expenses were USD 229 million, compared with USD 235 million, and related to taxable profits of UBS Switzerland AG and other entities.

Deferred tax expenses were USD 65 million, compared with USD 213 million. Deferred tax expenses in the third quarter of 2019 include expenses of USD 130 million that primarily reflect the amortization of deferred tax assets (DTAs) previously recognized in relation to tax losses carried forward and

deductible temporary differences to reflect their offset against profits for the quarter, including the amortization of US tax loss DTAs at the level of UBS Americas Inc. Deferred tax expenses were decreased by a benefit of USD 65 million in respect of additional DTA recognition that resulted from the contribution of real estate assets by UBS AG to UBS Americas Inc. during the second quarter of 2019 in accordance with the requirements of IAS 34, *Interim Financial Reporting*, as described in the second quarter 2019 report. A further benefit of USD 65 million will be recognized in the fourth quarter of 2019.

Note 9 Earnings per share (EPS) and shares outstanding

	As of or for the quarter ended			As of or year-to-date	
	30.9.19	30.6.19	30.9.18	30.9.19	30.9.18
Basic earnings (USD million)					
Net profit / (loss) attributable to shareholders	1,049	1,392	1,253	3,582	4,201
Diluted earnings (USD million)					
Net profit / (loss) attributable to shareholders	1,049	1,392	1,253	3,582	4,201
Less: (profit) / loss on own equity derivative contracts	0	0	0	0	(1)
Net profit / (loss) attributable to shareholders for diluted EPS	1,049	1,392	1,253	3,582	4,200
Weighted average shares outstanding					
Weighted average shares outstanding for basic EPS ¹	3,643,751,429	3,694,660,679	3,729,382,991	3,677,603,694	3,736,110,404
Effect of dilutive potential shares resulting from notional shares, in-the-money options and warrants outstanding	101,443,358	95,817,338	107,610,429	101,339,043	112,014,854
Weighted average shares outstanding for diluted EPS	3,745,194,787	3,790,478,017	3,836,993,420	3,778,942,737	3,848,125,258
Earnings per share (USD)					
Basic	0.29	0.38	0.34	0.97	1.12
Diluted	0.28	0.37	0.33	0.95	1.09

Shares outstanding

Shares issued	3,859,055,395	3,859,055,395	3,855,121,120		
Treasury shares	227,874,988	199,121,101	128,747,979		
Shares outstanding	3,631,180,407	3,659,934,294	3,726,373,141		

¹ The weighted average shares outstanding for basic EPS are calculated by taking the number of shares at the beginning of the period, adjusted by the number of shares acquired or issued during the period, multiplied by a time-weighted factor for the period outstanding. As a result, balances are affected by the timing of acquisitions and issuances during the period.

The table below outlines the potential shares that could dilute basic earnings per share in the future, but were not dilutive for the periods presented.

<i>Number of shares</i>	30.9.19	30.6.19	30.9.18	30.9.19	30.9.18
Potentially dilutive instruments					
Employee share-based compensation awards	855,690	2,311,369	2,690,180	855,690	2,690,180
Other equity derivative contracts	29,552,630	24,952,461	13,427,788	29,391,920	11,737,221
Total	30,408,320	27,263,830	16,117,968	30,247,610	14,427,401

Note 10 Expected credit loss measurement

a) Expected credit losses in the period

Total net credit loss expenses were USD 38 million, reflecting net expenses of USD 43 million related to credit-impaired (stage 3) positions and recoveries of USD 5 million related to stage 1 and stage 2 positions.

The recoveries of USD 5 million in stage 1 and 2 ECL during the quarter were primarily the result of a model update in the Investment Bank of USD 20 million, updates to macroeconomic and market data mainly in Personal & Corporate Banking and Global Wealth Management, partly offset by an update of the scenario weights and movements in book size and book quality.

Stage 3 net expenses of USD 43 million were recognized across a number of defaulted positions: USD 29 million in Personal & Corporate Banking, mainly related to a single exposure; USD 8 million in the Investment Bank; and USD 6 million in Global Wealth Management.

UBS uses four different economic scenarios in the ECL calculation: an upside, a baseline, a mild downside and a severe downside scenario. During the quarter, the macroeconomic and market data were updated to reflect current conditions across all scenarios. The forecast values used in the baseline scenario were also updated.

The reviews during the third quarter of 2019 reflected the increasing probability of a weakening economy in key markets, after a long period of substantial expansion, and the

uncertainties about the influence that several political developments with unpredictable outcomes may have on future growth. At the end of the third quarter, management reflected these developments by increasing the weight of the severe downside scenario by 2.5 percentage points, with a corresponding adjustment to the weight of the baseline scenario.

Economic scenarios and weights applied

ECL scenario	Assigned weights in %	
	2019	2018
	30.9.19	30.6.19
Upside	10.0	10.0
Baseline	42.5	45.0
Mild downside	35.0	35.0
Severe downside	12.5	10.0

With the exception of the aforementioned model update in the Investment Bank, no further model changes which give rise to a material effect on ECL or stage allocation were made.

→ Refer to "Note 1a Significant accounting policies item 3g" and "Note 23 Expected credit loss measurement" in the "Consolidated financial statements" section of the Annual Report 2018 for more information

b) ECL-relevant balance sheet and off-balance sheet positions including ECL allowances and provisions

The tables on the following pages provide information about financial instruments and certain non-financial instruments that are subject to ECL. For amortized-cost instruments, the carrying amount represents the maximum exposure to credit risk, taking into account the allowance for credit losses. Financial assets measured at fair value through other comprehensive income (FVOCI) are also subject to ECL; however, unlike amortized-cost instruments, the allowance for credit losses for FVOCI

instruments does not reduce the carrying value of these financial assets. Rather, the carrying value of financial assets measured at FVOCI represents the maximum exposure to credit risk.

In addition to on-balance sheet financial assets, certain off-balance sheet and other credit lines are also subject to ECL. The maximum exposure to credit risk for off-balance sheet financial instruments is calculated based on the maximum contractual amounts.

¹ The carrying amount of financial assets measured at amortized cost represents the total gross exposure net of the respective ECL allowances.

Note 11 Fair value measurement

This Note provides fair value measurement information for both financial and non-financial instruments and should be read in conjunction with "Note 24 Fair value measurement" in the "Consolidated financial statements" section of the Annual Report 2018, which provides more information about valuation principles, valuation governance, fair value hierarchy classification, valuation adjustments, valuation techniques and inputs, sensitivity of fair value measurements, and methods applied to calculate fair values for financial instruments not measured at fair value.

All financial and non-financial assets and liabilities measured or disclosed at fair value are categorized into one of three fair

value hierarchy levels. In certain cases, the inputs used to measure fair value may fall within different levels of the fair value hierarchy. For disclosure purposes, the level in the hierarchy within which the instrument is classified in its entirety is based on the lowest level input that is significant to the position's fair value measurement:

- Level 1: quoted prices (unadjusted) in active markets for identical assets and liabilities;
- Level 2: valuation techniques for which all significant inputs are, or are based on, observable market data; or
- Level 3: valuation techniques for which significant inputs are not based on observable market data.

Note 11 Fair value measurement (continued)**a) Fair value hierarchy**

The fair value hierarchy classification of financial and non-financial assets and liabilities measured at fair value is summarized in the table below.

Determination of fair values from quoted market prices or valuation techniques¹

¹ Bifurcated embedded derivatives are presented on the same balance sheet lines as their host contracts and are not included in this table. The fair value of these derivatives was not material for the periods presented. ² Other non-financial assets primarily consist of properties and other non-current assets held for sale, which are measured at the lower of their net carrying amount or fair value less costs to sell.

Note 11 Fair value measurement (continued)**b) Valuation adjustments****Deferred day-1 profit or loss reserves**

The table below summarizes the changes in deferred day-1 profit or loss reserves during the relevant period.

Deferred day-1 profit or loss is generally released into *Other net income from financial instruments measured at fair value through profit or loss* when pricing of equivalent products or the underlying parameters become observable or when the transaction is closed out.

Deferred day-1 profit or loss reserves

USD million	For the quarter ended			Year-to-date	
	30.9.19	30.6.19	30.9.18	30.9.19	30.9.18
Reserve balance at the beginning of the period	158	161	276	255	338
Profit / (loss) deferred on new transactions	32	58	43	122	293
(Profit) / loss recognized in the income statement	(58)	(60)	(68)	(245)	(376)
Foreign currency translation	(1)	0	(1)	(2)	(4)
Reserve balance at the end of the period	131	158	250	131	250

c) Transfers between Level 1 and Level 2

The amounts disclosed in this section reflect transfers between Level 1 and Level 2 for instruments that were held for the entire reporting period.

Assets totaling approximately USD 0.7 billion, which mainly consisted of exchange traded investment fund units presented in the line *Financial assets at fair value held for trading* on the balance sheet, were transferred from Level 2 to Level 1 during

the first nine months of 2019, generally due to increased levels of trading activity observed within the market for these instruments. Liabilities transferred from Level 2 to Level 1 during the first nine months of 2019 were not material. Assets and liabilities transferred from Level 1 to Level 2 during the first nine months of 2019 were also not material.

Note 11 Fair value measurement (continued)**d) Level 3 instruments: valuation techniques and inputs**

The table below presents material Level 3 assets and liabilities together with the valuation techniques used to measure fair value, the significant inputs used in the valuation technique that are considered unobservable and a range of values for those unobservable inputs.

The range of values represents the highest- and lowest-level input used in the valuation techniques. Therefore, the range does not reflect the level of uncertainty regarding a particular input, but rather the different underlying characteristics of the relevant assets and liabilities. The ranges will therefore vary from period to period and parameter to parameter based on characteristics of the instruments held at each balance sheet date. Furthermore, the ranges and weighted averages of unobservable inputs may differ

across other financial institutions due to the diversity of the products in each firm's inventory.

The significant unobservable inputs disclosed in the table below are consistent with those included in "Note 24 Fair value measurement" in the "Consolidated financial statements" section of the Annual Report 2018. A description of the potential effect that a change in each unobservable input in isolation may have on a fair value measurement, including information to facilitate an understanding of factors that give rise to the input ranges shown, is also provided in "Note 24 Fair value measurement" in the "Consolidated financial statements" section of the Annual Report 2018.

Valuation techniques and inputs used in the fair value measurement of Level 3 assets and liabilities

USD billion	Fair value				Valuation technique(s)	Significant unobservable input(s) ¹	Range of inputs						unit ¹
	Assets		Liabilities				30.9.19			31.12.18			
	30.9.19	31.12.18	30.9.19	31.12.18			low	high	weighted average ²	low	high	weighted average ²	
Financial assets and liabilities at fair value held for trading and Financial assets at fair value not held for trading													
Corporate and municipal bonds	0.3	0.7	0.0	0.0	Relative value to market comparable	Bond price equivalent	0	161	98	0	134	89	points
Traded loans, loans designated at fair value, loan commitments and guarantees	2.9	2.7	0.0	0.0	Relative value to market comparable	Loan price equivalent	0	101	99	0	100	99	points
					Discounted expected cash flows	Credit spread	250	530		301	513		basis points
					Market comparable and securitization model	Discount margin	1	14	2	1	14	2	%
Auction rate securities	1.5	1.7			Relative value to market comparable	Bond price equivalent	79	99	89	79	99	89	points
Investment fund units ³	0.2	0.6	0.0	0.0	Relative value to market comparable	Net asset value							
Equity instruments ³	0.5	0.6	0.0	0.0	Relative value to market comparable	Price							
Debt issued designated at fair value ⁴			10.0	11.0									
Other financial liabilities designated at fair value ⁴			0.7	1.0									
Derivative financial instruments													
Interest rate contracts	0.3	0.4	0.2	0.2	Option model	Volatility of interest rates	47	67		50	81		basis points
					Discounted expected cash flows	Credit spreads	1	563		4	545		basis points
						Bond price equivalent	3	100		3	99		points
Equity / index contracts	0.5	0.5	1.3	1.4	Option model	Equity dividend yields	0	16		0	12		%
						Volatility of equity stocks, equity and other indices	4	91		4	93		%
						Equity-to-FX correlation	(45)	64		(39)	67		%
						Equity-to-equity correlation	(17)	97		(50)	97		%

¹ The ranges of significant unobservable inputs are represented in points, percentages and basis points. Points are a percentage of par (e.g., 100 points would be 100% of par). ² Weighted averages are provided for non-derivative financial instruments and were calculated by weighting inputs based on the fair values of the respective instruments. Weighted averages are not provided for inputs related to derivative contracts as this would not be meaningful. ³ The range of inputs is not disclosed as there is a dispersion of values given the diverse nature of the investments. ⁴ Valuation techniques, significant unobservable inputs and the respective input ranges for Debt issued designated at fair value and Other financial liabilities designated at fair value, which mainly include over-the-counter debt instruments, are the same as the equivalent derivative or structured financing instruments presented elsewhere in this table.

Note 11 Fair value measurement (continued)**e) Level 3 instruments: sensitivity to changes in unobservable input assumptions**

The table below summarizes those financial assets and liabilities classified as Level 3 for which a change in one or more of the unobservable inputs to reflect reasonably possible alternative assumptions would change fair value significantly, and the estimated effect thereof.

The table shown presents the favorable and unfavorable effects for each class of financial assets and liabilities for which the potential change in fair value is considered significant. The sensitivity of fair value measurements for debt issued designated at fair value and over-the-counter debt instruments designated at fair value is reported with the equivalent derivative or structured financing instrument within the table below.

The sensitivity data shown below presents an estimation of valuation uncertainty based on reasonably possible alternative values for Level 3 inputs at the balance sheet date and does not represent the estimated effect of stress scenarios. Typically, these financial assets and liabilities are sensitive to a combination of inputs from Levels 1–3. Although well-defined interdependencies may exist between Levels 1–2 and Level 3 parameters (e.g., between interest rates, which are generally Level 1 or Level 2, and prepayments, which are generally Level 3), these have not been incorporated in the table. Furthermore, direct interrelationships between the Level 3 parameters are not a significant element of the valuation uncertainty.

Sensitivity of fair value measurements to changes in unobservable input assumptions

USD million	30.9.19		30.6.19		31.12.18	
	Favorable changes	Unfavorable changes	Favorable changes	Unfavorable changes	Favorable changes	Unfavorable changes

f) Level 3 instruments: movements during the period**Significant changes in Level 3 instruments**

The table on the following pages presents additional information about Level 3 assets and liabilities measured at fair value on a recurring basis. Level 3 assets and liabilities may be hedged with instruments classified as Level 1 or Level 2 in the fair value hierarchy and, as a result, realized and unrealized gains and losses included in the table may not include the effect of related hedging activity. Furthermore, the realized and unrealized gains and losses presented within the table are not limited solely to those arising from Level 3 inputs, as valuations are generally derived from both observable and unobservable parameters.

Upon adoption of IFRS 9 on 1 January 2018, certain financial assets and liabilities were newly classified as measured at fair value through profit or loss and designated as Level 3 in the fair value hierarchy. Certain assets were also reclassified from *Financial assets measured at fair value through other comprehensive income* to *Financial assets at fair value not held for trading*. Refer to "Note 24 Fair value measurement" in the "Consolidated financial statements" section of the Annual Report 2018 for more information.

Note 11 Fair value measurement (continued)

Assets and liabilities transferred into or out of Level 3 are presented as if those assets or liabilities had been transferred at the beginning of the year.

Assets transferred into and out of Level 3 in the first nine months of 2019 totaled USD 0.8 billion and USD 1.9 billion, respectively. Transfers into Level 3 mainly consisted of loans, investment fund units and equity / index contracts, reflecting decreased observability of the relevant valuation inputs.

Transfers out of Level 3 mainly consisted of loans, reflecting increased observability of the relevant valuation inputs.

Liabilities transferred into and out of Level 3 in the first nine months of 2019 totaled USD 0.8 billion and USD 3.1 billion, respectively. Transfers into and out of Level 3 mainly consisted of debt issued designated at fair value, primarily equity-linked issued debt instruments, due to decreased or increased observability, respectively, of the embedded derivative inputs.

g) Financial instruments not measured at fair value

The table below reflects the estimated fair values of financial instruments not measured at fair value.

Financial instruments not measured at fair value

<i>USD billion</i>	30.9.19		30.6.19		31.12.18	
	Carrying value	Fair value	Carrying value	Fair value	Carrying value	Fair value
Assets						
Cash and balances at central banks	91.3	91.3	101.5	101.5	108.4	108.4
Loans and advances to banks	13.2	13.1	12.9	12.9	16.9	16.9
Receivables from securities financing transactions	92.0	92.0	92.9	92.9	95.3	95.4
Cash collateral receivables on derivative instruments	25.7	25.7	23.8	23.8	23.6	23.6
Loans and advances to customers	320.2	323.4	322.7	325.9	320.4	320.9
Other financial assets measured at amortized cost	23.6	23.9	22.2	22.4	22.6	22.4
Liabilities						
Amounts due to banks	8.2	8.2	9.5	9.5	11.0	11.0
Payables from securities financing transactions	5.6	5.6	6.8	6.8	10.3	10.3
Cash collateral payables on derivative instruments	32.3	32.3	31.4	31.4	28.9	28.9
Customer deposits	426.8	426.9	433.0	433.2	419.8	419.9
Debt issued measured at amortized cost	117.1	119.6	120.8	123.3	132.3	135.0
Other financial liabilities measured at amortized cost	10.5	10.5	10.5	10.5	6.9	6.9

The fair values included in the table above have been calculated for disclosure purposes only. The fair value valuation techniques and assumptions relate only to the fair value of UBS's financial instruments not measured at fair value. Other institutions may

use different methods and assumptions for their fair value estimation, and therefore such fair value disclosures cannot necessarily be compared from one financial institution to another.

¹ Derivative financial liabilities as of 30 September 2019 include USD 12 million related to derivative loan commitments (30 June 2019: USD 14 million; 31 December 2018: USD 17 million). No notional amounts related to these commitments are included in this table, but they are disclosed in Note 17 under Loan commitments. ² Includes certain forward starting repurchase and reverse repurchase agreements that are classified as measured at fair value through profit or loss and are recognized within derivative instruments. The fair value of these derivative instruments was not material as of 30 September 2019, 30 June 2019 or 31 December 2018. No notional amounts related to these instruments are included in this table, but they are disclosed in Note 17 under Forward starting transactions. ³ In cases where derivative financial instruments are presented on a net basis on the balance sheet, the respective notional values of the netted derivative financial instruments are still presented on a gross basis. ⁴ Other notional values relate to derivatives that are cleared through either a central counterparty or an exchange. The fair value of these derivatives is presented on the balance sheet net of the corresponding cash margin under Cash collateral receivables on derivative instruments and Cash collateral payables on derivative instruments and was not material for all periods presented. ⁵ Changes in the fair value of purchased and sold non-derivative financial instruments between trade date and settlement date are recognized as derivative financial instruments. ⁶ Financial assets and liabilities are presented net on the balance sheet if UBS has the unconditional and legally enforceable right to offset the recognized amounts, both in the normal course of business and in the event of default, bankruptcy or insolvency of the entity and all of the counterparties, and intends either to settle on a net basis or to realize the asset and settle the liability simultaneously. ⁷ Reflects the netting potential in accordance with enforceable master netting and similar arrangements where not all criteria for a net presentation on the balance sheet have been met. Refer to "Note 25 Offsetting financial assets and financial liabilities" in the "Consolidated financial statements" section of the Annual Report 2018 for more information.

Note 12 Derivative instruments (continued)**b) Cash collateral on derivative instruments**

<i>USD billion</i>	Receivables 30.9.19	Payables 30.9.19	Receivables 30.6.19	Payables 30.6.19	Receivables 31.12.18	Payables 31.12.18
Cash collateral on derivative instruments, based on IFRS netting ¹	25.7	32.3	23.8	31.4	23.6	28.9
Further netting potential not recognized on the balance sheet ²	(15.5)	(18.9)	(14.2)	(17.9)	(14.5)	(15.4)

Cash collateral on derivative instruments, after consideration of further netting potential	10.2	13.4	9.6	13.5	9.1	13.5

¹ Financial assets and liabilities are presented net on the balance sheet if UBS has the unconditional and legally enforceable right to offset the recognized amounts, both in the normal course of business and in the event of default, bankruptcy or insolvency of UBS or its counterparties, and intends either to settle on a net basis or to realize the asset and settle the liability simultaneously. ² Reflects the netting potential in accordance with enforceable master netting and similar arrangements where not all criteria for a net presentation on the balance sheet have been met. Refer to "Note 25 Offsetting financial assets and financial liabilities" in the "Consolidated financial statements" section of the Annual Report 2018 for more information.

Note 13 Other assets and liabilities**a) Other financial assets measured at amortized cost**

<i>USD million</i>	30.9.19	30.6.19	31.12.18
Debt securities	14,291	12,906	13,562
<i>of which: government bills / bonds</i>	9,048	8,163	8,778
Loans to financial advisors ¹	3,004	3,075	3,291
Fee- and commission-related receivables	1,742	1,838	1,643
Finance lease receivables ²	1,389	1,259	1,091
Settlement and clearing accounts	565	583	1,050
Accrued interest income	784	816	694
Other	1,777	1,682	1,233
Total other financial assets measured at amortized cost	23,552	22,158	22,563

¹ Related to financial advisors in the US and Canada. ² Upon adoption of IFRS 16 on 1 January 2019, Finance lease receivables increased by USD 176 million. Refer to Note 1 for more information.

b) Other non-financial assets

<i>USD million</i>	30.9.19	30.6.19	31.12.18
Precious metals and other physical commodities	4,193	3,920	4,298
Bail deposit ¹	1,255	1,306	1,312
Prepaid expenses	955	1,016	990
Net defined benefit pension and post-employment assets ²	2,631	3	0
VAT and other tax receivables	347	336	334
Properties and other non-current assets held for sale	96	98	82
Other	446	466	395
Total other non-financial assets	9,923	7,146	7,410

¹ Refer to item 1 in Note 16b for more information. ² Net defined benefit pension assets of USD 2,631 million as of 30 September 2019 reflected the surplus of the Swiss pension plan. Following a 36-basis-point decrease in the applicable discount rate during the third quarter of 2019, the estimated future economic benefit of the Swiss pension plan turned positive and exceeded the plan's surplus. As a result, the full surplus of the plan was recognized as of 30 September 2019.

Note 13 Other assets and liabilities (continued)**c) Other financial liabilities measured at amortized cost**

<i>USD million</i>	30.9.19	30.6.19	31.12.18
Other accrued expenses	1,718	1,769	2,192

<i>of which: low-trigger loss-absorbing additional tier 1 capital instruments</i>	<i>2,404</i>	<i>2,436</i>	<i>2,369</i>
<i>of which: low-trigger loss-absorbing tier 2 capital instruments</i>	<i>6,873</i>	<i>6,947</i>	<i>6,808</i>
<i>of which: non-Basel III-compliant tier 2 capital instruments</i>	<i>534</i>	<i>702</i>	<i>703</i>
Debt issued through the Swiss central mortgage institutions	8,463	8,724	8,569
Other long-term debt	51	54	58
Long-term debt²	91,365	96,113	93,246
Total debt issued measured at amortized cost³	117,084	120,805	132,271

¹ Debt with an original maturity of less than one year. ² Debt with an original maturity greater than or equal to one year. The classification of debt issued into short-term and long-term does not consider any early redemption features. ³ Net of bifurcated embedded derivatives, the fair value of which was not material for the periods presented.

Note 16 Provisions and contingent liabilities

a) Provisions

The table below presents an overview of total provisions recognized under both IAS 37 and IFRS 9.

<i>USD million</i>	30.9.19	30.6.19	31.12.18
Provisions recognized under IAS 37	2,862	2,888	3,377
Provisions for off-balance sheet financial instruments	66	80	79
Provisions for other credit lines	38	42	37
Total provisions	2,965	3,011	3,494

The following table presents additional information for provisions recognized under IAS 37.

<i>USD million</i>	Operational risks ²	Litigation, regulatory and similar matters ³	Restructuring	Real estate	Employee benefits ⁶	Other	Total
Balance as of 31 December 2018	46	2,827	224	131	70	78	3,377
Adjustment from adoption of IFRS 16 ¹	0	0	(103)	(29)	0	0	(132)
Balance as of 1 January 2019	46	2,827	121	102	70	78	3,245
Balance as of 30 June 2019	45	2,509	91	99	70	75	2,888
Increase in provisions recognized in the income statement	2	72	21	0	1	10	106
Release of provisions recognized in the income statement	0	(4)	(9)	0	(1)	0	(14)
Provisions used in conformity with designated purpose	(5)	(44)	(25)	(1)	0	(7)	(80)
Capitalized reinstatement costs	0	0	0	(1)	0	0	(1)
Foreign currency translation / unwind of discount	(1)	(29)	(1)	(2)	(2)	(2)	(37)
Balance as of 30 September 2019	41	2,503	77⁴	95⁵	68	77	2,862

¹ Refer to Note 1 for more information. ² Comprises provisions for losses resulting from security risks and transaction processing risks. ³ Comprises provisions for losses resulting from legal, liability and compliance risks. ⁴ Primarily consists of personnel-related restructuring provisions of USD 16 million as of 30 September 2019 (30 June 2019: USD 23 million; 31 December 2018: USD 50 million) and provisions for onerous contracts of USD 57 million as of 30 September 2019 (30 June 2019: USD 63 million; 31 December 2018: USD 170 million). ⁵ Consists of reinstatement costs for leasehold improvements of USD 86 million as of 30 September 2019 (30 June 2019: USD 89 million; 31 December 2018: USD 89 million) and provisions for onerous contracts of USD 9 million as of 30 September 2019 (30 June 2019: USD 10 million; 31 December 2018: USD 42 million). ⁶ Includes provisions for sabbatical and anniversary awards.

Restructuring provisions primarily relate to onerous contracts and severance payments. Onerous contracts for property are recognized when UBS is committed to pay for non-lease components, such as utilities, when a property is vacated or not fully recovered from subtenants. Severance-related provisions are used within a short time period, usually within six months, but potential changes in amount may be triggered when natural

staff attrition reduces the number of people affected by a restructuring event and therefore the estimated costs.

Information about provisions and contingent liabilities in respect of litigation, regulatory and similar matters, as a class, is included in Note 16b. There are no material contingent liabilities associated with the other classes of provisions.

Note 16 Provisions and contingent liabilities (continued)

b) Litigation, regulatory and similar matters

The Group operates in a legal and regulatory environment that exposes it to significant litigation and similar risks arising from disputes and regulatory proceedings. As a result, UBS (which for purposes of this Note may refer to UBS Group AG and / or one or more of its subsidiaries, as applicable) is involved in various disputes and legal proceedings, including litigation, arbitration, and regulatory and criminal investigations.

Such matters are subject to many uncertainties, and the outcome and the timing of resolution are often difficult to predict, particularly in the earlier stages of a case. There are also situations where the Group may enter into a settlement agreement. This may occur in order to avoid the expense, management distraction or reputational implications of continuing to contest liability, even for those matters for which the Group believes it should be exonerated. The uncertainties inherent in all such matters affect the amount and timing of any potential outflows for both matters with respect to which provisions have been established and other contingent liabilities. The Group makes provisions for such matters brought against it when, in the opinion of management after seeking legal advice, it is more likely than not that the Group has a present legal or constructive obligation as a result of past events, it is probable that an outflow of resources will be required, and the amount can be reliably estimated. Where these factors are otherwise satisfied, a provision may be established for claims that have not

yet been asserted against the Group, but are nevertheless expected to be, based on the Group's experience with similar asserted claims. If any of those conditions is not met, such matters result in contingent liabilities. If the amount of an obligation cannot be reliably estimated, a liability exists that is not recognized even if an outflow of resources is probable. Accordingly, no provision is established even if the potential outflow of resources with respect to such matters could be significant. Developments relating to a matter that occur after the relevant reporting period, but prior to the issuance of financial statements, which affect management's assessment of the provision for such matter (because, for example, the developments provide evidence of conditions that existed at the end of the reporting period), are adjusting events after the reporting period under IAS 10 and must be recognized in the financial statements for the reporting period.

Specific litigation, regulatory and other matters are described below, including all such matters that management considers to be material and others that management believes to be of significance due to potential financial, reputational and other effects. The amount of damages claimed, the size of a transaction or other information is provided where available and appropriate in order to assist users in considering the magnitude of potential exposures.

Note 16 Provisions and contingent liabilities (continued)

In the case of certain matters below, we state that we have established a provision, and for the other matters, we make no such statement. When we make this statement and we expect disclosure of the amount of a provision to prejudice seriously our position with other parties in the matter because it would reveal what UBS believes to be the probable and reliably estimable outflow, we do not disclose that amount. In some cases we are subject to confidentiality obligations that preclude such disclosure. With respect to the matters for which we do not state whether we have established a provision, either (a) we have not established a provision, in which case the matter is treated as a contingent liability under the applicable accounting standard; or (b) we have established a provision but expect disclosure of that fact to prejudice seriously our position with other parties in the matter because it would reveal the fact that UBS believes an outflow of resources to be probable and reliably estimable.

With respect to certain litigation, regulatory and similar matters for which we have established provisions, we are able to estimate the expected timing of outflows. However, the aggregate amount of the expected outflows for those matters for which we are able to estimate expected timing is immaterial relative to our current and expected levels of liquidity over the relevant time periods.

The aggregate amount provisioned for litigation, regulatory and similar matters as a class is disclosed in the "Provisions" table in Note 16a above. It is not practicable to provide an aggregate estimate of liability for our litigation, regulatory and similar matters as a class of contingent liabilities. Doing so would require us to provide speculative legal assessments as to claims and proceedings that involve unique fact patterns or novel legal theories, that have not yet been initiated or are at early stages of adjudication, or as to which alleged damages have not been quantified by the claimants. Although we therefore cannot

provide a numerical estimate of the future losses that could arise from litigation, regulatory and similar matters, we believe that the aggregate amount of possible future losses from this class that are more than remote substantially exceeds the level of current provisions.

Litigation, regulatory and similar matters may also result in non-monetary penalties and consequences. For example, the non-prosecution agreement described in item 5 of this Note, which we entered into with the US Department of Justice (DOJ), Criminal Division, Fraud Section in connection with our submissions of benchmark interest rates, including, among others, the British Bankers' Association London Interbank Offered Rate (LIBOR), was terminated by the DOJ based on its determination that we had committed a US crime in relation to foreign exchange matters. As a consequence, UBS AG pleaded guilty to one count of wire fraud for conduct in the LIBOR matter, paid a fine and is subject to probation through January 2020.

A guilty plea to, or conviction of, a crime could have material consequences for UBS. Resolution of regulatory proceedings may require us to obtain waivers of regulatory disqualifications to maintain certain operations, may entitle regulatory authorities to limit, suspend or terminate licenses and regulatory authorizations, and may permit financial market utilities to limit, suspend or terminate our participation in such utilities. Failure to obtain such waivers, or any limitation, suspension or termination of licenses, authorizations or participations, could have material consequences for UBS.

The risk of loss associated with litigation, regulatory and similar matters is a component of operational risk for purposes of determining our capital requirements. Information concerning our capital requirements and the calculation of operational risk for this purpose is included in the "Capital management" section of this report.

Provisions for litigation, regulatory and similar matters by business division and in Corporate Center¹

<i>USD million</i>	Global Wealth Management	Personal & Corporate Banking	Asset Management	Investment Bank	Corporate Center	UBS
Balance as of 31 December 2018	1,003	117	0	269	1,438	2,827
Balance as of 30 June 2019	858	114	0	202	1,334	2,509
Increase in provisions recognized in the income statement	71	0	0	0	0	72
Release of provisions recognized in the income statement	(1)	0	0	0	(4)	(4)
Provisions used in conformity with designated purpose	(42)	(1)	0	0	(1)	(44)
Foreign currency translation / unwind of discount	(20)	(4)	0	(5)	(1)	(29)
Balance as of 30 September 2019	867	110	0	197	1,329	2,503

¹ Provisions, if any, for the matters described in this disclosure are recorded in Global Wealth Management (item 3, item 4 and item 7) and Corporate Center (item 2). Provisions, if any, for the matters described in items 1 and 6 of this disclosure are allocated between Global Wealth Management and Personal & Corporate Banking, and provisions, if any, for the matters described in item 5 are allocated between the Investment Bank and Corporate Center.

Note 16 Provisions and contingent liabilities (continued)

1. Inquiries regarding cross-border wealth management businesses

Tax and regulatory authorities in a number of countries have made inquiries, served requests for information or examined employees located in their respective jurisdictions relating to the cross-border wealth management services provided by UBS and other financial institutions. It is possible that the implementation of automatic tax information exchange and other measures relating to cross-border provision of financial services could give rise to further inquiries in the future. UBS has received disclosure orders from the Swiss Federal Tax Administration (FTA) to transfer information based on requests for international administrative assistance in tax matters. The requests concern a number of UBS account numbers pertaining to current and former clients and are based on data from 2006 and 2008. UBS has taken steps to inform affected clients about the administrative assistance proceedings and their procedural rights, including the right to appeal. The requests are based on data received from the German authorities, who seized certain data related to UBS clients booked in Switzerland during their investigations and have apparently shared this data with other European countries. UBS expects additional countries to file similar requests.

The Swiss Federal Administrative Court ruled in 2016 that, in the administrative assistance proceedings related to a French bulk request, UBS has the right to appeal all final FTA client data disclosure orders. On 30 July 2018, the Swiss Federal Administrative Court granted UBS's appeal by holding the French administrative assistance request inadmissible. The FTA filed a final appeal with the Swiss Federal Supreme Court. The Supreme Court on 26 July 2019, reversed the decision of the Federal Administrative Court. The judges also stated that the FTA must ensure that the French authorities respect the principle of "speciality", which requires the information furnished may only be used for the purposes specified in the request.

Since 2013, UBS (France) S.A., UBS AG and certain former employees have been under investigation in France for alleged complicity in unlawful solicitation of clients on French territory, regarding the laundering of proceeds of tax fraud, and banking and financial solicitation by unauthorized persons. In connection with this investigation, the investigating judges ordered UBS AG to provide bail ("caution") of EUR 1.1 billion and UBS (France) S.A. to post bail of EUR 40 million, which was reduced on appeal to EUR 10 million.

A trial in the court of first instance took place from 8 October 2018 until 15 November 2018. On 20 February 2019, the court announced a verdict finding UBS AG guilty of unlawful solicitation of clients on French territory and aggravated laundering of the proceeds of tax fraud, and UBS France S.A. guilty of aiding and abetting unlawful solicitation and laundering the proceeds of tax fraud. The court imposed fines aggregating EUR 3.7 billion on UBS AG and UBS France S.A. and awarded EUR 800 million of civil damages to the French state. UBS has appealed the decision. Under French law, the judgment is

suspended while the appeal is pending. The Court of Appeal will retry the case de novo as to both the law and the facts, and the fines and penalties can be greater than or less than those imposed by the court of first instance. A subsequent appeal to the Cour de Cassation, France's highest court, is possible with respect to questions of law.

UBS believes that based on both the law and the facts the judgment of the court of first instance should be reversed. UBS believes it followed its obligations under Swiss and French law as well as the European Savings Tax Directive. Even assuming liability, which it contests, UBS believes the penalties and damage amounts awarded greatly exceed the amounts that could be supported by the law and the facts. In particular, UBS believes the court incorrectly based the penalty on the total regularized assets rather than on any unpaid taxes on those assets for which a fraud has been characterized and further incorrectly awarded damages based on costs that were not proven by the civil party. Notwithstanding that UBS believes it should be acquitted, our balance sheet at 30 September 2019 reflected provisions with respect to this matter in an amount of USD 516 million. The wide range of possible outcomes in this case contributes to a high degree of estimation uncertainty. The provision reflected on our balance sheet at 30 September 2019 reflects our best estimate of possible financial implications, although it is reasonably possible that actual penalties and civil damages could exceed the provision amount.

In 2016, UBS was notified by the Belgian investigating judge that it is under formal investigation ("inculpé") regarding the laundering of proceeds of tax fraud, of banking and financial solicitation by unauthorized persons, and of serious tax fraud. In 2018, tax authorities and a prosecutor's office in Italy asserted that UBS is potentially liable for taxes and penalties as a result of its activities in Italy from 2012 to 2017. In June 2019, UBS entered into a settlement agreement with the Italian tax authorities under which it paid EUR 101 million to resolve the claims asserted by the authority related to UBS AG's potential permanent establishment in Italy. In October 2019, the Judge of Preliminary Investigations of the Milan Court approved an agreement with the Milan prosecutor under Article 63 of Italian Administrative Law 231 under which UBS AG, UBS Switzerland AG and UBS Monaco will pay an aggregate of EUR 10.3 million to resolve claims premised on the alleged inadequacy of historical internal controls. No admission of wrongdoing was required in connection with this resolution.

Our balance sheet at 30 September 2019 reflected provisions with respect to matters described in this item 1 in an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

Note 16 Provisions and contingent liabilities (continued)**2. Claims related to sales of residential mortgage-backed securities and mortgages**

From 2002 through 2007, prior to the crisis in the US residential loan market, UBS was a substantial issuer and underwriter of US residential mortgage-backed securities (RMBS) and was a purchaser and seller of US residential mortgages. A subsidiary of UBS, UBS Real Estate Securities Inc. (UBS RESI), acquired pools of residential mortgage loans from originators and (through an affiliate) deposited them into securitization trusts. In this manner, from 2004 through 2007, UBS RESI sponsored approximately USD 80 billion in RMBS, based on the original principal balances of the securities issued.

UBS RESI also sold pools of loans acquired from originators to third-party purchasers. These whole loan sales during the period 2004 through 2007 totaled approximately USD 19 billion in original principal balance.

UBS was not a significant originator of US residential loans. A branch of UBS originated approximately USD 1.5 billion in US residential mortgage loans during the period in which it was active from 2006 to 2008 and securitized less than half of these loans.

Lawsuits related to contractual representations and warranties concerning mortgages and RMBS: When UBS acted as an RMBS sponsor or mortgage seller, it generally made certain representations relating to the characteristics of the underlying loans. In the event of a material breach of these representations, UBS was in certain circumstances contractually obligated to repurchase the loans to which the representations related or to indemnify certain parties against losses. In 2012, certain RMBS trusts filed an action in the US District Court for the Southern District of New York seeking to enforce UBS RESI's obligation to repurchase loans in the collateral pools for three RMBS securitizations issued and underwritten by UBS with an original principal balance of approximately USD 2 billion. In July 2018, UBS and the trustee entered into an agreement under which UBS will pay USD 850 million to resolve this matter. A significant portion of this amount will be borne by other parties that indemnified UBS. The settlement remains subject to court approval and proceedings to determine how the settlement funds will be distributed to RMBS holders. After giving effect to this settlement, UBS considers claims relating to substantially all loan repurchase demands to be resolved and believes that new demands to repurchase US residential mortgage loans are time-barred under a decision rendered by the New York Court of Appeals.

Mortgage-related regulatory matters: Since 2014, the US Attorney's Office for the Eastern District of New York has sought information from UBS pursuant to the Financial Institutions Reform, Recovery and Enforcement Act of 1989 (FIRREA), related to UBS's RMBS business from 2005 through 2007. On 8 November 2018, the DOJ filed a civil complaint in the District Court for the Eastern District of New York. The complaint seeks unspecified civil monetary penalties under FIRREA related to UBS's issuance, underwriting and sale of 40 RMBS transactions in 2006 and 2007. UBS moved to dismiss the civil complaint on 6 February 2019.

Our balance sheet at 30 September 2019 reflected a provision with respect to matters described in this item 2 in an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of this matter cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

3. Madoff

In relation to the Bernard L. Madoff Investment Securities LLC (BMIS) investment fraud, UBS AG, UBS (Luxembourg) S.A. (now UBS Europe SE, Luxembourg branch) and certain other UBS subsidiaries have been subject to inquiries by a number of regulators, including the Swiss Financial Market Supervisory Authority (FINMA) and the Luxembourg Commission de Surveillance du Secteur Financier. Those inquiries concerned two third-party funds established under Luxembourg law, substantially all assets of which were with BMIS, as well as certain funds established in offshore jurisdictions with either direct or indirect exposure to BMIS. These funds faced severe losses, and the Luxembourg funds are in liquidation. The documentation establishing both funds identifies UBS entities in various roles, including custodian, administrator, manager, distributor and promoter, and indicates that UBS employees serve as board members.

In 2009 and 2010, the liquidators of the two Luxembourg funds filed claims against UBS entities, non-UBS entities and certain individuals, including current and former UBS employees, seeking amounts totaling approximately EUR 2.1 billion, which includes amounts that the funds may be held liable to pay the trustee for the liquidation of BMIS (BMIS Trustee).

Note 16 Provisions and contingent liabilities (continued)

A large number of alleged beneficiaries have filed claims against UBS entities (and non-UBS entities) for purported losses relating to the Madoff fraud. The majority of these cases have been filed in Luxembourg, where decisions that the claims in eight test cases were inadmissible have been affirmed by the Luxembourg Court of Appeal, and the Luxembourg Supreme Court has dismissed a further appeal in one of the test cases.

In the US, the BMIS Trustee filed claims against UBS entities, among others, in relation to the two Luxembourg funds and one of the offshore funds. The total amount claimed against all defendants in these actions was not less than USD 2 billion. In 2014, the US Supreme Court rejected the BMIS Trustee's motion for leave to appeal decisions dismissing all claims except those for the recovery of approximately USD 125 million of payments alleged to be fraudulent conveyances and preference payments. In 2016, the bankruptcy court dismissed these claims against the UBS entities. The BMIS Trustee appealed. In February 2019, the Court of Appeals reversed the dismissal of the BMIS Trustee's remaining claims. In August 2019, the defendants, including UBS, filed a petition to the US Supreme Court requesting that it review the Court of Appeals' decision. The bankruptcy proceedings have been stayed pending a decision with respect to that petition.

4. Puerto Rico

Declines since 2013 in the market prices of Puerto Rico municipal bonds and of closed-end funds (funds) that are sole-managed and co-managed by UBS Trust Company of Puerto Rico and distributed by UBS Financial Services Incorporated of Puerto Rico (UBS PR) have led to multiple regulatory inquiries, as well as customer complaints and arbitrations with aggregate claimed damages of USD 3.4 billion, of which claims with aggregate claimed damages of USD 2.4 billion have been resolved through settlements, arbitration or withdrawal of the claim. The claims have been filed by clients in Puerto Rico who own the funds or Puerto Rico municipal bonds and / or who used their UBS account assets as collateral for UBS non-purpose loans; customer complaint and arbitration allegations include fraud, misrepresentation and unsuitability of the funds and of the loans.

A shareholder derivative action was filed in 2014 against various UBS entities and current and certain former directors of the funds, alleging hundreds of millions of US dollars in losses in the funds. In 2015, defendants' motion to dismiss was denied and a request for permission to appeal that ruling was denied by the Puerto Rico Supreme Court. In 2014, a federal class action complaint also was filed against various UBS entities, certain members of UBS PR senior management and the co-manager of certain of the funds, seeking damages for investor losses in the funds during the period from May 2008 through May 2014. Following denial of the plaintiffs' motion for class certification, the case was dismissed in October 2018.

In 2014 and 2015, UBS entered into settlements with the Office of the Commissioner of Financial Institutions for the Commonwealth of Puerto Rico, the US Securities and Exchange Commission (SEC) and the Financial Industry Regulatory Authority in relation to their examinations of UBS's operations.

In 2011, a purported derivative action was filed on behalf of the Employee Retirement System of the Commonwealth of Puerto Rico (System) against over 40 defendants, including UBS PR, which was named in connection with its underwriting and consulting services. Plaintiffs alleged that defendants violated their purported fiduciary duties and contractual obligations in connection with the issuance and underwriting of USD 3 billion of bonds by the System in 2008 and sought damages of over USD 800 million. In 2016, the court granted the System's request to join the action as a plaintiff, but ordered that plaintiffs must file an amended complaint. In 2017, the court denied defendants' motion to dismiss the amended complaint.

Beginning in 2015, and continuing through 2017, certain agencies and public corporations of the Commonwealth of Puerto Rico (Commonwealth) defaulted on certain interest payments on Puerto Rico bonds. In 2016, US federal legislation created an oversight board with power to oversee Puerto Rico's finances and to restructure its debt. The oversight board has imposed a stay on the exercise of certain creditors' rights. In 2017, the oversight board placed certain of the bonds into a bankruptcy-like proceeding under the supervision of a Federal District Judge. These events, further defaults or any further legislative action to create a legal means of restructuring Commonwealth obligations or to impose additional oversight on the Commonwealth's finances, or any restructuring of the Commonwealth's obligations, may increase the number of claims against UBS concerning Puerto Rico securities, as well as potential damages sought.

In May 2019, the oversight board filed complaints in Puerto Rico federal district court bringing claims against financial, legal and accounting firms that had participated in Puerto Rico municipal bond offerings, including UBS, seeking a return of underwriting and swap fees paid in connection with those offerings. UBS estimates that it received approximately USD 125 million in fees in the relevant offerings.

In August 2019, two US insurance companies that insured issues of Puerto Rico municipal bonds sued UBS and seven other underwriters of Puerto Rico municipal bonds, alleging an aggregate of USD 720 million in damages from the defendants. The plaintiffs allege that defendants failed to reasonably investigate financial statements in the offering materials for the insured Puerto Rico bonds issued between 2002 and 2007, which plaintiffs allege they relied upon in agreeing to insure the bonds notwithstanding that they had no contractual relationship with the underwriters.

Note 16 Provisions and contingent liabilities (continued)

Our balance sheet at 30 September 2019 reflected provisions with respect to matters described in this item 4 in amounts that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provisions that we have recognized.

5. Foreign exchange, LIBOR and benchmark rates, and other trading practices

Foreign exchange-related regulatory matters: Beginning in 2013, numerous authorities commenced investigations concerning possible manipulation of foreign exchange markets and precious metals prices. In 2014 and 2015, UBS reached settlements with the UK Financial Conduct Authority (FCA) and the US Commodity Futures Trading Commission (CFTC) in connection with their foreign exchange investigations, FINMA issued an order concluding its formal proceedings relating to UBS's foreign exchange and precious metals businesses, and the Board of Governors of the Federal Reserve System (Federal Reserve Board) and the Connecticut Department of Banking issued a Cease and Desist Order and assessed monetary penalties against UBS AG. In 2015, the DOJ's Criminal Division terminated the 2012 non-prosecution agreement with UBS AG related to UBS's submissions of benchmark interest rates, and UBS AG pleaded guilty to one count of wire fraud, paid a fine and is subject to probation through January 2020. In 2019 the European Commission announced two decisions with respect to foreign exchange trading. UBS was granted immunity by the European Commission in these matters and therefore was not fined. UBS has ongoing obligations to cooperate with these authorities and to undertake certain remediation measures. UBS has also been granted conditional immunity by the Antitrust Division of the DOJ and by authorities in other jurisdictions in connection with potential competition law violations relating to foreign exchange and precious metals businesses. Investigations relating to foreign exchange matters by certain authorities remain ongoing notwithstanding these resolutions.

Foreign exchange-related civil litigation: Putative class actions have been filed since 2013 in US federal courts and in other jurisdictions against UBS and other banks on behalf of putative classes of persons who engaged in foreign currency transactions with any of the defendant banks. UBS has resolved US federal court class actions relating to foreign currency transactions with the defendant banks and persons who transacted in foreign

exchange futures contracts and options on such futures under a settlement agreement that provides for UBS to pay an aggregate of USD 141 million and provide cooperation to the settlement classes. Certain class members have excluded themselves from that settlement and have filed individual actions in US and English courts against UBS and other banks, alleging violations of US and European competition laws and unjust enrichment.

In 2015, a putative class action was filed in federal court against UBS and numerous other banks on behalf of persons and businesses in the US who directly purchased foreign currency from the defendants and alleged co-conspirators for their own end use. In March 2017, the court granted UBS's (and the other banks') motions to dismiss the complaint. The plaintiffs filed an amended complaint in August 2017. In March 2018, the court denied the defendants' motions to dismiss the amended complaint.

In 2017, two putative class actions were filed in federal court in New York against UBS and numerous other banks on behalf of persons and entities who had indirectly purchased foreign exchange instruments from a defendant or co-conspirator in the US, and a consolidated complaint was filed in June 2017. In March 2018, the court dismissed the consolidated complaint. In October 2018, the court granted plaintiffs' motion seeking leave to file an amended complaint.

LIBOR and other benchmark-related regulatory matters: Numerous government agencies, including the SEC, the CFTC, the DOJ, the FCA, the UK Serious Fraud Office, the Monetary Authority of Singapore, the Hong Kong Monetary Authority, FINMA, various state attorneys general in the US and competition authorities in various jurisdictions have conducted investigations regarding potential improper attempts by UBS, among others, to manipulate LIBOR and other benchmark rates at certain times. UBS reached settlements or otherwise concluded investigations relating to benchmark interest rates with the investigating authorities. UBS has ongoing obligations to cooperate with the authorities with whom we have reached resolutions and to undertake certain remediation measures with respect to benchmark interest rate submissions. UBS has been granted conditional leniency or conditional immunity from authorities in certain jurisdictions, including the Antitrust Division of the DOJ and the Swiss Competition Commission (WEKO), in connection with potential antitrust or competition law violations related to certain rates. However, UBS has not reached a final settlement with WEKO, as the Secretariat of WEKO has asserted that UBS does not qualify for full immunity.

Note 16 Provisions and contingent liabilities (continued)

LIBOR and other benchmark-related civil litigation: A number of putative class actions and other actions are pending in the federal courts in New York against UBS and numerous other banks on behalf of parties who transacted in certain interest rate benchmark-based derivatives. Also pending in the US and in other jurisdictions are a number of other actions asserting losses related to various products whose interest rates were linked to LIBOR and other benchmarks, including adjustable rate mortgages, preferred and debt securities, bonds pledged as collateral, loans, depository accounts, investments and other interest-bearing instruments. The complaints allege manipulation, through various means, of certain benchmark interest rates, including USD LIBOR, Euroyen TIBOR, Yen LIBOR, EURIBOR, CHF LIBOR, GBP LIBOR, SGD SIBOR and SOR and Australian BBSW, and seek unspecified compensatory and other damages under varying legal theories.

USD LIBOR class and individual actions in the US: In 2013 and 2015, the district court in the USD LIBOR actions dismissed, in whole or in part, certain plaintiffs' antitrust claims, federal racketeering claims, CEA claims, and state common law claims. Although the Second Circuit vacated the district court's judgment dismissing antitrust claims, the district court again dismissed antitrust claims against UBS in 2016. Certain plaintiffs have appealed that decision to the Second Circuit. Separately, in 2018, the Second Circuit reversed in part the district court's 2015 decision dismissing certain individual plaintiffs' claims and certain of these actions are now proceeding. UBS entered into an agreement in 2016 with representatives of a class of bondholders to settle their USD LIBOR class action. The agreement has received preliminary court approval and remains subject to final approval. In 2018, the district court denied plaintiffs' motions for class certification in the USD class actions for claims pending against UBS, and plaintiffs sought permission to appeal that ruling to the Second Circuit. In July 2018, the Second Circuit denied the petition to appeal of the class of USD lenders and in November 2018 denied the petition of the USD exchange class. In January 2019, a putative class action was filed in the District Court for the Southern District of New York against UBS and numerous other banks on behalf of US residents who, since 1 February 2014, directly transacted with a defendant bank in USD LIBOR instruments. The complaint asserts antitrust claims. The defendants moved to dismiss the complaint on 30 August 2019.

Other benchmark class actions in the US: In 2014, the court in one of the Euroyen TIBOR lawsuits dismissed certain of the plaintiffs' claims, including a federal antitrust claim, for lack of standing. In 2015, this court dismissed the plaintiffs' federal racketeering claims on the same basis and affirmed its previous

dismissal of the plaintiffs' antitrust claims against UBS. In 2017, this court also dismissed the other Yen LIBOR / Euroyen TIBOR action in its entirety on standing grounds, as did the court in the CHF LIBOR action. Also in 2017, the courts in the EURIBOR lawsuit dismissed the cases as to UBS and certain other foreign defendants for lack of personal jurisdiction. Plaintiffs in the other Yen LIBOR, Euroyen TIBOR and the EURIBOR actions have appealed the dismissals. In October 2018, the court in the SIBOR / SOR action dismissed all but one of plaintiffs' claims against UBS. Plaintiffs in the CHF LIBOR and SIBOR / SOR actions filed amended complaints following the dismissals, and the courts granted renewed motions to dismiss in July 2019 (SIBOR / SOR) and in September 2019 (CHF LIBOR). Plaintiffs in the SIBOR / SOR action have appealed the dismissal. In November 2018, the court in the BBSW lawsuit dismissed the case as to UBS and certain other foreign defendants for lack of personal jurisdiction. Following that dismissal, plaintiffs in the BBSW action filed an amended complaint in April 2019, which UBS and other defendants named in the amended complaint have moved to dismiss. The court dismissed the GBP LIBOR action in August 2019, and plaintiffs appealed the dismissal in September 2019.

Government bonds: Putative class actions have been filed since 2015 in US federal courts against UBS and other banks on behalf of persons who participated in markets for US Treasury securities since 2007. A consolidated complaint was filed in 2017 in the US District Court for the Southern District of New York alleging that the banks colluded with respect to, and manipulated prices of, US Treasury securities sold at auction and in the secondary market and asserting claims under the antitrust laws and for unjust enrichment. Defendants' motions to dismiss the consolidated complaint are pending.

UBS and reportedly other banks are responding to investigations and requests for information from various authorities regarding US Treasury securities and other government bond trading practices. As a result of its review to date, UBS has taken appropriate action.

With respect to additional matters and jurisdictions not encompassed by the settlements and orders referred to above, our balance sheet at 30 September 2019 reflected a provision in an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

Note 16 Provisions and contingent liabilities (continued)

6. Swiss retrocessions

The Federal Supreme Court of Switzerland ruled in 2012, in a test case against UBS, that distribution fees paid to a firm for distributing third-party and intra-group investment funds and structured products must be disclosed and surrendered to clients who have entered into a discretionary mandate agreement with the firm, absent a valid waiver.

FINMA has issued a supervisory note to all Swiss banks in response to the Supreme Court decision. UBS has met the FINMA requirements and has notified all potentially affected clients.

The Supreme Court decision has resulted, and may continue to result, in a number of client requests for UBS to disclose and potentially surrender retrocessions. Client requests are assessed on a case-by-case basis. Considerations taken into account when assessing these cases include, among other things, the existence of a discretionary mandate and whether or not the client documentation contained a valid waiver with respect to distribution fees.

Our balance sheet at 30 September 2019 reflected a provision with respect to matters described in this item 6 in an amount that UBS believes to be appropriate under the applicable accounting standard. The ultimate exposure will depend on client requests and the resolution thereof, factors that are difficult to predict and assess. Hence, as in the case of other

matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

7. Securities transaction pricing and disclosure

UBS identified and reported to the relevant authorities instances in which some Global Wealth Management clients booked in Hong Kong and Singapore may have been charged inappropriate spreads on debt securities transactions between 2008 and 2015. UBS intends to reimburse affected customers on a basis agreed with the relevant authorities. UBS expects the relevant authorities will subject UBS to reprimands and fines as a result of their investigations.

Our balance sheet at 30 September 2019 reflected a provision with respect to the matter described in this item 7 in an amount that UBS believes to be appropriate under the applicable accounting standard. The future outflow of resources in respect of this matter cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be greater (or may be less) than the provision that we have recognized.

Note 17 Guarantees, commitments and forward starting transactions

The table below presents the maximum irrevocable amount of guarantees, commitments and forward starting transactions.

	Gross		Total gross	Sub-participations	Net
	Measured at fair value	Not measured at fair value			
<i>As of 30.9.19, USD million</i>

¹ Cash to be paid in the future by either UBS or the counterparty.

Note 18 Currency translation rates

The following table shows the rates of the main currencies used to translate the financial information of UBS's operations with a functional currency other than the US dollar into US dollars.

	Closing exchange rate				Average rate ¹				
	As of				For the quarter ended			Year-to-date	
	30.9.19	30.6.19	31.12.18	30.9.18	30.9.19	30.6.19	30.9.18	30.9.19	30.9.18
1 CHF	1.00	1.02	1.02	1.02	1.01	1.00	1.02	1.00	1.02
1 EUR	1.09	1.14	1.15	1.16	1.10	1.13	1.16	1.12	1.19
1 GBP	1.23	1.27	1.28	1.30	1.22	1.28	1.30	1.27	1.35
100 JPY	0.92	0.93	0.91	0.88	0.93	0.92	0.89	0.92	0.91

¹ Monthly income statement items of operations with a functional currency other than the US dollar are translated with month-end rates into US dollars. Disclosed average rates for a quarter represent an average of three month-end rates, weighted according to the income and expense volumes of all operations of the Group with the same functional currency for each month. Weighted average rates for individual business divisions may deviate from the weighted average rates for the Group.

UBS AG interim consolidated financial information (unaudited)

This section contains a comparison of selected financial and capital information between UBS Group AG consolidated and UBS AG consolidated. Refer to the UBS AG third quarter 2019 report, which will be available as of 25 October 2019 under "Quarterly reporting" at www.ubs.com/investors, for the interim consolidated financial statements of UBS AG.

Comparison between UBS Group AG consolidated and UBS AG consolidated

The accounting policies applied under International Financial Reporting Standards (IFRS) to both UBS Group AG and UBS AG consolidated financial statements are identical. However, there are certain scope and presentation differences as noted below:

- Assets, liabilities, operating income, operating expenses and operating profit before tax relating to UBS Group AG and its directly held subsidiaries, including UBS Business Solutions AG, are reflected in the consolidated financial statements of UBS Group AG but not of UBS AG. UBS AG's assets, liabilities, operating income and operating expenses related to transactions with UBS Group AG and its directly held subsidiaries, including UBS Business Solutions AG and other shared services subsidiaries, are not subject to elimination in the UBS AG consolidated financial statements, but are eliminated in the UBS Group AG consolidated financial statements. UBS Business Solutions AG and other shared services subsidiaries of UBS Group AG charge other legal entities within the UBS AG consolidation scope for services provided, including a markup on costs incurred.
- The equity of UBS Group AG consolidated was USD 1.6 billion higher than the equity of UBS AG consolidated as of 30 September 2019. This difference is mainly driven by higher dividends paid by UBS AG to UBS Group AG compared with the dividend distributions of UBS Group AG, as well as higher retained earnings in the UBS Group AG consolidated financial statements, largely related to the aforementioned markup charged by shared services subsidiaries of UBS Group AG to other legal entities in the UBS AG scope of consolidation, and defined benefit plan OCI in UBS Business Solutions AG, reflecting the recognition of the Swiss pension plan's surplus in the third quarter of 2019. In addition, UBS Group is the grantor of the majority of the compensation plans of the Group and recognizes share premium for equity-settled awards granted. These effects were partly offset by treasury shares acquired as part of our share repurchase program and those held to hedge share delivery obligations associated with Group compensation plans, as well as additional share premium recognized at the UBS AG consolidated level related to the establishment of UBS Group AG and UBS Business Solutions AG, a wholly owned subsidiary of UBS Group AG.
- Going concern capital of UBS AG consolidated was USD 3.8 billion lower than going concern capital of UBS Group AG consolidated as of 30 September 2019, reflecting additional tier 1 (AT1) capital of USD 4.3 billion partly offset by higher common equity tier 1 (CET1) capital of USD 0.5 billion.
- CET1 capital of UBS AG consolidated was USD 0.5 billion higher than that of UBS Group AG consolidated as of 30 September 2019. The difference in CET1 capital was primarily due to compensation-related regulatory capital accruals at the UBS Group AG level, partly offset by differences in equity, as mentioned above.
- Going concern loss-absorbing AT1 capital of UBS AG consolidated was USD 4.3 billion lower than that of UBS Group AG consolidated as of 30 September 2019, reflecting Deferred Contingent Capital Plan awards and AT1 capital notes. These AT1 capital notes were issued by UBS Group Funding (Switzerland) AG, a direct subsidiary of UBS Group AG, after the implementation of the new Swiss SRB framework, and only qualify as going concern loss-absorbing capacity at the UBS Group AG consolidated level.

¹ As a result of the cross-border merger of UBS Limited into UBS Europe SE effective 1 March 2019, UBS Europe SE has become a significant regulated subsidiary of UBS Group AG. The size, scope and business model of the merged entity is now materially different. For more information about the cross-border merger of UBS Limited into UBS Europe SE, refer to the "Recent developments" section of our first quarter 2019 report. ² UBS AG and UBS Switzerland AG financial information is prepared in accordance with Swiss GAAP (FINMA Circular 2015/1 and Banking Ordinance), but does not represent interim financial statements under Swiss GAAP. ³ UBS Europe SE financial information is prepared in accordance with International Financial Reporting Standards (IFRS), but does not represent interim financial statements under IFRS. ⁴ UBS Americas Holding LLC financial information is prepared in accordance with accounting principles generally accepted in the US (US GAAP), but does not represent interim financial statements under US GAAP. ⁵ For UBS AG and UBS Switzerland AG, based on applicable transitional arrangements for Swiss systemically relevant banks (SRBs). For UBS Europe SE, based on applicable EU Basel III rules. ⁶ Refer to the 30 September 2019 Pillar 3 report available under "Pillar 3 disclosures" at www.ubs.com/investors for more information. ⁷ Consists of positions which meet the conditions laid down in Art. 72a-b of the Capital Requirements Regulation (CRR) II with regard to contractual, structural or legal subordination. ⁸ For UBS AG, on the basis of going concern capital. On the basis of tier 1 capital for UBS Europe SE and UBS Americas Holding LLC. ⁹ There was no local disclosure requirement for UBS Americas Holding LLC as of 30 September 2019 and 30 June 2019. ¹⁰ For UBS Europe SE, figures as of 30 September 2019 are based on a seven-month average and as of 30 June 2019 on a four-month average, rather than a twelve-month average, as data produced on the same basis is only available for the period since the cross-border merger. ¹¹ UBS AG is required to maintain a minimum liquidity coverage ratio of 105% as communicated by FINMA. ¹² UBS Switzerland AG, as a Swiss SRB, is required to maintain a minimum liquidity coverage ratio of 100%. ¹³ Refer to the "Capital management" section of our Annual Report 2018 for more information about the joint and several liability. Under certain circumstances, the Swiss Banking Act and FINMA's Banking Insolvency Ordinance authorize FINMA to modify, extinguish or convert to common equity liabilities of a bank in connection with a resolution or insolvency of such bank.

UBS Group AG is a holding company and conducts substantially all of its operations through UBS AG and its subsidiaries. UBS Group AG and UBS AG contribute a significant portion of their respective capital and provide substantial liquidity to subsidiaries. Many of these subsidiaries are subject to regulations requiring compliance with minimum capital, liquidity and similar requirements. The tables in this section summarize the regulatory capital components and capital ratios of our significant regulated subsidiaries and sub-groups determined under the regulatory framework of each subsidiary's or sub-group's home jurisdiction.

Supervisory authorities generally have discretion to impose higher requirements or to otherwise limit the activities of subsidiaries. Supervisory authorities also may require entities to

measure capital and leverage ratios on a stressed basis and may limit the ability of an entity to engage in new activities or take capital actions based on the results of those tests.

Standalone regulatory information for UBS AG and UBS Switzerland AG as well as consolidated regulatory information for UBS Europe SE and UBS Americas Holding LLC is provided in the 30 September 2019 Pillar 3 report available under "Pillar 3 disclosures" at www.ubs.com/investors.

Selected financial and regulatory information for UBS AG consolidated is included in the key figures table below. Refer also to the UBS AG third quarter 2019 report, which will be available as of 25 October 2019 under "Quarterly reporting" at www.ubs.com/investors.

¹ Refer to the "Performance targets and measurement" section of our Annual Report 2018 for more information about our performance targets. ² Calculated as net profit attributable to shareholders (annualized as applicable) divided by average equity attributable to shareholders. ³ Calculated as net profit attributable to shareholders (annualized as applicable) divided by average equity attributable to shareholders less average goodwill and intangible assets. Effective 1 January 2019, the definition of the numerator for return on tangible equity has been revised to align with numerators for return on equity and return on common equity tier 1 capital; i.e., we no longer adjust for amortization and impairment of goodwill and intangible assets. Prior periods have been restated. ⁴ Calculated as net profit attributable to shareholders (annualized as applicable) divided by average common equity tier 1 capital. ⁵ Calculated as operating income before credit loss expense or recovery (annualized as applicable) divided by average risk-weighted assets and average leverage ratio denominator, respectively. ⁶ Calculated as operating expenses divided by operating income before credit loss expense or recovery. ⁷ Calculated as change in net profit attributable to shareholders from continuing operations between current and comparison periods divided by net profit attributable to shareholders from continuing operations of comparison period. ⁸ Based on the Swiss systemically relevant bank framework as of 1 January 2020. Refer to the "Capital management" section of this report for more information. ⁹ Includes invested assets for Global Wealth Management, Asset Management and Personal & Corporate Banking. ¹⁰ As of 30 September 2019, the breakdown of personnel by business division and Corporate Center was: Global Wealth Management: 22,704; Personal & Corporate Banking: 5,093; Asset Management: 2,247; Investment Bank: 5,126; Corporate Center: 12,010.

This is a general list of the abbreviations frequently used in our financial reporting. Not all of the listed abbreviations may appear in this particular report.

Information sources

Reporting publications

Annual publications: *Annual Report (SAP no. 80531)*: Published in English, this single-volume report provides descriptions of: our Group strategy and performance; the strategy and performance of the business divisions and Corporate Center; risk, treasury and capital management; corporate governance, corporate responsibility and our compensation framework, including information about compensation for the Board of Directors and the Group Executive Board members; and financial information, including the financial statements. *Auszug aus dem Geschäftsbericht (SAP no. 80531)*: This publication provides the translation into German of selected sections of the Annual Report. *Annual Review (SAP no. 80530)*: This booklet contains key information about our strategy and performance, with a focus on corporate responsibility at UBS. It is published in English, German, French and Italian. *Compensation Report (SAP no. 82307)*: This report discusses our compensation framework and provides information about compensation for the Board of Directors and the Group Executive Board members. It is available in English and German.

Quarterly publications: The quarterly financial report provides an update on our strategy and performance for the respective quarter. It is available in English.

How to order publications: The annual and quarterly publications are available in .pdf format at www.ubs.com/investors, in the "UBS Group AG and UBS AG consolidated financial information" section, and printed copies can be requested from UBS free of charge. For annual publications, refer to the "Investor services" section at www.ubs.com/investors. Alternatively, they can be ordered by quoting the SAP number and the language preference, where applicable, from UBS AG, F4UK-AUL, P.O. Box, CH-8098 Zurich, Switzerland.

Other information

Website: The "Investor Relations" website at www.ubs.com/investors provides the following information about UBS: news releases; financial information, including results-related filings with the US Securities and Exchange Commission; information for shareholders, including UBS share price charts as well as data and dividend information, and for bondholders; the UBS corporate calendar; and presentations by management for investors and financial analysts. Information on the internet is available in English, with some information also available in German.

Results presentations: Our quarterly results presentations are webcast live. A playback of most presentations is downloadable at www.ubs.com/presentations.

Messaging service: Email alerts to news about UBS can be subscribed to under "UBS news alert" at www.ubs.com/investors. Messages are sent in English, German, French or Italian, with an option to select theme preferences for such alerts.

Form 20-F and other submissions to the US Securities and Exchange Commission: We file periodic reports and submit other information about UBS to the US Securities and Exchange Commission (SEC). Principal among these filings is the annual report on Form 20-F, filed pursuant to the US Securities Exchange Act of 1934. The filing of Form 20-F is structured as a wrap-around document. Most sections of the filing can be satisfied by referring to the combined UBS Group AG and UBS AG annual report. However, there is a small amount of additional information in Form 20-F that is not presented elsewhere and is particularly targeted at readers in the US. Readers are encouraged to refer to this additional disclosure. Any document that we file with the SEC is available on the SEC's website www.sec.gov. Refer to www.ubs.com/investors for more information.

Cautionary Statement Regarding Forward-Looking Statements | This report contains statements that constitute "forward-looking statements," including but not limited to management's outlook for UBS's financial performance and statements relating to the anticipated effect of transactions and strategic initiatives on UBS's business and future development. While these forward-looking statements represent UBS's judgments and expectations concerning the matters described, a number of risks, uncertainties and other important factors could cause actual developments and results to differ materially from UBS's expectations. These factors include, but are not limited to: (i) the degree to which UBS is successful in the ongoing execution of its strategic plans, including its cost reduction and efficiency initiatives and its ability to manage its levels of risk-weighted assets (RWA) and leverage ratio denominator (LRD), including to counteract regulatory-driven increases, liquidity coverage ratio and other financial resources, and the degree to which UBS is successful in implementing changes to its businesses to meet changing market, regulatory and other conditions; (ii) the continuing low or negative interest rate environment in Switzerland and other jurisdictions, developments in the macroeconomic climate and in the markets in which UBS operates or to which it is exposed, including movements in securities prices or liquidity, credit spreads, and currency exchange rates, and the effects of economic conditions, market developments, and geopolitical tensions on the financial position or creditworthiness of UBS's clients and counterparties as well as on client sentiment and levels of activity; (iii) changes in the availability of capital and funding, including any changes in UBS's credit spreads and ratings, as well as availability and cost of funding to meet requirements for debt eligible for total loss-absorbing capacity (TLAC); (iv) changes in or the implementation of financial legislation and regulation in Switzerland, the US, the UK, the European Union and other financial centers that have imposed, or resulted in, or may do so in the future, more stringent or entity-specific capital, TLAC, leverage ratio, liquidity and funding requirements, incremental tax requirements, additional levies, limitations on permitted activities, constraints on remuneration, constraints on transfers of capital and liquidity and sharing of operational costs across the Group or other measures, and the effect these will or would have on UBS's business activities; (v) the degree to which UBS is successful in implementing further changes to its legal structure to improve its resolvability and meet related regulatory requirements and the potential need to make further changes to the legal structure or booking model of UBS Group in response to legal and regulatory requirements, proposals in Switzerland and other jurisdictions for mandatory structural reform of banks or systemically important institutions or to other external developments, and the extent to which such changes will have the intended effects; (vi) UBS's ability to maintain and improve its systems and controls for the detection and prevention of money laundering and compliance with sanctions to meet evolving regulatory requirements and expectations, in particular in the US; (vii) the uncertainty arising from the timing and nature of the UK's exit from the EU; (viii) changes in UBS's competitive position, including whether differences in regulatory capital and other requirements among the major financial centers will adversely affect UBS's ability to compete in certain lines of business; (ix) changes in the standards of conduct applicable to our businesses that may result from new regulations or new enforcement of existing standards, including recently enacted and proposed measures to impose new and enhanced duties when interacting with customers and in the execution and handling of customer transactions; (x) the liability to which UBS may be exposed, or possible constraints or sanctions that regulatory authorities might impose on UBS, due to litigation, contractual claims and regulatory investigations, including the potential for disqualification from certain businesses, potentially large fines or monetary penalties, or the loss of licenses or privileges as a result of regulatory or other governmental sanctions, as well as the effect that litigation, regulatory and similar matters have on the operational risk component of our RWA as well as the amount of capital available for return to shareholders; (xi) the effects on UBS's cross-border banking business of tax or regulatory developments and of possible changes in UBS's policies and practices relating to this business; (xii) UBS's ability to retain and attract the employees necessary to generate revenues and to manage, support and control its businesses, which may be affected by competitive factors; (xiii) changes in accounting or tax standards or policies, and determinations or interpretations affecting the recognition of gain or loss, the valuation of goodwill, the recognition of deferred tax assets and other matters; (xiv) UBS's ability to implement new technologies and business methods, including digital services and technologies, and ability to successfully compete with both existing and new financial service providers, some of which may not be regulated to the same extent; (xv) limitations on the effectiveness of UBS's internal processes for risk management, risk control, measurement and modeling, and of financial models generally; (xvi) the occurrence of operational failures, such as fraud, misconduct, unauthorized trading, financial crime, cyberattacks, and systems failures; (xvii) restrictions on the ability of UBS Group AG to make payments or distributions, including due to restrictions on the ability of its subsidiaries to make loans or distributions, directly or indirectly, or, in the case of financial difficulties, due to the exercise by FINMA or the regulators of UBS's operations in other countries of their broad statutory powers in relation to protective measures, restructuring and liquidation proceedings; (xviii) the degree to which changes in regulation, capital or legal structure, financial results or other factors may affect UBS's ability to maintain its stated capital return objective; and (xix) the effect that these or other factors or unanticipated events may have on our reputation and the additional consequences that this may have on our business and performance. The sequence in which the factors above are presented is not indicative of their likelihood of occurrence or the potential magnitude of their consequences. Our business and financial performance could be affected by other factors identified in our past and future filings and reports, including those filed with the SEC. More detailed information about those factors is set forth in documents furnished by UBS and filings made by UBS with the SEC, including UBS's Annual Report on Form 20-F for the year ended 31 December 2018. UBS is not under any obligation to (and expressly disclaims any obligation to) update or alter its forward-looking statements, whether as a result of new information, future events, or otherwise.

Rounding | Numbers presented throughout this report may not add up precisely to the totals provided in the tables and text. Percentages, percent changes, and adjusted results are calculated on the basis of unrounded figures. Information about absolute changes between reporting periods, which is provided in text and that can be derived from figures displayed in the tables, is calculated on a rounded basis.

Tables | Within tables, blank fields generally indicate that the field is not applicable or not meaningful, or that information is not available as of the relevant date or for the relevant period. Zero values generally indicate that the respective figure is zero on an actual or rounded basis. Percentage changes are presented as a mathematical calculation of the change between periods.

¹ Refer to the "Performance targets and measurement" section of our Annual Report 2018 for more information about our performance targets. ² Calculated as net profit attributable to shareholders (annualized as applicable) divided by average equity attributable to shareholders. ³ Calculated as net profit attributable to shareholders (annualized as applicable) divided by average equity attributable to shareholders less average goodwill and intangible assets. Effective 1 January 2019, the definition of the numerator for return on tangible equity has been revised to align with numerators for return on equity and return on common equity tier 1 capital; i.e., we no longer adjust for amortization and impairment of goodwill and intangible assets. Prior periods have been restated. ⁴ Calculated as net profit attributable to shareholders (annualized as applicable) divided by average common equity tier 1 capital. ⁵ Calculated as operating income before credit loss expense or recovery (annualized as applicable) divided by average risk-weighted assets and average leverage ratio denominator, respectively. ⁶ Calculated as operating expenses divided by operating income before credit loss expense or recovery. ⁷ Calculated as change in net profit attributable to shareholders from continuing operations between current and comparison periods divided by net profit attributable to shareholders from continuing operations of comparison period. ⁸ Based on the Swiss systemically relevant bank framework as of 1 January 2020. Refer to the "Capital management" section of the UBS Group third quarter 2019 report for more information. ⁹ Includes invested assets for Global Wealth Management, Asset Management and Personal & Corporate Banking. ¹⁰ As of 30 September 2019, the breakdown of personnel by business division and Corporate Center was: Global Wealth Management: 22,704; Personal & Corporate Banking: 5,093; Asset Management: 2,247; Investment Bank: 5,126; Corporate Center: 12,010.

Changes to our presentation currency

Effective from 1 October 2018, the presentation currency of UBS AG's consolidated financial statements has changed from Swiss francs to US dollars. Comparative information in this report for periods prior to the fourth quarter of 2018 has been restated. Assets, liabilities and total equity were translated to US dollars at closing exchange rates prevailing on the respective balance sheet dates, and income and expenses were translated at the respective average rates prevailing for the relevant periods.

Introduction

Structure of this report

UBS Group AG is the holding company for the UBS Group and the parent company of UBS AG. UBS Group AG holds 100% of the issued shares in UBS AG. Financial information for UBS AG consolidated does not differ materially from that for UBS Group AG consolidated.

This report includes risk and capital management information for UBS AG consolidated and the interim consolidated financial statements, as well as UBS AG standalone financial information for the quarter ended 30 September 2019. Regulatory information for UBS AG standalone is provided in the 30 September 2019 Pillar 3 report available under "Pillar 3 disclosures" at www.ubs.com/investors.

→ Refer to the **UBS Group third quarter 2019 report available under "Quarterly reporting" at www.ubs.com/investors for more information**

Comparison between UBS Group AG consolidated and UBS AG consolidated

The table on the following page contains a comparison of selected financial and capital information between UBS Group AG consolidated and UBS AG consolidated.

The accounting policies applied under International Financial Reporting Standards (IFRS) to both UBS Group AG and UBS AG consolidated financial statements are identical. However, there are certain scope and presentation differences as noted below:

– Assets, liabilities, operating income, operating expenses and operating profit before tax relating to UBS Group AG and its directly held subsidiaries, including UBS Business Solutions AG, are reflected in the consolidated financial statements of UBS Group AG but not of UBS AG. UBS AG's assets, liabilities, operating income and operating expenses related to transactions with UBS Group AG and its directly held subsidiaries, including UBS Business Solutions AG and other shared services subsidiaries, are not subject to elimination in the UBS AG consolidated financial statements, but are eliminated in the UBS Group AG consolidated financial statements. UBS Business Solutions AG and other shared services subsidiaries of UBS Group AG charge other legal entities within the UBS AG consolidation scope for services provided, including a markup on costs incurred.

- The equity of UBS Group AG consolidated was USD 1.6 billion higher than the equity of UBS AG consolidated as of 30 September 2019. This difference is mainly driven by higher dividends paid by UBS AG to UBS Group AG compared with the dividend distributions of UBS Group AG, as well as higher retained earnings in the UBS Group AG consolidated financial statements, largely related to the aforementioned markup charged by shared services subsidiaries of UBS Group AG to other legal entities in the UBS AG scope of consolidation, and defined benefit plan OCI in UBS Business Solutions AG, reflecting the recognition of the Swiss pension plan's surplus in the third quarter of 2019. In addition, UBS Group is the grantor of the majority of the compensation plans of the Group and recognizes share premium for equity-settled awards granted. These effects were partly offset by treasury shares acquired as part of our share repurchase program and those held to hedge share delivery obligations associated with Group compensation plans, as well as additional share premium recognized at the UBS AG consolidated level related to the establishment of UBS Group AG and UBS Business Solutions AG, a wholly owned subsidiary of UBS Group AG.
- Going concern capital of UBS AG consolidated was USD 3.8 billion lower than going concern capital of UBS Group AG consolidated as of 30 September 2019, reflecting additional tier 1 (AT1) capital of USD 4.3 billion partly offset by higher common equity tier 1 (CET1) capital of USD 0.5 billion.
- CET1 capital of UBS AG consolidated was USD 0.5 billion higher than that of UBS Group AG consolidated as of 30 September 2019. The difference in CET1 capital was primarily due to compensation-related regulatory capital accruals at the UBS Group AG level, partly offset by differences in equity, as mentioned above.
- Going concern loss-absorbing AT1 capital of UBS AG consolidated was USD 4.3 billion lower than that of UBS Group AG consolidated as of 30 September 2019, reflecting Deferred Contingent Capital Plan awards and AT1 capital notes. These AT1 capital notes were issued by UBS Group Funding (Switzerland) AG, a direct subsidiary of UBS Group AG, after the implementation of the new Swiss SRB framework, and only qualify as gone concern loss-absorbing capacity at the UBS Group AG consolidated level.
 - Refer to "**Holding company and significant regulated subsidiaries and sub-groups**" at www.ubs.com/investors for an illustration of the consolidation scope differences between UBS AG and UBS Group AG
 - Refer to the "**Capital management**" section of this report for more information about differences in the loss-absorbing capacity between UBS Group AG consolidated and UBS AG consolidated

Risk and capital management

Management report

Risk management and control

UBS AG consolidated risk profile

The risk profile of UBS AG consolidated does not differ materially from that of UBS Group AG consolidated and risk information provided in the UBS Group third quarter 2019 report is equally applicable to UBS AG consolidated.

The credit risk profile of UBS AG consolidated differs from that of UBS Group AG consolidated primarily in relation to

receivables of UBS AG and UBS Switzerland AG from UBS Group AG. As a result of these receivables, total banking products exposure of UBS AG consolidated as of 30 September 2019 was USD 1.3 billion, or 0.3%, higher than the exposure of UBS Group, compared with USD 1.5 billion, or 0.3%, as of 30 June 2019.

→ **Refer to the "Risk management and control" section of the UBS Group third quarter 2019 report for more information**

Capital management

Going and gone concern requirements and information

UBS AG is considered a systemically relevant bank (SRB) under Swiss banking law and, on a consolidated basis, both UBS Group AG and UBS AG are required to comply with regulations based on the Basel III framework as applicable for Swiss SRBs.

The Swiss SRB framework and requirements applicable to UBS AG consolidated are consistent with those applicable to UBS Group AG consolidated and are described in the "Capital management" section of our Annual Report 2018.

UBS AG is subject to going concern requirements on a standalone basis. Capital and other regulatory information for UBS AG standalone and consolidated is provided in the 30 September 2019 Pillar 3 report – UBS Group and significant regulated subsidiaries and sub-groups under "Pillar 3 disclosures" at www.ubs.com/investors.

The table below provides the risk-weighted assets (RWA)- and leverage ratio denominator (LRD)-based requirements and information as of 30 September 2019 for UBS AG consolidated.

¹ Includes applicable add-ons of 0.72% for RWA. ² Includes applicable add-ons of 1.44% for RWA and 0.5% for LRD. ³ Includes outstanding low-trigger loss-absorbing tier 2 capital instruments under the transitional rules of the Swiss SRB framework to meet the going concern requirements until the earlier of (i) their maturity or first call date or (ii) 31 December 2019, and to meet gone concern requirements thereafter. Outstanding low-trigger loss-absorbing tier 2 capital instruments are subject to amortization starting five years prior to their maturity, with the amortized portion qualifying as gone concern loss-absorbing capacity. Instruments available to meet gone concern requirements are eligible until one year before maturity, with a haircut of 50% applied in the last year of eligibility. ⁴ Based on the actions we completed up to December 2018 to improve resolvability, FINMA granted a rebate on the gone concern requirement of 42.5% of the maximum rebate in the third quarter of 2019 as compared with 40% in the previous quarter. ⁵ The relevant capital instruments were issued after the new Swiss SRB framework had been implemented and therefore qualify as gone concern loss-absorbing capacity.

Deferred tax assets on temporary differences, excess over threshold	(119)	(57)	(62)
Goodwill, net of tax	(6,256)	(6,256)	0
Intangible assets, net of tax	(210)	(210)	0
Compensation-related components (not recognized in net profit)	(1,944)		(1,944)
Expected losses on advanced internal ratings-based portfolio less provisions	(458)	(458)	0
Unrealized (gains) / losses from cash flow hedges, net of tax	(1,749)	(1,749)	0
Own credit related to (gains) / losses on financial liabilities measured at fair value that existed at the balance sheet date, net of tax	(114)	(114)	0
Prudential valuation adjustments	(128)	(128)	0
Other ¹	(2,061)	(2,790)	729
Total common equity tier 1 capital	34,673	35,211	(538)

¹ Includes accruals for dividends to shareholders for the current year and other items.**Total loss-absorbing capacity and leverage ratio information under Swiss SRB rules applicable as of 1 January 2020**

The going concern capital of UBS AG consolidated was USD 3.8 billion lower than the going concern capital of UBS Group AG consolidated as of 30 September 2019, primarily reflecting lower additional tier 1 (AT1) capital of USD 4.3 billion, partly offset by higher common equity tier 1 (CET1) capital of USD 0.5 billion. The gone concern loss-absorbing capacity of UBS AG consolidated was USD 2.4 billion higher, due to low-trigger loss-absorbing AT1 capital.

The CET1 capital of UBS AG consolidated was USD 0.5 billion higher than that of UBS Group AG consolidated, primarily due to the deductions for compensation-related regulatory capital components that are only reflected at the level of UBS Group AG consolidated. The effects of these deductions were partly offset by lower equity of UBS AG consolidated.

The going concern loss-absorbing AT1 capital of UBS AG consolidated was USD 4.3 billion lower than that of UBS Group AG consolidated and relates to low-trigger AT1 capital notes of USD 2.4 billion which UBS AG consolidated is treating as gone concern capital, as well as Deferred Contingent Capital Plan awards granted to eligible employees for the performance years 2014 to 2018.

The aforementioned difference of USD 2.4 billion in gone concern low-trigger AT1 capital relates to capital instruments that were on-lent to UBS AG after the new Swiss SRB framework had been implemented and are therefore not

recognized within going concern capital but qualify as gone concern loss-absorbing capacity. Issuances of low-trigger AT1 capital from UBS Group AG were all made prior to the implementation of the new Swiss SRB framework and therefore qualify as going concern capital.

Differences in capital between UBS Group AG consolidated and UBS AG consolidated related to employee compensation plans will reverse to the extent underlying services are performed by employees of, and are consequently charged to, UBS AG and its subsidiaries. Such reversal generally occurs over the service period of the employee compensation plans.

The leverage ratio framework for UBS AG consolidated is consistent with that of UBS Group AG consolidated. As of 30 September 2019, the going concern leverage ratio of UBS AG consolidated was 0.4 percentage points lower than that of UBS Group AG consolidated, mainly because the going concern capital of UBS AG consolidated was USD 3.8 billion lower.

- Refer to the “Capital management” section of the UBS Group third quarter 2019 report available under “Quarterly reporting” at www.ubs.com/investors for information about the developments of loss-absorbing capacity, risk-weighted assets and leverage ratio denominator for UBS Group AG consolidated
- Refer to the “Introduction” section of this report for more information about the differences in equity between UBS AG consolidated and UBS Group AG

Interest paid in cash	8,830	7,011
Dividends on equity investments, investment funds and associates received in cash ⁴	2,632	1,938

¹ Includes dividends received from associates. ² USD 2,245 million and USD 3,112 million of cash and cash equivalents (mainly reflected in Loans and advances to banks) were restricted as of 30 September 2019 and 30 September 2018, respectively. Refer to "Note 26 Restricted and transferred financial assets" in the "Consolidated financial statements" section in the Annual Report 2018 for more information. ³ Money market paper is included in the balance sheet under Financial assets at fair value held for trading. Financial assets measured at fair value through other comprehensive income, Financial assets at fair value not held for trading and Other financial assets measured at amortized cost. ⁴ Includes dividends received from associates reported within Net cash flow from / (used in) investing activities.

Notes to the UBS AG interim consolidated financial statements (unaudited)

Note 1 Basis of accounting

Basis of preparation

The consolidated financial statements (the financial statements) of UBS AG and its subsidiaries (together, "UBS AG") are prepared in accordance with International Financial Reporting Standards (IFRS), as issued by the International Accounting Standards Board (IASB), and are presented in US dollars (USD), which is also the functional currency of UBS AG's Head Office, UBS AG's London Branch and UBS AG's US-based operations. These interim financial statements are prepared in accordance with IAS 34, *Interim Financial Reporting*.

In preparing these interim financial statements, the same accounting policies and methods of computation have been applied as in the UBS AG consolidated annual financial statements for the period ended 31 December 2018, except for the changes described in this note. These interim financial statements are unaudited and should be read in conjunction with UBS AG's audited consolidated financial statements included in the Annual Report 2018. In the opinion of management, all necessary adjustments were made for a fair presentation of UBS AG's financial position, results of operations and cash flows.

Preparation of these interim financial statements requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, income, expenses and disclosures of contingent assets and liabilities. These estimates and assumptions are based on the best available information. Actual results in the future could differ from such estimates and such differences may be material to the financial statements. Revisions to estimates, based on regular reviews, are recognized in the period in which they occur. For more information about areas of estimation uncertainty that are considered to require critical judgment, refer to "Note 1a Significant accounting policies" in the "Consolidated financial statements" section of the Annual Report 2018.

Adoption of IFRS 16, *Leases*

Application and transition effect

Effective from 1 January 2019, UBS AG adopted IFRS 16, *Leases*, which replaced IAS 17, *Leases*, and sets out the principles for the recognition, measurement, presentation and disclosure of leases.

IFRS 16 introduces a single lessee accounting model and fundamentally changes how UBS AG accounts for operating leases when acting as a lessee, with a requirement to record a right-of-use asset and lease liability on the balance sheet. UBS AG is a lessee in a number of leases, primarily of real estate, including offices, retail branches and sales offices, with a smaller number of IT hardware leases. As permitted by the transitional provisions of IFRS 16, UBS AG elected to apply the modified retrospective approach and has not restated comparative figures. Overall, adoption of IFRS 16 resulted in a USD 3.4 billion increase in both total assets and total liabilities in UBS AG's consolidated financial statements. There was no effect on equity.

→ Refer to the tables on the next page for more information

UBS AG applied the following practical expedients that are permitted on transition to IFRS 16 where UBS AG is the lessee in a lease previously classified as an operating lease:

- to not reassess whether or not a contract contained a lease;
- to rely on previous assessments of whether such contracts were considered onerous;
- to rely on previous sale-and-leaseback assessments;
- to adjust lease terms with the benefit of hindsight with respect to whether extension or termination options are reasonably certain of being exercised;
- to discount lease liabilities using UBS AG's incremental borrowing rate in each currency as at 1 January 2019;
- to initially measure the right-of-use asset at an amount equal to the lease liability for leases previously classified as operating leases, adjusted for existing lease balances such as rent prepayments, rent accruals, lease incentives and onerous lease provisions, but excluding initial direct costs; and
- to not apply IFRS 16 to leases in which the remaining term will end within 12 months from the transition date.

Note 1 Basis of accounting (continued)

The measurement of leases previously classified as finance leases where UBS AG acts as a lessee has not changed on transition to IFRS 16. Similarly, UBS AG has made no adjustments where UBS AG acts as a lessor, in either a finance or operating lease, of physical assets it owns. Where UBS AG acts as an intermediate lessor, i.e., where UBS AG enters into a head lease and sub-leases the asset to a third party, the sub-lease has been

classified as either a finance or operating lease based primarily on whether the sub-lease term consumes the majority of the remaining useful life of the right-of-use asset arising from the head lease as at the transition date.

The following table reconciles the obligations in respect of operating leases as at 31 December 2018 to the opening lease liabilities recognized on 1 January 2019:

Reconciliation between operating lease commitments disclosed under IAS 17 and lease liabilities recognized under IFRS 16

<i>USD million</i>	
Total undiscounted operating lease commitments as of 31 December 2018	4,546
Leases with a remaining term of less than one year as of 1 January 2019	(18)
Excluded service components	(296)
Reassessment of lease term for extension or termination options	424
Total undiscounted lease payments	4,657
Discounted at a weighted average incremental borrowing rate of 3.07%	(720)
IFRS 16 transition adjustment	3,937
Finance lease liabilities as of 31 December 2018	19
Carrying amount of total lease liabilities as of 1 January 2019	3,956

The following table provides details on the determination of right-of-use assets on transition:

Determination of right-of-use (RoU) assets on transition

<i>USD million</i>	<i>Carrying amount</i>
Recognition of gross RoU assets upon adoption of IFRS 16 (IFRS 16 transition adjustment)	3,937
Offset by liabilities recognized as of 31 December 2018	(515)
<i>of which: other non-financial liabilities (lease incentives)</i>	<i>(204)</i>
<i>of which: other financial liabilities measured at amortized cost (rent accruals)</i>	<i>(180)</i>
<i>of which: provisions (onerous lease provisions)</i>	<i>(131)</i>
Increase in total assets resulting from the adoption of IFRS 16 on 1 January 2019¹	3,422
Reclassification of assets recognized as of 31 December 2018 as an addition to RoU assets	38
<i>of which: other financial assets measured at amortized cost (finance lease assets recognized under IAS 17 as of 31 December 2018)</i>	<i>19</i>
<i>of which: other non-financial assets (prepaid rent)</i>	<i>19</i>
Reclassification of finance lease receivables from subleases to other financial assets measured at amortized cost resulting in a reduction of RoU assets	(176)
Total right-of-use assets as of 1 January 2019 presented within Property, equipment and software	3,284

¹ Total liabilities increased by the same amount upon adoption of IFRS 16.

Lease liabilities are presented within *Other financial liabilities measured at amortized cost* and right-of-use assets within *Property, equipment and software*. Finance lease receivables are included within *Other financial assets measured at amortized cost*. Due to the practical expedients taken on transition, there was no effect on equity. The weighted average lease term on 1 January 2019 was approximately 9 years.

During the third quarter of 2019 the depreciation expense for right-of-use assets presented within *Depreciation and impairment of property, equipment and software* was USD 112 million (second quarter of 2019: USD 113 million; first quarter of 2019: USD 113 million). The interest expense on lease liabilities

presented within *Interest expense from financial instruments measured at amortized cost* was USD 29 million (second quarter of 2019: USD 30 million; first quarter of 2019: USD 30 million) and other rent expenses (including non-lease components paid to landlords) presented within *General and administrative expenses* were USD 14 million (second quarter of 2019: USD 12 million; first quarter of 2019: USD 16 million). This compares with total rent expenses presented in *General and administrative expenses* of USD 142 million, USD 143 million and USD 147 million for the quarters ended 30 September 2018, 30 June 2018 and 31 March 2018, respectively.

Note 1 Basis of accounting (continued)**Update to significant accounting policy – Leasing (disclosed in “Note 1a item 15 Leasing” in the “Consolidated financial statements” section of the Annual Report 2018)**

UBS AG predominantly enters into lease contracts, or contracts that include lease components, as a lessee of real estate, including offices, retail branches and sales offices, with a small number of IT hardware leases. UBS AG identifies non-lease components of a contract and accounts for them separately from lease components.

When UBS AG is a lessee in a lease arrangement, UBS AG recognizes a lease liability and corresponding right-of-use asset at the commencement of the lease term when UBS AG acquires control of the physical use of the asset. Lease liabilities are presented within *Other financial liabilities measured at amortized cost* and right-of-use assets within *Property, equipment and software*. The lease liability is measured based on the present value of the lease payments over the lease term, discounted using UBS AG’s unsecured borrowing rate given that the rate implicit in a lease is generally not observable to the lessee. Interest expense on the lease liability is presented within *Interest expense from financial instruments measured at amortized cost*. The right-of-use asset is recorded at an amount equal to the lease liability but is adjusted for rent prepayments, initial direct costs, any costs to refurbish the leased asset or lease incentives received. The right-of-use asset is depreciated over the shorter of the lease term or the useful life of the underlying asset, with the depreciation presented within *Depreciation and impairment of property, equipment and software*.

Lease payments generally include fixed payments and variable payments that depend on an index (such as an inflation index). When a lease contains an extension or termination option that UBS AG considers reasonably certain to be exercised, the expected rental payments or costs of termination are included within the lease payments used to generate the lease liability. UBS AG does not typically enter into leases with purchase options or residual value guarantees.

Where UBS AG acts as a lessor or sub-lessor under a finance lease, a receivable is recognized in *Other financial assets measured at amortized cost* at an amount equal to the present value of the aggregate of the lease payments plus any unguaranteed residual value that UBS AG expects to recover at the end of the lease term. Initial direct costs are also included in the initial measurement of the lease receivable. Lease payments received during the lease term are allocated as repayments of the outstanding receivable. Interest income reflects a constant periodic rate of return on UBS AG’s net investment using the interest rate implicit in the lease (or, for sub-leases, the rate for the head lease). UBS AG reviews the estimated unguaranteed

residual value annually, and if the estimated residual value to be realized is less than the amount assumed at lease inception, a loss is recognized for the expected shortfall. Where UBS AG acts as a lessor or sub-lessor in an operating lease, UBS AG recognizes the operating lease income on a straight-line basis over the lease term.

Lease receivables are subject to impairment requirements as set out in “Note 1a item 3g” in the “Consolidated financial statements” section of the Annual Report 2018. Expected credit losses (ECL) on lease receivables are determined following the general impairment model within IFRS 9, *Financial Instruments*, without utilizing the simplified approach of always measuring impairment at the amount of lifetime ECL.

Other changes to accounting policies**Changes in Corporate Center segment reporting, cost and resource allocation to business divisions**

Effective from 1 January 2019, UBS AG made changes to Corporate Center segment reporting, as well as cost and resource allocation to business divisions.

→ **Refer to Note 2 for more information**

Presentation of dividend income and expense from financial instruments measured at fair value through profit or loss

Effective from 1 January 2019, UBS AG refined the presentation of dividend income and expense. This resulted in a reclassification of dividends from *Interest income (expense) from financial instruments measured at fair value through profit or loss* into *Other net income from financial instruments measured at fair value through profit or loss* (prior to 1 January 2019: *Other net income from fair value changes on financial instruments*). The change aligns the presentation of dividends with related fair value changes from the equity instruments and economic hedges removing volatility that has historically arisen within both *Net interest income* and *Other net income from fair value changes on financial instruments*. There is no effect on *Total operating income* or *Net profit / (loss)*. Prior periods have been restated for this presentational change and the effect on the respective reporting lines is outlined in the table below.

Refer to “Note 1d International Financial Reporting Standards and Interpretations to be adopted in 2019 and later and other changes” in the “Consolidated financial statements” section of the Annual Report 2018 for further details on standards adopted by UBS AG from 1 January 2019, none of which had a material effect on UBS AG’s financial statements.

Note 1 Basis of accounting (continued)**Changes to the presentation of dividend income and expense from financial instruments measured at fair value through profit or loss**

<i>USD million</i>	For the quarter ended				For the year ended
	31.3.18	30.6.18	30.9.18	31.12.18	31.12.18

Net interest income	(412)	210	(524)	(250)	(976)
Other net income from financial instruments measured at fair value through profit or loss	412	(210)	524	250	976

Changes in accounting standards to be adopted in future reporting periods**Amendments to IAS 39, IFRS 9 and IFRS 7 (Interest Rate Benchmark Reform)**

In September 2019, the IASB issued *Interest Rate Benchmark Reform, Amendments to IFRS 9, IAS 39 and IFRS 7*, enabling hedge accounting to continue during the period of uncertainty before existing interest rate benchmarks are replaced with alternative risk-free interest rates. The amendments are mandatorily effective from 1 January 2020, with early adoption permitted, and apply to hedge relationships that exist at the beginning of the reporting period or are designated thereafter,

and to the gains or losses that exist in OCI on adoption. Adopting these amendments will allow UBS AG to maintain current hedge accounting relationships and to assume that the current benchmark rates will continue to exist, with no consequential impact on the financial statements. In addition, the amendments bring in a number of new disclosure requirements to provide detail on the effects arising from the change in interest rate benchmarks. UBS AG is continuing to assess the effects of the amendments and will shortly determine whether it expects to early adopt the revisions in the fourth quarter of 2019 or instead from their mandatory effective date in the first quarter of 2020.

Note 2 Segment reporting

Overview and changes in Corporate Center segment reporting

UBS AG's businesses are organized globally into four business divisions: Global Wealth Management, Personal & Corporate Banking, Asset Management and the Investment Bank. All four business divisions are supported by Corporate Center and qualify as reportable segments for the purpose of segment reporting. Together with Corporate Center they reflect the management structure of UBS AG.

→ Refer to "Note 1a Significant accounting policies item 2" and "Note 2 Segment reporting" in the "Consolidated financial statements" section of the Annual Report 2018 for more information about UBS AG's reporting segments

As a consequence of a substantial reduction in the Non-core and Legacy Portfolio and following changes to UBS AG's methodology for allocating Corporate Center costs to the business divisions, beginning with the first quarter 2019 report, UBS AG provides results for total Corporate Center only and does not separately report Corporate Center – Services, Group Asset and Liability Management and Non-core and Legacy Portfolio.

As of 31 December 2018

Total assets¹	313,737	200,767	28,140	302,434	112,977	958,055
---------------------------------	----------------	----------------	---------------	----------------	----------------	----------------

¹ Prior-period information for the nine months ended 30 September 2018 has been restated to reflect the changed approach used for allocating Corporate Center funding costs and expenses to the business divisions and the updated fund transfer pricing framework, resulting in a decrease in Operating profit / (loss) before tax for Global Wealth Management of USD 270 million, for Personal & Corporate Banking of USD 85 million, for Asset Management of USD 18 million and for the Investment Bank of USD 122 million, with a corresponding increase for Corporate Center of USD 495 million. Additionally, Total assets as of 31 December 2018, has been restated to reflect the changed approach used for allocating balance sheet resources from Corporate Center to the business divisions, predominantly from high-quality liquid assets, resulting in an increase of Total assets in Global Wealth Management of USD 114 billion, in Personal & Corporate Banking of USD 62 billion, in Asset Management of USD 4 billion and in the Investment Bank of USD 44 billion, with a corresponding decrease of assets in Corporate Center of USD 223 billion. Upon adoption of IFRS 16, Leases, as of 1 January 2019, UBS AG additionally allocated approximately USD 3.4 billion of newly recognized right-of-use assets and finance lease receivables to the business divisions. ² Effective from the first quarter of 2019, UBS AG refined the presentation of dividend income and expense, reclassifying dividends from financial instruments measured at fair value through profit or loss from Net interest income to Non-interest income. Prior-period information was restated accordingly, with virtually all of the effect on UBS AG arising from the Investment Bank. Refer to Note 1 for more information.

Note 6 Personnel expenses

USD million	For the quarter ended			Year-to-date	
	30.9.19	30.6.19	30.9.18	30.9.19	30.9.18
Salaries and variable compensation	1,975	2,120	1,957	6,122	6,409
Financial advisor compensation ¹	1,029	1,005	1,016	2,994	3,055
Contractors	34	38	43	108	137
Social security	156	152	148	478	507
Pension and other post-employment benefit plans	130	139	99	440	240 ²
Other personnel expenses	114	116	134	336	381
Total personnel expenses	3,438	3,571	3,398	10,478	10,730

¹ Financial advisor compensation consists of grid-based compensation based directly on compensable revenues generated by financial advisors and supplemental compensation calculated on the basis of financial advisor productivity, firm tenure, assets and other variables. It also includes expenses related to compensation commitments with financial advisors entered into at the time of recruitment that are subject to vesting requirements. ² Changes to the pension fund of UBS AG in Switzerland in the first quarter of 2018 resulted in a reduction in the pension obligation recognized by UBS AG. As a consequence, a pre-tax gain of USD 132 million was recognized in the income statement in the first quarter of 2018, with no overall effect on total equity. Refer to "Note 29 Pension and other post-employment benefit plans" in the "Consolidated financial statements" section of the Annual Report 2018 for more information.

Note 7 General and administrative expenses

Other	24	24	23	77	61
Total general and administrative expenses	2,101	2,004	2,277	6,131	6,981

¹ Reflects the net increase in / (release of) provisions for litigation, regulatory and similar matters recognized in the income statement. Refer to Note 15 for more information. Also includes recoveries from third parties (third quarter of 2019: USD 2 million; second quarter of 2019: USD 1 million; third quarter of 2018: USD 0 million).

Note 8 Income taxes

UBS AG recognized income tax expenses of USD 276 million for the third quarter of 2019, compared with USD 421 million for the third quarter of 2018.

Current tax expenses were USD 206 million, compared with USD 215 million, and related to taxable profits of UBS Switzerland AG and other entities.

Deferred tax expenses were USD 70 million, compared with USD 206 million. Deferred tax expenses in the third quarter of 2019 include expenses of USD 130 million that primarily reflect the amortization of deferred tax assets (DTAs) previously recognized in relation to tax losses carried forward and

deductible temporary differences to reflect their offset against profits for the quarter, including the amortization of US tax loss DTAs at the level of UBS Americas Inc. Deferred tax expenses were decreased by a benefit of USD 65 million in respect of additional DTA recognition that resulted from the contribution of real estate assets by UBS AG to UBS Americas Inc. during the second quarter of 2019 in accordance with the requirements of IAS 34, *Interim Financial Reporting*, as described in the second quarter 2019 report. A further benefit of USD 65 million will be recognized in the fourth quarter of 2019.

Note 9 Expected credit loss measurement

a) Expected credit losses in the period

Total net credit loss expenses were USD 38 million, reflecting net expenses of USD 43 million related to credit-impaired (stage 3) positions and recoveries of USD 5 million related to stage 1 and stage 2 positions.

The recoveries of USD 5 million in stage 1 and 2 ECL during the quarter were primarily the result of a model update in the Investment Bank of USD 20 million, updates to macroeconomic and market data mainly in Personal & Corporate Banking and Global Wealth Management, partly offset by an update of the scenario weights and movements in book size and book quality.

Stage 3 net expenses of USD 43 million were recognized across a number of defaulted positions: USD 29 million in Personal & Corporate Banking, mainly related to a single exposure; USD 8 million in the Investment Bank; and USD 6 million in Global Wealth Management.

UBS AG uses four different economic scenarios in the ECL calculation: an upside, a baseline, a mild downside and a severe downside scenario. During the quarter, the macroeconomic and market data were updated to reflect current conditions across all scenarios. The forecast values used in the baseline scenario were also updated.

The reviews during the third quarter of 2019 reflected the increasing probability of a weakening economy in key markets, after a long period of substantial expansion, and the

uncertainties about the influence that several political developments with unpredictable outcomes may have on future growth. At the end of the third quarter, management reflected these developments by increasing the weight of the severe downside scenario by 2.5 percentage points, with a corresponding adjustment to the weight of the baseline scenario.

Economic scenarios and weights applied

ECL scenario	Assigned weights in %	
	2019	2018
	30.9	30.6
Upside	10.0	10.0
Baseline	42.5	45.0
Mild downside	35.0	35.0
Severe downside	12.5	10.0

With the exception of the aforementioned model update in the Investment Bank, no further model changes which give rise to a material effect on ECL or stage allocation were made.

→ Refer to "Note 1a Significant accounting policies item 3g" and "Note 23 Expected credit loss measurement" in the "Consolidated financial statements" section of the Annual Report 2018 for more information

b) ECL-relevant balance sheet and off-balance sheet positions including ECL allowances and provisions

The tables on the following pages provide information about financial instruments and certain non-financial instruments that are subject to ECL. For amortized-cost instruments, the carrying amount represents the maximum exposure to credit risk, taking into account the allowance for credit losses. Financial assets measured at fair value through other comprehensive income (FVOCI) are also subject to ECL; however, unlike amortized-cost instruments, the allowance for credit losses for FVOCI

instruments does not reduce the carrying value of these financial assets. Rather, the carrying value of financial assets measured at FVOCI represents the maximum exposure to credit risk.

In addition to on-balance sheet financial assets, certain off-balance sheet and other credit lines are also subject to ECL. The maximum exposure to credit risk for off-balance sheet financial instruments is calculated based on the maximum contractual amounts.

Note 10 Fair value measurement

This Note provides fair value measurement information for both financial and non-financial instruments and should be read in conjunction with "Note 24 Fair value measurement" in the "Consolidated financial statements" section of the Annual Report 2018, which provides more information about valuation principles, valuation governance, fair value hierarchy classification, valuation adjustments, valuation techniques and inputs, sensitivity of fair value measurements, and methods applied to calculate fair values for financial instruments not measured at fair value.

All financial and non-financial assets and liabilities measured or disclosed at fair value are categorized into one of three fair

value hierarchy levels. In certain cases, the inputs used to measure fair value may fall within different levels of the fair value hierarchy. For disclosure purposes, the level in the hierarchy within which the instrument is classified in its entirety is based on the lowest level input that is significant to the position's fair value measurement:

- Level 1: quoted prices (unadjusted) in active markets for identical assets and liabilities;
- Level 2: valuation techniques for which all significant inputs are, or are based on, observable market data; or
- Level 3: valuation techniques for which significant inputs are not based on observable market data.

Note 10 Fair value measurement (continued)**a) Fair value hierarchy**

The fair value hierarchy classification of financial and non-financial assets and liabilities measured at fair value is summarized in the table below.

¹ Bifurcated embedded derivatives are presented on the same balance sheet lines as their host contracts and are not included in this table. The fair value of these derivatives was not material for the periods presented. ² Other non-financial assets primarily consist of properties and other non-current assets held for sale, which are measured at the lower of their net carrying amount or fair value less costs to sell.

Note 10 Fair value measurement (continued)**b) Valuation adjustments****Deferred day-1 profit or loss reserves**

The table below summarizes the changes in deferred day-1 profit or loss reserves during the relevant period.

Deferred day-1 profit or loss is generally released into *Other net income from financial instruments measured at fair value through profit or loss* when pricing of equivalent products or the underlying parameters become observable or when the transaction is closed out.

Deferred day-1 profit or loss reserves

USD million	For the quarter ended			Year-to-date	
	30.9.19	30.6.19	30.9.18	30.9.19	30.9.18
Reserve balance at the beginning of the period	158	161	276	255	338
Profit / (loss) deferred on new transactions	32	58	43	122	293
(Profit) / loss recognized in the income statement	(58)	(60)	(68)	(245)	(376)
Foreign currency translation	(1)	0	(1)	(2)	(4)
Reserve balance at the end of the period	131	158	250	131	250

c) Transfers between Level 1 and Level 2

The amounts disclosed in this section reflect transfers between Level 1 and Level 2 for instruments that were held for the entire reporting period.

Assets totaling approximately USD 0.7 billion, which mainly consisted of exchange traded investment fund units presented in the line *Financial assets at fair value held for trading* on the balance sheet, were transferred from Level 2 to Level 1 during

the first nine months of 2019, generally due to increased levels of trading activity observed within the market for these instruments. Liabilities transferred from Level 2 to Level 1 during the first nine months of 2019 were not material. Assets and liabilities transferred from Level 1 to Level 2 during the first nine months of 2019 were also not material.

Note 10 Fair value measurement (continued)

d) Level 3 instruments: valuation techniques and inputs

The table below presents material Level 3 assets and liabilities together with the valuation techniques used to measure fair value, the significant inputs used in the valuation technique that are considered unobservable and a range of values for those unobservable inputs.

The range of values represents the highest- and lowest-level input used in the valuation techniques. Therefore, the range does not reflect the level of uncertainty regarding a particular input, but rather the different underlying characteristics of the relevant assets and liabilities. The ranges will therefore vary from period to period and parameter to parameter based on characteristics of the instruments held at each balance sheet date. Furthermore, the ranges and weighted averages of unobservable inputs may differ

across other financial institutions due to the diversity of the products in each firm's inventory.

The significant unobservable inputs disclosed in the table below are consistent with those included in "Note 24 Fair value measurement" in the "Consolidated financial statements" section of the Annual Report 2018. A description of the potential effect that a change in each unobservable input in isolation may have on a fair value measurement, including information to facilitate an understanding of factors that give rise to the input ranges shown, is also provided in "Note 24 Fair value measurement" in the "Consolidated financial statements" section of the Annual Report 2018.

Valuation techniques and inputs used in the fair value measurement of Level 3 assets and liabilities

USD billion	Fair value				Valuation technique(s)	Significant unobservable input(s) ¹	Range of inputs						unit ¹
	Assets		Liabilities				30.9.19			31.12.18			
	30.9.19	31.12.18	30.9.19	31.12.18			low	high	weighted average ²	low	high	weighted average ²	
Financial assets and liabilities at fair value held for trading and Financial assets at fair value not held for trading													
<i>Corporate and municipal bonds</i>	0.3	0.7	0.0	0.0	Relative value to market comparable	Bond price equivalent	0	161	98	0	134	89	points
<i>Traded loans, loans designated at fair value, loan commitments and guarantees</i>	2.9	2.7	0.0	0.0	Relative value to market comparable	Loan price equivalent	0	101	99	0	100	99	points
					Discounted expected cash flows	Credit spread	250	530		301	513		basis points
					Market comparable and securitization model	Discount margin	1	14	2	1	14	2	%
<i>Auction rate securities</i>	1.5	1.7			Relative value to market comparable	Bond price equivalent	79	99	89	79	99	89	points
<i>Investment fund units³</i>	0.2	0.6	0.0	0.0	Relative value to market comparable	Net asset value							
<i>Equity instruments³</i>	0.5	0.6	0.0	0.0	Relative value to market comparable	Price							
Debt issued designated at fair value⁴			10.0	11.0									
Other financial liabilities designated at fair value⁴			0.7	1.0									
Derivative financial instruments													
<i>Interest rate contracts</i>	0.3	0.4	0.2	0.2	Option model	Volatility of interest rates	47	67		50	81		basis points
<i>Credit derivative contracts</i>	0.3	0.5	0.4	0.5	Discounted expected cash flows	Credit spreads	1	563		4	545		basis points
						Bond price equivalent	3	100		3	99		points
<i>Equity / index contracts</i>	0.5	0.5	1.3	1.4	Option model	Equity dividend yields	0	16		0	12		%
						Volatility of equity stocks, equity and other indices	4	91		4	93		%
						Equity-to-FX correlation	(45)	64		(39)	67		%
						Equity-to-equity correlation	(17)	97		(50)	97		%

¹ The ranges of significant unobservable inputs are represented in points, percentages and basis points. Points are a percentage of par (e.g., 100 points would be 100% of par). ² Weighted averages are provided for non-derivative financial instruments and were calculated by weighting inputs based on the fair values of the respective instruments. Weighted averages are not provided for inputs related to derivative contracts as this would not be meaningful. ³ The range of inputs is not disclosed as there is a dispersion of values given the diverse nature of the investments. ⁴ Valuation techniques, significant unobservable inputs and the respective input ranges for Debt issued designated at fair value and Other financial liabilities designated at fair value, which mainly include over-the-counter debt instruments, are the same as the equivalent derivative or structured financing instruments presented elsewhere in this table.

Note 10 Fair value measurement (continued)**e) Level 3 instruments: sensitivity to changes in unobservable input assumptions**

The table below summarizes those financial assets and liabilities classified as Level 3 for which a change in one or more of the unobservable inputs to reflect reasonably possible alternative assumptions would change fair value significantly, and the estimated effect thereof.

The table shown presents the favorable and unfavorable effects for each class of financial assets and liabilities for which the potential change in fair value is considered significant. The sensitivity of fair value measurements for debt issued designated at fair value and over-the-counter debt instruments designated at fair value is reported with the equivalent derivative or structured financing instrument within the table below.

The sensitivity data shown below presents an estimation of valuation uncertainty based on reasonably possible alternative values for Level 3 inputs at the balance sheet date and does not represent the estimated effect of stress scenarios. Typically, these financial assets and liabilities are sensitive to a combination of inputs from Levels 1–3. Although well-defined interdependencies may exist between Levels 1–2 and Level 3 parameters (e.g., between interest rates, which are generally Level 1 or Level 2, and prepayments, which are generally Level 3), these have not been incorporated in the table. Furthermore, direct interrelationships between the Level 3 parameters are not a significant element of the valuation uncertainty.

Sensitivity of fair value measurements to changes in unobservable input assumptions

<i>USD million</i>	30.9.19		30.6.19		31.12.18	
	Favorable changes	Unfavorable changes	Favorable changes	Unfavorable changes	Favorable changes	Unfavorable changes

Note 10 Fair value measurement (continued)

f) Level 3 instruments: movements during the period

Significant changes in Level 3 instruments

The table on the following pages presents additional information about Level 3 assets and liabilities measured at fair value on a recurring basis. Level 3 assets and liabilities may be hedged with instruments classified as Level 1 or Level 2 in the fair value hierarchy and, as a result, realized and unrealized gains and losses included in the table may not include the effect of related hedging activity. Furthermore, the realized and unrealized gains and losses presented within the table are not limited solely to those arising from Level 3 inputs, as valuations are generally derived from both observable and unobservable parameters.

Upon adoption of IFRS 9 on 1 January 2018, certain financial assets and liabilities were newly classified as measured at fair value through profit or loss and designated as Level 3 in the fair value hierarchy. Certain assets were also reclassified from *Financial assets measured at fair value through other comprehensive income* to *Financial assets at fair value not held for trading*. Refer to "Note 24 Fair value measurement" in the "Consolidated financial statements" section of the Annual Report 2018 for more information.

Note 10 Fair value measurement (continued)

Assets and liabilities transferred into or out of Level 3 are presented as if those assets or liabilities had been transferred at the beginning of the year.

Assets transferred into and out of Level 3 in the first nine months of 2019 totaled USD 0.8 billion and USD 1.9 billion, respectively. Transfers into Level 3 mainly consisted of loans, investment fund units and equity / index contracts, reflecting decreased observability of the relevant valuation inputs.

Transfers out of Level 3 mainly consisted of loans, reflecting increased observability of the relevant valuation inputs.

Liabilities transferred into and out of Level 3 in the first nine months of 2019 totaled USD 0.8 billion and USD 3.1 billion, respectively. Transfers into and out of Level 3 mainly consisted of debt issued designated at fair value, primarily equity-linked issued debt instruments, due to decreased or increased observability, respectively, of the embedded derivative inputs.

g) Financial instruments not measured at fair value

The table below reflects the estimated fair values of financial instruments not measured at fair value.

Financial instruments not measured at fair value

USD billion	30.9.19		30.6.19		31.12.18	
	Carrying value	Fair value	Carrying value	Fair value	Carrying value	Fair value
Assets						
Cash and balances at central banks	91.3	91.3	101.5	101.5	108.4	108.4
Loans and advances to banks	12.9	12.9	12.7	12.7	16.6	16.6
Receivables from securities financing transactions	92.0	92.0	92.9	92.9	95.3	95.4
Cash collateral receivables on derivative instruments	25.7	25.7	23.8	23.8	23.6	23.6
Loans and advances to customers	321.7	324.9	324.3	327.5	321.5	322.0
Other financial assets measured at amortized cost	23.6	23.9	22.2	22.4	22.6	22.5
Liabilities						
Amounts due to banks	8.2	8.2	9.5	9.5	11.0	11.0
Payables from securities financing transactions	5.6	5.6	6.8	6.8	10.3	10.3
Cash collateral payables on derivative instruments	32.3	32.3	31.4	31.4	28.9	28.9
Customer deposits	429.1	429.3	435.6	435.7	422.0	422.0
Funding from UBS Group AG and its subsidiaries	47.6	49.5	45.2	46.8	41.2	41.7
Debt issued measured at amortized cost	69.7	70.4	75.7	76.6	91.2	93.5
Other financial liabilities measured at amortized cost	11.1	11.1	10.9	10.9	7.6	7.6

The fair values included in the table above have been calculated for disclosure purposes only. The fair value valuation techniques and assumptions relate only to the fair value of UBS AG's financial instruments not measured at fair value. Other

institutions may use different methods and assumptions for their fair value estimation, and therefore such fair value disclosures cannot necessarily be compared from one financial institution to another.

Note 11 Derivative instruments

¹ Derivative financial liabilities as of 30 September 2019 include USD 12 million related to derivative loan commitments (30 June 2019: USD 14 million; 31 December 2018: USD 17 million). No notional amounts related to these commitments are included in this table, but they are disclosed in Note 16 under Loan commitments. ² Includes certain forward starting repurchase and reverse repurchase agreements that are classified as measured at fair value through profit or loss and are recognized within derivative instruments. The fair value of these derivative instruments was not material as of 30 September 2019, 30 June 2019 or 31 December 2018. No notional amounts related to these instruments are included in this table, but they are disclosed in Note 16 under Forward starting transactions. ³ In cases where derivative financial instruments are presented on a net basis on the balance sheet, the respective notional values of the netted derivative financial instruments are still presented on a gross basis. ⁴ Other notional values relate to derivatives that are cleared through either a central counterparty or an exchange. The fair value of these derivatives is presented on the balance sheet net of the corresponding cash margin under Cash collateral receivables on derivative instruments and Cash collateral payables on derivative instruments and was not material for all periods presented. ⁵ Changes in the fair value of purchased and sold non-derivative financial instruments between trade date and settlement date are recognized as derivative financial instruments. ⁶ Financial assets and liabilities are presented net on the balance sheet if UBS AG has the unconditional and legally enforceable right to offset the recognized amounts, both in the normal course of business and in the event of default, bankruptcy or insolvency of the entity and all of the counterparties, and intends either to settle on a net basis or to realize the asset and settle the liability simultaneously. ⁷ Reflects the netting potential in accordance with enforceable master netting and similar arrangements where not all criteria for a net presentation on the balance sheet have been met. Refer to "Note 25 Offsetting financial assets and financial liabilities" in the "Consolidated financial statements" section of the Annual Report 2018 for more information.

Note 11 Derivative instruments (continued)**b) Cash collateral on derivative instruments**

<i>USD billion</i>	Receivables 30.9.19	Payables 30.9.19	Receivables 30.6.19	Payables 30.6.19	Receivables 31.12.18	Payables 31.12.18

Cash collateral on derivative instruments, after consideration of further netting potential	10.2	13.4	9.6	13.5	9.1	13.5

¹ Financial assets and liabilities are presented net on the balance sheet if UBS has the unconditional and legally enforceable right to offset the recognized amounts, both in the normal course of business and in the event of default, bankruptcy or insolvency of UBS or its counterparties, and intends either to settle on a net basis or to realize the asset and settle the liability simultaneously. ² Reflects the netting potential in accordance with enforceable master netting and similar arrangements where not all criteria for a net presentation on the balance sheet have been met. Refer to "Note 25 Offsetting financial assets and financial liabilities" in the "Consolidated financial statements" section of the Annual Report 2018 for more information.

Note 12 Other assets and liabilities**a) Other financial assets measured at amortized cost**

<i>USD million</i>	30.9.19	30.6.19	31.12.18
Debt securities	14,291	12,906	13,562
<i>of which: government bills / bonds</i>	9,048	8,163	8,778
Loans to financial advisors ¹	3,004	3,075	3,291
Fee- and commission-related receivables	1,735	1,830	1,644
Finance lease receivables ²	1,389	1,259	1,091
Settlement and clearing accounts	564	582	1,039
Accrued interest income	789	821	700
Other	1,826	1,752	1,310
Total other financial assets measured at amortized cost	23,597	22,225	22,637

¹ Related to financial advisors in the US and Canada. ² Upon adoption of IFRS 16 on 1 January 2019, Finance lease receivables increased by USD 176 million. Refer to Note 1 for more information.

b) Other non-financial assets

<i>USD million</i>	30.9.19	30.6.19	31.12.18
Precious metals and other physical commodities	4,193	3,920	4,298
Bail deposit ¹	1,255	1,306	1,312
Prepaid expenses	709	760	731
Net defined benefit pension and post-employment assets ²	1,601	3	0
VAT and other tax receivables	290	290	282
Properties and other non-current assets held for sale	96	98	82
Other	436	456	358
Total other non-financial assets	8,580	6,833	7,062

¹ Refer to item 1 in Note 15b for more information. ² Net defined benefit pension assets of USD 1,601 million as of 30 September 2019 reflected the surplus of the Swiss pension plan. Following a 36-basis-point decrease in the applicable discount rate during the third quarter of 2019, the estimated future economic benefit of the Swiss pension plan turned positive and exceeded the plan's surplus. As a result, the full surplus of the plan was recognized as of 30 September 2019.

Note 12 Other assets and liabilities (continued)**c) Other financial liabilities measured at amortized cost**

<i>USD million</i>	30.9.19	30.6.19	31.12.18
Other accrued expenses	1,516	1,565	1,911
Accrued interest expenses	1,322	1,441	1,501
Settlement and clearing accounts	2,207	1,787	1,477
Lease liabilities ¹	3,633	3,777	
Other	2,383	2,358	2,688
Total other financial liabilities measured at amortized cost	11,062	10,927	7,576

¹ Relates to lease liabilities of USD 3,956 million recognized upon adoption of IFRS 16 on 1 January 2019. Refer to Note 1 for more information.

d) Other financial liabilities designated at fair value

<i>USD million</i>	30.9.19	30.6.19	31.12.18
Financial liabilities related to unit-linked investment contracts	25,422	25,087	21,679
Securities financing transactions	7,304	7,436	9,461
Over-the-counter debt instruments	2,024	1,828	2,450
<i>of which: life-to-date own credit (gain) / loss</i>	<i>(42)</i>	<i>(26)</i>	<i>(51)</i>
Other	32	56	5
Total other financial liabilities designated at fair value	34,782	34,407	33,594

e) Other non-financial liabilities

<i>USD million</i>	30.9.19	30.6.19	31.12.18
Compensation-related liabilities	4,023	3,578	4,645
<i>of which: financial advisor compensation plans</i>	<i>1,388</i>	<i>1,295</i>	<i>1,454</i>
<i>of which: other compensation plans</i>	<i>1,408</i>	<i>986</i>	<i>1,929</i>
<i>of which: net defined benefit pension and post-employment liabilities</i>	<i>802</i>	<i>871</i>	<i>773</i>
<i>of which: other compensation-related liabilities¹</i>	<i>425</i>	<i>427</i>	<i>490</i>
Current and deferred tax liabilities	1,352	1,061	915
VAT and other tax payables	436	405	403

<i>of which: low-trigger loss-absorbing tier 2 capital instruments</i>	<i>6,873</i>	<i>6,947</i>	<i>6,808</i>
<i>of which: non-Basel III-compliant tier 2 capital instruments</i>	<i>534</i>	<i>702</i>	<i>703</i>
Debt issued through the Swiss central mortgage institutions	8,463	8,724	8,569
Other long-term debt	51	54	58
Long-term debt²	44,020	50,988	52,220
Total debt issued measured at amortized cost³	69,739	75,679	91,245

¹ Debt with an original maturity of less than one year. ² Debt with an original maturity greater than or equal to one year. The classification of debt issued into short-term and long-term does not consider any early redemption features. ³ Net of bifurcated embedded derivatives, the fair value of which was not material for the periods presented.

Note 15 Provisions and contingent liabilities

a) Provisions

The table below presents an overview of total provisions recognized under both IAS 37 and IFRS 9.

<i>USD million</i>	30.9.19	30.6.19	31.12.18
Provisions recognized under IAS 37	2,825	2,855	3,341
Provisions for off-balance sheet financial instruments	66	80	79
Provisions for other credit lines	38	42	37
Total provisions	2,928	2,978	3,457

The following table presents additional information for provisions recognized under IAS 37.

<i>USD million</i>	Operational risks ²	Litigation, regulatory and similar matters ³	Restructuring	Real estate	Employee benefits ⁵	Other	Total
Balance as of 31 December 2018	45	2,827	215	122	55	77	3,341
Adjustment from adoption of IFRS 16 ¹	0	0	(103)	(28)	0	0	(131)
Balance as of 1 January 2019	45	2,827	112	94	55	77	3,210
Balance as of 30 June 2019	43	2,509	86	90	55	73	2,855
Increase in provisions recognized in the income statement	2	72	12	0	1	2	88
Release of provisions recognized in the income statement	0	(4)	(8)	0	(1)	0	(14)
Provisions used in conformity with designated purpose	(3)	(44)	(19)	(1)	0	(2)	(69)
Capitalized reinstatement costs	0	0	0	(1)	0	0	(1)
Foreign currency translation / unwind of discount	(1)	(29)	(1)	(2)	(1)	(2)	(36)
Balance as of 30 September 2019	41	2,503	70⁴	87⁵	53	71	2,825

¹ Refer to Note 1 for more information. ² Comprises provisions for losses resulting from security risks and transaction processing risks. ³ Comprises provisions for losses resulting from legal, liability and compliance risks. ⁴ Primarily consists of personnel-related restructuring provisions of USD 8 million as of 30 September 2019 (30 June 2019: USD 18 million; 31 December 2018: USD 40 million) and provisions for onerous contracts of USD 57 million as of 30 September 2019 (30 June 2019: USD 63 million; 31 December 2018: USD 170 million). ⁵ Consists of reinstatement costs for leasehold improvements of USD 79 million as of 30 September 2019 (30 June 2019: USD 82 million; 31 December 2018: USD 83 million) and provisions for onerous contracts of USD 8 million as of 30 September 2019 (30 June 2019: USD 9 million; 31 December 2018: USD 40 million). ⁶ Includes provisions for sabbatical and anniversary awards.

Restructuring provisions primarily relate to onerous contracts and severance payments. Onerous contracts for property are recognized when UBS AG is committed to pay for non-lease components, such as utilities, when a property is vacated or not fully recovered from subtenants. Severance-related provisions are used within a short time period, usually within six months, but potential changes in amount may be triggered when natural

staff attrition reduces the number of people affected by a restructuring event and therefore the estimated costs.

Information about provisions and contingent liabilities in respect of litigation, regulatory and similar matters, as a class, is included in Note 15b. There are no material contingent liabilities associated with the other classes of provisions.

Note 15 Provisions and contingent liabilities (continued)

b) Litigation, regulatory and similar matters

UBS operates in a legal and regulatory environment that exposes it to significant litigation and similar risks arising from disputes and regulatory proceedings. As a result, UBS (which for purposes of this Note may refer to UBS AG and / or one or more of its subsidiaries, as applicable) is involved in various disputes and legal proceedings, including litigation, arbitration, and regulatory and criminal investigations.

Such matters are subject to many uncertainties, and the outcome and the timing of resolution are often difficult to predict, particularly in the earlier stages of a case. There are also situations where UBS may enter into a settlement agreement. This may occur in order to avoid the expense, management distraction or reputational implications of continuing to contest liability, even for those matters for which UBS believes it should be exonerated. The uncertainties inherent in all such matters affect the amount and timing of any potential outflows for both matters with respect to which provisions have been established and other contingent liabilities. UBS makes provisions for such matters brought against it when, in the opinion of management after seeking legal advice, it is more likely than not that UBS has a present legal or constructive obligation as a result of past events, it is probable that an outflow of resources will be required, and the amount can be reliably estimated. Where these factors are otherwise satisfied, a provision may be established for claims that have not yet been asserted against

UBS, but are nevertheless expected to be, based on UBS's experience with similar asserted claims. If any of those conditions is not met, such matters result in contingent liabilities. If the amount of an obligation cannot be reliably estimated, a liability exists that is not recognized even if an outflow of resources is probable. Accordingly, no provision is established even if the potential outflow of resources with respect to such matters could be significant. Developments relating to a matter that occur after the relevant reporting period, but prior to the issuance of financial statements, which affect management's assessment of the provision for such matter (because, for example, the developments provide evidence of conditions that existed at the end of the reporting period), are adjusting events after the reporting period under IAS 10 and must be recognized in the financial statements for the reporting period.

Specific litigation, regulatory and other matters are described below, including all such matters that management considers to be material and others that management believes to be of significance due to potential financial, reputational and other effects. The amount of damages claimed, the size of a transaction or other information is provided where available and appropriate in order to assist users in considering the magnitude of potential exposures.

Note 15 Provisions and contingent liabilities (continued)

In the case of certain matters below, we state that we have established a provision, and for the other matters, we make no such statement. When we make this statement and we expect disclosure of the amount of a provision to prejudice seriously our position with other parties in the matter because it would reveal what UBS believes to be the probable and reliably estimable outflow, we do not disclose that amount. In some cases we are subject to confidentiality obligations that preclude such disclosure. With respect to the matters for which we do not state whether we have established a provision, either (a) we have not established a provision, in which case the matter is treated as a contingent liability under the applicable accounting standard; or (b) we have established a provision but expect disclosure of that fact to prejudice seriously our position with other parties in the matter because it would reveal the fact that UBS believes an outflow of resources to be probable and reliably estimable.

With respect to certain litigation, regulatory and similar matters for which we have established provisions, we are able to estimate the expected timing of outflows. However, the aggregate amount of the expected outflows for those matters for which we are able to estimate expected timing is immaterial relative to our current and expected levels of liquidity over the relevant time periods.

The aggregate amount provisioned for litigation, regulatory and similar matters as a class is disclosed in the "Provisions" table in Note 15a above. It is not practicable to provide an aggregate estimate of liability for our litigation, regulatory and similar matters as a class of contingent liabilities. Doing so would require us to provide speculative legal assessments as to claims and proceedings that involve unique fact patterns or novel legal theories, that have not yet been initiated or are at early stages of adjudication, or as to which alleged damages have not been quantified by the claimants. Although we therefore cannot

provide a numerical estimate of the future losses that could arise from litigation, regulatory and similar matters, we believe that the aggregate amount of possible future losses from this class that are more than remote substantially exceeds the level of current provisions.

Litigation, regulatory and similar matters may also result in non-monetary penalties and consequences. For example, the non-prosecution agreement described in item 5 of this Note, which we entered into with the US Department of Justice (DOJ), Criminal Division, Fraud Section in connection with our submissions of benchmark interest rates, including, among others, the British Bankers' Association London Interbank Offered Rate (LIBOR), was terminated by the DOJ based on its determination that we had committed a US crime in relation to foreign exchange matters. As a consequence, UBS AG pleaded guilty to one count of wire fraud for conduct in the LIBOR matter, paid a fine and is subject to probation through January 2020.

A guilty plea to, or conviction of, a crime could have material consequences for UBS. Resolution of regulatory proceedings may require us to obtain waivers of regulatory disqualifications to maintain certain operations, may entitle regulatory authorities to limit, suspend or terminate licenses and regulatory authorizations, and may permit financial market utilities to limit, suspend or terminate our participation in such utilities. Failure to obtain such waivers, or any limitation, suspension or termination of licenses, authorizations or participations, could have material consequences for UBS.

The risk of loss associated with litigation, regulatory and similar matters is a component of operational risk for purposes of determining our capital requirements. Information concerning our capital requirements and the calculation of operational risk for this purpose is included in the "Capital management" section of the UBS Group third quarter 2019 report.

Provisions for litigation, regulatory and similar matters by business division and in Corporate Center¹

<i>USD million</i>	Global Wealth Management	Personal & Corporate Banking	Asset Management	Investment Bank	Corporate Center	UBS
Balance as of 31 December 2018	1,003	117	0	269	1,438	2,827
Balance as of 30 June 2019	858	114	0	202	1,334	2,509
Increase in provisions recognized in the income statement	71	0	0	0	0	72
Release of provisions recognized in the income statement	(1)	0	0	0	(4)	(4)
Provisions used in conformity with designated purpose	(42)	(1)	0	0	(1)	(44)
Foreign currency translation / unwind of discount	(20)	(4)	0	(5)	(1)	(29)
Balance as of 30 September 2019	867	110	0	197	1,329	2,503

¹ Provisions, if any, for the matters described in this disclosure are recorded in Global Wealth Management (item 3, item 4 and item 7) and Corporate Center (item 2). Provisions, if any, for the matters described in items 1 and 6 of this disclosure are allocated between Global Wealth Management and Personal & Corporate Banking, and provisions, if any, for the matters described in this disclosure in item 5 are allocated between the Investment Bank and Corporate Center.

Note 15 Provisions and contingent liabilities (continued)

1. Inquiries regarding cross-border wealth management businesses

Tax and regulatory authorities in a number of countries have made inquiries, served requests for information or examined employees located in their respective jurisdictions relating to the cross-border wealth management services provided by UBS and other financial institutions. It is possible that the implementation of automatic tax information exchange and other measures relating to cross-border provision of financial services could give rise to further inquiries in the future. UBS has received disclosure orders from the Swiss Federal Tax Administration (FTA) to transfer information based on requests for international administrative assistance in tax matters. The requests concern a number of UBS account numbers pertaining to current and former clients and are based on data from 2006 and 2008. UBS has taken steps to inform affected clients about the administrative assistance proceedings and their procedural rights, including the right to appeal. The requests are based on data received from the German authorities, who seized certain data related to UBS clients booked in Switzerland during their investigations and have apparently shared this data with other European countries. UBS expects additional countries to file similar requests.

The Swiss Federal Administrative Court ruled in 2016 that, in the administrative assistance proceedings related to a French bulk request, UBS has the right to appeal all final FTA client data disclosure orders. On 30 July 2018, the Swiss Federal Administrative Court granted UBS's appeal by holding the French administrative assistance request inadmissible. The FTA filed a final appeal with the Swiss Federal Supreme Court. The Supreme Court on 26 July 2019, reversed the decision of the Federal Administrative Court. The judges also stated that the FTA must ensure that the French authorities respect the principle of "speciality", which requires the information furnished may only be used for the purposes specified in the request.

Since 2013, UBS (France) S.A., UBS AG and certain former employees have been under investigation in France for alleged complicity in unlawful solicitation of clients on French territory, regarding the laundering of proceeds of tax fraud, and banking and financial solicitation by unauthorized persons. In connection with this investigation, the investigating judges ordered UBS AG to provide bail ("caution") of EUR 1.1 billion and UBS (France) S.A. to post bail of EUR 40 million, which was reduced on appeal to EUR 10 million.

A trial in the court of first instance took place from 8 October 2018 until 15 November 2018. On 20 February 2019, the court announced a verdict finding UBS AG guilty of unlawful solicitation of clients on French territory and aggravated laundering of the proceeds of tax fraud, and UBS France S.A. guilty of aiding and abetting unlawful solicitation and laundering the proceeds of tax fraud. The court imposed fines aggregating EUR 3.7 billion on UBS AG and UBS France S.A. and awarded EUR 800 million of civil damages to the French state. UBS has appealed the decision. Under French law, the judgment is

suspended while the appeal is pending. The Court of Appeal will retry the case de novo as to both the law and the facts, and the fines and penalties can be greater than or less than those imposed by the court of first instance. A subsequent appeal to the Cour de Cassation, France's highest court, is possible with respect to questions of law.

UBS believes that based on both the law and the facts the judgment of the court of first instance should be reversed. UBS believes it followed its obligations under Swiss and French law as well as the European Savings Tax Directive. Even assuming liability, which it contests, UBS believes the penalties and damage amounts awarded greatly exceed the amounts that could be supported by the law and the facts. In particular, UBS believes the court incorrectly based the penalty on the total regularized assets rather than on any unpaid taxes on those assets for which a fraud has been characterized and further incorrectly awarded damages based on costs that were not proven by the civil party. Notwithstanding that UBS believes it should be acquitted, our balance sheet at 30 September 2019 reflected provisions with respect to this matter in an amount of USD 516 million. The wide range of possible outcomes in this case contributes to a high degree of estimation uncertainty. The provision reflected on our balance sheet at 30 September 2019 reflects our best estimate of possible financial implications, although it is reasonably possible that actual penalties and civil damages could exceed the provision amount.

In 2016, UBS was notified by the Belgian investigating judge that it is under formal investigation ("inculpé") regarding the laundering of proceeds of tax fraud, of banking and financial solicitation by unauthorized persons, and of serious tax fraud. In 2018, tax authorities and a prosecutor's office in Italy asserted that UBS is potentially liable for taxes and penalties as a result of its activities in Italy from 2012 to 2017. In June 2019, UBS entered into a settlement agreement with the Italian tax authorities under which it paid EUR 101 million to resolve the claims asserted by the authority related to UBS AG's potential permanent establishment in Italy. In October 2019, the Judge of Preliminary Investigations of the Milan Court approved an agreement with the Milan prosecutor under Article 63 of Italian Administrative Law 231 under which UBS AG, UBS Switzerland AG and UBS Monaco will pay an aggregate of EUR 10.3 million to resolve claims premised on the alleged inadequacy of historical internal controls. No admission of wrongdoing was required in connection with this resolution.

Our balance sheet at 30 September 2019 reflected provisions with respect to matters described in this item 1 in an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

Note 15 Provisions and contingent liabilities (continued)**2. Claims related to sales of residential mortgage-backed securities and mortgages**

From 2002 through 2007, prior to the crisis in the US residential loan market, UBS was a substantial issuer and underwriter of US residential mortgage-backed securities (RMBS) and was a purchaser and seller of US residential mortgages. A subsidiary of UBS, UBS Real Estate Securities Inc. (UBS RESI), acquired pools of residential mortgage loans from originators and (through an affiliate) deposited them into securitization trusts. In this manner, from 2004 through 2007, UBS RESI sponsored approximately USD 80 billion in RMBS, based on the original principal balances of the securities issued.

UBS RESI also sold pools of loans acquired from originators to third-party purchasers. These whole loan sales during the period 2004 through 2007 totaled approximately USD 19 billion in original principal balance.

UBS was not a significant originator of US residential loans. A branch of UBS originated approximately USD 1.5 billion in US residential mortgage loans during the period in which it was active from 2006 to 2008 and securitized less than half of these loans.

Lawsuits related to contractual representations and warranties concerning mortgages and RMBS: When UBS acted as an RMBS sponsor or mortgage seller, it generally made certain representations relating to the characteristics of the underlying loans. In the event of a material breach of these representations, UBS was in certain circumstances contractually obligated to repurchase the loans to which the representations related or to indemnify certain parties against losses. In 2012, certain RMBS trusts filed an action in the US District Court for the Southern District of New York seeking to enforce UBS RESI's obligation to repurchase loans in the collateral pools for three RMBS securitizations issued and underwritten by UBS with an original principal balance of approximately USD 2 billion. In July 2018, UBS and the trustee entered into an agreement under which UBS will pay USD 850 million to resolve this matter. A significant portion of this amount will be borne by other parties that indemnified UBS. The settlement remains subject to court approval and proceedings to determine how the settlement funds will be distributed to RMBS holders. After giving effect to this settlement, UBS considers claims relating to substantially all loan repurchase demands to be resolved and believes that new demands to repurchase US residential mortgage loans are time-barred under a decision rendered by the New York Court of Appeals.

Mortgage-related regulatory matters: Since 2014, the US Attorney's Office for the Eastern District of New York has sought information from UBS pursuant to the Financial Institutions Reform, Recovery and Enforcement Act of 1989 (FIRREA), related to UBS's RMBS business from 2005 through 2007. On 8 November 2018, the DOJ filed a civil complaint in the District Court for the Eastern District of New York. The complaint seeks unspecified civil monetary penalties under FIRREA related to UBS's issuance, underwriting and sale of 40 RMBS transactions in 2006 and 2007. UBS moved to dismiss the civil complaint on 6 February 2019.

Our balance sheet at 30 September 2019 reflected a provision with respect to matters described in this item 2 in an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of this matter cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

3. Madoff

In relation to the Bernard L. Madoff Investment Securities LLC (BMIS) investment fraud, UBS AG, UBS (Luxembourg) S.A. (now UBS Europe SE, Luxembourg branch) and certain other UBS subsidiaries have been subject to inquiries by a number of regulators, including the Swiss Financial Market Supervisory Authority (FINMA) and the Luxembourg Commission de Surveillance du Secteur Financier. Those inquiries concerned two third-party funds established under Luxembourg law, substantially all assets of which were with BMIS, as well as certain funds established in offshore jurisdictions with either direct or indirect exposure to BMIS. These funds faced severe losses, and the Luxembourg funds are in liquidation. The documentation establishing both funds identifies UBS entities in various roles, including custodian, administrator, manager, distributor and promoter, and indicates that UBS employees serve as board members.

In 2009 and 2010, the liquidators of the two Luxembourg funds filed claims against UBS entities, non-UBS entities and certain individuals, including current and former UBS employees, seeking amounts totaling approximately EUR 2.1 billion, which includes amounts that the funds may be held liable to pay the trustee for the liquidation of BMIS (BMIS Trustee).

Note 15 Provisions and contingent liabilities (continued)

A large number of alleged beneficiaries have filed claims against UBS entities (and non-UBS entities) for purported losses relating to the Madoff fraud. The majority of these cases have been filed in Luxembourg, where decisions that the claims in eight test cases were inadmissible have been affirmed by the Luxembourg Court of Appeal, and the Luxembourg Supreme Court has dismissed a further appeal in one of the test cases.

In the US, the BMIS Trustee filed claims against UBS entities, among others, in relation to the two Luxembourg funds and one of the offshore funds. The total amount claimed against all defendants in these actions was not less than USD 2 billion. In 2014, the US Supreme Court rejected the BMIS Trustee's motion for leave to appeal decisions dismissing all claims except those for the recovery of approximately USD 125 million of payments alleged to be fraudulent conveyances and preference payments. In 2016, the bankruptcy court dismissed these claims against the UBS entities. The BMIS Trustee appealed. In February 2019, the Court of Appeals reversed the dismissal of the BMIS Trustee's remaining claims. In August 2019, the defendants, including UBS, filed a petition to the US Supreme Court requesting that it review the Court of Appeals' decision. The bankruptcy proceedings have been stayed pending a decision with respect to that petition.

4. Puerto Rico

Declines since 2013 in the market prices of Puerto Rico municipal bonds and of closed-end funds (funds) that are sole-managed and co-managed by UBS Trust Company of Puerto Rico and distributed by UBS Financial Services Incorporated of Puerto Rico (UBS PR) have led to multiple regulatory inquiries, as well as customer complaints and arbitrations with aggregate claimed damages of USD 3.4 billion, of which claims with aggregate claimed damages of USD 2.4 billion have been resolved through settlements, arbitration or withdrawal of the claim. The claims have been filed by clients in Puerto Rico who own the funds or Puerto Rico municipal bonds and / or who used their UBS account assets as collateral for UBS non-purpose loans; customer complaint and arbitration allegations include fraud, misrepresentation and unsuitability of the funds and of the loans.

A shareholder derivative action was filed in 2014 against various UBS entities and current and certain former directors of the funds, alleging hundreds of millions of US dollars in losses in the funds. In 2015, defendants' motion to dismiss was denied and a request for permission to appeal that ruling was denied by the Puerto Rico Supreme Court. In 2014, a federal class action complaint also was filed against various UBS entities, certain members of UBS PR senior management and the co-manager of certain of the funds, seeking damages for investor losses in the funds during the period from May 2008 through May 2014. Following denial of the plaintiffs' motion for class certification, the case was dismissed in October 2018.

In 2014 and 2015, UBS entered into settlements with the Office of the Commissioner of Financial Institutions for the Commonwealth of Puerto Rico, the US Securities and Exchange Commission (SEC) and the Financial Industry Regulatory Authority in relation to their examinations of UBS's operations.

In 2011, a purported derivative action was filed on behalf of the Employee Retirement System of the Commonwealth of Puerto Rico (System) against over 40 defendants, including UBS PR, which was named in connection with its underwriting and consulting services. Plaintiffs alleged that defendants violated their purported fiduciary duties and contractual obligations in connection with the issuance and underwriting of USD 3 billion of bonds by the System in 2008 and sought damages of over USD 800 million. In 2016, the court granted the System's request to join the action as a plaintiff, but ordered that plaintiffs must file an amended complaint. In 2017, the court denied defendants' motion to dismiss the amended complaint.

Beginning in 2015, and continuing through 2017, certain agencies and public corporations of the Commonwealth of Puerto Rico (Commonwealth) defaulted on certain interest payments on Puerto Rico bonds. In 2016, US federal legislation created an oversight board with power to oversee Puerto Rico's finances and to restructure its debt. The oversight board has imposed a stay on the exercise of certain creditors' rights. In 2017, the oversight board placed certain of the bonds into a bankruptcy-like proceeding under the supervision of a Federal District Judge. These events, further defaults or any further legislative action to create a legal means of restructuring Commonwealth obligations or to impose additional oversight on the Commonwealth's finances, or any restructuring of the Commonwealth's obligations, may increase the number of claims against UBS concerning Puerto Rico securities, as well as potential damages sought.

In May 2019, the oversight board filed complaints in Puerto Rico federal district court bringing claims against financial, legal and accounting firms that had participated in Puerto Rico municipal bond offerings, including UBS, seeking a return of underwriting and swap fees paid in connection with those offerings. UBS estimates that it received approximately USD 125 million in fees in the relevant offerings.

In August 2019, two US insurance companies that insured issues of Puerto Rico municipal bonds sued UBS and seven other underwriters of Puerto Rico municipal bonds, alleging an aggregate of USD 720 million in damages from the defendants. The plaintiffs allege that defendants failed to reasonably investigate financial statements in the offering materials for the insured Puerto Rico bonds issued between 2002 and 2007, which plaintiffs allege they relied upon in agreeing to insure the bonds notwithstanding that they had no contractual relationship with the underwriters.

Note 15 Provisions and contingent liabilities (continued)

Our balance sheet at 30 September 2019 reflected provisions with respect to matters described in this item 4 in amounts that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provisions that we have recognized.

5. Foreign exchange, LIBOR and benchmark rates, and other trading practices

Foreign exchange-related regulatory matters: Beginning in 2013, numerous authorities commenced investigations concerning possible manipulation of foreign exchange markets and precious metals prices. In 2014 and 2015, UBS reached settlements with the UK Financial Conduct Authority (FCA) and the US Commodity Futures Trading Commission (CFTC) in connection with their foreign exchange investigations, FINMA issued an order concluding its formal proceedings relating to UBS's foreign exchange and precious metals businesses, and the Board of Governors of the Federal Reserve System (Federal Reserve Board) and the Connecticut Department of Banking issued a Cease and Desist Order and assessed monetary penalties against UBS AG. In 2015, the DOJ's Criminal Division terminated the 2012 non-prosecution agreement with UBS AG related to UBS's submissions of benchmark interest rates, and UBS AG pleaded guilty to one count of wire fraud, paid a fine and is subject to probation through January 2020. In 2019 the European Commission announced two decisions with respect to foreign exchange trading. UBS was granted immunity by the European Commission in these matters and therefore was not fined. UBS has ongoing obligations to cooperate with these authorities and to undertake certain remediation measures. UBS has also been granted conditional immunity by the Antitrust Division of the DOJ and by authorities in other jurisdictions in connection with potential competition law violations relating to foreign exchange and precious metals businesses. Investigations relating to foreign exchange matters by certain authorities remain ongoing notwithstanding these resolutions.

Foreign exchange-related civil litigation: Putative class actions have been filed since 2013 in US federal courts and in other jurisdictions against UBS and other banks on behalf of putative classes of persons who engaged in foreign currency transactions with any of the defendant banks. UBS has resolved US federal court class actions relating to foreign currency transactions with the defendant banks and persons who transacted in foreign

exchange futures contracts and options on such futures under a settlement agreement that provides for UBS to pay an aggregate of USD 141 million and provide cooperation to the settlement classes. Certain class members have excluded themselves from that settlement and have filed individual actions in US and English courts against UBS and other banks, alleging violations of US and European competition laws and unjust enrichment.

In 2015, a putative class action was filed in federal court against UBS and numerous other banks on behalf of persons and businesses in the US who directly purchased foreign currency from the defendants and alleged co-conspirators for their own end use. In March 2017, the court granted UBS's (and the other banks') motions to dismiss the complaint. The plaintiffs filed an amended complaint in August 2017. In March 2018, the court denied the defendants' motions to dismiss the amended complaint.

In 2017, two putative class actions were filed in federal court in New York against UBS and numerous other banks on behalf of persons and entities who had indirectly purchased foreign exchange instruments from a defendant or co-conspirator in the US, and a consolidated complaint was filed in June 2017. In March 2018, the court dismissed the consolidated complaint. In October 2018, the court granted plaintiffs' motion seeking leave to file an amended complaint.

LIBOR and other benchmark-related regulatory matters: Numerous government agencies, including the SEC, the CFTC, the DOJ, the FCA, the UK Serious Fraud Office, the Monetary Authority of Singapore, the Hong Kong Monetary Authority, FINMA, various state attorneys general in the US and competition authorities in various jurisdictions have conducted investigations regarding potential improper attempts by UBS, among others, to manipulate LIBOR and other benchmark rates at certain times. UBS reached settlements or otherwise concluded investigations relating to benchmark interest rates with the investigating authorities. UBS has ongoing obligations to cooperate with the authorities with whom we have reached resolutions and to undertake certain remediation measures with respect to benchmark interest rate submissions. UBS has been granted conditional leniency or conditional immunity from authorities in certain jurisdictions, including the Antitrust Division of the DOJ and the Swiss Competition Commission (WEKO), in connection with potential antitrust or competition law violations related to certain rates. However, UBS has not reached a final settlement with WEKO, as the Secretariat of WEKO has asserted that UBS does not qualify for full immunity.

Note 15 Provisions and contingent liabilities (continued)

LIBOR and other benchmark-related civil litigation: A number of putative class actions and other actions are pending in the federal courts in New York against UBS and numerous other banks on behalf of parties who transacted in certain interest rate benchmark-based derivatives. Also pending in the US and in other jurisdictions are a number of other actions asserting losses related to various products whose interest rates were linked to LIBOR and other benchmarks, including adjustable rate mortgages, preferred and debt securities, bonds pledged as collateral, loans, depository accounts, investments and other interest-bearing instruments. The complaints allege manipulation, through various means, of certain benchmark interest rates, including USD LIBOR, Euroyen TIBOR, Yen LIBOR, EURIBOR, CHF LIBOR, GBP LIBOR, SGD SIBOR and SOR and Australian BBSW, and seek unspecified compensatory and other damages under varying legal theories.

USD LIBOR class and individual actions in the US: In 2013 and 2015, the district court in the USD LIBOR actions dismissed, in whole or in part, certain plaintiffs' antitrust claims, federal racketeering claims, CEA claims, and state common law claims. Although the Second Circuit vacated the district court's judgment dismissing antitrust claims, the district court again dismissed antitrust claims against UBS in 2016. Certain plaintiffs have appealed that decision to the Second Circuit. Separately, in 2018, the Second Circuit reversed in part the district court's 2015 decision dismissing certain individual plaintiffs' claims and certain of these actions are now proceeding. UBS entered into an agreement in 2016 with representatives of a class of bondholders to settle their USD LIBOR class action. The agreement has received preliminary court approval and remains subject to final approval. In 2018, the district court denied plaintiffs' motions for class certification in the USD class actions for claims pending against UBS, and plaintiffs sought permission to appeal that ruling to the Second Circuit. In July 2018, the Second Circuit denied the petition to appeal of the class of USD lenders and in November 2018 denied the petition of the USD exchange class. In January 2019, a putative class action was filed in the District Court for the Southern District of New York against UBS and numerous other banks on behalf of US residents who, since 1 February 2014, directly transacted with a defendant bank in USD LIBOR instruments. The complaint asserts antitrust claims. The defendants moved to dismiss the complaint on 30 August 2019.

Other benchmark class actions in the US: In 2014, the court in one of the Euroyen TIBOR lawsuits dismissed certain of the plaintiffs' claims, including a federal antitrust claim, for lack of standing. In 2015, this court dismissed the plaintiffs' federal racketeering claims on the same basis and affirmed its previous

dismissal of the plaintiffs' antitrust claims against UBS. In 2017, this court also dismissed the other Yen LIBOR / Euroyen TIBOR action in its entirety on standing grounds, as did the court in the CHF LIBOR action. Also in 2017, the courts in the EURIBOR lawsuit dismissed the cases as to UBS and certain other foreign defendants for lack of personal jurisdiction. Plaintiffs in the other Yen LIBOR, Euroyen TIBOR and the EURIBOR actions have appealed the dismissals. In October 2018, the court in the SIBOR / SOR action dismissed all but one of plaintiffs' claims against UBS. Plaintiffs in the CHF LIBOR and SIBOR / SOR actions filed amended complaints following the dismissals, and the courts granted renewed motions to dismiss in July 2019 (SIBOR / SOR) and in September 2019 (CHF LIBOR). Plaintiffs in the SIBOR / SOR action have appealed the dismissal. In November 2018, the court in the BBSW lawsuit dismissed the case as to UBS and certain other foreign defendants for lack of personal jurisdiction. Following that dismissal, plaintiffs in the BBSW action filed an amended complaint in April 2019, which UBS and other defendants named in the amended complaint have moved to dismiss. The court dismissed the GBP LIBOR action in August 2019, and plaintiffs appealed the dismissal in September 2019.

Government bonds: Putative class actions have been filed since 2015 in US federal courts against UBS and other banks on behalf of persons who participated in markets for US Treasury securities since 2007. A consolidated complaint was filed in 2017 in the US District Court for the Southern District of New York alleging that the banks colluded with respect to, and manipulated prices of, US Treasury securities sold at auction and in the secondary market and asserting claims under the antitrust laws and for unjust enrichment. Defendants' motions to dismiss the consolidated complaint are pending.

UBS and reportedly other banks are responding to investigations and requests for information from various authorities regarding US Treasury securities and other government bond trading practices. As a result of its review to date, UBS has taken appropriate action.

With respect to additional matters and jurisdictions not encompassed by the settlements and orders referred to above, our balance sheet at 30 September 2019 reflected a provision in an amount that UBS believes to be appropriate under the applicable accounting standard. As in the case of other matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

Note 15 Provisions and contingent liabilities (continued)

6. Swiss retrocessions

The Federal Supreme Court of Switzerland ruled in 2012, in a test case against UBS, that distribution fees paid to a firm for distributing third-party and intra-group investment funds and structured products must be disclosed and surrendered to clients who have entered into a discretionary mandate agreement with the firm, absent a valid waiver.

FINMA has issued a supervisory note to all Swiss banks in response to the Supreme Court decision. UBS has met the FINMA requirements and has notified all potentially affected clients.

The Supreme Court decision has resulted, and may continue to result, in a number of client requests for UBS to disclose and potentially surrender retrocessions. Client requests are assessed on a case-by-case basis. Considerations taken into account when assessing these cases include, among other things, the existence of a discretionary mandate and whether or not the client documentation contained a valid waiver with respect to distribution fees.

Our balance sheet at 30 September 2019 reflected a provision with respect to matters described in this item 6 in an amount that UBS believes to be appropriate under the applicable accounting standard. The ultimate exposure will depend on client requests and the resolution thereof, factors that are difficult to predict and assess. Hence, as in the case of other

matters for which we have established provisions, the future outflow of resources in respect of such matters cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that we have recognized.

7. Securities transaction pricing and disclosure

UBS identified and reported to the relevant authorities instances in which some Global Wealth Management clients booked in Hong Kong and Singapore may have been charged inappropriate spreads on debt securities transactions between 2008 and 2015. UBS intends to reimburse affected customers on a basis agreed with the relevant authorities. UBS expects the relevant authorities will subject UBS to reprimands and fines as a result of their investigations.

Our balance sheet at 30 September 2019 reflected a provision with respect to the matter described in this item 7 in an amount that UBS believes to be appropriate under the applicable accounting standard. The future outflow of resources in respect of this matter cannot be determined with certainty based on currently available information and accordingly may ultimately prove to be greater (or may be less) than the provision that we have recognized.

Note 16 Guarantees, commitments and forward starting transactions

The table below presents the maximum irrevocable amount of guarantees, commitments and forward starting transactions.

	Gross		Total gross	Sub-participations	Net
	Measured at fair value	Not measured at fair value			
<i>As of 30.9.19, USD million</i>					
Total guarantees	1,844	15,570	17,414	(2,833)	14,582
Loan commitments	7,021	27,122	34,143	(776)	33,367
Forward starting transactions¹					
Reverse repurchase agreements	36,559	1,070	37,629		
Securities borrowing agreements		23	23		
Repurchase agreements	20,098	750	20,848		
<i>As of 30.6.19, USD million</i>					
Total guarantees	1,830	16,810	18,640	(2,929)	15,712
Loan commitments	3,990	27,463	31,453	(675)	30,778

Repurchase agreements	7,926	400	8,326		

¹ Cash to be paid in the future by either UBS or the counterparty.

Note 17 Currency translation rates

The following table shows the rates of the main currencies used to translate the financial information of UBS AG's operations with a functional currency other than the US dollar into US dollars.

	Closing exchange rate				Average rate ¹				
	As of				For the quarter ended			Year-to-date	
	30.9.19	30.6.19	31.12.18	30.9.18	30.9.19	30.6.19	30.9.18	30.9.19	30.9.18
1 CHF	1.00	1.02	1.02	1.02	1.01	1.00	1.02	1.00	1.02
1 EUR	1.09	1.14	1.15	1.16	1.10	1.13	1.16	1.12	1.19
1 GBP	1.23	1.27	1.28	1.30	1.22	1.28	1.30	1.27	1.35
100 JPY	0.92	0.93	0.91	0.88	0.93	0.92	0.89	0.92	0.91

¹ Monthly income statement items of operations with a functional currency other than the US dollar are translated with month-end rates into US dollars. Disclosed average rates for a quarter represent an average of three month-end rates, weighted according to the income and expense volumes of all operations of UBS AG with the same functional currency for each month. Weighted average rates for individual business divisions may deviate from the weighted average rates for UBS AG.

Cautionary Statement Regarding Forward-Looking Statements | This report contains statements that constitute "forward-looking statements," including but not limited to management's outlook for UBS's financial performance and statements relating to the anticipated effect of transactions and strategic initiatives on UBS's business and future development. While these forward-looking statements represent UBS's judgments and expectations concerning the matters described, a number of risks, uncertainties and other important factors could cause actual developments and results to differ materially from UBS's expectations. These factors include, but are not limited to: (i) the degree to which UBS is successful in the ongoing execution of its strategic plans, including its cost reduction and efficiency initiatives and its ability to manage its levels of risk-weighted assets (RWA) and leverage ratio denominator (LRD), including to counteract regulatory-driven increases, liquidity coverage ratio and other financial resources, and the degree to which UBS is successful in implementing changes to its businesses to meet changing market, regulatory and other conditions; (ii) the continuing low or negative interest rate environment in Switzerland and other jurisdictions, developments in the macroeconomic climate and in the markets in which UBS operates or to which it is exposed, including movements in securities prices or liquidity, credit spreads, and currency exchange rates, and the effects of economic conditions, market developments, and geopolitical tensions on the financial position or creditworthiness of UBS's clients and counterparties as well as on client sentiment and levels of activity; (iii) changes in the availability of capital and funding, including any changes in UBS's credit spreads and ratings, as well as availability and cost of funding to meet requirements for debt eligible for total loss-absorbing capacity (TLAC); (iv) changes in or the implementation of financial legislation and regulation in Switzerland, the US, the UK, the European Union and other financial centers that have imposed, or resulted in, or may do so in the future, more stringent or entity-specific capital, TLAC, leverage ratio, liquidity and funding requirements, incremental tax requirements, additional levies, limitations on permitted activities, constraints on remuneration, constraints on transfers of capital and liquidity and sharing of operational costs across the Group or other measures, and the effect these will or would have on UBS's business activities; (v) the degree to which UBS is successful in implementing further changes to its legal structure to improve its resolvability and meet related regulatory requirements and the potential need to make further changes to the legal structure or booking model of UBS Group in response to legal and regulatory requirements, proposals in Switzerland and other jurisdictions for mandatory structural reform of banks or systemically important institutions or to other external developments, and the extent to which such changes will have the intended effects; (vi) UBS's ability to maintain and improve its systems and controls for the detection and prevention of money laundering and compliance with sanctions to meet evolving regulatory requirements and expectations, in particular in the US; (vii) the uncertainty arising from the timing and nature of the UK's exit from the EU; (viii) changes in UBS's competitive position, including whether differences in regulatory capital and other requirements among the major financial centers will adversely affect UBS's ability to compete in certain lines of business; (ix) changes in the standards of conduct applicable to our businesses that may result from new regulations or new enforcement of existing standards, including recently enacted and proposed measures to impose new and enhanced duties when interacting with customers and in the execution and handling of customer transactions; (x) the liability to which UBS may be exposed, or possible constraints or sanctions that regulatory authorities might impose on UBS, due to litigation, contractual claims and regulatory investigations, including the potential for disqualification from certain businesses, potentially large fines or monetary penalties, or the loss of licenses or privileges as a result of regulatory or other governmental sanctions, as well as the effect that litigation, regulatory and similar matters have on the operational risk component of our RWA as well as the amount of capital available for return to shareholders; (xi) the effects on UBS's cross-border banking business of tax or regulatory developments and of possible changes in UBS's policies and practices relating to this business; (xii) UBS's ability to retain and attract the employees necessary to generate revenues and to manage, support and control its businesses, which may be affected by competitive factors; (xiii) changes in accounting or tax standards or policies, and determinations or interpretations affecting the recognition of gain or loss, the valuation of goodwill, the recognition of deferred tax assets and other matters; (xiv) UBS's ability to implement new technologies and business methods, including digital services and technologies, and ability to successfully compete with both existing and new financial service providers, some of which may not be regulated to the same extent; (xv) limitations on the effectiveness of UBS's internal processes for risk management, risk control, measurement and modeling, and of financial models generally; (xvi) the occurrence of operational failures, such as fraud, misconduct, unauthorized trading, financial crime, cyberattacks, and systems failures; (xvii) restrictions on the ability of UBS Group AG to make payments or distributions, including due to restrictions on the ability of its subsidiaries to make loans or distributions, directly or indirectly, or, in the case of financial difficulties, due to the exercise by FINMA or the regulators of UBS's operations in other countries of their broad statutory powers in relation to protective measures, restructuring and liquidation proceedings; (xviii) the degree to which changes in regulation, capital or legal structure, financial results or other factors may affect UBS's ability to maintain its stated capital return objective; and (xix) the effect that these or other factors or unanticipated events may have on our reputation and the additional consequences that this may have on our business and performance. The sequence in which the factors above are presented is not indicative of their likelihood of occurrence or the potential magnitude of their consequences. Our business and financial performance could be affected by other factors identified in our past and future filings and reports, including those filed with the SEC. More detailed information about those factors is set forth in documents furnished by UBS and filings made by UBS with the SEC, including UBS's Annual Report on Form 20-F for the year ended 31 December 2018. UBS is not under any obligation to (and expressly disclaims any obligation to) update or alter its forward-looking statements, whether as a result of new information, future events, or otherwise.

Rounding | Numbers presented throughout this report may not add up precisely to the totals provided in the tables and text. Percentages, percent changes, and adjusted results are calculated on the basis of unrounded figures. Information about absolute changes between reporting periods, which is provided in text and that can be derived from figures displayed in the tables, is calculated on a rounded basis.

Tables | Within tables, blank fields generally indicate that the field is not applicable or not meaningful, or that information is not available as of the relevant date or for the relevant period. Zero values generally indicate that the respective figure is zero on an actual or rounded basis. Percentage changes are presented as a mathematical calculation of the change between periods.

¹ Effective from the first quarter of 2019, UBS AG refined the presentation of dividend income and expense. This resulted in a reclassification of dividends from <i>Interest income (expense) from financial instruments measured at fair value through profit or loss</i> into <i>Other net income from financial instruments measured at fair value through profit or loss</i> (prior to 1 January 2019: <i>Other net income from fair value changes on financial instruments</i>). <i>Net Interest Income</i> and <i>Other net income from financial instruments measured at fair value through profit or loss</i> for the period ending 30.09.2018 have been restated.					
² As reflected in the Annual Report 2018, the balance sheet figures under the column 31.12.2016 are as of 1.1.2017 for comparison purposes due to the adoption of IFRS 9, which was effective 1.1.2018.					
³ This amount has been translated from the audited financials of the Annual Report 2017, which was reported in Swiss francs, into US dollars at closing exchange rates prevailing on the balance sheet date.					
⁴ Based on the Swiss systemically relevant bank framework as of 1 January 2020.					
⁵ The information as published in Swiss francs in the Annual Report 2017 for the period ended on 31 December 2017 (CHF 33,240 million) and in the UBS Group AG and UBS AG annual report 2016 for the period ended on 31 December 2016 (CHF 32,447 million) was audited.					
⁶ Includes invested assets for Global Wealth Management, Asset Management and Personal & Corporate Banking.					

What are the key risks that are specific to the issuer?**Credit risk in relation to UBS AG as issuer**

Each investor in securities issued by UBS AG as Issuer is exposed to the credit risk of UBS AG. The assessment of UBS AG's creditworthiness may be affected by a number of factors and developments. These include changes in market and macroeconomic conditions, credit risk exposure to clients and counterparties, results of claims, disputes, legal proceedings and government investigations, availability of funding sources, changes in the laws and regulations affecting financial institutions, heightened regulatory expectations and regulatory changes, and reputational damage and operational risks.

If UBS experiences financial difficulties, FINMA has the power to open restructuring or liquidation proceedings or impose protective measures in relation to UBS Group AG, UBS AG or UBS Switzerland AG, and such proceedings or measures may have a material adverse effect on UBS's shareholders and creditors.

If restructuring or liquidation proceedings are instituted against UBS AG, holders of securities may suffer a substantial or **total loss** on the securities.
